Pride of Delaware—Rex Gladstone. I. Yearsley, Jr.'s (Coatesville, Pa.) English setter bitch Pride of Delaware (Carlowitz—Ollie) to G. F. Clark's Rex Gladstone (A.K.R. 2167), Oct. 3.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie. E. W. Jester's (St. George's, Del.) spaniel bitch Nellie, Sept. 23, six (three dogs), by A. Constable's Nick.

Bess. F. H. Bradbury's (Elkton, Md.) English setter bitch Bess, Sept. 24, six (two dogs), by E. W. Jester's Gladstone's Mark (Gladstone—Bessie A.).

Betty. Woodbrook Kennels' (Baltimore, Md.) beagle bitch Betty (A.K.R. 2910), Sept. 27, five (three dogs), by their Rattler III. (A.K.R. 2798).

Swiss Rhona. Hospice Kennels' (Arlington, N. J.) St. Bernard bitch Swiss Rhona (A.K.R. 3050), Sept. 29, eight (five dogs), by their Otho (A.K.R. 483); one bitch since dead.

Meg Merrilies. Harry A. Fletcher's (Woodford's, Me.) Irish setter bitch Meg Merrilies (A.K.R. 2181), Sept. 28, ten (six dogs), by his Prince (A.K.R. 1668).

Heather Lass. A. H. Aldrich's (Melrose, Mass.) Gordon setter bitch Heather Lass (Jack—Gipsey), Sept. 3, five (two dogs), by G. E. Browne's Argus II. (Argus—Beauty).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Little Nell. White bull-terrier bitch, whelped April, 1883, by Little Victor out of Daisy, by T. R. Varick, Manchester, N. H., to C. A. Barnes, Boston, Mass.

Oxford Nettie. White, black and tan fox-terrier bitch, age not given, by Bob out of Tip, by Frank C. Wheeler, London, Ont., to H. R. Lawrence, Brattleboro, Vt.

Hillsboro Frisky. White, black and tan head, fox-terrier dog, whelped December, 1885, by Mixture out of Hazel, by T. R. Varick, Manchester, N. H., to E. T. Rice, Newton Lower Falls, Mass.

Benjo. White bull-terrier dog, whelped July 3, 1886, by Count out of Little Nell, by T. R. Varick, Manchester, N. H., to Michael Ryan, same place.

Rex Wind'em. Black and white English setter dog, whelped July 15, 1886, by Rex Gladstone (A.K.R. 2167) out of Countess Wind'em (A.K.R. 2564), by G. F. Clark, St. George's, Del., to Dr. J. R. Housel, Watsontown, Pa.

Fanny. Tan and white beagle bitch, age and pedigree unknown, by E. W. Jester, St. George's, Del., to A. J. Ward, Boston, Mass.

Bud. Lemon and white setter dog, age and pedigree unknown, by E. W. Jester, St. George's, Del., to Jas. E. Hair, Bridgeport, Conn.

Glen Rock, Jr. Black and white English setter dog, whelped Aug. 12, 1886, by Glen Rock (A.K.R. 1616) out of Dashing Belle (A.K.R. 814), by E. W. Jester, St. George's, Del., to Dr. E. L. Mays, DeKalb, Ill.

Lead. Black, white and tan beagle dog, age and pedigree unknown, by E. W. Jester, St. George's, Del., to Henry Boeschell, Baltimore, Md.

Duchess. Fawn mastiff bitch, whelped Sept. 19, 1883, by Young Colonel out of Motive, by Ashmont Kennels, Boston, Mass., to Thos. Blyth, Peale, Pa.

Captain Tell. Liver and white pointer dog, whelped July 23, 1886, by William Tell (A.K.R. 2040) out of Vera, by C. A. Parker, Worcester, Mass., to F. H. Stowe, same place.

Rattler. Black, tan and white collie dog, whelped 1881, by Tweed II. out of Lassie, by Kilmarnock Collie Kennels, Braintree, Mass., to Jas. H. Wentworth, Brighton, Mass.

Kenneth. Sable and white collie dog, whelped June 27, 1886, by Kilmarnock Bruce out of Winnie, by Kilmarnock Collie Kennels, Braintree, Mass., to H. R. Hallett, Boston, Mass.

Talisman. Sable and white collie dog, whelped Oct. 27, 1880, by Trevor out of Guise, by Kilmarnock Collie Kennels, Braintree, Mass., to F. Mason, Weymouth, Mass.

Goodwood Joe. Black, white and tan beagle dog, age unknown, by Mark Anthony out of Diana, by S. C. Graff, Pittsburgh, Pa., to L. K. Avery, Bremen, Ind.

Count—Little Nell whelps. White bull-terrier dogs, whelped July 3, 1886, by T. R. Varick, Manchester, N. H., one each to F. H. Daniels, Worcester, Mass.; Julius J. Estey, Brattleboro, Vt., and Gordon Woodbury, New York.

Prince—Fanny whelps. Beagles, age not given, by E. W. Jester, St. George's, Del., one black, white and tan bitch to A. J. Ward, Boston, Mass., and one tan and white dog and three tan and white bitches to J. N. Lewis, Ramseys, N. J.

Gladstone's Mark—Aunty Fuller whelp. Lemon belton English setter dog, whelped Aug. 27, 1886, by E. W. Jester, St. George's, Del., to J. N. Lewis, Ramseys, N. J.

Gin (A.K.R. 1533)—Morning Star (A.K.R. 1541) whelps. English setters, whelped June 24, 1886, by Chas. York, Bangor, Me., a black, white and tan bitch to H. W. Durgin, same place, and a black and white dog to N. H. Cowan, Baltimore, Md.

Goodwood Rattler—Goodwood Music whelps. Black, white and tan beagle bitches, whelped July 17, 1886, by S. C. Graff, Pittsburgh, Pa., one each to Chas. Shore, same place, and L. K. Avery, Bremen, Ind.

Bosco II. (A.K.R. 3396)—Beda (A.K.R. 3845) whelps. Rough-coated St. Bernards, whelped June 24, 1886, by Mrs. J. Grant, West New Brighton, S. I., N. Y., two dogs to B. B. McGregor, Mamaroneck, N. Y.; a dog and bitch each to J. T. Winchester and Louis DeJonge, Staten Island, N. Y.

PRESENTATIONS.

Jolly Rex. Black, white and tan English setter dog, whelped Aug. 9, 1886, by Rex Gladstone (A.K.R. 2167) out of Little Fraud, by E. W. Jester, St. George's, Del., to Jefferson Cooper, Pearl River, N. Y.

Monarex. Black, white and tan English setter bitch, whelped Aug. 9, 1886, by Rex Gladstone (A.K.R. 2167) out of Little Fraud, by E. W. Jester, St. George's, Del., to C. B. Faxon, Boston, Mass.

Argus II.—Jessica whelp. Black and tan Gordon setter dog, whelped Aug. 21, 1886, by Geo. E. Browne, Dedham, Mass., to Miss M. Humphrey, same place.

DEATHS.

Foreman. Tan, lemon and white beagle dog, whelped February, 1880 (A.K.R. 1120), owned by Edward Foss, Holyoke, Mass., Sept. 27; killed by cars.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

CREEDMOOR, Oct. 2.—The tenth championship marksman's class match took place at Creedmoor to-day. The weather was cool and very pleasant, but a strong wind from 9 o'clock made the shooting rather difficult, and the scores were not as high as usual. The winners were:

	200yds.	500yds.	Tl.
E F Young, Co C, 7th Reg	21	25	46
W P Pickett, Co B, 23d Reg	20	24	44
D E Watson, Co A, 71st Reg	20	21	41
H Graff, Co B, 23d	20	21	41
E Larksley, Co E, 12th Reg	20	20	40
N B Thurston, Co E, 22d	20	20	40
C G Schultz, Co C, 13th	20	20	40

Lieut. Young is the first competitor who has won the medal for a second time.

THE ARMY TEAM.

DURING the past week the finals were held in the series of selective trials by which the army team is evoluted out of the several division teams, now assembled at Fort Leavenworth. Preceding the decisive tests was a season of preliminary trial. The Division of the Missouri team had its four department teams present, and these engaged in a team match at 200, 300, 500 and 600yds., 10 shots each. It was not a favorable day, and despite the fish-tail wind the following scores were made out of a possible 600 at each range at the known distances:

	200yds.	300yds.	500yds.	600yds.	T'l
Dakota	483	475	484	422	1,864
Missouri	481	474	468	390	1,813
Platte	462	477	458	411	1,808
Texas	465	483	449	408	1,805

For this match the Kansas City *Times*, which takes a great interest in army matters, offered a handsome gold badge to the members of the winning team who, in a separate contest at the same ranges, should make the highest total score. This contest and the badge was won by Sergt. S. P. Crow, Company C, Twentieth Infantry, by a score of 48 at 200yds., 42 at 300yds., 46 at 500yds., 41 at 600yds., or a total of 172. In this contest the team averaged over 164 points, or a little better than 82 per cent. at all the ranges.

The team match as skirmishers followed, each team acting as a body of skirmishers. The result proved a victory for the Missouri Department team, the score running:

	Hits in				
	Lying.	Kneeling.	Standing.	Penalties.	Score.
Missouri	6	158	9	1	684
Platte	11	137	15	1	643
Texas	2	132	32	2	624
Dakota	2	142	13	2	617

For a special medal offered to the leader in the winning team, Lieut. A. C. Macomb, Fifth Cavalry, was the winner with a score of 105.

FORT LEAVENWORTH, Kan., Sept. 29.—The biennial army rifle team competition began to-day. There was but little wind, the light was good and everything tended to good work by the riflemen. Sergeant Crawford made a bad break at 500yds. as did Garrard at 600, thus making the same misses. With these exceptions the scores made were more than the average. To-morrow there will be skirmish firing, when considerable of a change will take place in the position of the members of the team. General Sheridan arrived to-day to witness the contest, and will remain until Friday evening or Saturday morning. He was accompanied by his aid, Colonel Kellogg, and by General Rucker, retired. The following is the score of the team as made to-day:

	200yds.	300yds.	500yds.	600yds.	T'l
Z W Torrey, 1st Lieut, 6th Inf	44	41	45	42	172
J T Kerr, 2d Lieut, 17th Inf	44	41	44	37	166
C E Gillette, 2d Lieut, Corps Eng	41	42	39	39	161
L Roper, 1st Sergt F, 4th Inf	40	36	31	40	147
J T Crawford, Sergt A, 19th Inf	42	42	28	44	156
J W Weeks, Sergt E, 6th Inf	40	43	42	43	168
J B Denny, Sergt D, 14th Inf	41	39	44	38	162
M C Gustin, Sergt B, 2d Cav	43	42	43	33	161
W D Huddleson, Sergt K, 4th Art	44	43	42	40	169
G E Miller, Corp H, 2d Cav	40	39	41	42	162
C H Michel, Corp L, 4th Cav	40	41	42	43	166
H Garrard, Pvt K, 10th Inf	41	41	40	26	148

Sept. 30.—The wind this morning was almost blowing a hurricane at times, but the afternoon skirmish resulted in much better averages. Corp. Michel, of Troop L, 4th Cavalry, made the highest aggregate and won the army team gold skirmish medal. He leads for three days by nine points, but has a very strong second in Huddleson, of the Atlantic quota. Gen. Sheridan was constantly on the ground to-day and much interested. The following are scores and standing of the team for three days:

	Two days.	Aggregate Three days.
Corp Michel, 4th cav	144	310
Sergt Huddleson, 4th art	139	308
Lieut Torrey, 6th inf	126	298
Sergt Crawford, 19th inf	154	290
Sergt Roper, 4th inf	138	285
Corp Miller, 2d cav	121	283
Lieut Gillette, Eng corps	115	276
Sergt Weeks, 6th inf	108	276
Sergt Denney, 14th inf	113	275
Sergt Gustin, 2d cav	112	273
Lieut Kerr, 17th inf	107	273
Pvt Garrard, 10th inf	87	235

Oct. 1.—The rifle contest of the regular army team came to a close to-day, Corporal Michel, troop L, 4th Cavalry, winning the two first gold medals on the army team and five out of the six army medals offered by the Government. This has been done by no other man in the army since the competitions first began. When firing began this morning at known distance Michel led the next man, Huddleson, 2 points. The latter at the 200yds. range made 44 to Michel's 43, the latter still leading by 1 point. At 500yds. Huddleson made 40 to Michel's 41, leaving the latter still 2 points in the lead. At 600yds. Huddleson scored 42 to Michel's 43. At the 600yds., however, matters became interesting and the greatest excitement prevailed among spectators. Huddleson had fired his score, making 44 points. Michel had fired 5 shots, each being a bull, giving him 25, when through some oversight the gun was discharged before Michel had taken an aim and a miss was recorded. This created a panic among Michel's friends; but in the next two shots he scored 8, making him 31. It was now necessary for him to make two 5s. He scored a bull on each shot, making him 41 at 600yds. and tying with Huddleson for the four days with an aggregate of 478 each. Michel having the best record for two days' skirmishing he was given first place and Huddleson second. Corporal Michel was the recipient of congratulations from many of the officers and ladies present, especially from his troop commander, Capt. Theo. J. Wint, 4th Cavalry, who placed in the corporal's hand a $50 bill. Other officers offered him handsome sums, but they were modestly refused by him. This afternoon at 4:30 General Sheridan presented the medals to the winners in the presence of the troops of the garrison on the main parade. The following is the complete score:

	Known Dist.	Skirmishing. 1st Day.	2d Day.	2 Days.	T'l
Corp C. Michel, Troop L, 4th Cav	166	168	144	478	
Sergt W D Huddleson, Co K, 4th Art	169	170	139	478	
1st Lieut Z W Torrey, 6th Inf	172	173	126	471	
Sergt T T Crawford, 19th Inf	156	169	134	459	
2d Lieut C E Gillette, Engineers	161	166	115	442	
1st Sergt L Roper, Co F, 4th Inf	147	155	138	440	
Corp G E Miller, Co H, 2d Cav	162	155	121	438	
Sergt J W Weeks, 6th Inf	168	162	108	438	
2d Lieut J T Kerr, 17th Inf	166	160	107	433	
Sergt J B Denny, Co D, 14th Inf	162	152	113	427	
Sergt M C Gustin, Co B, 2d Cav	161	152	112	425	
Pvt H Garrard, Co K, 10th Inf	148	153	87	386	

Who the men are and what their previous record is the Kansas City *Times* sets forth in its issue of Sept. 7, where portraits of the team men are given as well. The list opens with a biographical notice of Lieut.-Col. Blunt who, on the first day of the preliminary practice, led the field with 171 in a possible 200, including a perfect score 50 at 500yds. the only highest possible made in the Army team work during the present year, of him and the excellent team he has mustered we quote:

Lieutenant-Colonel Stanhope E. Blunt, aide-de-camp to the Lieutenant-General and Inspector of rifle practice at the Headquarters of the Army, is a native of Massachusetts and entered the Army from New York as a cadet at the Military Academy in 1858. Upon graduation in 1872 he was assigned as second lieutenant to the Thirteenth Infantry, and promoted to be first lieutenant in that regiment in March, 1874. In November, 1874, after duty for two seasons on surveying and exploration parties in Utah, Wyoming, Colorado and New Mexico, he was, upon examination, transferred to the Ordnance Department, and served subsequently at various arsenals and at West Point as instructor of mathematics and of ordnance and gunnery. In April, 1880, he was promoted to a captaincy in the Ordnance Department, and in September was ordered to the Department of Dakota as chief ordnance officer, and almost immediately after was appointed inspector of rifle practice of the department, duties he continued to perform until November 1884, when General Sheridan selected him as inspector of rifle practice at the Headquarters of the Army, and a year later also appointed him lieutenant-colonel and aide-de-camp on his personal staff. While on duty at Fort Snelling, Colonel Blunt conducted in 1881 the first competition of the Division of the Missouri, and in the three subsequent years the annual contests of the Department of Dakota. In the fall of 1883 he was directed by the Secretary of War to prepare a manual of instruction for target practice, and his "Rifle and Carbine Firing," which was adopted by the War Department in January, 1885, has since been the authority in our Army on this subject. Colonel Blunt has qualified annually as a marksman and sharpshooter since the establishment of those classes. While under the rules formerly in vogue, he as an officer of a staff corps, was not permitted to shoot in the regular competitions, yet he has participated in several matches, and at Fort Snelling in 1883 won from over 100 competitors the gold badge offered for the best score in the six days' preliminary practice, the celebrated rifle shot, Lieutenant Partello, coming out second. At Fort Snelling in 1884 he won an off-hand match at 200yds. and a gold badge, and also another gold badge as the winner of a skirmish match. Since 1884 he has not shot in any matches or competitions.

Captain George D. Wallace, Seventh Cavalry, commanding rifle camp, is a native of South Carolina, and graduated at West Point in 1872; assigned to Second Cavalry; promoted first lieutenant June 25, 1876, and captain September 23, 1885.

First Lieutenant Z. W. Torrey, Sixth Infantry, is the winner of the gold and silver medals for the Department of the Platte. He is a graduate of the class of 1880; has been a marksman since 1881 and sharpshooter since that class was organized; was a member of the Platte team in 1885. Highest score on Division Missouri team, 486.

Second Lieutenant James T. Kerr is a graduate of West Point and entered the service in 1881; has been a marksman since 1882, a sharpshooter since 1884 and a member of the Dakota team in 1884, and of Division of the Missouri team by an aggregate score of 530.

Second Lieutenant Cassius E. Gillette, Corps of Engineers, is a native of New York. He is a graduate of West Point and entered the service in 1884. He is a member of the Division of the Atlantic team of 1886, gaining second place by an aggregate score of 492.

First Sergeant Ludwig Roper, Company F, Fourth Infantry, is a native of Germany. He enlisted May 19, 1873, and has served in Company F since that time. A sharpshooter since 1884. A member of the Platte team in 1885, of the Columbia in 1886, and gained first place on the Division of the Pacific team by an aggregate score of 509.

Sergeant Joseph F. Crawford, Company A, Nineteenth Infantry, born May 26, 1857; native of North Carolina. Enlisted Dec. 23, 1876; non-commissioned officer since April 19, 1881. On Texas team 1882; 1885 and 1886; division team 1885 and 1886, the latter by an aggregate score of 489.

Sergeant Weeks, Company E, Sixth Infantry, joined the service Oct. 18, 1881, and was assigned to the Sixth Infantry. He qualified as a marksmen, a member of the Platte team in 1885 and division team same year. Selected as "distinguished marksman," winning place on Army team by an aggregate score of 499.

Sergeant James B. Denny, Company D, Fourteenth Infantry, was born in Ireland, May 16, 1850. He enlisted in 1867, served in the Twelfth and Twenty-first Infantry. Member of the Columbia rifle team in 1881 and 1886, and member of the Division Pacific team in 1886, with an aggregate score of 492.

Sergeant M. C. Gustin, Troop B, Second Cavalry, is a native of Warren County, Ohio, enlisted March, 1880, and assigned to band, Sixth Cavalry, afterward transferred to Troop D, same regiment; qualified as marksman since 1883. On re-enlistment was assigned as trumpeter, Troop B, Second Cavalry; appointed corporal Feb. 1, 1886, and promoted sergeant in July, same year; member of Columbia team in 1886, and winner of second gold and skirmish silver medal, Division Pacific team, by a score of 498.

Sergeant William D. Huddleson, born in Maryland, enlisted Oct. 11, 1882; qualified as marksman in 1883, 1884, 1885, 1886; sharpshooter in 1884, 1885, 1886; has represented the battery of the Fourth Artillery in 1884, 1885, 1886 in department competitions, Division Atlantic. Was member of winning team in Sheridan's skirmish match at Creedmoor, N. Y., given by National Rifle Association in 1884-'85.

Corporal George E. Miller was born in Ontario County, N. Y., May 9, 1863; enlisted Feb. 7, 1884, and assigned to Troop H, Second Cavalry. An alternate of the Columbia team in 1885, and member this year winning fifth place and third place on division team by an aggregate score of 495.

Corporal Christian Michel, Troop L, Fourth Cavalry, is a native of Switzerland, 27 years of age, enlisted in New York, Dec. 20, 1881. He was a competitor for a place on the Missouri team in 1884. Has been a marksman consecutively since 1883, a sharpshooter since 1884, a member of the Department of the Missouri team in 1886, and division team by an aggregate score of 486.

Private Hatsell Garrard, Company K, Tenth Infantry, hails from Canada and is 28 years of age. He crossed the line in 1881, enlisted in December of that year at Fort Wayne, Mich. Has been a marksman four years and a sharpshooter since 1885. He was a competitor for a place on the team in 1884, a member of the Department of the Missouri team in 1886, and of the division in 1886, by an aggregate score of 484.

HAVERHILL, MASS., RIFLE CLUB, Sept. 25.—Monthly badge match:

BOSTON, Oct. 2.—A large party of riflemen were in attendance at Walnut Hill Range to-day and all the regular matches were shot. Several fine scores have been made during the past week. Mr. Washburn has made two 99s in the rest match and Mr. Francis (Rabbeth) a 90 off-hand. Private Foster, of the Cadets, made a 49 and several 47s. Thursday, Friday and Saturday next will be devoted to the fall competition of the Massachusetts Rifle Association. The following matches will be open to all comers: A decimal match, rounds 7, 5 scores to count, prizes 42 in number, the highest of which is $58; a 500-yard carton match for military rifles, and a rest match, with $75 in prizes. A novelty in the way of a revolver match, at 25yds., will also take place. It will be shot at the standard American target, rounds 5, 5 scores to count. Over $600 in prizes will be awarded in the various matches. Following are the best scores made during the past week:

THE ZETTLER RIFLE CLUB held their twelfth annual fall shoot at the Morrisania Schuetzen Park, 170th street and Boston road, Sept. 28. Scores:

Ring Target—Open to all comers. Geo. Joiner 71, L. Floch 70, C. Judson 69, M. Dorrler 69, F. Armbrust 69, G. Zinnmerman 69, B. Walther 68, C. G. Zettler 67, Wm. Klein 67, H. Holges 67, D. Miller 66.

Target of Honor—C. Judson 72, D. Miller 70, B. Zettler 67, M. Dorrler 65, Weigler 65, C. G. Zettler 64, Armbrust 63, G. Zimmerman 62, G. Joiner 56, B. Walther 59, W. Klein 53, Blumenberg 53, A. Lober 53, G. W. Plaisted 58, Max Tropp 57, Eibson 56, H. Holges 56, J. Schneider 54, Karcher 53, L. Floch 53, T. C. Noone 52, Max Engle 51, N. D. Ward 50, Berniers 49, Fabarius 33, Hunt 31, Adrian 3.

Bullseye Target—J. Schneider first, J. Weigler second, D. Miller third, C. G. Zettler fourth, T. C. Noone fifth, Max Tropp sixth.

Most Bullseyes—M. Dorrler first, C. Judson second, B. Zettler third, L. Floch fourth, Max Tropp fifth.

Invited Guests—John Coppersuith, first prize, gold medal; Dr. Toal, second prize, gold medal; Mr. Stolsenberger, third prize, silk umbrella.

The festival proved to be one of the most successful ever held by the club. One interesting feature of the day's pleasure was the shooting by the ladies, wives and friends of the members of the club. There were prizes for every lady who shot, and the interest they exhibited and their ability to hit the bullseye was a sight worth seeing. Mr. Otto Jaeger, of Wheeling, West Virginia, an old friend of the club, donated two prizes for the target of honor, one of which included a very beautiful pair of peach-blow vases. The club had on exhibition at the festival a large number of club trophies won in years past. Among the medals were those donated by the FOREST AND STREAM AND ROD AND GUN in 1878, which were shot for by all the principal clubs in the United States. These medals were an object of much interest to all who saw them.—N. D. WARD, Secretary.

MUZZLELOADERS TO THE FORE.—Jamestown, N. Y., Sept. 28.—The inclosed report of the shoot last week by the Nypano Association, is the finest shooting ever done in a public match. The meet lasted four days. The attendance was not large, but so many of the competitors being nearly equal in skill and marksmanship made the match of unusual interest. The shooting, as will be seen by the following scores, is extra fine, and far ahead in the aggregate of any shooting ever before done in the country. Those in attendance were John D. Kelley, Renovo, Pa.; R. C. Rice, Warren, O.; Edwin Rawdon, Windsor, O.; H. F. Hart, Rochester, N. Y.; C. H. Remer and Horace Warner, Syracuse, N. Y.; J. Robert Moore and H. V. Perry, of Jamestown; Benj. Garfield, Salamanca, and several others of the "have been class," but their courage has all oozed out at the present time. The following are the scores of each string of ten shots measured from the center of each ball hole to the real center of the target, and added together in inches and one-tenth part of an inch. Distance 220yds. (40 rods):

Scores of First Day.

Perry	15.2	13.0	12.3	10.2
Moore	10.2	12.6	10.6	13.2
Garfield	12.6	13.0	15.2	
Hart	11.9	10.5	14.5	9.6
Rice	10.0	12.7	15.1	14.3
Warner	11.8	17.0	10.1	7.9
Kelley			12.7	19.4
Rawdon		17.3	14.7	
Remer	11.8	14.5	10.4	9.0

Second Day.

Perry	9.2	6.9	9.6	8.4	8.3	10.3
Moore	8.9	10.9	10.5	10.8	8.9	11.8
Hart	8.9	12.3	10.3	7.8	11.7	11.8
Rice		14.9	12.4	17.4	11.0	
Warner	7.8	12.8		7.6	10.3	11.3
Kelley	13.2					
Remer	14.1	14.2	11.1	9.1	7.0	8.3

Third Day.

Perry	9.5	12.7	7.2	8.0	8.9
Moore	10.3	11.2	10.9	13.4	12.3
Hart	12.9	12.3	8.2	7.8	6.5
Rice	10.1	10.7	8.3		8.3
Warner	11.2	8.5	11.8	10.0	11.3
Remer	11.3			8.4	10.2

Fourth Day.

Perry	11.5	11.7	8.2	12.4
Moore	9.8	13.1	13.3	11.7
Hart	9.6	14.8	12.2	11.8
Rice	13.3	13.7	12.7	11.0
Warner	15.6	15.7	13.7	11.7
Remer	11.1	9.4	11.6	9.9

Mr. Kelley donated a $20 note to the Association as a prize to be shot for on the last day, the third string of that day should decide the contest for the $20. The contest, up to the time this prize was to be shot for, had run so nearly equal that it was difficult to pick the winning man. All had hopes and all had fears, but these hopes and fears were not allowed to come to the surface. The party was made up of men who realize that discretion is the better part of valor. Time was called, and off they went, bang, bang, and so on until every man had fired his 10 shots, but before the shots were half fired it was quite apparent where the $20 would go, for Perry had his first 5 shots all through one hole in the center of his target. The last 5 shots were sufficiently good, so that he made a string of 8.2in., which won the $20. There were but three men who shot in all the strings or who had all their strings measured. These were: Perry, 190 shots, aggregate 193.5in. Hart, 190 shots, aggregate 206.4in. Moore, 190 shots, aggregate 213.4in. The match was shot under handicap rules in regard to weight of guns and mode of resting and an extra 5 per cent. deduction on strings made with breechloading guns. Remer and Kelley used breechloading guns. Perry, second and third days, 110 shots, 99in. string measure, the best ever done in public match.—MUZZLE.

LUBRICANTS.—Albany, N. Y., Oct. 4.—If "Inquirer," of Troy, N. Y., who asks, in your last issue, concerning lubricants, will go to Rensselaerwyck Rifle Range, only three miles from Troy on any Thursday afternoon, he can find a lubricant used three better than that used by M. Wertheimer.—WM. E. FITCH.

NEW LONDON, Conn., Oct. 2.—The rifle match between the Fort Trumbull and Ivoryton teams took place at Fort Trumbull range to-day at 200yds. range. The visitors won by a score of 237 to 277. The fort team won at 500yds. by a score of 251 to 215, and the match by 26. The fort team has never been beaten.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

KEOKUK, Iowa, Sept. 21.—Keokuk Nimrod Gun Club, for club medal 20 single clay-pigeons, Ligowsky trap, 18yds. rise; club rules, gold badge prize:

T L Brown	11111111101011111110—17
Fred Raber	11110011110111111110—17
Jule Roos	11010111111100111111—17
W A Sherman	11110111001111101011—15
P P Armitage	10111100110010101110—12
W Huiskamp	11010111111010111110—15
J Bonakamp	10110111011111111111—17

S Bisbee	01110011101110100111—13
J Leisey	01100111001111111110—14

Brown won medal on shoot off.

UTICA, N. Y., Oct. 2.—At Riverside Park yesterday afternoon the monthly shoot of the Oneida County Sportsmen's Club for the Divine-Kirkland prizes. Each contestant fired at 20 blue rock targets with the following result:

Wheeler	1101100001—5	00 10 10 10 11—10
Rapp	1000001001—3	10 10 10 10 10— 8
Howe	1000111011—6	10 10 10 11 00—11
Dexter	0001010000—2	10 11 10 11 10— 9
Beckwith	1100101000—4	10 10 10 00 11— 9
Fisher	0000011101—4	00 00 11 00 00— 6
Pfeiffer	1000000001—2	10 10 00 10 11— 7
Booth	0301101000—3	11 11 11 10 11—12
Fox	0.00001100—2	10 11 01 01 10— 8

GUELPH, Ottawa, Sept. 29.—Representatives of Guelph and Brantford participated in a pigeon shooting match on Sleeman's flats to-day, Guelph coming out ahead by three birds. The following is the score:

Brantford.		Guelph.	
Westbrook	1101110101— 7	Shattuck	1111010111— 8
Montgomery	0101111110— 7	Wayper	1111111101— 9
Bethel	0011111000— 5	Walker	0111111111— 9
Cook	1111111110—10	Hollidge	0111100001— 5
Page	1001111111— 8	Sleeman	0111110101— 7
Black	1000101001— 4	Ogg	0101011010— 5
Root	1010001111— 6—47	Singular	1110011011— 7—50

A sweepstake then took place, Sleeman, Singular, Shattuck, Walker and Montgomery tieing. It was decided to divide the money owing to the late hour.

NEW YORK, Oct. 2.—The announcement that Miss Annie Oakley, of Buffalo Bill's "Wild West," would engage in a pigeon shooting match with William Graham, of England, at Oak Point, for $500 and the championship of the world attracted about 500 people to James Pilkington's grounds to-day, where the match was to take place. Miss Oakley, who is not more than 18 years of age, wore a brown dress and peacock-blue plush gaiters. Mr. Graham appeared in his ordinary clothes. The English champion shot at 30yds. rise, Miss Oakley at 21yds.; 25 pigeons were assigned to each of the contestants as the first feature of the entertainment. Mr. Graham killed 23 out of his 25, Miss Oakley put an end to the lives of 16 out of her 25. The next feature of the match was 50 clay-pigeons for each of the contestants. Only 25 were shot at, as Miss Oakley was obliged to call the match off, having injured her finger to such an extent a few days ago that she was unable to hold the gun in a satisfactory manner. Out of the 25 clay-pigeons Mr. Graham shot 17 and Miss Oakley 7. A return match will be shot on Saturday next at Erb's grounds, Bloomfield Road, Newark.

MESSRS. JOHN P. LOVELL'S SONS, of Boston, have just issued a book on the science of boxing by Prof. Ed. F. Shaw. See advertisement in another column.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

OCTOBER.

8-9. { Hartford and Springfield { Fall Meet,
{ New England Div. A. C. A. { Calla Shasta.

EASTERN DIVISION, A. C. A.

THE newly-formed Eastern Division of the Association is making a strong effort to enlist canoeists throughout New England generally, and to increase their numbers largely before the next meet. There are many canoeists in the New England States who cruise and who are members of clubs, but who as yet have taken no interest in the A. C. A. and the meets; but with a branch established among them there are additional inducements to join, and it is probable that before spring canoeing will receive a great impulse in the East. In order to make the Association better known to outside canoeists the officers of the Eastern Division have sent out the following invitation:

Purser's Office, Eastern Division, A. C. A., Hartford, Conn., Oct. 1, 1886. Dear Sir—There will be a fall race meeting of this Division at Calla Shasta, a grove situated on the west bank of the Connecticut River, about four miles below Springfield, Friday and Saturday, Oct. 8 and 9, 1886. The following is the programme of races on Saturday, Oct. 9. I. Sailing (no limit as to rig or ballast). II. Sailing (limited to 75 sq. ft.). III. Open sailing. Any boat of any recognized club, without regard to A. C. A. limits. IV. Consolation sailing. Owing to lack of wind at the June meet, several beautifully embroidered flags designed as prizes for the above races were not competed for, and they will be awarded to the victors in the four events named. Additional events will probably be added later. All canoeists are invited to be present and take part in the races, whether A. C. A. men or not, and all New England men are earnestly requested to join the Association. The fall regatta of the Springfield C. C., most of whose events are open to all, is to be held at Calla Shasta during the meet, which will be an additional attraction. Canoeists will be expected to provide their own shelter. Board and such provisions as bread, butter, eggs, milk, etc., can be obtained in the immediate vicinity. Canoeists receiving this circular are requested to notify other canoeists in their vicinity and ask them to send their addresses to the purser in order that they may receive circulars in future. A circular, giving the objects and advantages of the Eastern Division of the A. C. A., will be mailed later. Per order of Paul Butler, Vice-Commodore. W. B. Davidson, Purser, United States Bank, Hartford, Conn.

The new organization of the A. C. A. makes it possible for members in each locality to push the interests of the Association with better results than have before been possible. The local meets will do much to aid them in this and should become most important factors in the future development of the A. C. A. The Eastern Division is already taking steps to utilize this means of promoting canoeing, and their coming meet promises to be an important event.

A CRUISE ON LAKE VERMILION.

IT is not so much that the cruise I am about to give the leading incidents of was in any particular way remarkable, but because Lake Vermilion, wonderful and beautiful as it is, has not as yet to my knowledge found its way into the columns of the FOREST AND STREAM and because now that it is made get-at-able by a railroad connecting it with Lake Superior and a daily steamer with Duluth, it is probably soon destined to become a favorite objective point for sportsmen who seek genuine recreation with their trout; hence it is with the hope of leading into pastures new many who fear not some little adventure on virgin waters and in forests primeval that I write, hoping all who may come after may fare no worse than did our little party of four last fall in the glorious weather of October and November.

Our party was made up (if I do say it) of splendid timber, but somewhat differently constituted and most of the members deserve special mention. First of all the Commodore, whose hair and short beard of iron gray make him fifty or sixty, but thanks to his outdoor life and sportsmanlike habits, as hale and hearty as a young buck. A perfect encyclopedia of sportsman's information is he, not a make of gun in civilized existence but what he knows the peculiar characteristics, excellence or defect of; not a maker of rods, spoons, bait or fly but he knows them personally or by reputation, nor is there a boat builder of any excellence in either the United States or Canada that he cannot canvas the merits of, and he will talk to you by the hour of the different kinds of chokebores, powders, wads, shells, hooks and tackle; boats, fish and game, and he can no more do without his FOREST AND STREAM than he can his supper.

Next in order the skipper, yet a young man, a mechanical genius in his way, and a splendid sailor. He built the boat we made the trip in when he was 20. It was his first attempt at boat building, but he never made a mistake. She is of the Whitehall model, canoe built, 16ft.x4.9 beam, rows well and is a splendid sailer. I furnished him his time and material, he the skill and labor, so we own her together and named her the Viking, and I must say as a specimen of amateur build, or any other build of her class for that matter, is without a rival in Duluth waters.

Next the writer, shipped as cook only, but who managed to fight his way to the dignity of commissary for reasons hereafter to be explained.

Last, but not least, by any means, the sailor, because upon this cruise he developed the most extraordinary passion for sailing that can well be imagined, but being ordinarily a landsman he was necessarily shipped as a green hand. How he got his soubriquet, of which he is yet proud, remains to be told, just now perfect candor compels me to state that the "sailor," though perfectly brave and "true" in his element, had a horror of a canoe, and as there was nothing to be had on Lake Vermilion at this particular time but birch barks it was mainly on his account that we had resolved to ship our own boats overland for the trip, and this was how the Viking came to plow the waters of Lake Vermilion, one of the first ships if not the first ship of her kind to sail the far west end of the lake.

The waters of Lake Superior heaved to a gentle swell and reflected the misty sun glow of late October with silvery sheen, as the good steamer Dove, with our boats and traps aboard, plied for the new town of Two Harbors, 30 miles from Duluth. This town site was formerly known to anti-Duluthians as Agate Bay, from the great amount of cornelian agate formerly found there and still found, though in less quantity and smaller in size than when I first visited the place, 15 years ago. Now the great ore shipping docks of the Duluth and Iron Range Railroad Co. more than the agates, monopolize the interest of the traveler, and are well worth seeing.

Thanks to the general superintendent, Mr. G. H. White, we experienced no difficulty in getting our boats shipped on the same train we were to take, which greatly relieved our minds, and by 4 P. M. we were in the new iron town of Tower, with only one problem left, how to get the Viking and the Racine from the depot to the lake. Friend Basset, however, relieved us from this difficulty, for to the sportsman tourist it must be owned that the town is most unfortunately located in the most uninteresting spot imaginable midway between the iron mines, where the depot is, and the lake, about a mile and half from either, where nothing is to be seen except the straggling main street of a new town cut out of the primitive wilderness. It may be for some reason best known to the proprietors that the town, prosperous as it is, was not located on the lake shore, so low, level and beautiful for that purpose, but to me, and presumably to the town people, it must always be a source of regret. However, the cheerfulness and comfort of the Pioneer Hotel cannot be denied, and after an abundance of refreshments and a good night's sleep, our two pets, the Viking and the Racine, were without injury or blemish (it must be owned, however, that the watchful and anxious eyes of the skipper never left them while making the portage), and, betimes the next morning, launched on the waters of Lake Vermilion.

Now there was nothing to mar the pleasure of our outset except, what there was of it, a head wind; and as we had been repeatedly told that there was always a head wind on Lake Vermilion, in whatever direction one might head, this did not disappoint us at first; but after we had rounded Sucker Point and had plied the white ash breeze over Big Lake and nearly to the Narrows, about twenty miles, it grew to be somewhat monotonous, and we commenced to sigh for even a Dakota blizzard if it would only come from the right direction. Still this monotony of labor did not prevent us from enjoying the beautiful fall weather and the fine variety of changing scenery that we slowly passed—for the misty haze of autumn is, without doubt, the best condition through which to view the shifting phases, the varied features of this fine lake, its bold headlands and rock y islands furnishing at every turn beautiful incentives for the artist's pencil, and more particularly views calculated for the tender treatment of earth and air in India ink or sepia so much in vogue just now with the artists of *Century* and *Harper*. We dined at Gold Island, so called from an unfortunate attempt made some twenty years ago by a company of speculators to unearth the precious metal here, and had chosen to spread our meal very near the old Newson shaft, which we afterward visited. The sailor and I had volunteered to superintend the culinary operations for the party, while the commodore and the skipper went out prospecting. We had hardly got the camp kettle on before we heard first a shot from one direction and then one from another, and in a few minutes our ranking seniors came in, each of them with a plump partridge, but more than this, the commodore came provided with a game bag full of potatoes that he had foraged from some Indian field, where, however, he declined to tell, and we cared not to know. He simply said "bouljong" for supper, and this, to me at least, meant volumes.

Having dined as hungry men will, and smoked, we proceeded again against the wind, which continued to shift around every turn and headland square against us until we had fairly reached the opening to the big west end of the lake. There for the first time the wind commenced to play us fair on the side, and while we were casting about for a good camping spot for the night the skipper had espied an island about in the center of the lake and two miles ahead, and said, "I can reach the lee of that island, and there's where we will camp to-night." Now a smart breeze was blowing, and I knew that the square edge of a three-mile sweep was liable to prove uncomfortable to less nautical friends than he, yet as I never presumed to question either the skipper's orders or his judgment, I at once acquiesced. And here is where the sailor first engendered that love for the poetry of billowy motion that kept developing more and more from this time to the end of the trip. Camp, lovely spot, well sheltered, and—bouljong. (Orthographically this is not a success, but phonetically and gastronomically entirely so. Please let the Commodore have his way in a little matter like this, seeing that it was he who furnished the potatoes, from heaven knows where, but without which it could never have been such a divine success.)

Neighborly calls were hardly to be expected after supper in this far-away region, and we hardly looked for any such social contingency. After dark, nevertheless, two gentlemen from a birch bark gave us this pleasure just as we were finishing our last pipe preparatory to turning in. They were not guests the sailor and I were very anxious to take in for intimate acquaintances, however, nor did the Commodore seem to take to them particularly, for we let him do the honors, and after they had gone he informed us that, though they had probably expected to find a camp and et cetera ready made for the night, he did not urge them to stay, but rather to continue their journey for the camp they were or pretended to be in search of on the south shore, for he kindly explained to them that we (the sailor and I) were wealthy Eastern capitalists looking out pine lands and might not like to be disturbed. And the "Eastern capitalists" were rather relieved when they had gone, but felt a sense of meanness, nevertheless, to have been the cause of a somewhat scurvy entertainment in a situation where nature particularly claims a common brotherhood for all mankind. But let it not, on account of this incident, be said that the Commodore was, or is, anything but the most kind-hearted being alive. It was with infinite pleasure that we had noted during the day his continually repeated acts of kindness to and efforts of familiarity with the Indians we now and then had met; he always had a kind word for them which they certainly understood the spirit of, if not the letter, and his bottomless game bag never failed to bring out a plug of tobacco for every one he met. One such scene will always be indelibly impressed upon my mind. We had just passed Gold Island when we met a model Indian family of four on their way to the Indian reservation or towik, now the mart of exchange for all Indian produce in this region. In the center of the canoe was the squaw, brown and jet black haired with her eleven or twelve months papoose as handsome as an Indian babe can well be, sleeping serenely though bound so tightly to its board-backed frame that it stood nearly upright against the side of the canoe again and again bright and gay. In the bow a six year old boy bright and active, prepared to enjoy to the full the stupendous wonders of the new town and the iron horse so lately come to the head of the old lake, and then the "pater familias" stately and sedate, with his paddle at the stern, who with an almost imperceptible twirl or turn of the wrist made the frail bark move like a thing of life. I could not help while looking at this picture during the short exchange of civilities going on with tobacco and pantomime between the Commodore and the chief, and while the squaw with her eyes was devouring the superb finish of the Racine, thinking how immeasurably superior was the Indian in his native element of wild woods and waters is to the debased and often squalid creature the mere contact with our civilization often leaves him.

Having an object before us we were up betimes the next morning and soon with the aid of the white ash reached the far west end of the lake and by noon, having completed our observations, were dined at the Commodore's summer residence. About here a couple of partridges were bagged by the skipper and then we resumed our journey by water for another point of interest, where it was proposed to spend the night. Our route lay along the most enchanting scenery and the water was as smooth as glass. Our trolling tackle was out, but so was the blinking sun and this was probably the cause of our want of success in this line, but as we passed a certain headland we had an exciting bit of sport; partridges were discovered; I fired, the skipper fired (in my haste I had seized his gun and he my musket—he calls my Parker a musket from its strong shooting qualities which he has tested) and then we both jumped ashore and fired once or twice more and it became a subject of lively discussion when we were under way again if any of the poor birds got away. Certain it is that we had four birds more for "Bouljong" that night and equally certain that five shells were emptied, but as to who emptied the extra shell will never be explained, for we had exchanged guns after the first round, but that no bird got away from us was equally maintained by all concerned.

The balance of the day was spent in rowing and paddling leisurely along beautiful shores between rocky islands and surveying such other objects of interest as we had come to see. Camped that night on a high headland overlooking a landlocked bay. Having now accomplished the object of our trip in fact, we resolved to devote the next day to exploration and sport, if any could be found. The Commodore and the writer had often wished for an opportunity to run up an arm of the lake northeast from the big west end, and then follow a creek some three miles further into a tributary lake which was said to be full of wild rice, hence ducks, and we went accordingly. But except for the keen enjoyment always felt in dipping blades in virgin waters and discovering pastures new the trip was fruitless. The creek proved a sluggish one, easily navigable, but tedious from its continual snake-like coils through a uniform bed of tall reeds and grass, and the lake, though promising when finally reached, was entirely void of that sport which we had anticipated, for with the exception of a few lonely ducks which took alarm at our first approach, the lake was empty. The Commodore would not be satisfied, however, until he had explored it to its extreme length; but while he and the skipper took the Racine to scour its shores, the sailor and I, with some misgivings, took the Viking back to the spot opposite the mouth of the creek which we had previously fixed upon as our camping ground for the night.

We had now been out two nights, and our commissariat had got into that state where something had to be done. The fact was our stock of bread had given out. We had plenty of the raw material for bread, but it was tolerably well known by most in the party that something had to be done to this material before it could become of real service as the staff of life. Just what this thing was seemed not so much a mystery as a subject for some shyness. They all knew how, but somehow seemed to evade the point at issue. For the commodore to slap a little bread together was an easy matter, the skipper thought it simple enough and the sailor guessed he had made johnjacks in the army. So it seemed that I was the only one in the whole party, that far from despising the operation, really knew that bread-making was an art, because I had seen it done. I had even helped at the process; for once while out when we had nothing in the world for a bread pan but birch bark, I had furnished the bark. So I had resolved that while my friend, the sailor, was fixing camp, I would surprise our seniors with hot bread for supper. But how there came to be the amount of genius, tact, science and manipulative skill required for this delicate operation in one person at one time, was indeed a mystery not only to myself, but even more so to my companions. However, the bread was good; was greeted with applause in fact; and this was how I suddenly became invested with the undisputed dignity of chief cook and commissary for the party. (I might add bottle-washer also, but it hardly agrees with my notion of dignity.) Slept like horses—tired drag horses—or like mules for that matter, for I have been privately informed since then that sounds issued from our tent that night something like the braying of that animal, at any rate a noise the like of which probably never before disturbed their solitudes, and this is to be hoped may never again. The next morning we commenced to retrace our course, homeward bound in fact. The weather had up to this time been most favorable and still continued fine. We had a splendid run across the big west end, a four mile sheet of water, with the wind on our quarter, and this wind became even more favorable as we entered the narrows, and for some seven miles we had a glorious run right before it, most of the time chasing the billows wing and wing.

But it was not intended that we should go the whole length of Lake Vermilion and back again without being favored with a little demonstration of what it can do when it has a mind. Siren-like, she had lured us into the innermost recesses with her sweetest smiles, but it was another matter as soon as we made it manifest that we intended to leave her fair bosom for good. Then she became tearing mad, and we were not slow to catch on. A bend in the arm of the lake necessitating a shifting course across the wind had just been passed, and we had a three-mile stretch of clear sailing before us and exposed to a two-mile sweep, when the skipper sniffed the air significantly and merely said "wind." Sure enough, some ugly-looking clouds were seen bearing down upon us in great shape, and they were not slow in coming. I felt pretty tolerably sure that the Viking would stand almost any sea that this part of the lake could well kick up; although, with three good-sized fellows on her and all our luggage, she was loaded rather too heavily, but what made the situation serious just here was the Racine in tow with the commodore in her. Would she stand a suddenly kicked up chopping sea right square across her beam? was the question, for should the commodore spill out or even fill we would have to stop to get him aboard, of course, which would have been awkward for both parties. As the wind kept increasing to quite a gale, several possible contingencies, any one of which would be accompanied by disagreeable complications, kept dancing before me with entirely too much vividness for perfect composure. Meanwhile I watched the Commodore in his little shell. She became fascinating under the circumstances—she has always been a beauty. To see her rise and fall on the crest of a wave or lay herself calmly between two monsters as if to invite destruction, only to come up smiling and shake herself again saucily for another and deeper plunge was something I had read about perhaps, but never before seen. The Commodore's paddle, it must be understood, however, was not idle, for to have left her to the tender mercies of a tow line would be asking too much under the circumstance even of a Racine. The wind kept augmenting, but so did our speed, and when we finally gained shelter from a friendly headland, the tension my nerves had been put to relaxed, and I began to shake as if with the ague. The captain and I have both been in many ticklish places together, have even been capsized, but I am safe to say that I was never more excited in my life than over this gallant struggle of the little Racine with the mermaids of Lake Vermilion. The Commodore, over whom we had had all this fuss, had never changed a muscle; the skipper never uttered a word of thanks, but the sailor drew one long and deep sigh of relief, as with a pathos most significant he remarked, "Water! Much water!! Too much water!!!"

Having gone ashore, stretched our legs and consulted our maps, we discovered that from this point we had nearly a straight shoot of only a couple of miles to the first narrows, with the wind nearly aft, so we were not long in taking advantage of this fact and getting under way again in the same order that we were before, for the Commodore laughed at the idea of giving up his Racine and individual liberty now with the wind in so favorable a quarter. The race across this stretch was not less exciting, but less dangerous, and we went it a whooping; we passed some Indian boys in a canoe lying to in the mouth of the narrows, and their mouths were literally agape with amazement at the rate we swooped by them (perhaps also at the strange craft we were in). And now it was determined that as the wind was increasing to a steady gale, we should only make Gold Island and get dinner there while awaiting future action of the elements from above.

We found a lovely spot for our purpose in a sheltered cove, and went to work with that mathematical precision which invariably characterizes the movements of the commissary when in camp and prepared a meal fit for far higher personages than any we had to deal with, *i. e.*, "the gods," which, having discussed to our stomach's content (for the stomach's is apt to be heart's content in such cases), we proceeded to discuss the awkward situation over our pipes and the smouldering camp-fire. After due deliberation and taking the rather too tempestuous weather into consideration, it was resolved to take it easy and row along under the protection of the north shore until we should reach point from which we could make a straight shoot, with the wind abaft, for Birch Point. Right here it may be remarked that this plan suited the sailor exactly, except in so far as it might be thought necessary to sail. He liked sailing, he remarked, and he had grown quite enthusiastic over it on this trip; indeed, it was the poetry of motion long sought for, but it was a mistake to suppose that such poetry should be indulged in except on smooth water. It had been his lifelong habit to sail on smooth water, he said, and he had never met with an accident; but on rough water people should always row. And to prove his honesty of opinion and purpose he even proposed to row himself; but this proposition it must be remarked, was met with somewhat of incredulity by the rest of the party, and yet the opinion, experience and logic of the sailor had such weight with us that when we started "it was rowing we were;" and thus we dawdled along watching the weather which was puffy and boisterous; stopped once intending to raise a shelter of our tent to escape a threatened shower, but thought better of it as it appeared to blow over; proceeded until we had come to a point from where we could cross this arm of the lake for Birch Point, the place where we had intended to camp if the weather should prove too boisterous for continuing our way across Big Lake to Tower, and just here it was we met a sight, or rather a sight passed us that made the commodore and myself with a sense of shame and the skipper with something like silent wrath. A half a dozen birch barks were seen plying along in the very center of Storm channel and their occupants we knew to be Indians from the fact that they used their blankets only for sails and they were having a lovely time playing with wind and waves. This was too much for the skipper and with suppressed rage he commanded me "Give her the foresail, Mr. Commissary, we must see where these perky squaws are going." And I was only too quick to give her the foresail. How we flew as we got into big water where the wind had more sweep, the waves grew naturally larger, and as we neared the opposite shore, the rain squall that had been threatening struck and made things furious; the wind picked up the water and splashed the spray over us in spite of our running away from it, and the captain, with the sheet in one hand and the tiller in the other, had all he could do to hold her. I had my hands on the throat halliards and was ready to let go instantly at word of command. As for the Commodore we wasted no thought on him now, for with the wind astern, as long as our rigging would hold he was all right. But the sailor just now was rather in an embarrassing position. He couldn't row, that was certain and equally certain it was that this was not his kind of weather for sailing. Then again we could not very well stay where we were, he admitted even this as the force of circumstances were such as to compel us to go on, even if we went to the bottom, indeed afterward he candidly confessed that as there was only one thing for him to do, this he did with all the care imaginable, as he expressed it, "I was determined to go down with my hair parted right square in the middle," but we did not go down, but on.

We soon entered the narrows leading to Big Lake but we had yet some distance to make to Birch Point under which we intended to take shelter, the wind rather increased than let up, it seemed to make a funnel of the Narrows and bowled us along at a great rate. As we looked for complication arose, either our course or the wind had changed a trifle so that under ordinary circumstances in order to round Birch Point we should have shifted sail. The wind was now so furious, however, that this simple maneuvre could not be thought of and we were forced to follow a windward shore with a sail to windward, bellying so far before the mast at times that it was in some danger of being wrapped around it (to come around with the commodore in tow was not to be thought of), and here it was that the sailor's nautical knowledge failed him. To bowl along in mid channel with a friendly windward shore not far off, offering some protection and not avail ourselves of it was something beyond his ideas of what ought to be done, but still it must be argued that as a landsman his instincts remained intact, for he repeatedly put the query, "Can't we get in here somewheres where it won't howl so?" but when this idea had been hinted a few times the commissary was forced to quiet him with a "ssh, dear boy, don't bother the skipper now he has all he can attend to," by which time we were near Birch Point, the most ticklish point for us to make as yet but pleasant if gained. "Get a hold of the boom if you can," said the skipper to me, "and at the word haul down and take the oars, I will 'tend to the commodore." "All right, John." "Now." Down she came! but before I could get the oars in motion the momentum we had gained swung us into smooth water with the Racine under the Viking's lee following the tow line in the skipper's ready hand, and right in the midst of a fleet of birch barks. We found ourselves with their dusky occupants almost as surprised as we were at the sudden and unexpected meeting. They had stopped to make some trifling repairs to some of their crafts and to await a favorable sign from the elements to move on down through Big Lake. We intended if the weather did not let up, to stop all night.

It was aggravating, though, after they had waited awhile for a

few fearful gusts to blow over (during which time they smoked tranquilly, looked weather-wise and uttered a few gutteral monosyllables to one another) and after I had changed a half dollar and my pipe for one of theirs, I repeat it was aggravating to see them accept a favorable omen from the elements and start in single file down the lake with the wind square behind them and beckoning for us to come on. It was almost more than the skipper could stand, and I, less enthusiastic, but recognizing the chance of getting to Tower that night without much rowing, addressed the sailor thus:

"Now, my dear boy (you see we had been boys together) these Indians know when it is safe to start, now we can follow them and with the wind astern can just as well as not get to Tower to-night, to Duluth to-morrow night, and you can be in St. Paul Sunday morning."

Sailor—"You think you can, eh! and there will be no danger?"

Commissary—"Certainly not; where the Indians can go we can go and they know when to start. You saw them beckon to us to come on."

"Sailor—"And you think there will be no danger to follow the Indians over Big Lake now?"

C.—"Certainly not."

Sailor—"Not a particle of danger?"

C.—Not a particle."

Sailor—"Well, then, if that's the case, we will stay right here."

Immediately after this conversation the commodore selected a convenient log and proceeded complacently to take his favorite "L. C. Smith" apart for an oiling, lest, peradventure, some treacherous water drop might have got into that same (through its impenetrable casing of inverted sheepskin) during our watery peregrinations this day. So that matter was settled.

Now it so happened that this wind, coming from the north (it was growing constantly colder, by the by), had brought with it an army of geese, who had no doubt sniffed the necessity of seeking a warmer clime about now and were embracing this opportunity to get help from the wings of the wind, and the vanguard of the particular troop heading for our region I happened to espy flying low. I immediately sang out, "Geese, boys, flying low," seized my Parker, and got myself under the shadow of a tree so as not to divert their flight, for they had turned so as to come right over us, but the tree proved my stumbling block, preventing me from getting a fair swing. The captain did not see them before they were on him, the Commissary had to put his gun together and had only time to put in one duck shell, so we all fired and never ruffled a feather, and the geese, with a few extra "honks," were content to sail away. Well, if it were a desirable and not a melancholy thing to see three chopfallen sportsmen, it would have been well worth one's while to take a good look at us just then. The sailor was the only one that had improved this enviable opportunity. For the first time I quarreled with my Parker. The sailor noted the fact. The skipper, I believe, actually swore at his gun, and remarked in *sotto* something to the effect that if it had not been a present from an old friend he would have drowned it long ago, and the sailor also noted this fact. The commodore apologized for his, saying he was not ready. Then the sailor, with a long and tired look at each and every one of us, including a careful survey of our weapons, exclaimed: "Well, I swear, if I'd a thought that, I'd pulled some of 'em down by the legs." And how ever it came out afterward I cannot say; it seemed to me a breach of promise case when the feasibility of pulling a goose down by the legs came to be publicly discussed before the bar at the Tower Hotel, for we had made a solemn compact before leaving the camp at Birch Point that this goose business should not be mentioned in our future intercourse. The sailor's hereinbeforementioned inordinate desire to "turn in somewhere" at a certain critical juncture should not either be expatiated upon; but that infernal thing in the shape of humanity, the Tower press man, got a hold of it somehow, and before we knew it the whole compact, solemn though it had been in the making, was a "gone goose," and "pulled down by the legs" at that.

It blew the rest of that day and turned so cold toward night that we were forced to recognize the value of the instinct in the numerous troops of geese that regularly succeeded each other from this on, flying for a warmer clime, and by the quaint music of their calls and commands we were lulled to sleep in Drew's comfortable cabin. It blew the next day and grew even colder, and as we had now lost our connection by rail for a day we concluded to make our cabin more comfortable and spend the day in hunting and fishing; and we were sufficiently successful in both to keep our table abundantly supplied, and this was all we cared for. The next morning the wind had gone down to a great extent, but it had also changed direction, so as to be far from favorable. Instead of the northwest wind that had followed us from the west end, it was now northeast, just from the very worst quarter we could possibly have it in crossing Big Lake, *i. e.*, one point from a dead-ahead and with an eleven miles sweep. Under these circumstances the thought of sailing across was not entertained, but our mode of procedure was arranged a little differently in case a heavy wind should arise suddenly. Our falding stove and other least indispensable luggage were stowed in the Racine, the commodore was given the tiller of the Viking and the skipper and I took the oars. This was all that our little ship was able to carry in a heavy sea, but the arrangement was preferable in case of an emergency, and it did indeed look at times as though we were in for it; but with a few puffs now and then, the weather contented itself finally with settling down to a steady but cool breeze.

From Drew's to Sucker Point, a distance of 7 miles, we never rested on our oars, but the sailor and the commodore, not having the advantage of exercise, were stiff with cold, so we landed here and built a fire for one wing of the party to thaw out by while the other rested. From Sucker Point to Tower we white-ashed it over glassy water, and here the nautical experience of our cruise ended; not so our adventures, however, for yet one more, and an entirely unlooked for one was in store for us.

It seems we were destined to experience a wreck of some kind on our trip, and this not having occurred as it might easily have done on Lake Vermilion, it must perforce be brought about on main land. The box car we had secured for the transportation of our boats to Two Harbors was thrown off the track by a broken wheel (a nimble and quick-witted brakeman had smelt the danger and detached our coach from it in time to avoid the unpleasant consequence of us following after), the result was that in order to get to Two Harbors that day we had to take passage on the platform cars forward, which were heaped with sand and gravel. Great relief was felt when the wrecked box car was opened to find the Viking and Racine uninjured, and at the captain's suggestion, with the help of the train men (the attorney of the road even, who happened to be a passenger lending a hand) we soon had their keels solidly planked in beds of gravel.

The faithful sailor voluntarily stationed himself at the Viking's stern and was observed from this on to hang on to that vessel's sternpost with a determination savoring almost of the sublime, and after we had thus triumphantly sailed into Two Harbors it was not without some degree of self-complacency that, as he expressed it, he had "saved the old tub again."

Thus fortunately ended a week of delightful experience, observation and some adventure, which must be always remembered, I think, as red-letter days by each and every one of our party.

BERLIN.

OTTAWA C. C. RACES.—On Sept. 24 a paddling race for the Brough Cup took place with the following starters: Messrs. Baldwin, McQuilkin, Rogers, Gisborne, Brough, P. A. Mangy, Wicksteed. Mr. Baldwin won the cup, with McQuilkin second and Rogers third. He will hold it until the next race in the spring, and if he wins it then will retain it permanently. A race was lately paddled at Ottawa between Messrs. Brough and Badgely, McQuilkin and Rogers, Short and Pittaway, Mercer and Gisborne and Baldwin and Hemming. Mr. Brough's crew won, with Mr. McQuilkin's second. The two winning canoes used the double blades, the other three being single.

CANVAS BOATS AND CANOES.—Utica, N. Y., Oct. 2.—*Editor Forest and Stream:* Your correspondent, C. W. Hallock, inquires for the personal experience of some of your readers with portable canvas boats. I have a Stranahan canvas boat, manufactured by Frank Holmes, Chagrin Falls, O., which I deem invaluable for inland cruising. It is made in three sections, weighs about 40 or 45lbs., and will carry three persons. We have used it on two trips in the Adirondack region this year and it just the thing for exploring purposes, trout fishing and deer hunting. Many times while floating for deer we ran on to snags and rocks, but the boat came out all right.—Pursuit.

PECONIC BAY.—On Oct. 15 Messrs. Barney, Shedd and Patterson, of Springfield, will leave for a two weeks' cruise on Shinnecock Bay, taking their canoes and guns, the double object being to shoot ducks and explore Peconic Bay, with a view to a salt-water meet. They go by rail to New London, thence by boat to Sag Harbor, and by rail to Good Ground.

BIRCH BARK CANOES.—A correspondent sends us a circular of Coleman & Godshall, Florence, Wis., makers of birch bark canoes from 10 to 25ft. long. The canoes are built by Menominee Indians. The prices range from $20 to $40.

HOW WOULD YOU LIKE IT to have your wife and children in want of the necessaries of life? Many families have suffered this from the death of a protector who expected it as little as you. Moral: Insure in the Travelers, of Hartford, Conn.—*Adv.*

Yachting.

JUST WHAT GALATEA REALLY DID.

OVER the inside course Mayflower officially beat Galatea by 12m. Lieut. Henn claims that his cutter was bothered a great deal by the large fleet of accompanying steamers. These kept ahead of the cutter over the whole course and chopped up the water in a way which must have been seriously detrimental in the light wind. Toward the close of the race Mayflower had her wind badly broken by the excursionists steaming alongside and about her quarters. But this was only during the last half hour of the race. Galatea was twice forced about, had to pay to windward off on one occasion, and for lack of water was compelled to heave round under Mayflower's lee.

It is difficult to estimate how much Galatea was injured by all this. Lieut. Henn has been reported as saying that five minutes was lost in consequence. This I deem a fair estimate, and conclude that in the first match for the America Cup, Galatea was beaten about 7m. on her merits.

In the second or outside race, Galatea was beaten officially 29m. All accounts agree in saying she lay becalmed for 20m., while Mayflower was making for home. This reduces the difference to 9m. It was also generally reported that Mayflower had a little the best wind nearing the turn and also on the last of the run home. For this it is safe to allow 2m., so that the race was again lost to Galatea by about 7m. on her merits.

The sail area of the Galatea is about 8,000 sq. ft. She is sparred for all-round racing at sea.

The sail area of Mayflower is about 9,000 sq. ft. She is oversparred for seawork and rigged only for light weather or a breeze in smooth water. Pratically Galatea sailed with a reef down in comparison with the summer rig of the Mayflower.

Every one will grant that a Mayflower under whole sail will beat a Mayflower with a reef down in light winds by much more than 7m. over a 40-mile course.

Similarly, assuming Galatea's hull to be only as favorable to speed as that of the Mayflower, she should have been beaten by much more than 7m. owing to difference in sail area.

That Galatea was not beaten more than 7m. and not by as much as difference in rig would account for, is the best proof possible that Galatea's form of hull is particularly well adapted, keel, lead and all, for the highest speeds in light wind, and that her form of hull is in reality superior to that of the Mayflower, else she should have been beaten by more than difference in sail area accounts for instead of less.

Had Galatea been given like sail area with Mayflower, the cutter would have herself the faster of the pair. She lost both races, simply because underrigged by comparison for such a trifling conterfeit upon real work of real racing.

That Galatea is capablo of carring as large or nearly as large an area as Mayflower in light winds is certain from the fact that even at small angles of heel the cutter stood up better than the Mayflower, the difference is stiffness standing as an approximate equivalent for the difference in the sail areas of both yachts.

In opposition to the defect of Galatea, scores of races can be cited in which equally extreme cutters have beaten all comers of the sloop and centerboard variety, in witness whereof I point to the records of Clara, Ulidia and Shona by way of example, all of these 6-beam cutters, as narrow, as heavy, as deep as Galatea in proportion to their lengths.

If Galatea was beaten because she is all wrong in hull and Mayflower won because she is all right, then it is impossible to explain by rational talk how Clara, Ulidia and Shona have met with such unprecedented success and proven themselves the fastest craft among *hundreds* of sloops of their length.

If my explanation of Galatea's defeat is logically exact, then, and the only, does then performance of Clara, Ulidia and Shona admit of rational interpretation.

There are no facts or grounds upon which to account for Galatea's defeat in the form of her hull. The recent international races prove only one thing, a vessel with a reef down will be beaten by another without a reef in light winds.

Most people are aware of this fact, and international races are not required to prove what is self-evident.

Those who choose to overlook twenty odd *consecutive* victories of the cutters this season, and think they see in Galatea's defeat a verdict against the hull of the cuttor and some occult advantage in the greater beam, lighter displacement and centerboard of Mayflower, will some day wake up to their mistake.

It is only necessary to build an 85ft. Clara to successfully dispose of the Mayflower. If now measurement rules do not interfere, I look forward with confidence to the ultimate triumph of an 85ft. cutter, just as I have already seen the complete triumph of cutters in the smaller classes.

After the Puritan's victories last year it was prophesied that cutters would die a speedy death in America and that in England the "compromise" would crowd out the thoroughbred racing cutter. Exactly the reverse has taken place. Cutters have multiplied and become more popular and successful than ever before in America, and the British have received the mere notion of Mayflowers with disdain.

It is again prophesied that Mayflower's meaningless triumphs will drive cutters out of existence all the world round.

I foresee no such thing, but venture the prediction that the fleet of cutters in American waters will continue to grow, and in their classes drive the sloop away from the start altogether. I further predict that more keel vessels will be built than in the past, and that our sloops and counterfeit cutters will continue to approach the real article step by step, as they have been doing for some years past, till a Philadelphia lawyer himself could not decide what really is sloop and what cutter.

As for the British seas the world will come to an end before the sloop or even the compromise receives national recognition. In the words of the London *Field*: "All our experience on this side of the Atlantic goes to prove that in the steep seas usually met with on a coast with hard running tides the long, narrow and deep type of yacht can get through it faster than the beamier types."

It will take more than the Mayflower's play racing to turn such evidence as that.

I venture upon one more prediction. If Mayflower is ever beaten by a new vessel built on this side of the Atlantic, it will be by something narrower, deeper, heavier than herself, and in all probability by a vessel with a lead keel.

The review of this season's racing which I hope to contribute before long, will exhibit the overwhelming superiority displayed by the cutters this season. C. P. KUNHARDT.

SACHEM AND MIRANDA, OCT. 1.

SCHOONER racing this year has been more active than usual, and has partaken of the impulse given to all yachting by the International contests. Not only have the old boats been improved during the past winter, but the fleet has received two very important additions, both differing greatly from the rest of the fleet. Thes first of these, Mr. Burgess's white schooner Sachem, has been described before in our columns, a yacht very similar to Mayflower but schooner-rigged and with a clipper stem. She has the lead keel and centerboard, and the model differs but little. While she has done little racing this year, and has twice lost her chance by bold flukes, she has shown that there is speed in her model, and that she will not be far from the front in the future.

The other addition to the fleet comes by purchase, the keel schooner Miranda, designed by Mr. John Harvey and built by him in 1870. For some years she was at the head of her class, and with the disappearance of schooner racing abroad she has never been outbuilt. For some years past the improvements in the schooner class have stopped entirely abroad, in consequence of which Miranda, though her original ballast plan has been altered by the addition of a heavier lead keel, has not kept pace with the improvements that have marked the cutter class of late years. This season she was purchased by Mr. G. W. B. Hill, of New York, and sailed across the Atlantic. Her crew were shipped in England, but her sailing master is an American, formerly master of Mr. Hill's schooner Varuna. Not having raced for a long time previous to her sale, she is yet far from her proper trim, her light hollow bowsprit being replaced by a heavy one of solid yellow pine, while her sails are none of the newest. Added to this she is in new hands, and while her skipper has done fairly by her, it is hardly to be expected that in two or three months he will do what Canfield did after seasons of racing.

It has been a most interesting question how she would compare with our American yachts, and the Newport race was looked to to decide it, but in vain. To the satisfaction of all yachtsmen a match was made shortly after that dismal failure by Mr. Hill and Messrs. Metcalf & Owens, owners of the Sachem, the course to be 20 miles to windward or leeward from Newport, to be sailed under the New York Y. C. rules, within a limit of eight hours. The race was for a sweepstakes of $500 per side, to be devoted to the purchase of a cup after deducting expenses. The date first set was Thursday, Oct. 1, but the race was fortunately postponed to the following day, as there was little wind. The Sachem's corrected length is 88.47ft., while Miranda's is 85.75ft., the latter receiving an allowance of 1m. 35sec. It is a curious fact that while Miranda has long been noted for her peculiar rig, a very short foremast and a long mainmast, this year Mr. Burgess has given Sachem the same peculiar proportions of spars, so different from all American practice.

Friday morning at Newport was very foggy with a light S. W. wind, clearing about 8 A. M. as the breeze became fresher and fresher. Miranda went out under sail about 8:30, while Sachem was towed out by the tug Narragansett at the same time. The steam yacht Talisman, with her owner, Mr. J. W. Slater and the judge, Com. A. Cass Canfield, S. C. Y. C., accompanied the yachts to the start off Brenton's Reef Lightship, Messrs. Burgess and Owens went on board of Miranda to conclude all arrangements, and the course was decided upon; S. W. by W. 20 miles, making the mark 8 miles W. of Block Island.

The first signal was given from the Talisman at 10:43. At 10:53 the start was given, Miranda going over first on starboard tack, carrying large jib and working maintopsail. Sachem also crossed on the starboard tack, carrying foretopsail as well as main. The times were; Miranda, 10:54:35; Sachem, 10:56:39. Sachem began at once to gain on her rival, going to windward of her. At 11:18 Miranda set her foretopsail, tacking just after, while Sachem followed at once. The latter gained steadily, and at 11:26 Miranda tacked again, the white one again following her around. Sachem was now the leader and gaining. At 11:47 both went on starboard tack toward Point Judith, running into rougher water. Off Point Judith Miranda stowed her foretopsail, but Sachem was well ahead and still gaining on her. As they neared the mark Sachem was a long distance ahead, when suddenly the wind went round to N.W., Miranda getting it first and coming free for the mark and gaining considerably on Sachem before the latter felt the new wind. Sachem made the mark on the port and tack set her foretopsail and started sheet for the reach home. The times were: Sachem, 2:18; Miranda, 2:25. Thus Sachem had gained 8m. 34s. in a beat of 20 miles. During the latter half of the race the wind held about N. W. by N., blowing quite heavily, and the yachts made good time, Miranda gaining a little but still being badly beaten. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Sachem	10 56 09	3 53 50	4 57 41	4 57 41
Miranda	10 54 35	4 02 35	5 08 00	5 06 25

THE THETIS-STRANGER MATCHES, OCT 1-2.

NOT satisfied with the race from Newport to Marblehead won by Thetis, her owner and Mr. Warren have kept up the racing by two more matches, the first a single race of 15 miles to windward and return, the second a series of three. The first race on Oct. 1 was sailed under the following agreement, made on Sept. 27: Match race agreed to between yachts Stranger and Thetis for $200 per side, to be 15 nautical miles dead to windward or leeward and return. Race to be sailed first day after Sept. 30, that the wind and weather permit. Yachts not to be started in a fog or gale of wind, and race to take place off Marblehead. Race to be sailed in six hours or no race, and in case the finish is not made within this time, yachts are to start each day next ensuing, wind and weather permitting, and warranting chance of a finish within the time limit, until completion of said race. No restrictions as to sail or crew. Race to be sailed under Eastern Yacht Club rules, and with their time allowance, the loser to pay expenses of tug boat, the judges to decide whether the weather warrants a start. If the judges do not make a decision as to weather on or before 12:30 P. M., race to be off for the day. Signal of starting of the race to be a steam tug whistle. Before preparatory signal is given the tug will have an American ensign at the fore. Preparatory signal to be given by hauling down American ensign and hoisting blue peter in its place. Five minutes later signal for start shall be given by blowing tug whistle and hauling down blue peter. Mark boat to be left on the starboard hand.

As the Mayflower-Galatea race had been given up on the previous day there was a good breeze, though light at the start. The wind was W.S.W., driving away a fog that prevailed on the early morning, and the course laid out was E.N.E., 15 miles, from Half Way Rock, finishing off Marblehead Rock. Mr. George A. Goddard, on the tug Wm. Sprague, acted as judge and starter. At 11:25 the first whistle blew, followed by a second at 11:30 to start. Stranger with clubtopsail and balloon jibtopsail over lower sails went over at 11:30:40 with Thetis under similar canvas at 11:32:15. Stranger set her spinnaker to port promptly at 11:32:10, but it was 11:32:20 before Thetis had hers drawing. The wind was quite light and working to the south, so that at 12:35 the booms came over on both and spinnakers were shifted to starboard, Thetis being a little ahead of Stranger at the hailing. At 1:05, the wind still being very light, both took in their spinnakers.

At 2 P. M. Stranger was on Thetis's weather quarter and covering her, but the latter jibed over and started away. Stranger hung to her very closely to the turn, which was made thus:

Thetis	2 10 45	Stranger	2 11 08

Coming home a good breeze met the yachts, increasing as they beat into it. Both crossed on the starboard tack, lowering clubtopsails. Thetis had her jibheader aloft, but the cutter lost time by having to lower one sail before she set another. At 2:23 Thetis went on port tack, Stranger following at 2:25. At 2:30 Thetis tacked again, with Stranger after her at 2:35:30. At 2:53 Thetis stowed her topsail and at 3:02 she tacked again in toward Thatcher's Island. Stranger held her tack until 3:08, when she followed Thetis. Stranger had been outpointing the other but not footing so fast; now, however, she came up on her. Thetis gained again for a time, but near the finish Stranger came up closer. Both had to tack finally to weather the line, crossing on starboard tack thus: Thetis 4:49:00, Stranger 4:50:22. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Thetis	11 32 15	4 49 00	5 16 45	5 15 45
Stranger	11 30 40	4 50 22	5 19 42	5 19 42

Two of Stranger's crew were knocked overboard in jibing, but were picked up safely.

Following this race a series of three was agreed upon, the conditions being as follows:

Match between the Thetis and Stranger for $200 a side, best two out of three races. Yachts not to be started in calm, fog or gale of wind. Races to be sailed in three hours or no race, and if the finish is not made in that time, it is to be sailed the following day. No restrictions as to sails or crew. Races to be under Eastern Yacht Club rules and measurements. Loser to pay expense of tug boat, etc. Start to be the same as in first match. First day, 15 miles to windward and leeward and return. Second day, triangular, 30 miles, 10 miles a leg as nearly as possible. If no start is made by 12:30, race to be off for the day. Third race, if necessary. Toss up for choice of course. GEORGE H. WARREN.

Witness by JOHN BRYANT. HENRY BRYANT.

MARBLEHEAD, Oct. 2.

The tug Sprague ran over from Salem early in the morning, picking up Stranger off Beverly. The wind was then strong from the west. Mr. Goddard was unable to act as judge, so his place was filled by Mr. B. W. Crowninshield. Mr. Bryant was also absent and his brother, Dr. John Bryant, acted in his stead. Mr. Warren and Lieut. Henn were on board of Thetis to arrange matters finally. The start was decided on from Marblehead Rock, E.S.E., in anticipation of the wind hauling. At 10:56 the first whistle found both the yachts far from the line, both with club and balloon jibtopsails aloft, Thetis also carrying a thimble header under her clubtopsail. The start was given at 11:01, the crew of Thetis then being busy with her spinnaker boom, while Stranger, further away, was setting her spinnaker. Thetis was first away, crossing at 11:03:04, while Stranger with a worse wind inshore and in trouble with her gear, did not cross until 11:05:45. As the time was taken from the signal, both were handicapped.

Stranger soon began to overhaul Thetis, though her spinnaker was hardly drawing, the wind being well forward. Within the first half-dozen miles she had made up her loss of 2m. 4s. For the next half-dozen miles the two held even, first one and then the other taking the lead, but when near the mark Stranger ran some distance ahead. The wind still worked to the north, and Stranger took in her spinnaker and jibed. A short time later Thetis took in her spinnaker, coming rapidly for the mark. When near it she made a handsome jibe and passed on starboard tack at 1:11, her balloon jibtopsail having been stowed. Stranger had lost ground and did not turn until 1:12:50.

With a strong breeze now blowing the two started for home in close company, tacking together and holding very even, being close together at times. When abreast of Magnolia Thetis downed her working topsail, but Stranger held hers until near Baker's Island. The cutter continually had worked to windward of the other, but Thetis had been sailed harder and had outfooted her. Thetis held in by Baker's Island, while Stranger drew too much water to follow, thus losing considerably. The finish was:

Thetis	3 46 10	Stranger	3 51 33

The full times were:

	Start.	Outer mark.	Finish.	Actual.	Corrected.
Thetis	11 01	1 11 00	3 46 10	4 45 10	4 44 10
Stranger	11 01	1 12 50	3 51 53	4 50 53	4 50 33

The times counted from the actual start make Thetis the winner by 3m. 42sec.

The second race was sailed on Oct. 5 over a triangular course of 30 miles, from Tinker's Island, 10 miles south by west, to Harding's bellboat, leaving it on the port hand; thence to the outer mark (tug William Sprague), 10 miles east by north half north, leaving the tug on port hand, and thence 10 miles northwest to finish, between the tug and Tinker's Island.

On board the tug were Messrs. Geo. A. Goddard and W. Lloyd Jeffries, judge and timekeeper. Lieut. Henn and Mr. Charles A. Longfellow sailed with Mr. Warren, while on the Thetis were Dr. John Bryant, Mr. Joseph Hawes, Mr. Decatur and Captain Reed. The wind was quite fresh from N. to N. E., with some sea outside the harbor. Both yachts came to the line off Tinker's Island under lower sails and jibheaders, Thetis carrying a clubtopsail.

The start was a flying one at 11:22 A. M., Thetis going over smartly with Stranger to windward a little later. Thetis broke out her balloon jibtopsail as she went over and Stranger set a small jibtopsail, and the pair at once began a huffing match, running off their course.

After a few minutes they settled down to work again, only to go off later in a second trial at wind jamming. Stranger now began to gain and led Thetis, the latter stowing her balloon jibtopsail. At 12:15 the wind shifting a little allowed them to set spinnakers, and they ran along for a time under them until at 12:41 Stranger lowered hers for the turn. Thetis held on until 12:45 with hers. The turn was made:

Stranger.....12 47 17 Thetis.....12 48 48

The cutter had gained 1m. 52sec. in ten miles.

Stranger continued to gain, while the wind fell lighter, as she was outpointing Thetis considerably, both feeling the sea. When off Minot's Ledge at 1:30, Stranger was far to windward and a little ahead of Thetis. Here the cutter made a bad error that cost her some of her lead. She went on starboard tack out into the flood tide, taking it on her weather bow, while Thetis held inshore toward Cohasset, holding on for over ten minutes.

It was 2:15 when the tug stopped at the second mark, and at 2:20 Stranger made her last tack for the mark, crossing Thetis's bow by a half mile. The turn was timed, Stranger, 3:32:10; Thetis, 3:53:35. Stranger set up small jibtopsail and soon was on her course for the finish, easing sheet and shifting to balloon foresail. The race was over here, as Thetis had no chance of catching the cutter. Stranger was timed at 4:50, the other being then two miles away. As some of the party on board wished to catch the Boston train, the tug towed Thetis in. The times were:

	Start.	Finish.	Actual.
Stranger	11 22 00	4 50 00	5 28 00
Thetis	11 22 00	Did not finish.	

The final race, over a course to be chosen by the winner of a toss, was to be sailed next day.

LARCHMONT PENNANT REGATTA, OCT. 2.

THE fall pennant regatta of the Larchmont Y. C. was sailed on Oct. 2, over the match course of 28 knots, in a strong N. W. wind. As usual in all the club regattas this year in which sloops and cutters have entered together, the cutters came out ahead, Clara beating Cinderella and Mona disposing of one sloop in her class, while the remaining one withdrew. Clara's victories have become so much a matter of course that they attract little notice now, but the beating which she gave Cinderella at the end of the season counts for much more than those of the early spring when the latter was new from the stocks. Built after the new type and specially to beat Clara, she has failed to do so once in a season of hard racing, though handled by some of the leading amateurs in various races. It has been claimed that Clara has a specially good skipper and so she has, but in many of her races this year she has been sailed not by Barr but by her owner, Mr. Sweet, by Mr. Lee and by other amateurs, so it is not all the skipper, however great Barr's share in her success may be. Never beaten by anything near her size, leading her class this year and last, beating the sloops in the class above her on allowance and even on elapsed time, first in all weathers, blow high or blow low, Clara cannot be ignored in the dispute over types, but after every dogmatic "hence" and "therefore," her record still remains to be accounted for and explained away. Not only wins over individual boats or in single matches, but a complete monopoly of the racing for two seasons, which no American centerboard boat, old or new, has interfered with in the least. Those that have faced her she has beaten, while the rest have met a still more inglorious defeat by avoiding the regatta courses that once belonged to them.

Saturday was a rare day for yacht racing, bright, cool, with a fine N. W. wind. At 11:00 the first signal was given, with the start at 11:10. The starters were in Class C, Clara and Cinderella and in Class H., Mona, Surf, Santapogue and Sara. Clara led over the line with Santapogue next, then Mona, Cinderella and Surf. Sara was handicapped. Surf was hardly over before her bowsprit parted in the iron and put her out of the race. It was a short run to Execution Buoy, with booms to port, making a jibe necessary. Clara's boom came over at 11:27:40 and Cinderella's at 11:28:21. Off for Matinnicock Clara tried a spinnaker but it would not draw. Cinderella had gained a little and at the buoy tried to cut in between it and Clara by a sharp maneuver but failed to accomplish it. The times at Matinnicock were:

Clara.....12 07 57 Cinderella.....12 08 05

When off on the next leg Cinderella housed her topmast at once, but Clara held to her jibheader for half an hour longer. At Captain's Island buoy the times were:

Clara.....12 37 05 Cinderella.....12 37 57

The other boats were not timed at the intermediate marks. Out to Execution again with wind abeam Clara increased her lead but the turn was not timed.

The wind drew ahead on the last leg, but Clara weathered the finish, the centerboard having to tack to make the line. While Clara was beating Cinderella the same story was being told in the smaller class, the keel Mona beating the centerboard Santapogue, to say nothing of Sara, so far astern that she was not timed. The full times were:

CLASS C—CABIN SLOOPS AND CUTTERS 55FT. AND OVER.

	Start.	Finish.	Elapsed.	Corrected.
Clara	11 10 29	1 49 53	2 39 24	2 39 24
Cinderella	11 11 41	1 52 51	2 41 10	2 40 55
CLASS H.—CABIN SLOOPS 53FT. AND UNDER 42FT.				
Mona	11 10 55	2 23 18	3 12 23	3 10 43
Santapogue	11 10 48	2 21 48	3 11 00	3 11 00
Surf	11 14 22	Disabled.		
Sara	11 15 17	Not timed.		

THE MAYFLOWER-GALATEA RACE.

THE end of the long waiting at Marblehead has been merely another fizzle, as the first of October was reached without a breeze, and according to agreement Mayflower sailed for Beverly to lay up. On Sept. 29 there was a good breeze in the morning and the signal was given for a race. The wind was strong from the north, increasing from 7 to 9 A. M., but at 9:30 a light rain began to fall, partly killing the wind. Both yachts sailed out to the start off Half Way Rock, carrying clubtopsails. For a time the wind freshened, but fell again, though blowing a moderate breeze. For three hours the boats maneuvered about the line, but at 1:30 Lieut. Henn objected to starting, as the wind was not likely to strengthen or even to hold, and Com. Hovey agreed with him, so the race was abandoned for the day. Later on the wind dropped and it seems certain that even if started in good time the conditions of the agreement would not have been realized.

The occasion has been seized upon by the daily press as an opportunity for a good deal of abuse of Lieut. Henn's action, but the representatives of both yachts agreed in their opinions, and the weather itself furnished a full justification of their action. Among the most unpleasant criticisms of Lieut. Henn is the following interview with Captain Stone, widely circulated by a number of daily papers: "Yes," he said, in answer to an inquiry, "I was very much disappointed at having no race yesterday. I did want to give Lieut. Henn another trial, as he seemed anxious for one, but, after yesterday's experience I am disgusted. In my opinion the reason for reversing the decision to race was that the Englishman is afraid to risk another encounter, and made an excuse for the occasion. He is simply playing a game of bluff. Why, yesterday was the best day we have had this season for yacht racing. If Lieut. Henn had meant business he would not have let such a chance slip by unimproved. But, of course, he did not want to race. He says he wants a gale. If a skipper has a vessel outside in a storm he gets into harbor as quick as he can.

"Yes, there was plenty of wind for a race yesterday. The Mayflower could have made the run to leeward, a straight run to Minot's Light, at the rate of 12 knots an hour, and a boat is sailing pretty fast to do that. I could have gone over the whole course inside of 4 hours."

In answer to the question as to how the Mayflower would compare with the Galatea in crossing the Atlantic or in a voyage around the Bermudas, Captain Stone said: "She would stand it finely. But I believe all this Bermuda talk is bluff, and that Lieut. Henn does not desire such a race any more than he does one at Marblehead."

Capt. Stone has won an enviable reputation this year on board of Mayflower, and the remarks above quoted do not sound like the comments of a thorough sportsman on an unsuccessful but plucky rival, and it is certainly much pleasanter to believe that he has been misrepresented by some irresponsible reporter. The statement, however, has been widely circulated, and if not promptly corrected will injure him in the estimation of many of his friends.

That Lieut. Henn should be more or less adversely criticised by the newspapers was only to be expected, but all who have met him this summer can bear testimony to his pluck and spirit as a sportsman, and respect him for the brave fight he has made against adverse circumstances. On Sept. 30 the usual calm weather prevailed and the signal for "no race" was set at 9:30. During the day Mayflower left for Beverly, and Fortuna, Intrepid and Mohican also sailed.

Mayflower is now laid up between the bridges at Beverly, where Fortuna has joined her.

MARINE GLUE FOR YACHT WORK.

WE have lately received from Messrs. A. Jeffrey & Co., of London, some samples of their marine glue, showing the methods of applying it. A section of deck plank with seam caulked and payed is shown, and also a model of a double skin boat with a layer of canvas and glue between the skins, a method of building much employed in the British Navy. The finest quality only should be used, applying it as follows: Cut the glue into small pieces, melt in a pot or cauldron over any moderate fire, keeping it stirred now and then. When the glue is all melted the heat is about 212 Fah., but rather too thick to run freely, and if used in this state air bubbles may arise; therefore it requires boiling and stirring a few minutes longer, and should be used at a heat of from 250 to 300 Fah.; it then becomes perfectly liquid, and should be used as quickly as possible. Continued boiling hardens the glue, hence thinning are sometimes necessary. Common observation will soon enable the workman to see the proper heat at which the glue should be used for the work in hand.

The marine glue never boils over into the fire like pitch, although it will occasionally ignite while being melted if the flame be allowed to touch it, and it will continue so to burn until the glue would be destroyed; when this takes place cover the pot or cauldron over with a piece of sacking, or any air-tight substance; this will immediately extinguish the flame, but this igniting will never take place if proper care be taken.

The oakum to be laid well down in the seam, hard, leaving the seam three-quarters of an inch deep and a quarter of an inch wide after caulking, for the glue in the seam, and, as usual to be payed soon. Water, cold naphtha, or coal oil to be used in dipping the caulking irons, as linseed oil or grease prevents the glue from adhering to the edge of the plank. In paying decks the glue should be poured from the ladle into the seams, holding the nose of the ladle an inch from the deck. Note.—If the ladle is drawn on the seams, as it is frequently done when pitch is used, a quantity of atmosphere is enveloped, and has not time to escape before the glue becomes set; this will cause air bubbles in hot weather, and leave the seams hollow and unsound.

When the decks have been payed with pitch or resin the old materials to be broken out, and a race-knife used to clear the seams, in order that the glue may adhere to the edge of the plank; the seams may be afterward caulked or hardened down, as may be required, to the depth before described, viz., three-quarters of an inch, if the thickness of the timber will allow of it; and if the weather be sufficiently fine to allow the decks to be payed with pitch, it will do also for the glue.

For Shakes.—Expel the dirt and moisture from them, and then run them full with the glue, as in case of deck seam.

This quality of glue is recommended as absolutely free from stickiness. About 130 to 140 line feet of yacht seam can be payed with 10lbs. of the glue.

The second quality is used chiefly for the construction of air-tight bulkheads and compartments in lifeboats, being used as follows:

After melted as described, spread the glue on the surface of the wood or iron with a stiff iron-bound brush, or wire brush, leaving on a good body, lay the canvas on the glue and pass an ordinary flat iron over the canvas and make the glue sweat through, taking care not to make the iron so hot as to scorch the canvas. (Experience will immediately show the heat required.) Another way of application is to coat the canvas on one side and lay it glued side downward on the wood or other substance requiring to be covered, passing the iron over as before—the canvas will then be found perfectly waterproof and adhering tightly to the wood, etc. In the course of a few minutes a thin coating of glue over the canvas may be added (if desired) and the iron again passed lightly over it, and a few tin tacks should be added to the edges and angles where necessary. The cases can then be painted. The angles of packing cases are also treated in like manner, before being sent abroad, rendering them perfectly water-tight. It will be found impossible to spread the glue on canvas, etc., as smooth as paint, as it becomes chilled so quickly, unless the substance upon which it is being applied is hot, but this is of no consequence provided the whole of the substance is covered.

A third quality is used for double-skin boats, as before mentioned. It will not crack or crumble with age, and is always elastic and waterproof.

To apply it, melt the glue as before and paint it on the first series of planks with an ordinary tar brush, following on with the calico directly after (the calico will be found to stick to the glue, but it is as well to tack the edges with small copper tacks); a hot flat iron should then be passed over to make the glue sweat through the calico, then paint over with the glue and the longitudinal planks from the kiln can be applied when convenient, and apply the copper rivets in the usual way. The boat will then be found to be perfectly watertight, and the glue will expand and contract with the timbers without cracking, as is invariably the case when white lead is used.

A much commoner quality, marine pitch, is an adulteration of the glue with pitch, and is superior to the latter for common work. The following general points should be observed in using the glue:

The marine glue being elastic, it will be found necessary, in all cases in joining timbers, to use fastenings, in order to take off the gravity and prevent sliding. Oil, grease, dust and dirt must be avoided. Excess of boiling and repeated boiling injures the glue; therefore melt no more than is required for immediate use. Should any remain in the pot, pour it out on a wet stone or sheet iron and mix with fresh glue when required.

NEW HAVEN Y. C. FALL REGATTA, OCT. 5.—The fall regatta of the New Haven Y. C. was sailed on Oct. 5 over the club course, 10 miles to leeward and back for the large yachts and 7½ for Class D, in a very light wind. The start was made at 10:57, fifteen yachts going over as follows:

Endeavor	10 59 19	Ulidia	11 07 13
Stranger	11 02 13	Mona	11 07 15
Wanda	11 03 32	Rajah	11 09 55
Anita	11 04 21	Viking	11 11 00
Vixen	11 04 50	Lily R.	11 15 17
Flora	11 06 09	Venus	11 15 52
Marguerite	11 06 30	Cirrus	11 17 20
Thalia	11 06 48		

The race was slow and uninteresting, Ulidia simply leaving the fast centerboard boats, for which the New Haven Y. C. is noted, and winning as she pleased, in spite of her keel and 8ft. draft. The corrected times were:

Ulidia	6 02 57	Marguerite	7 13 22
Stranger	6 23 18	Thalia	7 27 32
Mona	6 47 04	Endeavor	7 28 57
Flora	6 54 04	Rajah	7 51 24
Viking	7 05 32	Anita	Not measured.
Wanda	7 10 12	Vixen	Time not taken.

CLASS D—OPEN YACHTS.

Lilly R.	4 32 45	Cirrus	5 04 51
Venus	4 45 46		

The judges were S. A. York and Col. A. H. Robertson, and the regatta committee J. T. Whittlesey, F. M. Guion, W. A. Foskett, Jr. and L. A. Elliott.

QUEBEC Y. C.—A race was sailed on Sept. 27 in a strong wind, six yachts starting—Guinevere, Iris, Hirondelle, Osprey, Bernadette and Montagnais. Bernadette made the turn 11min. ahead of Hirondelle, with the others astern, and held the lead home. The times were:

FIRST CLASS.

	Start.	Turn.	Finish.	Elapsed.
Hirondelle	10 27 50	1 50 30	3 37 45	5 10 00
Guinevere	10 25 50	. . .	. . .	. . .
Osprey	10 24 45	. . .	. . .	. . .
Bernadotte	10 25 20	1 39 20	2 32 40	5 07 20
SECOND CLASS.				
Iris	10 21 00	. . .	. . .	. . .
Montagnais	10 22 30	. . .	4 59 05	6 35 35

The regatta committee included Messrs. Chas. McKenzie, John Shaw and A. F. Falkenburg, and Mr. E. C. Fry as timekeeper.

TORONTO AND HAMILTON.—On Sept. 23 a race was sailed from Toronto to Hamilton between the Escape, Bonita, Whistlewind and Rivet. Starting at 4 P. M., the wind was very light from the east, but at 6 P. M. it came fresher from S.W., heading the yachts. Whistlewind and Rivet made a close race, the former finishing a little ahead at 1:16 A. M. Bonita gave up and Escape finished two hours after the leaders.

THE SCOTCH CHALLENGE.—On Thursday last Mr. James Bell's challenge arrived in New York, but has not been made public and will not be until after the meeting of the club on Oct. 28. Nothing definite is yet known of Mr. Bell's plans or of his proposed boat, but it is reported that Watson will design her.

THE COLLISION IN BOSTON HARBOR.—On Aug. 28 a collision occurred in Boston Harbor between the yacht Edith and the steamer Chatham, which resulted in the drowning of one of the crew of the yacht, as recorded in the FOREST AND STREAM of Sept. 2. The collision has been carefully investigated by Messrs. Burnham and Savage, U. S. Inspectors, who have handed in the following report, which exonerates the officers of the steamer: "OFFICE OF THE UNITED STATES LOCAL INSPECTORS OF STEAM VESSELS, BOSTON, Sept. 25, 1886. George H. Starbuck—Sir: In having come to our knowledge officially, through report from Capt. William A. Hallett, master of the steamship Chatham, that said ship had been in collision with the sloop yacht Edith, and that life had been lost, we deemed it our duty, under the provisions of Sec. 4450, U. S. R. S., to investigate the cause of said collision. Having taken the testimony of witnesses and carefully considered the same, we beg to submit the following report: It appears in evidence that on the 28th ult. the steamship Chatham was proceeding down the harbor bound for Baltimore. While in the Narrows, at about 4:45 P. M., came in collision with the sloop yacht Edith, commanded by Mr. H. W. O'Hara. It appears in evidence that when Capt. Hallett first saw the Edith she was nearly a mile away; when within about one-third of a mile, the yacht, then on the starboard tack, crossing to the south, he ordered the helm of the ship put to starboard to pass under the yacht's stern. The ship had begun to swing on this helm when it was noticed the yacht had tacked, and the helm of the steamer was again changed to port to pass under her stern. While swinging on the port helm and within from 100 to 200ft., the Edith's tiller was put hard to port. According to O'Hara's testimony, they were but 100ft. apart when the last tack was attempted, while other witnesses place them a ship's length or more apart. They then evidently were too near for the ship's course to be changed and Capt. Hallett exclaimed: 'Good God, she has tacked again.' Seeing that this last change of course had destroyed all chances of clearing her, he rung to stop and back. The claim of Mr. O'Hara that the yacht was lying helplessly becalmed is not sustained by the evidence, his own testimony, which was that he made two tacks after seeing the steamer near Nix's Mate (about half a mile away). The ship would have gone that distance in three minutes. His claim is that the yacht was in that hopeless condition for the last five minutes before the collision, while Mr. Ide, of his party, put the time at a few seconds. This is undoubtedly true. The yacht was in the wind with sails shaking, as testified to by Capt. Parke. Capt. William B. Floyd testified that he had sailed his yacht, which is very similar to the Edith, both in rig and size, from Boston, near Foster's wharf, to the Narrows that afternoon, leaving about 2:30, and was in the vicinity of the collision when it occurred at 4:45, and that there was a good working breeze for yachts like the Edith, and at no time was there a calm. The evidence in the case satisfies us that Capt. Hallett changed the course of his ship twice to avoid the collision and that the Edith's course was also twice changed, and attempt was made by O'Hara to make the third tack when too near for it to be possible for the steamer's course to be again changed. The putting the helm of the yacht to port when too near for the steamer to change her course or for the yacht to fill away on her port helm was what brought about the collision, for which Capt. Hallett was in no way at fault or to blame for the sad loss of one life.—Very respectfully, ANDREW BURHAM, ANDREW J. SAVAGE, United States Local Inspectors."

THE NAHLI-LORNA MATCH, Oct. 1.—A very interesting match was sailed on Friday between the open boats Nahli, owned by Mr. W. S. Alley, and Lorna, Mr. E. J. O'Gorman. The course was from Sands Point 2½ miles N. W., two rounds, making 10 miles, for a sweepstake of $500. The skipper of the Nahli was James Willis, of Cowbay, with 9 men and 39 sandbags, while Lorna was sailed by Samuel Seaman of New Rochelle, with 11 men and 41 bags. A few yachts were on hand at the start at 11.25 A. M., the referee, Capt. Henry Van Wyck, being on board the Schemer. The time of the start was 11.25, the boats crossing: Nahli 11:25:28, Lorna 11:25:23. With a heavy S. W. wind they started to beat out to the mark, Nahli leading, but within ten minutes of the start she was taken aback and nearly capsized, her crew at once tossing over 21 bags of ballast, so that she was out of the race. Reefing down, she still held on, the time being made thus: Lorna 11:53:30, Nahli 12:01:00. Lorna turned in two reefs in mainsail and bobbed her small jib. The time was made: Lorna 12:10:10, Nahli 12:15:30. Nahli gave up the race and Lorna withdrew when Mr. Alley notified her owner.

BUFFALO Y. C.—On Sept. 25, the fall regatta of the Buffalo Y. C. was sailed over a course from south end of the government breakwater, along south shore to a buoy opposite Windmill Point, 1½ miles off the stone dock, and back to the starting place, 13 miles. The wind was strong from S. W. during the race. The entries were E. B. Jewett, Alarm, Turk, Curlew, Sylvia, Emma, Minette, of Buffalo, and Vera, of Port Dover. The start was made at 2:55 P. M., Alarm finishing first at 5:00:35, and winning the pennant, Turk was second, winning a pair of side lights, and Curlew third, her prize being an anchor light.

RACES AT BRIDGEPORT.—The citizens of Bridgeport have presented two silver cups to be raced for by yachts of that place. One, the citizen's cup, to be raced for every year, the other a challenge cup, to be subject to challenge during the yachting season. The first race will be sailed to-day over a course from Bridgeport Light to Point No Point buoy, thence to Fayerweather Island and return. The judges are Messrs. Wm. Lewis, J. P. Davis and P. H. Prindle. The committee are Messrs. A. C. Hobbes, A. H. Davis and W. F. Brookes. The race will be under New Haven Y. C. rules.

LAUNCH OF THE FLORIDA.—On Sept. 30, at West Haven, Conn., a suburb of New Haven, the new yacht Florida, building for Mr. Henry P. Kingsland by Gesner & Marr, was launched. The Florida is intended for a racing yacht, and will come in the class with Mayflower and Puritan, though much smaller, being 72ft. on L. w. l., 76ft. 9in. over all, 18ft. 6in. beam, 6ft. draft and 7ft. 4in. in depth. She has a plumb stem and sternpost and a wide, full counter. On the keel she carries 10 tons of lead, with about 25 tons inside. The rig is a cross between sloop and cutter.

COLUMBIA Y. C.—A match was sailed on Oct. 2 for a cup valued at $25 by the Daisy, Troublesome, Henry Gray and Defiance, over the Columbia Y. C. course, in a strong W. wind. Henry Gray won, with Defiance second and Troublesome third.

ALVA.—Mr. W. K. Vanderbilt's new steam yacht is ready for launching, and was to have gone over on Saturday last, but the launch has been postponed until Mr. St. Clare J. Byne arrives from England, probably about Oct. 28.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. R. W., Anoka.—Tested with No. 8 shot, 40yds., 30in. circle.

KITTEN KATTEN, Dayton, Ky.—We cannot tell until we have seen them.

E. N.—Repeating rifles of the caliber you name can be had. Apply to the dealers whose names are found in our advertising columns.

W. G., Farmland, Ind.—Any one of the three arms you name is reliable and effective, and you will not make a mistake in selecting from them.

RUBBER.—To mend rubber cloth apply a preparation of dammar varnish and asphaltum in about equal quantities, with a little turpentine.

R. N. M., New York.—It is forbidden in this State to shoot robins at any time. The rabbit season was not changed by the last Legislature.

W. O. R., Brooklyn, N. Y.—Please state in your next edition whether it is against the law to shoot robins and heighholders on Long Island? Ans. Yes.

X. Y. Z., Sing Sing, N. Y.—The "claipe" or "clape" we presume to be the woodpecker, known as high-hole or yellow hammer, is protected by the present law.

F. S. C.—Where are the nearest places to Clyde, N. Y., where I can get good trout or bass fishing? Ans. The trout season is over. For black bass go to Great Sodus Bay, Lake Ontario, Canandaigua or Oneida Lakes; or the other lakes, large and small, to the southeast or southwest of Clyde.

N., Dunkirk, N. Y.—In the FOREST AND STREAM, some time ago, a contributor writing on Florida, in enumerating the different ways of reaching that State spoke of sailing vessels from New York. Would you be so kind as to send me an address whereby I can reach one or more of these vessels? Ans. Write to Warren Ray, 62 South street, New York.

MRS. CHARLOTTE LISLE, Chicago, ascribes the cure of a dangerous cough, accompanied by bleeding at the lungs, to Hale's Honey of Horehound and Tar. "My cough," she says, "threatened to suffocate me * * * * but this remedy has removed it." PIKE'S TOOTHACHE DROPS cure in one minute.—Adv.

FILE BINDERS, Size to suit FOREST AND STREAM, FOR SALE AT THIS OFFICE Price, $1.50.

Among the Many Novelties

Introduced by us last spring were the

Dead Finish, Waterproof, Braided Silk Fly Lines, FOR SALMON, TROUT AND BLACK BASS.

These lines have given perfect satisfaction and stood the most severe tests. *They do not crack, chip or become sticky and stiff*, but remain soft and pliable. These lines are waterproofed through and through, not merely on the surface. They will not become tender in use or by age.

Also a new style **LANDING NET**, made of *waterproof braided linen line*, which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

ABBEY & IMBRIE, Manufacturers of every description of Fine Fishing Tackle. 18 Vesey Street (Fourth door from Astor House), New York City.

WINCHESTER PAPER SHOT SHELLS.

BAKER'S

Breakfast Cocoa.

Warranted *absolutely pure Cocoa*, from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

STEVENS'

The following letter refers to a Stevens' New Model Pocket Rifle, weighing about two pounds, is from a perfectly reliable gentleman (whose name is at the service of any applicant).

LAMPKIN, GA.

Dec. 28th, 1884.

Messrs. J. Stevens & Co.

Gentlemen:—My preference for your guns has been strengthened by the following circumstances: Some weeks ago a friend brought a small pocket rifle to have me clean up for him, as it had become rusty from neglect and disuse. I saw your name, "J. Stevens & Co.," on the barrel, and I said to him, that I would wager that it was a fine shooting gun. Said he, my father has carried that rifle for fifteen years, and has bagged all sorts of game with it, from deer to small birds. He once killed an alligator with it at 110 yards. He always shoots squirrels in the head, no matter how high they get. At this moment another man, who had done business for the old man on his farm for a number of years, and used the rifle a great deal, stepped up, and, overhearing the conversation, remarked: "Yes, it is the best rifle I ever saw. I have killed squirrels almost by the thousand with it, and killed ducks by the hundred at all distances. I once killed a duck with it at 240 yards." I thought this very remarkable, as it is a very small gun, barrel only 12 inches long, with skeleton shoulder stock, 32 caliber. The gentlemen says, "If you will clean it up you can use it whenever you like," handing me a box of cartridges. He said, "You will be surprised at its shooting qualities." So I rubbed the gun up nicely, and made an agreement with a friend to go hunting. When we met he remarked, "Where is your gun?" (eyeing the little thing with a disappointed curiosity). I told him I would take it along for practice, and would let him kill the game with his shot-gun. With a kind of a sneer he said, he thought I wanted to go hunting. Very soon the dog treed a squirrel in a very tall hickory, and, getting sight of it first, I raised the rifle and down came the squirrel. "Well," said he, "the little thing shoots like anything." Pretty soon he shot at a dove about 40 yards off and missed it. I raised the rifle and brought it down. With a puzzled air he remarked, with much emphasis. "That thing shoots like the mischief." It was not long before the dog barked up a large, tall pine tree, in which we soon found a very large fox squirrel. I let him take two shots at the squirrel, which only caused him to go to the very top. Then I took a shot. At the crack of the rifle, the squirrel came crashing down, shot in the head. My friend then came up and took the rifle in his hand and examined it very closely. "Well," said he, "it shoots like the———. I did not think it was in the thing."

I remain, yours very truly,

A. W. L.

J. STEVENS & CO. "PREMIER" RIFLES, Nos. 7 and 8.

CHICOPEE FALLS, MASS.

Swiss Stock with Fore-end, Vernier and Open Back Sights and Globe Sight.

American Field, Jan. 10, 1885.—"The next gun was a 22 caliber Stevens, and a pair of beautiful pistols, made by Stevens, on the Lord pattern. These weapons Dr. Carver uses on the stage, and does all his fancy shooting with. I saw him during the morning shoot with these pistols, in two consecutive shots, two half dollars thrown in the air, and he sent them whizzing away with holes nearly through the center of both. Opening a window, and calling upon Hans (one of his attendants) to fix up a target, I saw him shoot twenty shots, fired at forty steps, and the bullets could all be covered with a ten cent piece."

Mr. Reeves, in *American Field*, Dec. 6, 1884.—"Regarding the feat of Mr. Ira A. Paine with a Stevens' Gallery Pistol, 22 caliber. He put several shots in a one inch bullseye in a card, held in a lady's hand at ten yards and then hit the card edgewise three shots out of four. Small cards measuring four and a half by three inches were then substituted with three spots in the center of the card like the three of hearts, when he put a shot through each heart. The next feat was firing at a walnut and grape placed on the top of his wife's head, on a small pedestal about one inch high. He knocked the grape off the first shot, and then the walnut at the second shot, all at the same distance—ten yards."

No poor shooting weapon can leave this factory. Every one must make about as good a target as this or the inspector would reject it.

5 successive shots, 50 feet.

He would hardly allow even a 10 inch Pocket Rifle to pass unless it would make a better target than this.

5 successive shots, 50 feet.

WHY should every Lawyer, Doctor, Preacher, Teacher, or any one who needs pleasant recreation to draw the mind away from their daily cares, buy and constantly use some one of the various arms made by J. Stevens & Co.?

BECAUSE you can have **more fun in a day** with a Stevens' Rifle or Pocket Rifle than with a common weapon in a whole year.

BECAUSE when any one practices with weapons of such wonderful accuracy the interest does not diminish, but increases constantly. You can practice an hour or two a day, a hundred and fifty times in a year, without tiring. When your skill is such that you can make targets like the first, try it at a longer distance and you will be surprised at the pleasure that results from the accomplishment of the object.

BECAUSE all their arms are so light and convenient, and easily taken apart to carry in a trunk or bag, or in a small package.

BECAUSE you can with a little practice become a really expert shot at a merely nominal expense.

BECAUSE when you buy one of these arms you are sure of an accurate shooter. Every arm before it can leave their factory must by actual trial make targets of which the best one above is a fair sample. No Fisherman's outfit is complete without a two-pound Pocket Rifle with which to knock over any game, large or small, he is likely to come across.

Mr. Jones, of Pittsburgh, lately made some remarkable shooting with Stevens' Rifle with **22 short cartridge at 200 yards.** It is something new to see a Rifle with 22 short cartridge competing successfully on the 200 yard range with Rifles of the best makers shooting very much larger cartridges.

Mr. Butler, of Syracuse, N. Y., has four other Rifles of the best makes, but says he uses his little Stevens' a dozen times **as much as all the rest**, it is so convenient to carry and so **wonderfully accurate.**

Mr. R. B. Fuller, 172 South Clark St., Chicago, has a twenty dollar Stevens' Rifle that has been used in his shooting gallery **every day for eight years,** which is now in good order after having been shot **over 500,000 times.**

Mr. Carpenter, of Louisville, Ky., lately went to a turkey shoot and secured **7 turkeys in a couple of hours.** He shot a 22 caliber 18 inch New Model Pocket Rifle weighing 2½ pounds at

225 yards.

Mr. Ingersoll, who has two of the finest shooting galleries in Pittsburgh (and probably in the world) has at present **Thirty-one (31) Stevens' Rifles** in use in his galleries.

R. P. Cory, of Conseccon, Canada West: I have used for three years a Stevens' 22-caliber Pocket Rifle, have shot it about 15,000 times, can kill all sorts of small game with it a great deal farther than with the best Shot Gun. For squirrel shooting I will **match this little Pocket Rifle against any man with the best Shot Gun that can be brought forward.**

From American Field.—"For careful boring and grooving, and perfection of workmanship in every particular, *I consider the Stevens' Rifle the superior of any in the market.*" COQUINA.

My Old Model Pocket Rifle after being used 8 or 9 years, is as fine as ever.

A. R. C.

I have one of your J. Stevens & Co., 26 in. barrel, 38 calibre Rifles, and it is the finest shooting rifle I ever saw. I have also one of the Hunters' Pet, 32 calibre, the best short range rifle I ever owned. They are a perfect rifle in every respect.

W. S. B.

I received the 10 inch Stevens' Rifle, and was very much pleased to find it the best shooting article that I have ever handled. The first shot I fired, I knocked one of Dad's hens over at 8 rods.

Full explanation by circular. Both dogs in the stud at $25 to bitches of guaranteed field quality only. MAX WENZEL, 89 Fourth street, Hoboken, N. J.

ENGLISH SETTER PUPPIES.

From imported Flora, by Roy (Dash III.—Bessie), whelped March 3, 1886. Dogs or bitches. Will guarantee these pups to be just right; strong nose, natural hunters, and very staunch, requiring but little training. They are not sold to close out any scrub stock or to make room, but were bred especially for the trade, and to show as well in the field as on paper. Address, H. J. PIERRE, Winsted, Conn.

SETTERS FOR $10 EACH.

A large lot of English setters, taken in exchange for other dogs, will be closed out at this remarkably low price. They are of both sexes, excellent looking, are guaranteed not gunshy and to have fair nose. Ages from 6 to 15 mos. If on inspection they should not prove satisfactory the money will be returned. ASSOCIATED FANCIERS, 237 South Eighth st., Philadelphia, Pa. sep2,tf

FOR SALE.—ITALIAN GREYHOUND PUPS from imported stock. Also fine English pugs. HENRY C. BURDICK, 150 Bridge street, Springfield, Mass. sep2,3mos

PRIZE AND PEDIGREE ENGLISH MASTIFFS.—Mr. James Hutchings, 25 Gandy st., Exeter, England, has several grand ones for sale, brindles and fawns, including stud dogs brood bitches and puppies. Tourists' inspection invited.

A KENNEL OF THOROUGHBRED FOXhounds for sale. Address Lock Box 12, Monroe, N. C. sep2,8t

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. sept22,tf

CHESAPEAKE BAY DOGS.

Puppies, $15 at 8 wks., sired by celebrated dog Gowrie. GEO. E. POYNEER, Williamsburgh, Iowa. tf

IRISH SETTER PUPS FOR SALE, DAM, granddaughter to field trial winner champion Biz—Flora; Sire by Elcho—Mag; also pups by son of Glencho—Nell II. ONOTA KENNELS, Pittsfield, Mass. sep16,4t

FOR SALE.—RED IRISH SETTER, PARTLY broken; lemon and white English setter, broken; very fine litter of liver and white pointer puppies, by champion Duke ex Grace (A.K.R. 1250); a nice litter of lemon and white English setter puppies, by Rock (Rock—Hazel Kirk) ex La Belle Creole (A.K.R. 3046). Box 472, Pittsburgh, Pa.

FOR SALE.—SOME FINE BREEDING bitches, consisting of Irish and English setters, greyhounds and pointers. All stock sent express paid. Drop postal for circulars. MAJOR LOVEJOY, Bethel, Me. sep30,2t

FOR SALE.—FIVE POINTER PUPPIES, four dogs and one bitch, whelped July 2, 1886. By Joker, Jr. (Beaufort—Nymph) out of Lady Mc (champion Faust—Gertrude). $15 each. G. H. NIXON, Leesburg, Va. sep30,2t

FOR SALE.—CLUMBER SPANIELS OF THE best and purest strains. Address F. H. F, MERCER, P. O. Dep't, Ottawa, Can. sep23,3t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, OCTOBER 14, 1886.

VOL. XXVII.—No. 12. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six, and twelve months. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be nserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price. $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

THE NEW CREEDMOOR.

THE Directors of the National Rifle Association are fully alert to the importance of taking steps for the abandonment of Creedmoor, if rifle shooting in the neighborhood of the metropolis is not to become a thing of the past. At the last meeting of the Board the matter was discussed at some length, and although no formal or final action was taken on the question, the majority of the members of the Association are fully convinced that a change is a necessity in the near future. Lieut. Zalinski has taken the matter in his special care, and with his usual zeal and thoroughness is looking the whole ground over before presenting his conclusions to his fellow directors. He thinks that at Staten Island something may be done in the way of securing a long-distance range. Such a change would reduce the cost of reaching the range and home again more than one-half and the time in the same proportion.

At the present time it would be difficult to name a place equally near to New York city which is more inaccessible. It is not on a line of railroad, but is fully a mile away from even the little insignificant stopping place which is now the railroad point for reaching the range. The company controlling the means of transit have shown no disposition to bring the range nearer the metropolis in traveling time, and could not do better than they are in throttling the last show of interest in the invigorating sport.

The range itself is a magnificent spot. It is the finest property of its sort in the world. It has historic associations about it which will always make it a place of interest to those who shoot and those who admire skill in fine marksmanship. Its broad stretch of nearly an hundred acres has felt the tread of thousands of feet, and over its long stretch of a half mile and beyond the well-sent bullets of more than one American team have sped.

All this is true, and yet the old range is showing the signs of age. A dozen years has not dealt kindly with it. The artificial hill of earth back of the butts has settled very much and the bullet-proof fence atop of it is in a state of very unsteady equilibrium. In the butts below the ground there is danger of a collapse, and the spring will probably find the range in need of many thousand dollars' worth of repairs in butts and fence. Besides, the new range where the short-range targets are located, and where the now famous trajectory tests conducted by FOREST AND STREAM last fall were carried on, is no longer under lease by the Association, and the owner has extravagant notions about a new lease. All things considered, the present is a good time for an adieu to the old shooting ground, provided, of course, something equally serviceable shall be discovered.

With the experience which has been had in the management of ranges it would be possible to so plan a shooting ground as to make very material economies in space and working methods. The firing point should be, if possible, fixed with the targets put at the various distances from 100 up to 1,000yds. There has been a great deal of unnecessary tramping up and down the range at Creedmoor on the part of marksmen, when a great deal of it might better have been done by the markers. It is important that strong targets of the heaviest iron type be on hand for the battering which the militia inflict upon them, but much of the fine work in off-hand shooting ought to be on other targets of a more portable type.

It is urged that the old range may not net at sale as much as was originally paid for it. If this be true, it only proves that the original purchase was a good deal of an imposition upon the State and that farmer Creed, if he ever got all of the price paid, got a good deal more than the land was then worth.

Lieut. Zalinski is quite right in agitating the matter of a new range, and whether the old fogy management of the State militia at Albany can see the point or not, rifle practice is a vital point of a soldier's duty. It can be made popular instead of irksome as now, and the first step in that direction is to provide a range near by, cheaply accessible and open every day the year round. Then the civilian marksmen will once more compete in the regular matches and the old time enthusiasm for the sport prevail.

RAILROADS AND GAME.

IF railroads have in general been powerful auxiliaries in the wholesale destruction of game, they have also in particular cases taken an important and highly commendable part in staying the hand of the skin-hunter and game butcher. The agency of the Western roads, which furnished ready transportation for the products of the buffalo and elk-killing industries, has already been adverted to in these columns; and occasion has been had to call attention to the new attitude assumed by certain roads, notably the Northern Pacific, which has taken the stand that, as the large game of the West is a potent attraction for tourists and is the direct object sought by great numbers of passengers over that road, it is the wisest policy to cut off market-hunting, that passenger fares may take the place of insignificant freight bills. It would appear as if this elementary bit of business principles ought to be patent to and observed by the managers of all roads which lead to hunting and fishing districts; but, as a matter of fact, most roads have been just penny-wise enough to clutch at the paltry revenue from game destruction, lawful and unlawful. In many instances, too, railroad officials have been foolish enough to wink at flagrant game law violations which were of no benefit to themselves, though not altogether without profit to subordinates. It is not long ago that passengers on the Long Island Railroad were familiar with the frequent spectacle of sportsmen, returning empty-handed after tramping barren covers, buying of the trainboy snared game, regularly brought aboard at the way stations. The brakemen, baggage-masters and other train hands did a regular business in smuggling this contraband commodity to the New York markets.

Times are changing. Passenger agents and general managers are catching up with the times. Take the Maine railroads. It was only four years ago that the Superintendent of the Somerset Railroad, which leads to Maine game resorts, was anxious to let "sporting men" know of the attractions held out by July moose killers; and it was not so long ago as that that the Maine roads in general went on the principle of receiving and forwarding game and fish and no questions asked. Now the railroad managers are among the best allies of the game wardens. They will not transport contraband goods; they have taken away from the Darling class of game butchers their means of forwarding game to the Boston markets. It is a sound dollars and cents business-like course. The road collecting fares from passengers going into the deer forests and out again will pay better dividends than a road contenting itself with tariff on deer carcasses shipped to market. Certain of the Arkansas railroads have taken the same stand. If all passenger superintendents could be shown that the interests of their roads demanded such an active coöperation in game protection, the great problem of how best to check the enormous destruction of game for marketing would be solved.

The latest example of far-seeing railroad management brought to our notice is that of the Detroit, Mackinac and Marquette Railroad Co. This note received from the general passenger agent shows that on one line at least the wildfowl shooters are appreciated as profitable patrons:

DETROIT, MACKINAC AND MARQUETTE RAILROAD CO.—Office of E. W. Allen, Gen. Pass. and Ticket Agent, Marquette, Mich., Oct. 4.—*Editor Forest and Stream:* We have on the line of our road a large extent of marshy country through which streams of considerable size flow, where geese and ducks come in considerable numbers now; but I wish to do something to improve the sport which may be had, and to that end desire to know if you can inform me where wild rice and wild celery seed may be obtained. I would also be glad to have some facts in regard to the method of sowing, and what precautions, if any, can be taken against the inroads of muskrats. For this information if in your power to give, I shall be very much obliged.—E. W. ALLEN.

THE SHACKER BAND.—The FOREST AND STREAM, of June 17, 1886, contained a communication from Dr. Samuel B. Hunter, of Machias, Maine, giving an account of the trial of certain Wesley parties charged with having burned the house and barn of a game warden. The article contained sundry severe reflections on the moral condition of a community where such crimes were practiced. Maine papers copied Dr. Hunter's communication, and certain Wesley people feeling aggrieved at this, instituted libel suits against the author. The Machias *Republican* of Oct. 9 contains this note: "The somewhat notorious Shacker libel cases vs. Dr. Samuel B. Hunter, of Machias, have been withdrawn, and plaintiffs pay their own costs." This is the conclusion anticipated by those familiar with the facts.

IMPORTANT IF TRUE.—Last June, at a season when buffalo hides are in exceedingly poor condition and totally unfit for a taxidermist's purpose, Mr. W. T. Hornaday, the Government taxidermist, went to the Milk River, Montana, country to secure buffalo specimens for the National Museum. Needless to say, the expedition was not successful. We note in a Montana paper that Mr. Hornaday is now on the way to the Yellowstone National Park, where he proposes to shoot buffalo for the Museum, Secretary Lamar having given him permission to kill the game. This can hardly be true, for the Secretary of the Interior has no authority to give any one permission to kill a single one of the remnant of bison nor any game whatever in the National Park.

OCTOBER DAYS are those of all the year the brightest and most wont to linger long in the memory of sportsmen. It is the month of exhilarating air, brilliant foliage and game mature and worthy of the quest. It is surprising how far and how sturdily one can tramp on an October day. More good shooting stories begin "Once in October, 18—," than with reference to all of the other eleven months of the year put together. The man who goes for game in October returns laden with more prizes than are contained in his game bag or across his saddle.

FLORIDA LAND SWINDLES.—Along about the time hard frosts have killed millions of noisy and noxious insect pests, the land schemers begin to make a clamor over the brilliant bargains in sand cities down on the Florida peninsula. Cheap land in Florida is sometimes a very dear investment. One good rule is to see a horse before you buy it; a better rule is to see a wonderful Florida new city lot before you sink any money and hopes in it.

OCTOBER MOONLIGHT invites to raids and scurries after coons. Those who know no better think this form of hunting a peculiarly southern institution; but the hillsides of New England and the Middle States are resonant with the October jollity of men and dogs and coons. We hear from Connecticut of some famous runs rewarded by much plunder.

NESSMUK'S POEMS.—Elsewhere is printed a notice of the forthcoming volume of poems by "Nessmuk." Intending subscribers are asked to fill out and return the subscription blanks at an early date.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—VIII.

AFTER the cold snap came a week of soft-breathed days and dark, still, frostless nights, wherein the traps waylaid many a nightly wandering muskrat, and the trappers' harvest was rich.

Some of the earliest comers of birds were beginning nest building, the wood ducks had chosen their homes, and dusky ducks in pairs sought the remotest coves, while great flocks of their companions went on their way northward. The crows scorned now the once prized heap of muskrat carcasses, for they had entered into full possession of their ancient rights, and swaggered about the fields with an air of absolute ownership, and were evidently somewhat impatient that their tenants, the farmers, were so slow in beginning corn planting.

More birds came from the south; reinforcements of the dusky army of blackbirds with flashing troops of redwings; the main body of the robins joined the advance guard and the thickets were more populous with slate-colored snowbirds, and noisy with their sharp metallic chirping; and there were many arrivals of later comers. The highhole cackled and hammered again on his lofty perch, the white-throated sparrow called all day long for the ever absent Mr. Peabody, and the wailing cry of the grass plover arose from meadows and upland pastures. Out of nooks of the marshes the booming of the bittern resounded over the watery level, a sound so strange to Pelatiah's ears that he asked, "Who be them fellers a drivin' stakes in the ma'sh, an' what be they a-duin' on it for?" and was greatly astonished when told that it was only the voice of a bird, and entertained an uncomfortable suspicion that Sam was fooling him till one day when he stealthily stalked the sound and saw a "gob gudgeon" standing on a mass of marsh drift diligently pumping out his dolorous love song. "By gol!" Pelatiah remarked, as, when he disclosed himself the startled fowl sprang upon his awkward flight with a contemptuous parting salute, "his ol' pump needs primin' if that's all he's got for so much fuss!" By day and by night stranger outcries came from the marshes, weird laughter and wild yells, the voices of unknown waterfowl that were never seen.

The recurved lines of the water maple's branches began to glow with dots and clusters of scarlet, and the willows shone with catkins of silver and gold, caskets which held a treasure that all the bees of the region came to steal. The grass was greening in the swales and on the warmest slopes, and the farmers were plowing in a dozen fields within sight and as many more within hearing, all shouting to their slow teams of oxen so vociferously that Pelatiah said, as he lounged on the bank in front of the shanty: "It's eq'l tu a lawgin' bee t' hum!" and as his thoughts ran homeward led by these familiar sounds, "Darn it all! I s'pose I'd ort tu be t' hum a-helpin' aour folks, but I snum, I'd druther stay here!" and his gaze wandered across lots to the white house.

"Wal, we'll all go torights, Peltier," said Sam, "the trappin's 'baout done up—hain't got scasely nuthin' these tew three nights—'n' I expec' the'll be a team arter us 'fore the end o' the week, 'n' then we'll pull up an' clear aout."

"Bah gosh!" cried Antoine, "we'll ant go 'fore the bull pawt was bit an' we'll ketch lot of it! Bah gosh, no! De eyelin was be gittin' warm, an' Ah'll know he was bit pooty soon, prob'ly to-naght, prob'ly to-morreh naght, Ah dun-no. Ah'll gat some hook an' lahne w'en Ah was go store. Where Ah'll put dat? Ah freegit, Ah'll be so seek dat tam?" and he began a hurried and excited search among his disorderly effects for the missing tackle. "Hoorah, here he was! Naow, Sam, give me some bullet for mak sinkit an' Ah'll feex up for try to-naght, 'f Ah can fin' som' wum. Ah'll gat some pole-feesh more as week 'go. Oh, Ah can ketch it if any bod-dy can ketch," he bragged as he half-hitched a hook on to the coarse line, "Ah was preffick feeshymans." Then he split one of the Ore Bed's big balls half in two and closed it on the line, which he then rigged upon a pole that had had more labor bestowed upon it in trimming and peeling than its original worth seemed to have warranted, for it was top-heavy and as crooked as an eel. Perhaps its owner considered this a virtue rather than a fault, and hoped that the reflection of the contorted "hard hack" might entice some lonely eel to its companionship, and the eel was to him what the trout and salmon are to the scientific angler. Having his outfit arranged to his satisfaction he crossed the Slang in the dugout to the cultivated fields beyond in quest of earth worms, and Pelatiah accompanied him on his way to return the borrowed bag, while the camp was left to the keeping of Sam and his hound.

Sam busied himself with bundling up the dried peltry, and Drive was as busy with ineffectual digging in the nearest muskrat burrow, which long after the beleaguered rat had plowed his way to safety toward the channel of the Slang with a sluggish, heavy, under-water wake faintly marking his furrow, he abandoned; and shaking and wiping some of the dirt from his long ears and sorrowful face, sought more congenial pastime in chasing and being chased by a vixen who had begun housekeeping and the rearing of a family not far away. Once, rating this ancient enemy of her race with angry, gasping barks, she followed him so close to camp that Sam got a full view of her in her sorry and tattered faded-yellow garb of vulpine maternity, not twenty yards behind the slinking, shame-faced hound. "Good arternoon, marm!" he said, "if 't was in the fall o' the year, naow, yer tail 'ould be a pintin' tow-wards that 'ere sneakin' ol' bundle o' kag hoops, an' the'd be a diff'ent style o' music in fashion! Good-bye, marm," as the vixen vanished behind the veil of hazy undergrowth, "I wish ye good luck a raisin' yer fam'ly, an' 'ould like to make the hull of yer 'quaintances come November, an' ye git yer good close on. Oh, Drive! haint you a spunky dawg, a skulkin' hum with yer tail atween yer laigs afore a nasty little bitch fox not quarter 's big as you be!" as the hound came up to him and endeavored to explain the peculiarities of the situation with whimpers and more deeply corrugated brow, and quick, low-swung tail beats that shook all his lean anatomy. "A spunky ol' haoun' dawg you be! But yer julluk me, an' I guess the most o' tew-legged he humerns. Lord! I'd druther wrastle with a mad painter 'an to face a jawin' womern, I be dum'd if I hedn't! If *they* won't take the spunk aouten a feller, he's tougher 'n a biled nowl!"

The sun was down, and the reflected gold of the western sky lay unbroken on the quiet water save where a skimming bank swallow touched it with the light dip of his wing, or a fish lazily rose to an insect that dimpled it as it fell exhausted in its too adventurous flight, before the returning dugout vexed the Slang into a thousand distortions of mirrored sky and shores.

Antoine's bait hunting had been successful and he had an old teapot half full of angle worms, an encouraging sign of future luck, he thought, and supper was no sooner over over than he betook himself to the bank with pole and teapot. He charged his hook with a bait that might entice the fullest fed and most indifferent bullhead in all the Slang, and spitting on it for luck, sent it with a whishtling overhead cast straight out from shore, where it and the heavy sinker plunged with a *kerchug!* that again awoke the waves. While he sat waiting with statutesque patience for a bite his companions watched him with an interest at first quite intense, but which grew languid as Antoine's form became an undefined dark blur in the dusk and yet gave no sign that his patient waiting had been rewarded with even a nibble.

Then they saw the flicker of a feeble light just kindled away down stream on the further shore. Presently it grew from the volume of a candle flame to a brilliant blaze, and then began to slowly skirt the shore, attended by its glittering red dancing reflection, and revealing one figure, one side red with fire light, the other black with shadow standing close behind it, and dimly suggesting another crouching a little further away with a paddle that gleamed for an instant at regular intervals as it was raised for a stroke, then faded into the gloom. Then the light turned toward them, and yawing along its course came more swiftly down its own shortening glade, growing larger and sending down frequent showers of sparks on either side, each spark and its double meeting at the waters' surface and vanishing there together. The square prow of a scow became visible, and a man standing therein, wielding a spear that he made a show of well-intended but ineffectual paddling with.

"Hillo, Danvis!" hailed the actual propelling power in the stern.

Hello, Lakefield," Sam answered, recognizing the stentorian voice of his whilom enemy, and giving him in return the name of his township.

"Wanter take a leetle turn up the Slang a-spearin'?"

"Wal, I do' know," said Sam, rising and going toward them as the scow surged through the floating sedges and butted against the shore, "I can't spear a fish; never done sech a thing in my life."

"Oh, you needn't du no spearin'. Jimmy 'll 'tend t' that; he's a ripper t' spear. You c'n help me paddle 'f you're a minter, an' Jimmy 'll prod 'em. He's wus 'n a kingfisher; haint that so, Jimmy?"

Jimmy, who seemed not much given to speech, answered only with a grunt, and drew from his pocket a plug of tobacco, which, after slowly and thoughfully turning in the light of the jack in search of the most vulnerable corner, he gnawed a quid from, and then extended toward Sam. The friendly offering was declined with thanks and the explanation that Sam "didn't never chaw."

"Come on," urged the other occupant of the scow, "an' ha' some fun an' git some fish f' yer breakfus. He c'n go tu, if he wants to see the fun. The's room 'nough," nodding toward Pelatiah.

"Feesh for breakfis!" cried Antoine, as he jerked a bullhead out and landed it with a heavy thud on the bank the pole's and line's length behind him, where it protested against the sudden change of elements with vigorous flapping of its tail and grinding of its jaws. "Bah gosh, here he'll was, dumn sight gre' deal better as peckrils was! Ant you'll hear it grape hees toofs? Dat 'cause he'll know haow good he'll was wen he'll be fry, an' he'll mad 'cause he can't heat some of it heesef. Oh, he'll good wan!" as, with the handiness of one who knows the trick, he grasped the fish between the thorny pectorals and dorsal and disengaged the hook; "he'll humpy fellar. Dey's more of it comin'. All hees ree-lashin' comin' breakfis. You go spearin' you wan' to, Ah'll stay here an' tol' it good evelin wen he'll come."

Sam and Pelatiah took their allotted places in the boat, which resumed its slow and silent way over the submerged marshes. The glaring light of the jack, fed at times from a store of "fat" pine, out of the darkness conjured ghostly forms of trees that seemed to stalk out from the shore to meet them, then receded and vanished in the gloom behind them. A muskrat in bootless quest of departed friends, halted on his course and lay for a moment with as little motion as a drifting stick, regarding the unwonted floating illumination of his haunts, then dived with a startling sudden splash. An owl flitted with noiseless flight like a gigantic moth, close to the glaring torch, and disappearing, hooted out a cry of wonder or a hoarse laugh of derision from the more congenial depths of night. And wood-ducks sat on their roosts of prone trees with charmed gaze till the falling sparks hissed close beside them before they sprang fluttering away into the gloom, uttering wild squeaks of fright. As the scow headed across a broad shallow, the intent spearsman raised his spear, and as the craft was checked in obedience to the motion, he made a quick thrust and brought in a great pickerel, whose struggles were quickly ended by a stamp of his captor's boot-heel.

"That's the sort, Jimmy," said his comrade in loud approval. Jimmy only grunted, and a moment later hurled his spear twice its length. As the boat came up to the wriggling and waving shaft, he stooped, and picking it up, boated a large fish. "Swago," he laconically catalogued it and stamped it into everlasting rest.

"That's the way Jimmy jerks 'em in," cried his friend and patron. "When he runs his eye aout at 'em, they're goners, you better b'lieve! I argy he does it by charmin' on 'em with his good looks. You've noticed 'at he's oncommon harnsome."

"Onph!" Jimmy grunted, and after some slow rumination of his cud, speaking more at length than was his wont, "Guess you haint no gret to brag on that way, Joe, no more 'n me. Folks calls him Time," addressing Sam and indicating his comrade by a backward movement of his head, "'cause he favors the pictur o' Time in the primmer."

"'Tend right tu yer spearin', Jimmy, an' don't tire yerself a-talkin'," said Joe. And Jimmy raised his spear, then arresting it in a half delivered stroke, said with supreme contempt, "Cussed bowfin!" and the boat moved on. Presently he poised his spear and announced, "Mud turkle. Ol' buster. Shell I?"

"Let him hev!" shouted the commander of the expedition, and the spear went unerringly to its mark. Jimmy grunted profusely as he lifted the sprawling monster inboard partly by the spear and partly by a "tail holt." He was a patriarch of the oozy depths with the moss of many years clinging to his broad shell, and was vicious in appearance and behavior.

"Cut off his cussed ol' head," said Joe, passing his open jack-knife forward, "an' let him c'mence his nine days o' dyin' right off. Mebby you're the man 'at ketched my goslin's, you humbly ol' cuss! Haow d' ye like that kind of sass yerself?" as Jimmy sawed away at the turtle's tough neck just below where the spear transfixed it, while the reptile clawed at the knife and hissed angrily. When he was decapitated and laid upon his back the boat moved on to new conquests, Jimmy taking many fine fish of various kinds before they reached the head of navigation, where a rude, low log bridge barred their further way. As they skirted the left bank on their homeward cruise, Jimmy still alert for more victims, Joe said: "Jimmy 's a cuss to spear, wus 'n a kingfisher or a blue herrin, but he won't paddle er pole. Some says it's 'cause he's lazy, but I 'low it's on'y 'cause he don't like tu work!"

"Onph! Lazy! The' wa' n't nobody 't ever wasted the' breath a-tellin' haow 't you was lazy," was Jimmy's only reply to the imputation.

When they reached the landing at the camp all went ashore and stretched their cramped legs, and found the warmth of the fire very comforting, for the dampness and chill of the spring night had crept into their bones.

CRANE ISLAND.

Governor De Montmagny's Game Preserve.

BY J. M. LE MOINE.

Author of "Quebec Past and Present," "Maple Leaves," "Chronicles of the St. Lawrence," etc.

THAT quaint old repository of historical lore, the "Rélations des Jésuites," makes mention, among others, of two picturesque islands in the St. Lawrence, thirty-six miles lower than Quebec. Père Le Jeune alludes to them at an early date as the inviolate sanctum and breeding ground of millions of ducks and teal, whose loud voices made the whole place vocal in the summer season. We are told, however, that in that *année terrible*, 1663, as memorable as the present is likely to be for Charleston, South Carolina, owing to frightful and continuous earthquakes, the soil rolled and quaked, some added, "to that degree that church steeples would bend and kiss the earth and then rise again." This last feat, from its novelty, would doubtless have been particularly attractive to witness from a balloon, for instance, or from the deck of a ship; from anywhere, in fact, except from old mother earth. Such are some of the notices our early annals furnish. Governor de Montmagny seems to have set his mind at procuring these islands as a game preserve for himself and friends. In May, 1646, Louis XIV., the Grand Monarque, made a grant of these islands to his trusty lieutenant holding court at the Chateau Saint Louis, at Quebec. A famous Nimrod, one would fain believe, was this Knight Grand Cross of Jerusalem and Governor of Quebec, Charles Huault de Montmagny. He left his name to the flourishing county of Montmagny, which includes his cherished shooting box. Of the bags of game he annually made up on the verdant and swampy beaches of his isles, of the roasted black duck, teal and snipe he had served up to his merry little court within the sacred precincts of Castle of St. Louis, we have no record save the faint tracings of tradition.

Nature itself seemed to have predestined this group of green, solitary isles as the home of the aquatic tribe. It afforded it more than a pleasant haunt during the spring and fall, a breeding place in summer, it contained an hospital for the infirm and wounded birds of the neighborhood. Mère Juchereau, of the Hotel Dieu Hospital, at Quebec, in her Diary, under date of July 8, 1714, when with eight of the saintly sisterhood and the Almoner, Rev. Messire Thibault (with the sanction of the Bishop, she adds), was visiting by water conveyance Big Goose Island, then recently purchased by the monastery and held by it to this day, will describe *con amore* this singular rock, still known as *rocher de l'Hopital:* "We returned," says she, "from our excursion, which had lasted eight days, perfectly delighted with the beauty and fertility of the spot. Among the most striking objects," she adds, "there is a large rock, which from time immemorial goes by the name of the Hospital, because any Canada goose (*outarde*) or other sea fowl wounded by fowlers, hurries to this rock, like unto an asylum, where relief is at hand. The feathered tribe have here delicate appliances, in which art would seem to play a greater part than nature. A number of holes of various size are scooped out of the solid rock. The tide flows into them, the sun warms the tidal water remaining therein. The invalid birds bathe and luxuriate in these tepid reservoirs. When shallow water is required, they resort to one of the smaller cavities, or else plunge into a larger one, as they may fancy. They repose on the heated stone or else lie imbedded in the moss to cool themselves. In hospital we noticed sick or wounded *outardes* (Canada geese). They apparently recognized us as Hospitalieres nuns. We were careful not to scare them, and ascended to the summit of the Hospital rock, from which the eye took in a wide expanse of water—a sea." Such is the bright picture drawn by good Mother Juchereau de St. Ignace, the annalist of the monastery.

Whence the name of Crane Island? That erratic wanderer, sung by Hora, *Gruem advenam*, the wary crane having also sought the island as a trysting place during the spring and fall migrations from Florida to the far countries and Hudson Bay, the place was called after it, Crane Island. Under French rule the law lent its protection to the game it contained. Special *ordonnances de chasse* were passed to that effect and some legislation to protect the ducks, etc., at the period of incubation also took place under the early English Governors; at one time several varieties of aquatic fowl resorted for food or incubation to its vast meadows, clothed in luxuriant, coarse grass called *la rouche*—a substantial fodder for cattle. Pot-hunters having undertaken to hunt with dogs the fledglings, in July, before they could fly, the parent birds resented such unsportsmanlike practices and sought other breeding places in the more secluded isles, on the Labrador coast or in the neighborhood of Lake St. John. They still return in the fall.

Among the early proprietors of these islands figure the names of some of the officers of the dashing Carignan-

Salières Regiment, subsequently to whom we find the name of a descendant of Baron Charles Le Moyne de Longueuil. In 1775, the Seigneur was M. de Beaujeu,* brother of the famous de Beaujeu, who in 1755 took part in the memorable battle of the Monongahela. In 1759, he had been intrusted with the command of an important post, that of Michilimakinac in the west, for his services and devotion to the cause of His Most Christian Majesty, he was decorated. De Beaujeu, at the head of his *censitaires*, was a sturdy chieftain; nor did he hesitate during the winter of 1775-6 to cross over and join the succor, which de Gaspe, Seigneur of St. Jean, Port Joly, Couillard, Seigneur of St. Thomas, and an old Highland officer, Thomas Ross, of Beaumont, made a noble effort to pour into Quebec. The skirmish with the Continentals and their Canadian allies took place at St. Pierre, Riviere du Sud, and is known in Canadian annals as *l'affaire de Michel Blais*. It was a rout for the Loyalists.

It is curious to follow the warlike Seigneur de Beaujeu upholding the standard of England in 1775-6—the same standard he had so successfully opposed before the desertion of the colony by France. De Beaujeu's name still survives on Bayfield's old charts—in that of the shifting sand bank, in the St. Lawrence opposite the Manor House. It is proper to state that his winter expedition of 1775-6, to relieve His Excellency, Guy Carleton, blockaded in Quebec, ended in a disaster, nearly costing him and his followers their lives. Capt. de Beaujeu expired at Crane Island in 1802.

In our early sporting days we recollect hearing from the oldest inhabitants of the islands, quaint anecdotes, relating to their aged and warlike Seigneur de Beaujeu. It would seem that on great holy days the Chevalier de St. Louis took particular pride in wearing in his buttonhole the red ribbon of the order sent out to him by the King of France, Louis XIV. Age and infirmities creeping on, the old lion used to remain in his den the greater part of the day, and when the tenants brought the rents and seigniorial capon at Michaelmas, more than once, they had to kindle the fire on the very spacious hearth, inclosed by an antique "wide-throated chimney," which to this day is a subject of curiosity to all visitors, so as to render the hall tenantable. Recently there were lying on the shore at Crane Island, near the church, an antiquated rusty cannon, brought from Cap Brulé on the north shore, opposite to Crane Island. In 1859 a similar cannon, measuring in length 5ft. 8in. and 12in. in diameter, was presented by a resident of Crane Island, Capt. Lavoie, to the Quebec Seminary; at that period some of the timber of this old wreck was still visible. History furnishes full details of the wreck at Cape Brulé of the French man-of-war Elephant, on Sept. 1, 1729, carrying to Quebec some of the most noted men in the colony, Bishop Dosquet, Intendant Hocquart and others; the cannon we saw at present forms part of the antiques and curios, gathered together in the Museum of Herbert Molesworth Price, Esquire, at Montmorency Falls, near Quebec, the antiquary is very proud of this relic of the past. With the exception of the de Beaujeu seigniorial manor on the lower end of Crane Island, rebuilt and enlarged by McPherson Le Moyne, Esquire, of Boston, the new seigneur, who occupies it during the summer months, all the dwellings stand on the northern side of the island, a thick belt of forest trees hides them from view, except when the steamer takes the north channel—the old French route—when they are faintly seen in the distance. The locality ranked as a parish, under the name of St. Antoine de l'Ile and Gunes, as early as 1683, when it comprised but three families, in all fifteen souls. In 1678 Pierre de Becart Sieur de Granville, was the seigneur.

Crane Island—six miles in length—during the "leafy months" is noted for its salubrity and attractiveness. A highway, as level as a bowling green, runs from one end to the other, and umbrageous woods, descending to the shores, intersect the portion of the island which is not under culture. A dense grove of graceful maple and oak trees, some thirty acres long, fringes the crest of this plateau at the west point facing the anchorage, well known to every river pilot, La Pointe aux Pins. The Marine and Fishing Department in 1866 erected a lighthouse on a pier which now connects with the shore, also a number of beacons on the land and recently, gas buoys in the channel, near de Beaujeu's shoal. In the rear of the lighthouse the ground rises in successive terraces, studded with dwarf parasol pines of singular beauty, and leads through natural avenues to the wooded and umbrageous plateau above, known as "Le Domaine du Seigneur," a cool, delightful spot for a picnic or fête champêtre, of which Quebecers seem fully disposed to avail themselves with the permission of the owner. These picturesque highlands have also their heather, a fuzzy, graceful carpet of juniper bushes, weighted down each fall with fruit, when September crimsons the adjoining maple groves a visit to this elysium is a thing to be remembered. Few sites in our gorgeous Canadian scenery can surpass its river views, extending to Cape Tourmente, Cape Mallard, and over the innumerable islets basking in sunshine at your feet.

The old manor, with its green groves, orchard, ample veranda, flagstaff and numerous outhouses, is in full view from the steamer ascending the south channel. Some distance in rear are two antiquated wind mills to grind the island wheat; beyond this is a string of pretty, white cottages extending to the west end of the island, the parish church of course, as in all Canadian scenery, looms up in the center. As a river view, nothing can surpass in grandeur the panorama which the lovely St. Lawrence here unfolds on a radiant summer morning, when with the rising tide a fleet of swan-winged merchantmen emerge from the Traverse far below, in the direction of the church of St. Roch des Aulnets: at first imperceptible white specks on the horizon, gradually growing larger and larger, on the bosom of the glad waters until they, each in succession, crowd on your gaze, topsails, topgallant sails and royals all set, a moving tower of canvas advancing toward the island shore—at times so close that you can hear the voices of all on board.

It was at one time contemplated to divide in lots the west end of the island for sportsmen wishing to build their shooting lodges in proximity to the several fishing and shooting grounds in the neighborhood, such as Ile St. Marguerite, Battures aux loups marins (Seal Rocks), Roches Plates and St. Joachim beaches. Such is Governor Montmagny's game preserve of 1646.

*Louis Lienard Villemondo de Beaujeu was the brother of the hero of the Monongahela and his worthy emulator. Ensign from 1731 to 1738, lieutenant in 1744, he was appointed in 1751 captain of the company of Soldiers of the Marine, in place of M. de la Verendrye; and by his honorable conduct in January, 1754, obtained the Cross of St. Louis. The authorities granted him that year a concession of land four leagues in depth by four front, on the border of Lake Champlain, and he applied himself to the work of clearing it. Sometime afterward he was appointed commander of the post of Michilimakinac, and he served in this position during many years. Later he took an active part in the defence of the country during the American war (of independence). M. de Beaujeu died on June 5, 1802, at his manor at Crane Island, at the advanced age of eighty-five years and five months. ("Collections of the State Historical Society of Wisconsin," Vol. VII. page 138).

BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

65. *Myiodioctes mitratus*—Hooded warbler.

Not a rare specimen from May 15 to July 1, after which it is rarely seen. Arrives from May 1 to 14 according to the season. It may seem strange to many readers of this article that this species or any other should have so varied a period of arrival, but it cannot be accounted for in many localities. It is equally mysterious to me. That a species should arrive some seasons two weeks sooner than it appears in other years is good cause for speculation. In mentioning the arrival I intend to convey my first sight of the bird, and I am positive that the hooded warbler did not arrive until May 14 one season, 1877. Now, undoubtedly the bird had arrived in the State some time before this date, but had not migrated through this country. One year, 1881, I saw it on May 5 in Montcalm county, well to the north. The average date of arrival may be placed at May 6 to 8.

Some seasons the birds are quite abundant, again comparatively rare. The species first came under my notice in May 1875, and I think the few years preceding the birds were scarce, for I was quite diligent in the collecting and failed to note it sooner. In 1876 several nests came under my observation. I may safely say that there are few birds that remain with us during the breeding season that are as little known. Nevertheless in some seasons the birds are comparatively common, and in many instances if heavy beech and maple woods with scant underbrush, their favorite haunts, are properly searched these birds will be found breeding in secluded situations where their existence was not suspected. They are very shy and it is with much difficulty that their presence is discovered. Their simple yet pleasing notes can be heard in dense thickets of small bushes, or from low branches of trees throughout the entire day, without one even obtaining a single view of the handsome fellow. It is one of our most retiring warblers and one might collect for years without securing a skin, unless a very enthusiastic collector. Their presence is only detected by the pleasing songs of which they have two, with a fine call note and short strain. So shy is the hooded warbler that the breaking of a twig or cocking of a gun scares it from its perch, when it flies six to ten rods and renews its song, still keeping out of sight. I have been puzzled and followed one of these birds about for an hour before I could get a shot. Their nests are only found by mere accident, and I have never yet found one that I hunted for although the birds were present.

The first nest was found May 27, 1876, and contained two eggs, and one egg of a cowbird. I left the nest several days with the expectation of getting more eggs. However, no more were laid, and this seemed to be the complement. Three eggs, however, appear to be the usual number laid. I also found nests May 31 and June 6 and 9. All these nests contained three eggs. Of these eggs the dimensions vary from .72x.65 to .74x.63in. One egg of the series was only .73x.58in. The color is white with a roseate tinge, marked with more or less red at larger end and a few scattered markings over entire surface in some instances. Occasionally we find a black dot at larger end. All of these nests were in beech or maple bushes, not over four feet from the ground, one not being over one foot from the ground. They were composed of beech and maple leaves of the last season, neatly formed into a compact structure 4in. across at the top, four high externally, the hollow being about 2½in. in width and the same in depth, the whole nicely lined with grapevine bark and fine roots. The birds always left the nest silently and did not seem to care if the eggs were taken, indeed it was difficult to secure the parent for identification. These nests were secured at Kalamazoo, Mich., about 43 10' lat. north.

The hooded warbler is extremely plentiful from 43° north to 45 , and one of the most common species in many quarters. Always difficult to study from its peculiarly restless, timorous disposition, it is rarely known among amateur collectors. It is embraced by Sager, 1839, in first list of "Birds of Michigan." Given as rare by Hughes, Covert and Boies. Observed regularly as a migrant in many southern parts of the State. Not embraced by several lists, showing it to be an irregular visitor as regards localities. More likely a bird of preferences in regard to lines of migration. I failed to find the species in the Upper Peninsula or in the British possessions near Lake Superior. I know nothing of this bird in its fall migration. It is so quiet after the breeding season that it is rarely if ever seen excepting by accident, as it is so exceedingly shy.

66. *Myiodoctes pusillus* (Wils.) Bp.—Black-capped yellow warbler.

This bird was formerly called Wilson's black cap, but times have changed, and now poor Wilson gets no credit. What is the everlasting changing of names going to lead to? If some one should undergo old Rip's sleep, if it only lasted half as long, I do not think he would know one bird out of ten either by its common or scientific name. This beautiful little bird is rare in all parts of the State where I have collected. I shot a specimen near Kalamazoo May 16, 1875, which is the latest date of its stay here that I have met with. It is certainly a migrant, and probably does not summer south of 45 or 46°. I failed to find it in the northern peninsula in June. The bird has also been shot a number of times to my knowledge. Covert is the only man who says "very common migrant," in his Birds of Washtenaw County. Dr. Atkins, that good man of over thirty years' experience in Ingham county, now gone to his reward, found it as early as 1866. It may be classed as a rather rare migrant, I think, as it is omitted by many lists. If Covert finds it a common transient, it probably migrates through a certain belt in his section, as it is certainly not well distributed. Of its nesting habits nothing is known, although Covert says "some remain during the summer."

67. *Myiodioctes canadensis* (Linn.) Aud.—Canadian flycatching warbler.

Not a rare migrant in southern points of the State and a common summer resident north of 43 north latitude. I think it may be found as a summer resident in Kalamazoo county; it has not been proved, however. Usually arrives about May 10. My earliest arrival is May 5, and one year I did not see it till May 20. A straggling migrant. I am satisfied that it breeds in Kent, Ottawa and Montcalm counties, but I have been unable to find the nests. One authority says it breeds south of 43 north latitude. Found by Cabot in the Upper Peninsula as early as 1850, and embraced by nearly all the lists. A beautiful species and very pleasing in its habits and notes. It has a short song in which it frequently indulges while in its nesting grounds, but which is rarely uttered during migrations. One of the peculiarities of this species is its curiosity, a trait which is so striking that one will notice it the first time the birds are met with. Its inquisitiveness is so marked that it is actually as odd as the blackcap titmouse in its movements while collectors are near. Nothing is known of the breeding habits of this species in the State.

68. *Setophaga ruticilla* (Linn.) Swains.—American redstart.

An abundant species some seasons and again rare. Not near so common near my present home in Kalamazoo county as formerly, from the fact that the woods have been largely cut down during the last ten or fifteen years. This bird likes the edges of heavy beech and maple, elm and basswood forests, wherein to build along the edges, where young maples and thorn bushes have grown up. I imagine that the centers of deep forests are rarely selected by these birds, but now the woods are cut off too freely, and some species which follow civilization—and they are innumerable—will leave for other localities where there are more forests. The redstart arrives from April 25 to May 9, and by May 15 usually many nests are in course of construction. The proper time for collecting the eggs is from May 25 to June 10. Frequently the eggs may be taken as late as July 1, and I have been led to believe that frequently two broods are reared in the season.

This species breeds throughout sections that I have visited, I having found it abundant as far noth as Sault St. Marie. The nesting habits are well-known and need not be described here. The male does not got his bright coat of black and salmon until the second season, and the brightest colors until the third year. I found a nest containing eggs presided over by two birds in the dress of the female, and wondered at the peculiarity. I shot the birds and dissected them and found one a male. The pleasing notes of the redstart are among the memories one retains after a spring in the woods and fields.

With the conclusion of this biography we complete the histories of the thirty-eight species of the family *Sylvicolidæ* in Michigan. A few remarks generally may not come amiss as a concluding chapter. The members of this family comprise one of our most interesting groups of birds, and it may well be doubted if any other class could take their places in our affections. Remove the warblers from forest and field and the beauty of nature would be sadly impaired. Nothing can quite fill their places in May and June; and the migration of the warblers is one of the most pleasing features of bird life. Their nesting habits, so varied, are the enthusiast's delight; the grace of form and gay plumage cause them to be the chosen of the ornithologist and too often the disagreeable assaults of the hat decorators.

The warblers hold high rank in my estimation, and I am quite confident that more time has been spent on my collection of warblers' skins and eggs than on the members of any other three families. In the matter of benefit to the farmer it is reasonable to place these little fellows above the thrushes in point of merit. As was written in earlier numbers of this series, the thrushes have the well-founded reputation of devouring largely the predacious species of beetles, and moreover have the disagreeable habit of devouring large quantities of fruit. The *Sylvicolidæ*, on the contrary, although often represented in gardens and orchards, rarely, if ever, feed on fruit, and usually confine themselves to the minute form of insect life found almost everywhere. They come near to the swallows in their nearly strictly insectivorous diet. The swallows feeding mostly on *dipterous* insects, with a few *coleoptera* and a good share of *neuroptera*, while the warblers are more confined to larvæ and, as with a few species like *Setophaga*, to flying species in the mature state. Very few species arrive early in the spring, and with the exception of the yellow rump, pine and large-billed water thrush, which frequently reach us in early April, we rarely see them here in any numbers until about May 10. In the autumn, however, the case is different, many species remaining until Oct. 1, and one even till after snow flies in some seasons, the birds being able to find plenty of food that, at a corresponding time in the spring, would be hardly procurable.

The following ratio of the prevalence of the warblers in sections that I have visited may not be uninteresting to the reader, especially to those who live in other States and desire comparison with their own species. Among those which are extremely abundant in almost all sections that I have visited excepting the extreme northern portions of the State may be placed the following: Abundant migrants; a portion remains in some portions of State during summer—*M. varia, P. americana, D. æstiva, D. coronata, D. pennsylvanica, D. blackburniæ, D. virens, D. pinus, D. discolor, S. auricapillus, S. motacilla, G. trichas, M. mitratus, S. ruticilla*. Common migrants; a portion remains during summer in some parts of the State—*H. chrysoptera, H. ruficapilla, D. cærulescens, M. canadensis*. Only seen during migration—*H. peregrina, P. tigrina, D. maculosa, D. castanea, D. striata, D. palmarum, O. agilis, M. pusillus, S. nævius*. Stragglers—*H. celata, H. vermivorous, P. citrea, H. leucobronchialis, D. kirtlandi, O. formosa*. Not rare in extreme southern portions of the State some seasons—*D. cærulea, D. dominica albilora, D. virens*. Common in sections, but rarely taken during migration—*G. philadelphia*. Common (in some sections) during migration only—*H. pinus*.

Below is given the measurements, average and otherwise, of twenty-seven species of warblers captured in the State and taken from 122 specimens. The remaining eleven species I had no authentic measurements of, or in

some cases had not the species captured within the boundaries of Michigan:

	Average Length.	Average Wing.	Average Extent.	Average Tail.	Greatest Length.	Longest Wing.	Greatest Extent.	Specimen.	Shortest Wing.	Shortest Wing.	Least Extent.	No. Examined.
M. varia	4.95	2.81	8.47	2.09	5.23	2.85	9.00	4.56	2.72	8.13	6

* Only one specimen of these species, and the figure cannot be taken as an average.

KALAMAZOO, Mich., Sept. 18.

FANGS AND RATTLES.—During the winter of 1884-85 I was following my calling as a taxidermist in a South Florida town. One day a tourist brought me a large male rattler, the skin of which he wished to have preserved so that on his return North it could be tanned for slippers. While I was busy preparing the skin my customer took up my large wire cutters and extracted the snake's fangs. I had no occasion to use these cutters again for more than a month, but it so happened that with the first wire I did sever with them I slightly scratched one of my fingers on the first joint, hardly breaking the skin. Within an hour it was greatly inflamed and causing much pain. The next morning my arm was swollen to the elbow, and I promptly called in the services of a physician. In a week the swelling and soreness had disappeared, and I congratulated myself that I was cured; but two days later it again became inflamed and I again went through the same experience. After this I received no more trouble from it for about six months, when, for the third time, it laid me up for a week, since then I have heard nothing from it, but am never likely to forget it, for I am left with a finger slightly deformed, although good for all practical uses. I at once adopted for a motto: "No rattlers need apply."—BLACK SPOT.

AUTUMN BIRD NOTES.—Forreston, Ill., Oct. 10.—Our northern warblers have been migrating southward now for about ten days. Among those mostly seen are the chestnut-sided, yellow-rumped, black-throated green, black-throated blue and black and white creeper. White-throated sparrows have been numerous along the hedges for several days and among them are a few white-crowned. Kinglets are very numerous and feed principally on insects that infest the wild crab apple and thorn apple. Brown creepers and red-bellied nuthatches were never so abundant as they are this fall. Robins are still here and feed mostly in large flocks. But few wild pigeons have been seen this fall. Golden-winged woodpeckers have been very abundant, but there were two heavy frosts lately, since which but few have been seen. Turtle doves have been very scarce and none are seen where in former years they were plenty. I have not noticed any blue-gray gnatcatchers this fall and but few humming birds.—H. A. KLINE.

FAMILIARITY OF BIRDS.—Agawam, Mass., Oct. 5.—There seems to be some interest in the familiarity of some of the smaller birds with human beings. Fifteen years ago I spent a winter with a brother cutting timber on the first rocky ledge west of the Connecticut River in this State, and under his training I learned to teach the common chickadee to feed out of my hands. It requires only a little patience, very cold weather and deep snow for this; when the snow disappeared they preferred their natural food. They seemed to know the dinner hour as well as ourselves, but although lighting indifferently on my shoulder, open palm of hand, fingers or thumb, I never could close my hand quick enough to capture one. It seemed to be the same individuals of the flock that fed from the hand each day.—PINE TREE.

SWIMMING RABBIT.—Lynn, Mass., Oct. 3.—A few days ago two men, Charlie Dodge and A. M. Tufts, were fishing on Spring Pond, between Lynn and Peabody, when they observed an animal swimming across the pond. Mr. Tufts made a noise and the swimmer pricked up his ears and turned round and round in the water and started for the shore. They overtook and caught in the landing net what proved to be a full grown rabbit. There was nothing to frighten it and besides it could have gone around the foot of the pond and not have any further to go than to swim across. The pond is about 200yds. wide at this place. It seemed to swim as fast and easy as a dog.—X.

A TAME WOODPECKER.—Jefferson, N. H.—At the Maple House in this village is a tame pileated woodpecker; he is so tame that he will eat from his owner's hands; one of his wings is clipped. His food consists of grasshoppers, ants, crickets and small grubs found in rotten trees. Will any of your readers give information in regard to winter food for him?—SPORTSMAN.

THE SEA SERPENT is alleged to have been seen Oct. 10 by P. S. Sanford and W. Stroude, of Westport, Conn., and Dr. Keys, of New York, half way between Westport and Southport in the Sound. The story is said to have been received as "creditable," which it might well enough be even if not credible.

THE OTTER IN NEW ENGLAND.—Is the otter so nearly extinct here in New England as the author of "Sam Lovel's Camps" seems to think? As long as I lived near the Connecticut River, a trapper took one at least each winter at a certain ledge of rock, and the tracks of others were seen about the ponds or passing from one brook to another, and I understand the fur dealers usually secure a pelt or two about the Southwick Ponds, this State, each season; and three of us now resident here are sure we saw one in a small pond near the house where I am writing, four years ago.—PINE TREE (Agawam, Mass.).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One pileated jay (*Cyancorax pileata*), one anaconda (*Eunectes murinus*), nine slow-worms (*Anguis fragilis*), and thirty-five European salamanders (*S. maculosa*). Presented—Thirteen gray squirrels *Sciurus carolinensis*), two muskrats (*Fiber zibethicus*), one raccoon (*Procyon lotor*), one black bear (*Ursus americanus*), two turtle doves (*Turtur risorius*), seven cactus conures (*Conurus cactorum*), one Levaillant's amazon (*Chrysotis levaillanti*), one Egyptian monitor (*Varanus niloticus*), one Hardwick's mastigure (*Uromastix hardwickii*), four alligators (*Alligator mississippiensis*), two horned toads (*Phrynosoma cornuta*) and one horned toad (*P. douglassi*).

Game Bag and Gun.

Address all communications to the Forest and Stream Pub. Co.

ON THE COAST OF SOUTH CAROLINA.

SUMTER, South Carolina.—The season for field sport is just now opening. The excessive rain in the spring destroyed a large portion of the first hatching of quail; but the fruitful birds have repaired the damage, and my dogs run upon coveys by the roadside almost daily within a mile of the town from which I write. Our last Legislature passed a law changing the open season to Nov. 1. As the birds were late on account of the destructive rains, the law is wise for this year; but ordinarily by Oct. 1 they are well grown and ready for the gun.

Sumter is only a short distance from the coast, say 60 miles, and between here and the salt one can find all manner of game. Will you bear with me while I give an outline? Pawley's Island, situated on the open sea, ten miles above Georgetown, is a magnificent summer retreat for those who are willing to put up with a private boarding house. A mile and a half from shore is a coral reef where fish of all sorts abound. A few days ago three of us caught 126 trout and sheepshead in 55 minutes. In the creeks to the rear of the island are oyster banks and shallows which supply abundance of crabs and shrimps. Our party of Sumter tourists reveled in these delicacies every day while on the island. At night, with a light in the boat, we found sport in striking flounders with a spear. They lie in shallow water partly concealed under the mud. It requires a keen eye to detect them, but practice will soon enable one to discover their hiding place. In this sport the ladies would join, and on some nights we bagged fifty, many of them weighing five pounds. The surf bathing on the beach is unsurpassed by any that I know of; not even does Tybee, below Savannah, nor the beach on Sullivan's Island in any way compare with that on Pawley's Island.

But the finest sport to be found there is in driving for deer. The Waccamaw River runs along our sea coast for thirty miles, forming a neck between the river and the beach which will not average more than four miles in width. Toward the southern end of this neck deer are found in great numbers, but the ground is very low and is broken into bays and marshes. Many of these places have never felt a human footfall. Only a skillful hound can penetrate them, and there the deer find hiding places. To stalk or fire-hunt them is impossible. One cannot see ten paces ahead of him. Our only means of getting at the deer is to turn in the dogs, and as the deer generally run in set routes, we soon learn where to stand for them. The yelp of the dogs and the whoop of the drivers is very startling to one's nerves, and the crash of the deer through the undergrowth gives a *coup de grace* to the whole, so that it is fully possible for one to miss his aim. A party of us the other day, thirteen in number, put in the dogs at the head of a dense bog. Within ten minutes I heard the crack of a gun. It was a miss. On came the game right along the line of standers, and as good luck would have it it fell to my luck to put in the fatal shot. At the next drive we had scarcely been posted by the leader of the party before the dogs came yelping and screaming toward us. We were standing in a line, 100yds. apart, along a straight, open road. Away at the other end of the line I heard a gun, then a horn. This was the signal that "meat was on hand," as they put it. But the dogs did not hush. On they came. Away down the road I saw a venerable M. D. and the judge of our County Court with guns at their shoulders, as if ready to fire. I accused the judge afterward of having danced a handsome jig. Bang! the M.D. had shot. Bang! a second time, but no horn blew. "Oh, we'll get him," said the Doctor, and as we rode in the direction along which the deer had gone, one of my ponies, ridden by a friend, gave a lunge to one side, and there lay a magnificent buck. Laying him across a horse we went out to the road, and there met La Bruce with a second buck, so we had bagged three deer within two hours. On these trips to the neck we always find abundance of game, and rarely ever come to our stopping place without one or more deer.

Up the Waccamaw River, along the rice fields and marshes and at Big Marsh, near the mouth of Winyaw Bay, ducks of all sorts congregate—shall I say it?—in millions. I have seen ten acres of water so completely covered that one could not throw an apple among the ducks without striking one. From these great gatherings they rise and fly from time to time in droves of from five to fifty. If one knows where to place his decoys and has learned to shoot the ducks while going from him and not while coming to him, his share of meat is assured. I brought in sixteen summer ducks one evening lately and they were then flying very badly. The large ducks I have not yet tried this season. In two days last hunting season a friend and myself bagged 152. During November and December is the time for the large ducks.

Our sport now immediately around Sumter is fishing for pike and shooting squirrels. A seat in the swamp on any afternoon will soon reveal the squirrels running up and down the trees. A bag of twenty is not hard to obtain. Then the pike! The little lakes and outside creeks in the swamps are now very low. In fact many of the creeks have ceased to flow and the pike are hungry. They will rise at anything—a piece of bacon or a strip of red flannel or a strip from the belly of a fish. On Monday several of us (two ladies in the party) hung up sixty pike in two hours' fishing. Some of them are of good size, measuring 15in., the majority averaging 12in. and weighing 1lb. These fish are close akin to the fish Northern folks call pickerel and which we call jack-fish. They bite just like the jack, that is, they pull the bait down and seem to chew on it before swallowing. The fisherman must learn to give them abundance of time. After they chew the bait a while, they will hang on to it and allow you to flirt them out of the water without ever being touched by the hook. It is said of an old fellow in the country near here that his jerks are so severe that as soon as he flirts a pounder out from the water, he casts off his hat so as to be better able to hear where the fish drops. I have seen Nash, a "commercial tourist," lift them from the water and up into the trees 20ft. high. But it's big sport. At times they bite as if ravenous. One man will string fifty in as many minutes. Then again they flirt your cork about with their tail and fool and vex you, but refuse pointedly to take the bait. Within an hour a change comes over them and then you cannot feed them fast enough.

Dr. Mood has secured a curiosity in the shape of an alligator's head, and has it in one of our drug stores on exhibition. The animal was 16ft. 3in. long, by actual measurement. The following are the measurements of the skeleton head: From eye to eye, 6in.; from tip of nose to first joint of neck, 24in.; distance around mouth midway between nose and eyes, 28in.; from tip to tip when mouth is open, 16in.; distance around head over eye sockets, 34in. This beast was found dying in Wateree Swamp, 20 miles from Sumter.

One or two gentlemen from the North have been down to spend a month in the winter shooting quail. Let others come. They will find good companionship if they seek out the proper kind of people. Good board can be had for $20 per month, and abundance of quail within easy walk of the town. The lands are not posted and persons who demean themselves well are not regarded as trespassers. Now, a pot-hunter might find it different, but of course, I do not invite any such to come.

Just a word more. Will you not provoke some of your correspondents to write upon the subject of loading shells? I shoot a 7lbs. hammerless gun, and find that for quail 3¼drs. powder and 1¼oz. shot with three pink-edge wads on the powder and then pasteboard on the shot, does the best work. If I fail to kill it is because I miss the bird. Will others give me the benefit of their experience?

When the quail season opens I will give an account of my first day's hunt. C. C. BROWN.

HALCYON DAYS.

Editor Forest and Stream:

When I was a boy living in a small village in southern New York, long vacations between school days was the rule, it being considered extravagant by most parents to allow more than four or five months schooling in the year, and that in the winter when there was no farm work to do. Then boys had to work and their duties began at daylight when they were called to go for the cows, and ended only at dark after milking time, the intervening hours being occupied in doing anything that a boy could do, and often as much as men were expected to do. A boy's life on a farm was not by any means an easy one, nor was it an unhappy one, for they were brought up to work and knew no better. Rainy days were generally holidays, and were spent in amusements best known to the average country boy.

It was my good fortune, considered in a boy's standpoint of judgment, to be possessed of parents who did not live on a farm, and while I had certain chores to attend to, and they were made imperative, a fair portion of the vacation season was left to myself, and occurring in that part of the year, beginning in the early spring and lasting late in the fall, I had golden opportunities for indulging in all the freaks and inclinations of boyish nature. I had few companions, for most other boys were engaged in the arduous duty of farm work, but there were two or three about the village whose company might not have been considered exactly proper by the good folks at home had it been known of my association with them, whom I could rely upon almost any time for a lark or ramble through the woods and fields. They were not bad boys in the sense of the word, for they had never been far enough away from the quiet, peaceful little town to learn anything really bad, the objections to them being based on the fact that they would rather fish and hunt or loaf around than work. "Chip" Mason, one of these, about my own age, stout, good-natured, and always dressed in a brief suit consisting of an old chip hat, shirt and baggy pants, rolled half way up to the knees, upheld by one home-made suspender, was my favorite. Chip was the owner of a large black dog of no particular breed, but an unusually intelligent animal. Chip had expended a great deal of patience in Snap's education, and was rewarded one day by the faithful brute saving his life, dragging him from the millpond in which he had fallen, for Chip, with all his accomplishments, could not swim, and thereafter boy and dog were firm and inseparable friends.

One morning early in September, while I was engaged in the to me particularly disagreeable task of cleaning out the cellar of an old building adjoining our house, preparatory to getting ready for the winter vegetables, etc., the doorway was darkened and I was greeted with, "Wat yer doin'?" It was Chip, and when I told him and explained that I had nearly an all-day's job before me, his countenance assumed a disappointed expression, and, stepping inside, he walked up close to me and half whispered, "I got er coon in an ole holler log over 'n the holler, an' I thought yer cud go 'long an' help me ketch 'im. Snap drove 'im in when I was comin' over from ole Spoonyberger's this mornin', an' I plugged up the hole with a big stone."

Here was an opportunity for fun, indeed; but how to get away was the question. I had strict orders to finish the job in hand that day, and former experience had taught me that any disobedience of orders from my paternal ancestor would not be overlooked. I did not know how to manage it, and was about to give up the idea when Chip came to my relief. "Tell yer wat I'll do. Ef yer kin go wen yer git this done, I'll help yer. That coon 's got ter be ketched to-day." And at it we went. Chip worked harder than I ever knew him to work before, and considerable extra exertion on my part enabled us to get through by half-past 11 o'clock. Taking particular

care to put the wheelbarrow and other tools in their proper place and to see that everything was in good order, that it could not be said that I had neglected anything, we started, Snap leading the way, seemingly the happiest of the three.

Our way took us down a narrow path along a little creek of clear, pure water, whose banks were fringed with an intricate network of laurel and alder, forming an almost impenetrable barrier to a close inspection of its interior, but here and there a slight opening occurred, through which as we peered we could see in the deep pools some monster pickerel or mullet lazily fanning himself, unaware of our presence. Now and then we would see in the soft bank the track of a coon or mink, made the night before in his search for a fish supper. Chip told me he had once seen a mink catch one of these large fish, and in the struggle he almost caught the animal before it could get away. Even after its discovery of him, so rapacious was it that it would not let go its hold until he had almost broken its back with a stick, when it disappeared quickly in the deep water and entered its hole in the side of the bank a few feet distant. He got the fish, which lay on the bottom, and which proved to be a large sucker, and it had an ugly hole torn in its belly, the air bag was broken, and one of its eyes was gouged out. I witnessed a similar incident some years afterward, and in this case, too, the fish, which would weigh about a pound, had its belly badly torn and a deep cut across the front of the head. I was sitting on a stump a few feet from the bank of a small stream, which at that point formed a small but deep pool, watching a squirrel tree. I had not moved for more than half an hour, and the woods were oppressively still. Suddenly I heard a commotion in the water, and looking down I discovered a small mink, its wicked little eyes shining like brilliants through the water, grasping a fish as large as itself. The struggle was terrific, the fish seeming to have the best of it at first, but all at once its struggles seemed to cease and the mink was commencing to make off with his prize, when I fired and missed, but causing the animal to let go and sink. I could plainly see him in the clear water making for his hole in the opposite bank. The fish was not dead, but lay on the surface badly stunned. Picking up a long stick, I reached over and drew it to the bank and found it to be a large mullet, and badly mutilated as above. I never had an opportunity to witness a like performance, and have often wondered if instinct in the animal does not teach it to strike the fish in a fatal part at once to disable it and prevent a struggle.

Chip led me on to where the path struck an old wagon road crossing the creek and leading to an old grist mill a short distance below. We found the busy old miller who kindly loaned us an old grain bag that had been used for flour and was as white and dusty as the old miller himself. Taking the road again we followed it a half mile further, when we came to an old clearing containing an old deserted log house. Down through this we went, until we came to the "holler," and in a few moments found Chip's "holler log," which proved to be an old tree blown over by the wind and having a hole in its side near the butt, into which the coon ran when chased by Snap. The hole was well "plugged." Snap had not forgotten his chase of the morning, and was the first at the tree, sniffing and barking and pawing away at the stone trying to dislodge it, by which we knew the coon was safe. It was a mystery to me how Chip intended to get the animal out of his retreat, but Chip knew a good many tricks that I did not, and commenced proceedings without any hesitation. The tree was an old dead one that had lain for years, and there was scarcely any bark on its upper side. Picking up a good-sized round stone he began sounding the trunk from the butt toward the top until, in his judgment, he had found about where the hollow ended; then gathering up leaves and sticks proceeded to build a fire directly under that part of the log. Fishing a lot of strong string out of his pocket and prying out the stone with a stick, he tied the mouth of the bag over the hole in such a way that his coonship would run into it if he attempted to get out. He came to where I was standing by the fire and remarked, "Guess we got 'im now." We soon had a fire that threatened to burn the tree in two in a very short time.

Chip's judgement proved to be good. The heat generated inside the tree soon began to make it somewhat uncomfortable for its occupant and presently we heard a scratching and scrambling within which caused Chip to jump for the bag ready to grab it at the proper time. I picked up a stick and began poking the fire, and jabbing the end against the side of the log I punched a hole where the fire had partially burned through, which created a draft drawing the smoke and heat into the hole and causing the coon to make for the other end and into the bag, when Chip grabbed hold of it and held it together. In his endeavor to loosen the string he slipped and fell, but grasping the bag with all his might. Just then Snap, hearing the squalling and thinking his master needed his assistance, made a dash for the scene but only to be in the way, and as fast as Chip would get up he would knock him down Chip, dog and bag rolling over and over in one promiscuous heap, the coon squalling and snarling, Snap barking, and Chip shouting, "Git out, darn ye, gosh hang it," made the scene so ludicrous that I could not assist for laughing. When at last Chip extricated himself from the mess his appearance was ludicrous in the extreme. He was covered from head to foot with flour from the bag. The coon had bitten through in several places and his face and legs were red with blood from his hands. But Chip was plucky, and after tying the bag tightly we started for home, stopping at the creek to wash up and examine Chip's wounds, which we found to be but a few scratches which bled very freely. Chip sold the coon to the village postmaster for twelve shillings which he generously divided with me, and we had money to buy powder and fish hooks and lines to last us some time. J. H. B.

Mansfield Valley, Pa.

Quail in a City.—In gardens and grounds between Kennedy street and the arsenal, Hartford, Conn., a flock of quail has been seen, seemingly almost as tame as sparrows. When disturbed they flew to neighboring grounds or yards.

Michigan.—Grand Rapids.—C. D. Spalding, of the firm of Hill & Co., has opened a sportsman's "wigwam," where gunners and angleas are invited to call,

GAME PRESERVING IN BRITAIN.

IV.—THE GAME OF THE WOODS.—CONTINUED.

The Black Grouse, Black Cock, Heathfowl.

TETRAO TETRIX is not essentially game of the woods of Britain and in treating of it under this heading I am to some extent pandering to popular fallacy. At the same time it is not exclusively confined to moorland, consequently I have determined to treat of it here, this seeming the most suitable moment, as it forms a link between the capercaillie and the red grouse, between the cock of the woods and the cock of the moors.

The black grouse is a natural inhabitant of Great Britain, but does not thrive nor exist in Ireland, it is, however, very generally spread all over England, Wales and Scotland, increasing alike in the area of its dispersion and in numbers as we proceed northward. Nearly every wild, rough, uncultivated or semi-cultivated tract of land in Southern England boasts its stock of black grouse and a very pleasant relief they afford to the somewhat constrained other varieties of game we possess. Such bits of wild country crop up still throughout the length and breadth of our land and in some instances extend to very material area as in the case of Dartmoor, Exmoor, Sedgemoor, the New Forest and the moors of Yorkshire and other counties, so that this bird has every chance of maintaining itself against the march of agriculture and with the fostering aid of game preservation does not diminish in numbers but probably annually adds to them.

The haunts of the black grouse are decidedly typical. Besides the rough, heather-clad, boulder-strewn moors above alluded to, this game bird affects half cultivated country to a considerable extent; country of uneven surface, of rocky and rough nature, where low covers, plantations and woods alternate with rough down and boggy morass, where farming is carried on in a haphazard, old-world way; where, in short, the bustle of life is absent and the calm of untrammeled rural existence left undisturbed. This is the beau ideal of black-cock land, but by no means a *sine qua non* that a district should be absolutely of this description in order to include black game among its birds of sport. On the contrary, no bird scarcely appears to reconcile itself so easily to the inroads upon its domain accomplished at the hands of farmer or land grabber, provided one does not actually allow the birds to suffer regular disturbance. This it cannot stand. Cultivate up to the edge of the woodland, run a railway near its haunt, do anything you like, in fact, but don't continually disturb it, and it will remain and multiply. Were I asked to describe black-game land *par excellence*, I should point to some wide, open heather, gorse and sedge-grown upland, where dry, hard ground and low, swampy mire were in juxtaposition, which had been planted irregularly and roughly with larch and fir and beech and mountain ash and withey, and never been attended to since. I have several such expanses in my mind's eye now, and I know them to be what they ought to be, the very essence of black-grouse haunt.

But you will find them in countless other such places. In rough and tumble hill districts, in Scotch glens, upon the wild weatherbeaten isles of the west of Scotland, anywhere in fact from the warm sheltered Surrey hills within 50 miles of London, to the most inhospitable, weather-beaten, wettest expanse of Sutherlandshire moor. This being so I am surprised and regret that it is not more plentifully preserved in Britain. It is very unexacting as regards haunts, it is very hardy and a splendid bird of sport, but still to my thinking not appreciated at its true worth nor fostered and assisted to increase as it should be.

Its habits—particularly its routine of life, vary very much from the red grouse, remarkably so considering how closely related are the two species. The yearly course of its existence may be regarded as commencing in either March or April, according to the nature of the season, when the "packs" or flocks of males congregated during the winter months are broken up preparatory to the breeding season. Black game are polygamous and when the males set about forming their matrimonial engagements, a good deal of ill-will seems to be engendered between them, both over the possession of certain sites and also over the acquiring of certain individual females. As a rule each bird selects a certain expanse affected by his kind and sets himself up as a sort of cock of the walk and proceeds to maintain his supremacy there against all comers. Both in his courtship and in his battles for mates the black cock presents a most interesting subject of study and you cannot find a more entertaining sight in our game bird life, more arrogant and superior in prowess; and the young ones will, unless regularly killed down, play the part of dog-in-the-manger to a very material and—as regards the increase of stock—detrimental extent.

May is usually the month when the nesting process is begun. The site chosen is a well-sheltered, dry spot, sometimes in a clump of high, thick-growing heather, sometimes beneath an overhanging ledge of ground, occasionally at the base of a thick-growing tree or bush. I have found them, too, upon a low hedgerow, among the granite stones adorning the apex of a moorland hill, and under the gorse bushes. From three to thirteen eggs are laid, almost always in the month of May, differences of season, locality and climate notwithstanding. The whole process of incubation, rearing, protection and providing for the young is left to the females, which are very assiduous and devoted to the wants of their progeny. Meanwhile the males again pack and proceed to moult—curious ideas of the paternal duty. The young meanwhile remain and pass the summer with the mother bird until they moult, the new feathering being distinctive as regards their sex, which attire acquired, the broods are split up and the birds pack off again in separate packs, males and females apart. Sometimes these packs will number fifty or more, at others only a few head, the sexes occasionally, though rarely, flocking together. The males, as a rule, form into larger bodies than the females, packs of the latter rarely exceeding thirty in number. A good many birds, too, pursue an individual course of life in couples and threes, and some of the old cocks get it made so warm for them that they run a solitary show of their own.

The daily life of the black cock seems to run in a not uncertain groove. Always an early riser, it leaves its place of roost betimes and betakes itself to its feeding grounds. I have been about the haunts of black game as early as the departing darkness would permit, but I never found them absent from their feeding places which they resort to immediately day breaks. The varied nature of these feeding spots can be gathered from the list of this bird's food which, under varying circumstances, consists of all or some of the following: The leaves, flowers, shoots and seeds of many kinds of sedge grass and sedge plants, chickweed and ranuncule, the berries and young green tips of cran, caw, bear and whortle berries, tender shoots of ling and heather, the soft needles and shoots of fir, the leaves of fern and of some few low growing trees and shrubs and the seeds and young sprouts of many rushes. Even now the list is incomplete, but I have mentioned a sufficient variety to show how easily and diversely this bird provides for itself. This, of course, holds good only in open weather, in winter time the range of food is considerably reduced, and in hard weather black game invariably suffers, but as a rule they are able to betake themselves to the fields of the agriculturist and there find the necessities of life. Hunger is a great tamer of wild birds, and sometimes when hard weather sets in early, the black game become sorely pressed, and I have seen them as thick as crows in oat stubbles in Scotland. Sometimes these visitations are phenomenal, and it has become a regular and recognized practice to feed black game in winter.

In many respects this game bird is peculiar, almost eccentric, particularly in regard to the manner in which it shifts its quarter from one side of the country to another. I do not mean from one side of England to the opposite; but apply the word country in a local sense. Neither season nor weather appears to guide these movements, but pure caprice, and I need scarcely add that it is only in the rough-country districts that this occurs to so marked an extent.

Woodcock.

America is lucky enough to offer her sportsmen so much more woodcock shooting and so many more woodcock that I am sure most of the readers of Forest and Stream must know a good deal more about this game bird than I can tell them, so that in dealing with it I will confine myself to certain points only of its history such as may be interesting to American sportsmen as concerning one of their own game birds as we have it in an old-world country.

The woodcock is almost entirely a migratory bird in Britain, although a certain, or rather, uncertain number annually breed in these islands. Despite its migratory habits though it is a true game bird and one upon which we set great value—more I venture to fancy, than you Americans do, judging from what I read so frequently in this journal—we draw our main supply of woodcocks from Norway, Sweden, Lapland, etc., and I am inclined to think from some portion of the shores of the Mediterranean too. They arrive in successive flights of more or less magnitude at various times at more or less regular intervals from the end of September until the turn of the year, and in these flights we find a very interesting subject of controversy as far as regards the influences which regulate the periods of their occurrence and also why it is that our woodcocks. although coming from eastern, invariably appear first upon our western shores and upon the sea coast before they appear inland. Our flights usually arrive, I fancy, during certain predominating descriptions of weather and direction of wind and are not, I am convinced, regulated by the phases of the moon as some people maintain. An easterly wind and a moderately bright clear sky above usually heralds their approach, the females coming first and the males after them, as has been the case ever since the fall.

When the 'cocks first arrive they are in poor condition. but soon recover from the effects of their presumably arduous and certainly long journey. These birds provide us with our main supply, and without them we should regard woodcock as a somewhat *rara avis*, because the number of them, British born and bred, is very small; inconsequential, in fact, as far as sport goes, and they also, probably all, indulge in an emigration at some period of the year. From the time of the arrival of the flights in autumn till they again leave us, which may be from April to August, the woodcock frequent localities throughout Britain of decidedly pronounced character. No bird is more thoroughly spread over the British isles, and yet no game bird is so essentially conservative and individual in its choice of haunt while here. It is for the most part more or less open ground, swampy in parts, wooded with mixed timber of much varying age and withal but little disturbed. I cannot set down every "likely place," every haunt for woodcock in these lands; it would be a thankless and herculean task, but I could point them out to you, and detail them, too, did space permit, just as woodcock shooters can in America. The bird is doubtless of identical habits in the New World as in the Old. Here we regard it as a sort of eternal sporting puzzle in its way; we are always nearing the solution, but we never seem to attain it, and I am sure I cannot tell American sportsmen anything about its curious choices of haunts, its pretty idiosyncracies of habit, its delightful vagaries of life which they do not know already.

Suffice it for me to say, that sometimes we have good woodcock seasons and sometimes bad ones. Occasionally they are abundant, as a rule they are reasonably plentiful, and in some years scarce, but we are never without a fair winter's supply, and as our supply so our sport. We cherish the woodcock as a great sporting luxury, we value it as a priceless jewel, and we regard the sport it affords as *facile princeps* among our game bird shooting. We can do nothing to increase its numbers here, but we do a great deal to encourage it and protect it. With no wild fowl is the season more conscientiously observed, the morale of sport more carefully maintained.

It is therefore with feelings akin to astonishment that we find a very different condition of affairs apparently obtaining your side, and I have ventured, knowing the woodcock to be a great bird of sport in America, to try and point a moral in this instance rather than detail its natural history as I have done with our other game birds which are put under the process of preservation, a process inapplicable to woodcock. Moorman.

England.

Illinois.—Forreston, Oct. 10.—Large flocks of golden plover have been reported near town. Our local hunters still make good bags of prairie chicken; most of them are killed in the cornfields. A friend brought in five yesterday and three the day before, and another had the good luck to secure seven. Jack snipe are scarce, owing to dry weather, but some good bags have been made along running streams. Teal are scarce, and but few mallards are seen. I secured two ruffed grouse yesterday with a Stevens rifle within a mile of town.—H. A. K.

A DAY ON KENTUCKY STUBBLES.

FOR several months past my brother Ed, friend Seaf and myself had been planning a quail hunt; and at last we all decided to break from the treadmill of office work, and a friend, who is the proprietor of a beautiful Kentucky farm, was notified of our intended visit. We filled cartridge cases and packed up breechloaders, each of us taking 200 cartridges which we thought would be sufficient for two days' shooting, boarded the train and had a very pleasant run down to Rowletts. We were greatly amused by the conversation which was carried on by a party of young fellows who occupied a seat nearly opposite ours. They were all clad in fancy hunting suits and their hands were encased in kid gloves; they were discussing the merits of double-nosed pointers and hammerless breechloaders in a way which plainly showed that their knowledge of the dog and gun had been acquired from some city gunsmith who had probably never shot a quail and could not tell the difference between a setter and a pointer. At the station we found friend M. with his team of pretty sleek mules.

The next morning we donned our hunting clothes—blue flannel shirt, old pantaloons and stout shoes, a very simple outfit but a very comfortable one. After a five o'clock breakfast, being impatient to get among the birds, we put our guns together and calling Chief, as fine a specimen of dog flesh as I ever saw, quite large and beautifully formed, we started out in quest of game. M. told us there were birds in a field adjoining his yard, where he had raised wheat. We started in that field and were soon convinced that the game was near at hand, for we had not proceeded 100yds. before Chief, who had been quartering the ground about 40yds. ahead of us, began to steady down, and holding his head breast high commenced to draw up on a little clump of weeds which grew on the edge of a ditch; slower and slower he went until, straightening out and becoming rigid he made a beautiful point. Chief had done his part beautifully, and now was the time for our part of the business, which was not performed in so graceful a manner. Ed and myself are both old hands at quail shooting, but Seaf had never before drawn a bead at anything but clay-pigeons, at which he is a good shot. We all walked up to where the birds were and flushed the flock. They rose all together and then separated, part flying toward a bunch of beech woods which grew near by, and the other part went over to a cornfield; I gave my first barrel to a bird which came my way and dropped him, but missed with my second barrel. Ed bagged one bird and Seaf wounded one badly, but it succeeded in getting away. After marking them down we followed them up, and succeeded in bagging four more out of the same flock. After getting all we could from this flock we hunted the rest of the field, and found another flock, out of which we bagged six fine birds; and then crossed over to another field belonging to a neighbor of M.'s, where we found a very large flock of birds, but only secured three, for we were informed by the proprietor that his land was posted, and we were obliged to withdraw, leaving the birds well scattered in a sedge field. Then we held a council of war and decided to "knock off" for dinner.

After dinner we again took the field and succeeded in swelling the bag to thirty-three birds all told. We shot until it grew so dark that we could not see the birds, and then turned our steps homeward.

We retired that night expecting to enjoy a fine day's sport on the morrow; but we were doomed to bitter disappointment, for the next day opened wet and cold, with a steady rain falling, and we were compelled to remain in the house all day and pass off the time spinning yarns and cleaning up the guns, until it was time for us to leave to catch the night train for Louisville. M. drove us over to the station and put us and our traps on the train. The last thing he said when we parted from him was, "Boys, whenever you want to try the birds again just let me know you are coming in time to hitch up the team and meet you at the train." We arrived in Louisville about 3 o'clock in the morning, all pretty tired, but well satisfied with our trip. D. G. R.

THE FIRES IN THE PARK.

YELLOWSTONE NATIONAL PARK, Sept. 29.—*Editor Forest and Stream:* The fires which have been raging in the Park for the past six weeks received a check from light snows which fell on the 23d and 25th inst. The storms were heaviest on Slough Creek, putting out the fires there, and those on Blacktail Deer Creek. The fires are still burning on Tower Creek. Those on the Madison are destroying immense quantities of timber. Unless the fire on the south fork of the Madison is soon checked it will reach Norris Basin, when the hotel at that point will be in danger. Bannock Indians set some of the fires; carlessness on the part of hunters and tourists caused most of the others. I cannot believe any white man would intentionally set fire to the timber in the Park. A lighted cigar, cigarette or match with only a live coal dropped among pine trees will often cause a fire; and the person may be many miles away before it amounts to enough to attract attention. I have put out fires along the trails which, I think, were caused in that way. At least one-twentieth of the timbered area of the Park has been burned over since the spring of 1882.

Some game is being killed in the Park, as parties run on to the remains of elk and deer from which most of the meat has been taken. A party of three hunters and trappers from Eagle Rock, Idaho, were discovered on the head of the Gibbon, southwest of Dunraven Peak; but before they could be arrested they packed up and left for Montana. Owing to the nature of the country in which the game is found, it is almost impossible for any one not experienced in the business to find hunters or trappers who wish to avoid arrest. Captain Harris, acting superintendent, has men out scouting for hunters and careless campers. Jack Baronette, with some of the troop stationed here, brought in a prisoner, who was supposed to have started one of the fires on the Madison; but as nothing could be proved against him he was discharged.

On the 25th a party of tourists saw five buffalo on Alum Creek, the first that have been seen this summer. Twenty-four antelope were seen on Indian Creek near Swan Lake. Elk are very plenty in the Park; at least 300 are in the timber on the head waters of the Gibbon River near the Mount Washington Range. Bands of from 10 to 20 are often seen on Indian Creek, and within four miles of the Mammoth Hot Springs.

Barracks, stables, store houses and other necessary buildings are being built at the Mammoth Hot Springs for the accommodation of the troop stationed there. The site selected for the buildings is to the right of the Kingman road to Norris, between the road and the Hot Spring terraces.

There are very few visitors in the Park now, although this is the best time of the year to travel in the mountains.

X.

ABOLISH SPRING SHOOTING.

Editor Forest and Stream:

Summer is over, bay snipe shooting is ended, and I have had a rattling good time. Never have I had such fine shooting as I have had this summer on the meadows over decoys.

Last spring the birds commenced to arrive on May 2, and they came and went until May 28. Not a gun was fired at them (thanks to the spring law) and they came back with their young in droves, making splendid shooting. Among some of the good days that can remember I bagged 27, 32, 42, 56 and 61. The da I bagged 42, I went on the meadow with fifty shells 8 A. M. and at 11 A. M. I had forty-two good birds, th fifty shells all used, and I left with five yellowlegs coming to decoys to be killed, but I was satisfied and happy to let those birds go on their journey to the meadows to the west, where my friend Mr. W. L. Breeze was waiting for them. His bag, I have since learned, for that day was fifty-two. I have been looking anxiously for the English snipe to come along, but have not seen any until to-day I bagged two, all that I flushed, and one yelper and one meadow plover. Ten years ago I could bag one hundred English snipe here in the season, but now they are very scarce, owing to shooting in the spring. I hope yet to see a law against shooting English snipe in the spring.

ALFRED A. FRASER.

OAKDALE, L. I., Oct. 8.

Two days snipe shooting at Atlanticville, Long Island, scored as follows: Saturday, Oct. 2—10 yelpers, 1 plover, 1 brant bird, 4 English snipe, 3 dowitchers, 57 creekers, 20 leadbacks, 12 ox-eyes. Oct. 4—12 yelpers, 10 English snipe, 21 creekers, 6 leadbacks, 69 ox-eyes. Friday, Oct. 1—The old gunner shot 21 large snipe, 15 were yelpers or large yellowlegs, 4 plover (blackbreast), 1 golden plover, 2 yellowlegs, 1 robin snipe, 36 creekers, 1 English snipe, 69 ox-eyes.—F. J. J. DE R.

THE SKIN-HUNTERS.—A gentleman who has just returned from a hunting excursion to Southern Oregon, says the business of killing deer for their skins is still carried on there as extensively as ever. In every direction in Coos, Curry and Jackson counties the camps of these skin-hunters are found, and around them are the carcasses of deer rotting on the ground. Two hunters will start out each with a packhorse loaded with provisions for two weeks, and at the end of that time return with their horses laden with a hundred to a hundred and fifty deer skins. For these they get about fifty cents each. One of the worst features of this business is that, as the skins are thinner and better adapted for fine buckskin in the summer time than after the winter coat of hair has come out and the hide thickened, hundreds of does are shot before their fawns are sufficiently grown to take care of themselves.—*Portland Oregonian.*

WESTERN LARGE GAME.—Fremont, Elkhorn & Missouri Valley R. R., Douglas, Wyo., Oct. 5.—Should any of your readers contemplate a hunt this fall for large game, such as elk, bear, deer, antelope, etc., I can furnish information as to the locality of said game that will be reliable. I am in no way connected with the above named road, and have no "axe to grind" other than that I would like to join a party of say four or five for a two weeks' hunt. The locality hinted at is easily accessible from this point, and it may be confidently relied on that the game mentioned (besides grouse, sage hens, etc.), can be found in quantities. Any parties contemplating shooting for "heads and hides" or a wholesale slaughter need not apply. —ABNER.

MISSISSIPPI.—Aberdeen, Oct. 5.—The open season for quail began last Friday. Business prevented my going out, but a friend of mine, who makes a point of shooting on the opening day of every season, was out for an hour or two in the afternoon. He reported four bevies found and twelve birds bagged. The bevies were large and the birds well grown. Unfavorable ground prevented his making a larger bag. Reports as to the number of birds this season are conflicting; but, in my opinion, there will be fewer than usual. June was an unusually wet month, and this usually begets a short bird crop.—WILL.

"ALF" TAYLOR, who, with his brother "Bob," is running for the Governorship of Tennessee, is a good shot and a skillful hunter. "Bob" is quoted by a New York *Times* correspondent as saying: "Alf was always fond of hunting. When a mere lad he would go out on the mountain with an old man who lived near us and camp out for weeks at a time. I believe he had rather hunt now than do anything else."

NEW JERSEY.—Smithburg, Oct. 7.—Quail are more plentiful than they have been for a number of years, and I have several fine coveys spotted for next month's shooting. Pheasants are quite numerous in the pines south of this place, but it is pretty rough hunting; the cover is very thick, with plenty of briers.—W. L. B.

DAKOTA, Bismarck, Oct. 6.—Geese are plentiful and we are having fine sport. There are gentlemen here from all parts of the country in answer to my letters in your paper. Dr. McKoun of Albany, N. Y., has been here, and Mr. S. F. Rathbun, of Auburn, is here with other friends. —W. H. WILLIAMSON.

DOG TRAINING AND DOG POINTS.—The first two chapters of Hammond's "Training vs. Breaking," and all the "Stonehenge" standards, with standards adopted by specialty clubs. In paper covers, price 25 cents, postpaid, by Forest and Stream Pub. Co.

MRS. CHARLOTTE LISLE, Chicago, ascribes the cure of a dangerous cough, accompanied by bleeding at the lungs, to Hale's Honey of Horehound and Tar. "My cough," she says, "threatened to suffocate me * * * * but this remedy has removed it." PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Camp-Fire Flickerings.

"That reminds me."

191.

I HAVE been so often and pleasantly mentioned in your columns by your piscatorial friend and correspondent, the Hon. James M. Scovil, that I feel I have an introduction to your readers, and can vary matters a bit by telling a few things I know about Mr. Scovil himself. Few good and reliable things can be said of a fisherman. Men will go their bail if they get in trouble; sometimes a person can be found who will testify to their veracity; under a great pressure a bit of evidence may be put upon record that one was once known to tell the truth. What I especially want to say of him has no connection whatever with his imagined episodes. There is a reality about him, a *camaraderie*, that makes an impress upon the record of the world's doings. While I call him the mythical symbolism of an imaginary quantity, I have good reason to know and tell of a materialization over 6ft. in length, proportioned and substantiated, set a-going and with wondrous head works. Now to my story:

One day after one of those dinners he likes so much he said: "Did you ever catch a salmon off of the glacier streams of Norway?" Being a constitutional fisherman and consequent liar I said: "Yes." "Well," said he, "then you have enjoyed the same pleasure that I have. Were you towed far out?" That rather got me. I did not know what to say. However, I mustered and said, "I toed as far as I could." That mystified him. He looked at me and seemed disappointed about something. I noticed a revivifying thrill go through him, them came his constitutional clutch of his glass as he asked: "John, did you ever have a struggle with a shrimp?"

That beat me all to pieces. I responded "No." "Well," said he, "you are lucky. There are few men, as far as I can learn, who have survived struggles with one. Terrible, they are. It takes a man of my physique to get through one alive. Some day I will show you the wounds I got. It was away back in the war times, '62. I was fighting scouts, Florida Indians. Had been living for over a month on sand fleas and tropical mosquitoes, caught marauding upon my person, when one day I went to the beach for an ocean bath, and with the true instinct of a fisherman took a hook and line with me. When I reached the tipping waves of the Atlantic, I evolved and established the first natatorium on the Florida coast. While I was staking or rather swimming out my claim, a shrimp went on shore and took hold of the hook upon my line. I saw him, and Tobe, I never was so mad. It was so unfair. I nearly cut my throat with my toes swimming ashore, I swam with so much energy. Just at the edge of the water I encountered the shrimp. I was much exhausted from my lavation and swim; but I fully realized the situation when the shrimp, highwayman-like and piratically, took hold of me. It was a question to be instantly decided, which should survive, myself or the shrimp. Naturally I felt inclined to be the survivor, and put in my best endeavors to attain such a result. We fought and fought. I had the advantage of hands and arms; but the shrimp was far ahead of me in legs. After I killed him I counted them. He had twenty-two and a lot of young ones coming. How big was he? Well, not over two inches, but he was armed, legged and fortified all about. Tobe, if a shrimp ever tries to carry away your belongings, let it take them. Don't you fight with 'em. I tell you such a struggle is terrific."

This is Scovil's last yarn. TOBE HODGE.

NESSMUK'S POEMS.

SOME time ago there came to the FOREST AND STREAM a manuscript volume of verse, written in the characteristic hand of "Nessmuk," and bound in limp buckskin from a deer that fell to his own little muzzleloading rifle. The manuscript gave evidence of having been much read by the author's friends; and it has been read and in parts re-read, here in the office, and frequently brought out for the entertainment of visitors when "Nessmuk's" name happened to come up. Those who are familiar with "Nessmuk's" contributions to the FOREST AND STREAM need not be told that many of his poems relate to the woods and the camp; but their range is more comprehensive than this. If some of his verses are attuned to the soughing of the night wind through the hemlocks, and some are musical with the gurgle of the mountain stream, in others is the rhythm of life and labor—the ring of anvil and lapstone, the buzz of loom and whirr of factory wheels, the city's rumble, the roll of drum and cannon's roar. And because between these buckskin covers we have found so much true poetry—humor, pathos, shrewd philosophy, and that which has to it the ring of manliness, we propose to put the poems into the permanent form they deserve, and give them wider circulation than ever a manuscript can have.

The poems, with a biographical sketch of "Nessmuk," will make a volume of something more than 120 pages. The book will be printed from type; the size of the edition will depend upon the number of subscriptions received, and the type will then be distributed. The price for copies subscribed for before publication will be $1. For remaining copies after publication the publishers reserve the right to advance the price. Subscriptions should be sent in on the blank form on page 238. Duplicate blanks will be sent upon application.

NESSMUK'S POEMS.

John o' the Smithy.	A Christmas Entry.
Gleaners after the Fire.	Two Lives.
Genius Loci of Wall Street.	Anna Fay—on Skates.
My Neighbor over the Way.	Polka Jacket.
Sunrise in the Forest.	At the Hop.
Surly Joe's Christmas.	A Summer Camp.
The Mameluco Dance.	Johnny Jones.
Disheartened.	Paraphrase on Brahma.
Answer to "Flight of the Goddess."	Hannah Lee.
	'Sixty-Five and John Bull.
In the Tropics.	The Retired Preacher.
Our little Prince.	The Scalp-Hunter Interviewed.
Mickle Run Falls.	Breaking Camp.
Typee.	A Fragment.
It Does Not Pay.	Elaine.
Ida May.	Waiting for her Prince.
My Forest Camp.	Crags and Pines.
Hunter's Lament.	King Cotton.
My Hound.	Our Camping Ground.
Non Respondat.	New Year's Ode, 1860.
Ione.	Pauper Plaint.
A Little Grave.	The Ship Gloucester.
Roses of Imeco.	A Dream of the Tropics.

New Year's Eve in Camp. Desilucao.
October. May.
My Attic. Isabel Nye.
Lotos Eating. Puir Buffie.
For the Times. Watching the River.
Drawers and Hewers. The Banshee.
All Things Come Round. An Arkansas Idyl.
The Smiths. Miah Jones.
To Gen. T. L. Young. Tropical Scrap.
Woodland Princess. Haste.
Ballad of the Leekhook. At Anchor.
Remembered—L. K. Deacon John.
Mother and Child Temperance Song.
A Summer Night. O'Leary's Lament.
That Trout. Wellsboro as a Temperance Town.
New Year's Ode.
Stalking a Buck. Crusading the Old Saloon.
Greeting to the Dead. The Cavan Girl.
Bessie Irelon. From the Misanthrope.
To John Bull on his Christmas. Why I Love Hiawatha; a Tale.

DEDICATION.

TO MY BROTHER CHARLES.

NOT that the gift of poesy is mine,
Nor that I claim the poet's meed of praise,
But in remembrance of the golden days
Of youth, have I inscribed these simple lays
To thee, my brother, and to auld lang syne.

The rolling years have thinned our locks of brown
To a scant fleece of salt-and-pepper gray;
More rapidly the seasons pass away;
With steadier, slower beat our pulses play;
We like the country rather than the town,

And have a strong dislike to noise and riot.
The fire of youth no longer warms our veins;
And, being subject to rheumatic pains,
We grow prophetic as to winds and rains,
And like to be well fed, well clothed, and quiet.

That we are past our youth is all too plain;
And nearing rapidly the Dark Divide.
Oh, passing weary is this middle tide
Of life, which I would give, with aught beside,
To live one year of boyhood o'er again!

It may not be. The wrinkles on each face
Are past erasure: and not many years
Can glide ere one of us with blinding tears
Shall stand beside the marble which uprears
Above a friend the world cannot replace.

MY NEIGHBOR OVER THE WAY.

I KNOW where an old philosopher dwells,
A bearded cynic, of wit and sense,
In a broad, white web, with curious cells,
On the sunny side of the garden fence.
He passes the days in virtuous ease,
Watching the world with his many eyes;
And I think he is sorry when he sees
How his web entangles the moths and flies.

I have a neighbor, a legal man—
We meet on the sidewalk every day.
(He is shrewd to argue, scheme and plan,
Is my legal neighbor over the way.)
He talks, perhaps, a trifle too much—
But he knows such a vast deal more than I.
We have in our village a dozen such,
Who do no labor—the Lord knows why.

But they eat and drink of the very best,
And the cloth that they wear is soft and fine,
And they have more money than all the rest,
With handsome houses, and plate and wine.
And I ponder at times, when tired and lame,
How strangely the gifts of fortune fall,
And wonder if we are not to blame,
Who have so little, yet pay for all.

Alas for the workmen over the land
Who labor and watch, but wait too long;
Who wear the vigor of brain and hand
On trifling pleasures, and drink, and song.
Alas for the strength too much diffused,
And the sights that lure from the better way,
For the gifts and riches we have not used,
And the true hearts beating to swift decay.

Alas for the twig, perversely bent,
And the tree of knowledge, to wrong inclined.
Alas that a dollar was ever spent
Until the dollar was earned or mined.
But my neighbor is one who understands
All social riddles; and he explains
That some must labor with calloused hands,
While others may work with tongues and brains.

Though he doesn't make it so very clear
Why he should fare much better than one
Who does more work in a single year
Than he in all of his life has done.
But he argues me out of all demur
With logic that fogs my common sense,
And I think of the old philosopher,
Whose "shingle" hangs by the garden fence.

MICKLE RUN FALLS.

FRONT-FACING the east, where the Falls are downpouring,
A fairy-like rainbow is formed on the spray.
Beneath it the waters are rushing and roaring
To the pool, where by moonlight the brown otters play,
Are rushing and roaring, and dashing and roaring,
Away to the vale where the eagle is soaring,
And the blue Susquehanna sweeps down to the bay.

By the point of the rocks, at the foot of the mountain,
Foaming over a boulder moss-covered and gray,
Is bubbling and gushing a crystalline fountain,
Where the red deer are browsing the long summer day,
Are daintily browsing, are warily browsing,
Above the deep pool where the trout are carousing,
And the slide of the otter is moist with the spray.

THAT TROUT.

I'VE watched that trout for days and days,
I've tried him with all sorts of tackle;
With flies got up in various ways,
Red, blue, green, gray, and silver-hackle.

I've tempted him with angle-dogs,
And grubs, that must have been quite trying,
Thrown deftly in betwixt old logs,
Where, probably, he might be lying.

Sometimes I've had a vicious bite,
And as the silk was tautly running,
Have been convinced I had him, quite:
But 'twasn't him; *he* was too cunning.

I've tried him, when the silver moon
Shone on my dew-bespangled trousers,
With dartfish; but he was "too soon"—
Though, sooth to say, I caught some rousers;

And sadly viewed the ones I caught,
They loomed so small and seemed so poor.
'Twas finding pebbles where one sought
A gem of price—a Kohinoor.

I've often weighed him (with my eyes),
As he with most prodigious flounces
Rose to the surface after flies.
(He weighs four pounds and seven ounces.)

I tried him—Heaven absolve my soul—
With some outlandish, heathenish gearing—
A pronged machine stuck on a pole—
A process that the boys call spearing.

I jabbed it at his dorsal fin
Six feet beneath the crystal water—
'Twas all too short. I tumbled in,
And got half drowned—just as I'd orter.

Adieu, oh trout of marvelous size,
Thou piscatorial, speckled wonder,
Bright be the waters where you rise,
And green the banks you cuddle under.

MY HOUND.

I Wandered far in many a clime,
And many a faithful friend have found,
But none who better deserves my rhyme
Than brave old Nigger, my faithful hound.
For never a man on land or sea
Had truer ally or friend than he.

His coat is sleek as an Arab steed,
He is clean of limb as a yearling deer.
A match for the greyhound in his speed,
With a voice so loud and silvery clear
You would swear, as he sweeps thro' mountain dells,
'Twas a musical chime of vesper bells.

Often, when tired of this strife for bread,
Have he and I wandered where gurgling rills
In purity spring from their mountain bed
In the ice-cold bosoms of distant hills;
And leaving the world to its wearisome ways,
Have built us a shanty and camped for days.

And often when night closed over our camp,
And he was away on the track of deer,
Have I breathless listened to catch the tramp
Of his pattering feet draw swiftly near.
I have listened till silence became a pain,
But never yet did I listen in vain.

I have lain by my camp-fire's glowing light,
And lazily fingered his silken ears,
Till meeting his eyes, so wistfully bright,
My own have silently filled with tears,
As I thought with shame of some harsh rebuff
To my poor dumb friend, when my mood was rough.

OUR LITTLE PRINCE.

"LITTLE CHARLEY is a prince,"
So we said in joyous pride,
As we loitered side by side,
Where the roses bloomed and died,
Half a dozen summers since.

He was rustling through the leaves,
Where the golden tassels swayed,
Half in pleasure, half afraid,
Hiding in the furrowed shade,
Where the August cricket grieves.

Silken tassels on the corn,
Silken curls about his head;
"Which is which?" we laughing said;
While the sun a glory shed
On the curls and tasseled corn.

Saxon eyes and face and hair,
Saxon blood in every vein,
Cheeks like roses after rain;
Never shall we see again
Childish loveliness so rare.

When the apple and the quince
All their summer fragrance shed,
How we miss our darling dead;
How we miss the curly head
Of our lovely little prince.

Little Charley *was* a prince—
But, somebody in the sky
Had more need of him than I,
So we laid him down to die
Half a dozen summers since.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

THE SENSIBILITY OF FISHES TO PAIN.

TO WHAT extent physical injury to fishes is attended by that form of sensation which we know as pain, is a question of interest to every angler. An answer may be sought in two ways. Either the nervous organization of a fish may be studied and an answer be reasoned out from the anatomical facts so found, as indeed has already been done; or, an answer may be sought from the behavior of fishes under conditions calculated to produce pain. Each method of investigation is a check upon and a supplement of the other; nor can the investigation be considered complete until both have been followed to a conclusion, and the results afforded by each have been found to be in accord.

Should each member of the angling fraternity contribute to some common center such incidents in his personal experience as seemed to bear upon the question, facts probably of value and certainly of interest would be made matters of record, and be rescued from oblivion. Induced by the hope that others will follow my example and contribute to the FOREST AND STREAM such events of like character as may be within their own knowledge, I relate the following:

On the 31st day of last July, on the Grand Cascapedia River, in Canada, my fly was taken by a salmon with about the average degree of vigor ordinarily displayed by that fish. A swirl on the surface of the water, there some seven or eight feet deep, first showed the presence of the fish. Then the fly was dragged downward, to which the usual response of throwing the spring of the rod upon the fish was of course promptly made. As is not unusual with salmon, the fish seemed to return to its lair, where for some moments it remained perfectly passive. We were in doubt at first whether it was a salmon or a large sea trout, the fish itself not having shown when the fly was taken. But the drag on the line remaining steadily downward and straight away—a characteristic of the salmon—rather than swerving off to one side, as is the usual course of the sea trout, we concluded it was a salmon, and, raising the anchor, prepared for battle.

To this overture the fish promptly responded by a dash of some sixty or seventy yards, ending the run by a beautiful leap into the air. We then noticed something red on its abdomen, and supposed some one had raked it with a gaff. Upon regaining the water the fish remained quiescent for a moment or two, which interval was improved by approaching it with the canoe and regaining line. Then it was off again in another brilliant run, ending in a second leap into the air. In brief, the fish fought for some twenty-five or thirty minutes with a vigor decidedly up to, if not beyond, the average, leaping in all three times and making quite a number of energetic and protracted runs.

But time pressed, so we put in practice a perfectly feasible, but to me very distasteful method of abridging the contest. We had by that time worked the salmon down stream into quite deep and rather sluggish water. Keeping up an even strain and gradually shortening line, the canoe was slowly brought up to and over the unsuspecting fish. My gaffer, seizing an opportune moment, sank his gaff beneath it, and the next moment it was floundering in the bottom of the canoe. When there I never saw a fish display more vigor. It thrashed and banged upon the bottom and sides of the canoe so that the noise was heard and commented on by a gentleman fishing some three-quarters of a mile above. In short, I feel confident that no salmon fisherman would have charged this fish from first to last with any lack of energy in its struggle for liberty and life.

Yet about four inches in front of the vent a pyramid of flesh had been bitten out of its belly measuring about 3in. fore and aft and about 3¾in. in the direction toward the backbone. Both walls of the abdominal cavity and its contents were removed within this area, the wound extending to the flesh situated between the backbone and that cavity. I had, of course, no means of weighing the missing portion of the fish, but I then estimated that it would rather exceed than fall short of a third of a pound. I have qualified the measurements given above by the word "about," because, from lack of means, they were estimated and not actually measured. But a limit of error of half an inch will certainly more than cover any inaccuracy.

The wound was perfectly raw and fresh in appearance. Older than forty-eight hours it certainly could not have been, while it looked to me as though two hours, or even less, would be very much nearer the mark. It was supposed to be the work of an otter.

This salmon weighed 25lbs. plump just as it was after it had been killed. HENRY P. WELLS.

NEW YORK, Oct. 8.

CUTTYHUNK CLUB.—New York, Oct. 12.—In an editorial in your issue of the 7th inst., headed "Striped Bass," referring to their scarcity, etc., you say, "So far none have been taken by the Cuttyhunk Club." In this you are in error, as the fish taken this season comprise the following: On Aug. 18, by Mr. Wm. H. Woodhull, 1 bass, 18¼lbs.; on Sept. 13, by Mr. Wm. McGroorty 1, 27¼lbs.; and on Oct. 1, by Mr. Woodhull, 1, 20lbs.; in all 3 bass, averaging 22lbs. each. When you take into consideration the fact that but a few years ago our record shows that from about June 10 to Oct. 10, 875 bass were taken, weighing near 7,000lbs., an average of about 8lbs. each, bass fishermen may well inquire what has become of the bass?—HENRY P. MCGOWN.

SHAD ON A HOOK.—Early this week Mr. D. Harris, of 230 Fulton street, Brooklyn, was fishing for "snappers," as young bluefish are called, from the iron pier at Rockaway. He had been using the spearing (*Menidia*) for bait, and had not been very fortunate, when he suddenly had a strike from a larger fish and found on landing it that it was a shad. We saw the fish when Mr. Harris brought it in to Mr. Blackford at Fulton Market and identified it. The weight of the fish was 1⅞lbs. Mr. Harris left it on exhibition and many anglers viewed it with interest. According to old theories the shad should not be in this vicinity at this time, and therefore the capture is of great interest.

HAY BAY.

LITTLE FALLS, Oct. 3, 1886.—I have just returned from a trip to certain not very well known fishing grounds in Canada, where I was led to believe that within convenient distance of each other, were bays most thickly settled with the noble muskellunge, so thickly that the veriest tryo could be reasonably sure of a day's catch far in excess of that of a well-outfitted expert, anywhere else in the world; waters bordered with stony bars, and sprinkled with "drowned islands" on which the gamy bass indulged in crab hunting, which, however, the cast minnow would invariably supersede; lakes in which these bass were even more abundant, and of such size that one's credulity was strongly tested when hearing of them, bass which reduced to an insignificance the two and three-pound big ones of my previous experience, comparable only to that of the two and three pound brook trout when referred to by my friends of the Oquassoc Angling Association, who, demanding from Mooselucmaguntic or Molly-chunkamunk, trout in length equal to the names, speak contemptuously of the two and three pound little ones. If all I heard was true, I had before me, when I started upon my trip, a reasonable prospect that on my return I could, greeting as did Rollo, when he exclaimed, "I too have slain a Peruvian," say, I too have slain my forty-pound muskellunge and my five-pound bass. Looking over my gear I found little in which I could place the confidence necessary. My sundry spoons and lines, of which a year ago I had a box full, had one after the other yielded to the successive strikes of the ceros, amber-jacks and barracontas, which had at Key West last winter reduced me to cod hook, pork, clothes line and darky labor to haul in, and my bass gear had by as many conflicts with Spanish mackerel and skip jacks, together with much soaking in sea water, become demoralized. So I ordered a fresh outfit, which did not arrive as it should have done, and my resolution to wait for it another day was not strong enough to withstand my impatience to be off, and unwisely as it proved I started without it, calculating that I would devote my earlier work to the muskellonge, the best of gear and tackle for which sport I could be sure of finding among the outfit which my Clayton boatman would provide. My objective point was Hay Bay, in Canada, and the route proposed took in Clayton. There may be some among the FOREST AND STREAM readers who would like the benefit of my experience. I will give it to them, and that's a great deal cheaper than I got it. First, then, when you go to Canada fishing or shooting, and are tempted to leave anything you may want behind you, to be forwarded, don't; for as far as express and mail facilities are concerned, Alaska is almost as handy as Canada. My gear shipped on 20th, was, on 22d, forwarded from Clayton to Picton, and where it is now (Oct. 3) I don't know. The express company and I are searching for it so far without result. I reached Picton on the 25th, and left on 27th, disgusted, gearless and fishless.

Hay Bay is a long narrow arm of Lake Ontario, stretching to the northeast about twelve miles, from the channel, which is the route of the steamers from Kingston to Belleville. It is about sixty miles from Kingston, eighteen from Glenora, four (over land) from Conway and six from Picton. The head of the bay is about four miles wide and deep and is reached by a channel from two to three miles wide. The banks are covered with very comfortable looking farms, which are very fertile and produce much barley, apples and peas, and thousands of dozens of eggs are sent therefrom. There is no village up the bay, and although there are many steamers running between Bath, Picton, Deseronto, Glenora, Napanee to the end of the route, Belleville, most of which have wharves and stopping places at several little settlements *en route*, none penetrate Hay Bay. It has remained almost a *terra incognita* to the outside world and a safe resort for the muskellunge, where with suitable water and food they had become very plentiful, a state not greatly disturbed by the occasional capture of a few by farmers in the very seldom leisure moments of harvest time, provided as they were with most indifferent boats and gear.

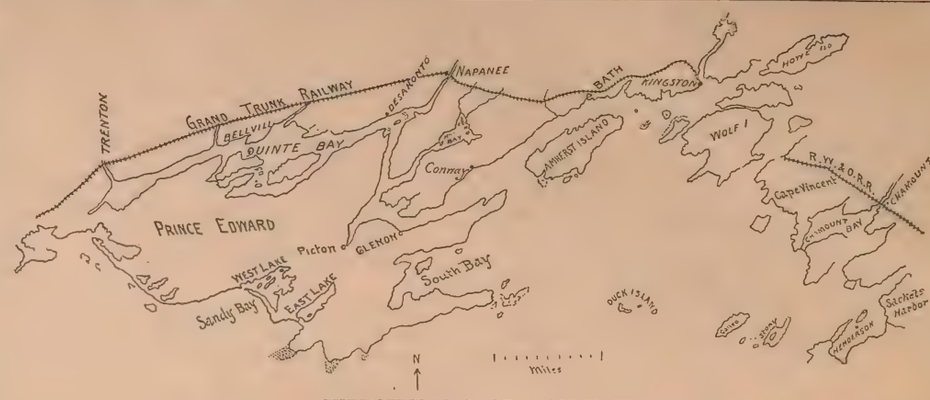
There are several routes by which it may be reached, the one I should recommend is via New York Central to Rome, N. Y., thence to Cape Vincent by R.W. & O. R.R., thence by steamer Maude to Kingston, arriving about 1 P. M., in time to get a very poorly cooked dinner (unless you have better luck than I had) and to take passage by steamer Hero, leaving about 3:30 P. M. for Belleville. The steamer reaches Conway at 6 P. M. and if the weather is bad and wind from northward it is advisable to land yourself and boat, hire a team and hay wagon and haul across to the bay, about four miles; if pleasant it will be as well to go on to Glenora, arriving at 7 P. M. There is at this place a very comfortable hotel kept by Mrs. Comers, a lady from Massachusetts, you will be sure of a good bed and breakfast and supper, if you have not taken that on the Hero. Then in the morning start as early as you please in your skiff. There is said to be good fishing in a great many places passed over on the eighteen mile row. Another route is by Grand Trunk R. R., from Kingston to Picton, leaving the latter place at 6 P. M. the next morning in tow of steamer bound to Belleville, which will drop you at Thompson's Pond, the entrance of the bay. Or you can go on from Glenora by the Hero to Picton, reaching there about 8 P. M. and taking next morning's steamer. In either case it is necessary that you should provide yourself at either Clayton or Alexander Bay with boat and boatman and all that that implies; he will bring his muskellunge gear, and if you are in the ducking season (after middle of October) decoys, etc. Many of the boatmen own all that is necessary.

Singular as it seems, on this long line of water front a boat is hardly to be gotten, certainly not a good one, and no one has anything in the way of gear. Even at Glenora, which is, I am informed, a very thronged and popular summer resort (the landlady told me that during the past season there had been over twenty thousand guests, many of course just for the trip), not a boat can be had; and were there boats, if one wanted to try the bass grounds in the vicinity, said to be good, he could do no better than catch minnows by hook and line, or grasshoppers for bait. All around the vicinity are beautiful coves and islands, smooth water and fair fishing. One would think that a boat livery, with some of the boats fitted to make the Hay Bay trip, would be a most paying investment. Mrs. Comers told me of the good fishing to be had, rather hoping, evidently, to seduce me off from my Hay Bay destination. "How shall I fish for them?" "Why off the wharf." "But what shall I do for bait?" "Why there are plenty of grasshoppers." Aside from this serious deficiency Glenora (among the boat people it is known as "Stone Mills," but this title does not at all suit the lady) is quite an odd little place. Like Port Townshend in Washington Territory, the business portion of the town is on a narrow plateau a few feet above the water, leaving just room enough for the road and the front part of some of the houses, a high and steep bluff, on the abrupt face of which the rear ends of the houses rest, reduced from two to one story. On the top of the bluff, 180ft. above Lake Ontario, from which it is not three hundred yards distant on a horizontal measurement, lies a very pretty lake about a mile long and broad, in which are many fish (but no boat). This lake is presumed to be a part of Lake Huron, with the water level of which it coincides. A fifteen minutes' brisk climb from the hotel's back porch, during which we cross a wild looking deep ravine, or glen, takes one to the summit, which is a tableland, from the precipitous edge of which a splendid view is obtained of all of the adjacent waters and towns. At the foot of the bluff, and operated by the lake's water, brought down through great iron pipes, are several stone mills. The operatives of these mills live in a little village on the tableland. This "lake on the mountain" has no known inlet, and it is the lion which draws so many guests. Even without the view, the sharp exercise in the morning's air paid me for my climb by a most beautiful appetite for breakfast. Either through this appetite or a change in the nature of the fish, the pickerel on which I breakfasted was a most excellent fish, hard, flaky and well flavored, my previous experience of the fish having been quite the reverse. When I caught him, just before reaching Kingston (I rowed in the skiff a good portion of the 21 miles from Clayton to Kingston), I noticed that it was, to me, remarkably plump and short for its weight, 6lbs., and accepted Tom's suggestion to save him for our breakfasts, he saying that since the advent of the menhaden (branch alewives) the pickerel have been getting fatter and better eating, probably through the abundance of food, and I hereby indorse his views, and never again will I despise and condemn untasted the fish, however much his failure to be a trout may and probably will annoy me upon some of my future trips to Adirondack lakes.

Let me put myself right on the record; when I say pickerel in this letter I simply follow the ordinary nomenclature on our side of the river (on the other they are more correct) and refer to the *Esox reticulatus*, at least I think I do; but I may, through my very recent Canadian experience, get a bit confused. They get right on this fish by calling it pike, but they get off the track by calling the wall-eyed pike "pickerel." I lost half a day's fishing by the glowing accounts of the fine still-fishing for "pike" I could have by going to a certain cove. Now a six or seven-pound pike, from my point of view, was decidedly worth trying for; but when I got to work and found that my only game was pickerel and weeds, and had contributed a couple of leaders to the combination, I remembered that my informant was a Canadian. And as we rowed back to better ground, I tried to get it all clear in my mind. It ought to be simple, but this is the way it shaped itself: A big pickerel is a pike and a little pike is a pickerel, and a pike (wall-eye) is a pickerel and he's a pike-perch, too; and sometimes, if you are not thoroughly up on muskos, a ten or twelve-pound pickerel is, you are assured, a muskellunge, by either the boatman, who is to be rewarded for such fish, or the man who wants to sell him to you. I tried to straighten it out by the aid of the scientific names, of which I remembered some, but not being able to distribute them positively, I gave it up and concluded to call the fish by the names I have always known them by.

I had adopted the route to Kingston via Clayton, because I had thus an opportunity to select my own boat and boatman, for I knew no one upon whose recommendation I was willing to rely for an employe who was to be my companion as well as guide. I preferred to chance it on suiting myself. And I was extremely fortunate, and if the FOREST AND STREAM will allow me I should like to say a good word for Tom Purcell, even if it does look a little like ringing in a "free ad." Tom's boat is the most perfectly outfitted boat I ever went fishing in. Everything that by any chance could possibly be wanted was in its place. Trying in vain to think of something I could catch him minus, I asked for a mirror and a bit of Pear's soap to shave with; the mirror was there and a bit of soap, not Pear's. The boat is a beauty, rowing and sailing well, but Tom himself just suits me to this extent, whenever I go that way again and can get him, I shall. He is obliging, skillful and temperate, a little too orderly, perhaps, for my use, as it brings out my own carelessness by too strong a contrast. Everything had a fixed place, and after use went back to it, and every time a fish was caught and the preliminaries of boxing accomplished, no further fishing was done until every trace of slime and blood had been sponged away, and at the end of a day's fishing, with the box full, our skiff was as neat as though just out of the boat house; that is to say, his end of it was, mine, I confess, at times got a little mixed.

Leaving Geneva Thursday morning, a pleasant row of some eighteen miles carried us to the fishing ground in the Upper Bay, the entrance to which is marked by an island. Hardly had we entered than my starboard bell rang sharply and I hauled in a good sized pickerel. It was some time before it rang again, and while waiting for a strike I will tell you what Tom then told me, as we circled, as to the discovery, so to speak, of this resort. "The first we heard of Hay Bay as a fishing place was about two years ago, a man hired by Johnson of the Walton House, got talking a good deal about the fishing he had seen when he worked on a farm at Hay Bay. Whenever one of our boats came in with a big fish or a lot of them, he would hold out that that didn't begin with Hay Bay. At first we all thought that he was blowing, but finally Johnson, who's something of a sport and likes it as well as any of them, thought he'd look into it, so with a couple of men who were stopping with him he went up in a steam yacht to have a try at them. Well, the first day's work convinced him. They stopped two or three day and came back with the prettiest lay out I ever saw. There were over fifty muskos and quite a number of big ones. Well, that started it, and our boats and the Alexander Bay boats went up with parties and they just scooped a pile. Last year a good many went but there was a great deal of bad weather and northeast wind, and the fishing didn't pan out so well, but quite a lot were taken."



I heard from another source that a good many were disappointed last year by going direct to the bay expecting to find their boats outfitted like the Clayton boats, but the best they could get were scows, and as for spoons, lines, etc., those used by the natives were anything but enticing. This year the fishing has started fairly and a great many are going in. Tom was engaged for another party. A great many charter steam yachts at Clayton and live aboard of them, thus making sure of lodging, three such parties were there during my three days visit, one party steaming over to Picton for lodging.

The farmers who live along the bay were utterly unprepared for visitors; but they are beginning to wake up to the situation and learning how to take care of people. several of them have built boat houses and I believe several boats have been bought; but they are very slow and conservative. At the date of my visit there was no boatman to be had, and no ice and very few sleeping rooms. I fortunately secured the one bedroom in the house of a Mr. Spencer, and I suspect, from the contents of the wardrobe, that in so doing I evicted the madame. There I was comparatively comfortable, for, although it opened off from the other room—which was kitchen, sitting room, dining room and bedroom at night (by aid of cots) combined—I could shut my door and be alone. But I was satisfied. The table was good, cooking good, cleanliness prevailed, and if I had been a long-lost brother I could not have been shown more kindness; and I could but regret that I had not postponed my trip for two weeks, for in a week the carpenters had promised that the addition to the house, which would when completed add six good rooms, a parlor and dining room, all very pleasant ones to the outfit, should be habitable. And Mr. Spencer, awakening to the necessity, intended going to Picton and bring from there a few tons of ice.

I think it very likely that some cursory remarks made by me when I found that, through lack of ice, it would be impossible for me to send home my first muskellunge—my very first, for with all of my fishing I never before took one of the *Esox nobilior*—may have helped to influence his decision. Another strike soon after Tom was sure was a musko, for we were in deep water, but we failed to hook him. It was thus evident that one good fish, at least, remained in the bay; and we resolved to go for him after dinner, for which we rowed in to Spencer's.

Starting about 3 P. M., with our three lines set, we found on the bay two other boats, in one of which were two young gentlemen from one of the steam yachts, known as the Stewart party, who had already taken four good fish. As my boat passed theirs they struck a large fish, and we kept where we could see the circus, the result of which was a saved fish, which, as they held it up, was nearly two-thirds as long as the boy who caught him. That looked warm, and very soon after I had hold of a very close mate to it, but on subsequent measuring and weighing I was beaten, theirs was 31lbs., 43in., mine 25lbs. and 41in. Tom was a little anxious about my saving so large a fish for my maiden effort, but when it came alongside at last, as quiet as a lamb and never attempted to dodge, when he administered the final coup, he expressed his satisfaction at my method of handling him. He hardly realized that although a novice at the muskos, I had had plenty of experience in handling fish for which my 25-pounder could have been used on a gang for bait. This was the sum total of my catch on my first day. On our way home, starting at sunset, I had a very good strike but failed to catch.

The next morning opened with a dense fog. We trolled from 6 to 8, half the time too close to the shores, as we found by catching pickerel and weeds. I took one fish weighing 10lbs. After breakfast, the wind being N. E., and Tom assuring me that there would be no more trolling, I took my bass gear, such as I had, and gun, and started on an investigating tour, fishing thoroughly severa

SURROUNDINGS OF HAY BAY.

Hay Bay came out on the plate as Hog Bay; it now appears as H Bay. The other orthographical idiosyncrasies will probably not lead the Hay Bay bound tourist astray.

banks and stony bars without a bass, and shooting a few plover. An hour before sunset we went again for the muskos, and just as the sun set I caught another 10-pounder, and very soon had another heavy strike. I gathered in on the guy line, when the fish, larger than either of my two smaller ones, jumped not 30ft. from the boat; this rather astonished me, for I thought him a long way off. He had struck the weed hooks, which were just at the surface, and as I had not expected that any fish would interfere with it, it was rather carelessly tied on. I did it myself. The weed hooks are in this bay a necessity; it's not a nice place for trolling, especially with the wind off shore, for that brings great quantities of grass and the water becomes covered with slimy-looking scum as well. Hardly was this fish lost, for his jump cleared him, than the bell rang again, and I brought in a 3-pounder. This closed my musko fishing with this summary: Trolled 11 hours, had 6 strikes, saved 4 fish. Four of the six strikes were on lines that at the time were being hauled in to clear, if foul; three of the four (including the weed hook) from 30 to 70ft. from boat. The shortening in of the lines, either by increased rapidity of motion or by bringing the spoon nearer to surface, seemed to have good effect. I incline to believe that at sunset a short line is advisable. My weed hooks consisted simply of the triple gang of an old spoon, from which the spinning plate and all but the shanks of the feathers had been taken off; yet this rude decoy at the surface was selected instead of the perfect appliances revolving from 130 to 150ft. astern and from 3 to 6ft. under. Three out of my six muskellunge jumped out of the water from twice to thrice their length; my big one went out twice.

On Saturday a rainy N.E. morning decided me to push on. Now that I "had him on my list," the trolling for muskos ceased to greatly divert me. My Florida and West India experience lately and more or less of it all over the world for a lifetime, had rather dampened my ardor; but the thoughts of the bass to be had in West Lake still drew me; and wrapped in oilskin, our little sail doing the work, we started for Picton, making the twenty-two mile trip in about five hours, the weather clearing as we sailed. Arriving in time for dinner, I went at once to the Royal Hotel, the proprietors of which, Messrs. Soby & Son, had kindly undertaken to post me up and start me; and to their care I had sent my gear. To my disgust it had not reached them, and a call at the express office and a visit to the Custom house, failed to find them. My trip was at an end, for the resources of Picton were not equal to my wants.

The next morning, Sunday, although rainy, I drove over to the lake to take a look at it. It was a very pretty drive, in spite of the rain, and the lake looked well. I talked with a number of persons accustomed to fish on it and arrived at the conclusion, that although I would undoubtedly get plenty of bass, yet that it was rather too late to expect any very large ones. So after thoroughly looking over the situation I made up my mind to put away my gear (unless it arrived that day, which it did not) and postpone till next year, when, if from all that I have heard I deduct for belief at least 75 per cent., there remains a very big probability of by far the best bass fishing next year that I have ever dreamed of.

I found that to fish that lake for, say three days, would be a very expensive luxury. My boat would have to be hauled to and fro (7 miles each way), my man and myself transported daily to and from Picton, and our hotel bills to pay there for what we didn't eat, and such farmer along the lake as would give us a noon meal for what we did. A good portion of our time would be taken up going and coming and catching minnows with hook and line, having, of course, to go some distance from the bassing grounds to get them. So as the weather looked unfavorable I gave up and came home.

Now a few hints for a person going as I have indicated. At Kingston and Picton, call at once on the Custom House officer, tell him just what you have and where you are going. Your boat is a highly dutiable article, and you must assure them that it won't be left in Canada. The officers are very courteous, and if provided with good credentials, as I was, there is no difficulty whatever. But if through any cause they have not full confidence, you will have to deposit security to the full value of your dutiable articles, such as your boat, gun, etc. Shooting is allowed on but three days per week, and considerable tracts of the best grounds are preserved. You can obtain a permit by suitable introduction and paying for it. A call upon either of our consuls will be a wise move; they are gentlemen, and can render good advice and assistance.

Don't expect to keep your friends at home posted as to your movements. I posted one letter Friday evening by a steam yacht going from Hay Bay to Picton. On Saturday evening I myself posted one at Picton. On Monday evening I got home. On Tuesday my first letter arrived, and on Wednesday my second—available only as evidence that I did keep my promise and write.

Carry with you everything you will need. Leave your small silver at home. Our silver dollars fetch 85cts., half dollars 40cts., quarters 20cts., dimes 8cts. Be careful not to violate any of the laws or regulations about shooting. Already an effort has been made by certain shooting and fishing men (I won't call them sportsmen), to establish a license tax, $2 for natives, $25 for foreigners, which includes us. Fortunately there were sportsmen enough, of whom I learn that Mr, Soby was a prominent mover, to prevent this unneighborly act. PISECO.

STRIPED BASS.—Washington, D. C., Oct. 10.—Noting your comments in the last number of FOREST AND STREAM in reference to the scarcity of striped bass in the vicinity of New York and further north, I am prompted to say that great numbers of striped bass, or rockfish, as they are called here, are brought to our city markets. They are sold in bunches of four or five at twenty-five cents per bunch, the fish averaging hardly a half-pound each. They are caught in the Potomac and adjacent waters. This would indicate that the striped bass is not in immediate danger of extinction; but all the same, there is some great cause of the scarcity of the larger bass that you speak of, and it may be traced to the same that is diminishing the quantity of bluefish.—J. C. B.

ADIAN ANGLING NOTES."—Friend's guide was French guide, the sun shone at 5 o'clock, and there was no necessity of casting far as the biggest trout came up near to the boat.

TROUT STREAMS OF ALASKA.

TO the pleasures of the sportsman in Alaska are added the joys of the discoverer. Several times have I felt this added joy when standing on the shore of some lonely lake, where only the loon's diabolical cry awakes the echoes, the first white man to gaze upon its shining surface. This feeling may be shared by any one who will penetrate to the interior of the islands or ascend the mountains. Only the water ways are known at all and they not well. Water communication is everywhere so easy that the Indian avoids the land in his travels except to camp upon it, and formerly to trap along the streams. Many a white man, I believe, has been deterred from penetrating to the interiors on account of the supposed difficulties. True, the vegetation is very dense along the water, but it thins out considerably a little distance back from it.

I shall not enumerate all the trout streams of southeastern Alaska; this I am unable to do. But I shall describe a few that are fondly remembered for the pleasures they gave me. In the first place come the twice-mentioned streams of Ward Cove and Karta Bay.

Karta Bay is situated at the upper end of Kasa-an Bay. It is the location of the Baronovich salmon fishery. A few miles from this place, on the Skowl arm of Kasa-an Bay, is the Hydah village of Kasa-an, containing the largest number of totem poles now standing in Alaska. There are more than one hundred totem poles and mortuary columns in good state of preservation, and many of the former are good specimens of Hydah sculpturing. Here lives, as his signboard names him, Hyderjohn Jewellay. This man is the best artisan in Alaska, and his silver bracelets and bangles are widely known. Kasa-an village was also noted before his death as the dwelling place of the great chief, Skowl; as great in the sense that his obesity was such that his body was unwieldy, as in the other meaning of the word. He had two wives to administer to his enormous appetite for food and drink, and two slaves to support his weight when he went about. He stood nearly 6ft. high and weighed over 400lbs. On state occasions it was his custom to dress up in a black broadcloth suit, with a high standing collar and gold-rimmed spectacles. This mass of flesh thus decked out, with his two slaves, one on either side of him, to bear his weight, was a sight in Alaskan waters not likely to be forgotten. He inspired great fear and respect, as well from the fierce Chilcats of the north as from the more civilized Hydahs of the south. He was the great *tyee* of Alaska at the time of his activity; full of courage, and his deeds of bravery have become traditions among his people. His wealth in blankets at one time was great, but in his later years he squandered it in drink, and died comparatively poor. He has been dead two years, but his body still lies in state in a house set apart for that purpose, surrounded by the remnant of his fortune.

When we visited this village all of its people were away, working at the different fisheries, or in the mines at Juneau, providing for the winter of wet and cold. We could not help being impressed by the feeling of security with which they left most of their household goods. Many of the houses we could have entered without much trouble, but such a thing as burglary among themselves seems not to be thought of. They are in the habit of caching their surplus wealth of blankets in the woods. Recently the cache of a wealthy chief of the Klowak tribe on Prince of Wales Island was broken open and robbed of several hundred blankets, looking glasses and wash bowls, by a white trader. Fortunately it was discovered before the man had disposed of his plunder. He is now awaiting trial at Juneau, a rough mining settlement. If justice should miscarry in this instance it would have a bad effect upon the Indian population of Alaska.

Into the head of Karta Bay, a mile or less from the fishery, empties a stream with a wide and rocky bed. Just the conditions exist there for good trout fishing, deep pools, rapid water and a broad bed for casting. The fish were gamy and very strong. I took 127 trout from this stream as the result of four visits to it, a few hours in the afternoon each day. Two of us made a combined catch of 107 one afternoon. Fish ranging from 1 to 2lbs. were common.

While we were at Karta Bay another vessel dropped anchor alongside of us, and some of her people played havoc in our favorite stream. They chummed the pools with salmon roe and used the same for bait. By these means three of them captured in two days over 400 trout. The dull-colored flies are the most killing in all these waters. With one exception, where the fish showed a liking for the gray-palmer and hare's-ear, the only flies I have been successful with have been the coachman, professor, brown-hackle and gray-dun.

The place where we most frequently anchored was Ward Cove, a beautiful little rounded basin on the western side of Revillagiged Island, and opening into Tongass Narrows. About a mile from the cove is a fresh-water lake, and in the early part of the season I took many trout from the stream which flows from this into the salt water. But in August this stream was so crowded with salmon that our fishing in it was totally destroyed. We were obliged to tramp further for our sport, to a stream emptying into the lake, where we had good sport until late in the season. Many salmon had overcome the obstacles below and were spawning in the upper river. This gave the trout an abundance of food, yet they rose eagerly to the flies. I was of the opinion that with an abundance of food, trout were sluggish in rising to the fly. My experience here, however, proves that such is not always the case. I have already alluded to the eggs running out of the trouts' mouths when held up by the tail. Last year the fishing was practically over early in August, except in streams whose mouths were obstructed by weirs, above high waterfalls or in waters beyond the reach of the salmon. This year we have not observed the same rush of salmon.

From the south end of Etolin Island we moved up into Wrangell Strait and anchored off Finger Point, midway the strait. Abreast of this point, on Mitkoff Island, is a large stream, which at its mouth tumbles over a broken ledge of rocks in a narrow gorge, making a picturesque waterfall about 8ft. high. Back of this for a little distance the water is broken into a series of falls and rapids, beyond which the stream broadens out in the wide valley; but it is not fordable except in places. My first visit to this stream was at the end of a drizzly afternoon in the middle of August. I took a number of fine fish from a large and deep pool not far above the rapids. Among them was one weighing 20oz., the heaviest of the season, and a number weighing 8, 10 and 12oz. each. I never got another rise from this pool. Though the stream was visited several times afterward this practically ended my trout fishing in Alaska, for the next day it began raining hard and continued with few intermissions as long as we remained—till Sept. 12. The rain never ceased falling long enough for the swollen stream to subside. After the first day just mentioned our tramps were so full of fatigue and so poorly rewarded with fish that I finally put away my light bamboo and jointed a stouter lancewood rod for the sea trout at the foot of the lower falls.

In the Mitkoff Island trout the whole side showed a rainbow iridescence, not bright, but like the reflection of a rainbow in the sky. These were the first in my sight to merit their name, and they were a connecting link between the uniformly marked lake denizens and those of brighter color inhabiting swift running streams. The clearer and colder the running water the brighter and narrower is the streak on the side. I have seen it almost crimson. The average fishing has been poor in southeastern Alaska this year on account of the wet season.

While fishing for sea trout at the foot of the falls the salmon took our baited hooks a number of times. Twice it fell to my lot to be fastened on to one. The first, I suspect, was pretty well exhausted by its efforts to jump the falls. I had nearly succeeded in landing it, when my companion, in his eagerness to assist me, waded toward it with landing net in hand—our sole reliance in such an emergency. The fish gave a flounce and the hook parted company from the snell. The second time the salmon took the bait as if it were fresh from the sea and started back whence it came at great speed. As I could not follow it took but little time to reel off all the line, and I then gave it the point of the rod. It saved my line and leader. I have been told of a number of instances, occurring both here and down the Oregon coast, where the salmon have taken the baited hook while deep-sea fishing.

I will close this narrative with an account of a strange freak which I saw in Cholmondely Sound, P. of W. Island. We were at anchor in a harbor which we named Dora Bay. A driving mist put a stop to all work, but not to sport. A companion and I, with an Indian to paddle the canoe, set out to fish a little stream in our vicinity. In the shallow water at its mouth we saw a bunch of about twenty salmon going round and round in a circle about six feet in diameter. They kept it up without intermissions or breaks in the ring. It reminded of the merry-go-rounds which one sees at certain kinds of amusements. We cast the flies over them and dropped the hooks in their midst without interrupting them in what they were doing—play it might have been. My companion determined to capture those fish and he set about it in the following manner. He and the Indian lashed their sheath knives to long poles and waded into the water. As the fish came around they speared them with the knives until they had taken the entire lot. In the meantime I was amusing myself with the trout in the stream near by, and when they had finished with the salmon I had made a string of 19 *S. purpureus*. T. H. S.

ALASKA, Sept. 14, 1886.

BASS FISHING AT RIVERTON.

IT was one of those warm days about the middle of April, when a man begins to think that no result whatever would justify the least display of energy, and there comes to a disciple of Izaak Walton visions of running water and leaping fish and he longs to take himself away from the weary routine of his office and spend a day or two with his rod and line. At noon Judge Wm. A. Hudson, a regular breeze of a man—rather should I say gale, for he is a man of that impulsive, resistless energy that carries everything before it—burst into my office. "Hello here, Charles, look at this." And "this" proved to be a telegram as follows: "RIVERTON, Va.—The bass are biting finely. Come down.—L. B."

"Well," said I, "what does this mean?"

"This means that the bass are biting at Riverton, and I am going down there this evening and you are going with me."

"You're too sudden. I don't think I can get off this evening. To-morrow—"

"To-morrow! Thunder!" interrupts Hudson. "We're going this evening."

"But I haven't any suitable flies."

"Flies be hanged! You don't want any flies. You couldn't catch these bass this time of the year with flies to save your life. What you want is minnows, big hooks and a sinker. They are feeding on the bottom. But I haven't time to be fooling here with you. Dick Bell is going with us, and I have got to see him yet. Now, you get ready and meet me at the 4 P. M. train."

The mere contact with the man had infused new energy into me; I hurriedly closed my office and struck for home to gather up the things necessary for my trip—wading pants, a pair of old shoes, some old clothes, a couple of light rods, 100yds. of line, two dozen large bass hooks on double guts, a dozen sinkers of various sizes, which I purchased very reluctantly, but which Hudson said I could not get along without, and he was right, and various other things. We met at the B. & O. depot. Our party consisted of Judge Wm. A. Hudson, a prominent lawyer of Staunton; Richard P. Bell, Commonwealth Attorney, and his son, a boy of some 10 years and myself, a young lawyer of the same place. After a somewhat long and tiresome journey we arrived at Strasburg about 10 P. M. We put in the night there, and the next day before daybreak were aroused from our peaceful slumbers to take the Manassas Gap train for Riverton, where we arrived before 7 A. M., and proceeding to the house of Col. Richards, one of those old Virginia farmers who remind you so forcibly of the times "befo de wah." We sat down to a breakfast fit for a king, and before 8 A. M. we were on the river. The south branch of the Shenandoah was too muddy for fishing. They seemed to be biting only in the north branch between the Fork and Kenner's Dam, a stretch of about three-quarters of a mile.

On nearing the river what a sight met our eyes! Early as it was there were a dozen fishermen on the eastern bank, just where the water came over the dam. So thick were the anglers that their lines were becoming constantly tangled. The water was covered with anchored boats, containing from one to five rods each. The banks were lined on both sides with fisherman, black and white. At every 20yds. was a party of from one to five or six, and

as I passed and asked each party "What luck?" they would hold up a string of from one to two dozen bass, and each bass would weigh from 1 to 5lbs. Their mode of fishing was both successful and primitive. The water was very swift and taking about 20yds. of heavy cotton line, they would attach one end to a stake driven in the mud. To the other end they would fasten about a half pound of lead. Two and four feet respectively above the lead they would fasten a couple of large bass hooks, and having baited with two large live minnows they would toss the lead out in the stream as far as it would go. After setting several such lines they would probably get a bass on one of them and pull him in hand over hand, and then would be kept busy hauling in fish, baiting and throwing out, until they wearied of the slaughter—for slaughter it was—and terrific slaughter.

We made our way across the river and got upon the crib of the dam, which luckily happened to be unoccupied. The fun soon became fast and furious. Judge Hudson caught the first fish, which pulled 1½lbs. Indeed, he may have caught the second, too, for he caught more than all the rest of the party. It was some time before I took my first, but when he came he was a beauty, a 3-pounder. Bait was very scarce, and for several hours during the morning we had not a single live minnow, though we had at least a dozen small boys foraging in the neighborhood for us. The natives looked at us a little contemptuously on account of our light bamboo rods, reels and long lines. Nevertheless, at about 12:30, when we stopped for dinner, our catch of 18 fish weighed just 34lbs. After dinner we went at it again, and though we did not seem to catch them so fast, what we did catch were large, and by twilight we had some 30lbs. more.

It is an undecided question as to whom belongs the honor of catching the largest, which was taken as follows: It was getting late in the evening and we were entirely out of live minnows. Putting two hooks on my line and baiting with two large dead minnows, I prepared to cast about 40ft. out in some very rapid water, in hopes that the swift current would make the dead fish look as if they were alive. In preparing to cast, my line became tangled, and the better to untangle it I set my rod against the mill and dropped my hooks and bait off the crib into the water, some 5ft. below. The bait had hardly touched the water when it was taken with a rush that almost set me wild. In my excitement I grabbed for the line instead of the rod, and in so doing lost my balance and went headforemost into the water. Luckily it was some 8ft. deep, so beyond the ducking I was not hurt. My first thought on coming to the top was the fish, and I turned to yell to Judge Hudson, when I saw that he already had the rod in his hand, his vast proportions shaking with laughter while he skillfully played the bass.

"Have you got him?" I yelled.

"Yes, and he's a buster," he replied.

I got out as quickly as I could, but almost before I could get on to the crib the Judge had the fish there. He was a beauty of 4½lbs. Several times after that I felt the earth tremble as if there was an earthquake, and turning saw the Judge's sides shaking with silent laughter—"Just laughing at the way that fish pulled you in."

The next morning we added some 20lbs. to our catch before taking the 12 o'clock train for home, where we were soon the center of an admiring crowd of friends and small boys as we divided our catch. Some of those friends we made happy by a further subdivision. We all hope to repeat the trip every spring as long as we live.

TAX.

STAUNTON, Va.

BLUEFISH.—Rockaway, L. I., Oct. 9.—*Editor Forest and Stream:* The young bluefish, or "snappers," are not as plenty here now as they were ten days ago. For some weeks in September they were very plenty and were taken in great numbers off the iron pier with spearing for bait. One of the largest catches of the season was made by Messrs. Adams Griffin and Harris, of Brooklyn, two weeks ago. They took 402 snappers, weighing from ¼ to ¾ of a pound in one day, but the fishing has dropped off. During this pleasant weather there are many anglers here, and while they all meet with some success, the fishing is not what it was.—IRON PIER.

THE OHIO FISH AND GAME COMMISSIONERS.—Sandusky, O., Oct. 4.—*Editor Forest and Stream:* In the leading editorial of your number of Sept. 30 you class me as one of the Fish Commissioners of the State of Ohio. The Governor could have done much worse than to have appointed me to that office, but then he did better by appointing my son and partner, C. W. Sadler, who is young and energetic, an expert angler, and one who takes great interest in the protection and propagation of fish and the reasonable protection of all game. If of any consequence, you can make the correction.—E. B. SADLER.

H. H. THOMPSON.—This gentleman, whose initials often appear appended to fishing articles, and who is well known as the secretary of the Bisby Club and more recently as the secretary of the board of New York Fish Commissioners, will leave his present business in New York city on November 1, to take the position of first teller of the new Bedford Bank of Brooklyn, of which Fish Commissioner E. G. Blackford is president. Mr. Thompson is an expert bank officer of much experience both in private banks and in the United States Treasury.

BLUEFISHING IN GREAT SOUTH BAY.—There is not very good fishing for bluefish and weakfish in and about the Great South Bay and other waters on the south side of Long Island. The fish were so late in coming in that anglers had almost despaired of having any sport with these fish this season. The trolling outside Fire Island and along the south coast from Rockaway Inlet to Montauk Point is now very good, and the sloops and catboats are numerous. Many good catches are reported.

NEW JERSEY COAST.—Camden, N. J., Oct. 6.—I had rare luck at Anglesea last week with the mud hens and with the young mackerel, the latter we catch by trailing. The big mackerel (10 and 15lbs.) have disappeared from the sea, but these "blue fish" weigh from 1 to 2lbs. and are deliciously toothsome. I have met half a dozen New Yorkers at Anglesea, brought there by my letters in FOREST AND STREAM. The red drum (channel bass) are biting and will be there till Oct. 25.—J. M. S.

NUMBERING HOOKS.—The lack of agreement among hook makers regarding the numbering of the different sizes is almost as great a grievance as the vagaries of fly nomenclature. All anglers know that a specified number of one maker does not fit the hooks of a rival manufacturer, who is a law unto himself regarding the designation of sizes. On this subject the editor of the London *Fishing Gazette* replies to a correspondent, who complains of the evil: "We have for years past advocated one general system in the numbering of hooks. We have now sent a letter to every firm of hook manufacturers of importance in the country, asking them, in the name of the angling community generally, if they will, on and after a date to be named by them, agree to number their hooks of all kinds as follows: 000, 00, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, and so on, beginning with 000 as the smallest. There can be no question as to this being the best and simplest method, as it leaves it optional to the maker to increase the size of his hooks indefinitely without upsetting the numbering, whereas if he calls his biggest hook number one, it is not likely to correspond with the biggest hook of another firm, and it is possible before long he may want to make a larger hook to still, then he will have to call it 1 or begin another system and call it 1A. We shall publish the replies we receive. The plan of numbering which we suggest is that now in most general use, and we sincerely hope that manufacturers will consider the interests of their customers, and anglers generally, and adopt one uniform system."

DESTRUCTION OF SMALL FISH.—Greenwich, Conn., Oct. 11.—*Editor Forest and Stream:* Some parties here are taking bass, weakfish, etc., with seine. Fish too small for their use are left on shore to die instead of being thrown back to grow. They operate about the mouth of Coscob Harbor, and claim that being in the Sound they have perfect right to net their fish. Several rod fishers are indignant at the netters' style in general, and their selfish short-sightedness in particular, and I promised to consult FOREST AND STREAM on the subject. As tide water extends some two miles above where the netters operate, I suppose they can reasonably claim to be netting in the Sound. But is it legal in Connecticut to net such fish either in Sound or river flowing into Sound? If not, to whom should complaint be made? You know the objection of many persons to attending court in such cases, even when not deterred by fear of neighbors' opinions, they are afraid of postponed cases, loss of time and dollars for nothing. Is it necessary that witnesses testify in person, or will their depositions forwarded to the warden suffice? I am not witness to the netting but wish to post those who are.—F. D. G. [We would advise our correspondent to complain to the fish commissioners of Connecticut; they are: Dr. W. M. Hudson, Hartford; Robt. G. Pike, Middletown, and James A. Bill, Lyme.]

FIXTURES.

DOG SHOWS.

Oct. 13 and 14.—Third Annual Dog Show of the Stafford Kenne Club. R. S. Hicks, Secretary, Stafford Springs, Conn.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel Club. H. W. Wilson, Secretary, St. Johns, N. B.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 14 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Wiusted, Conn. Entries close Dec. 4.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4126.**

PACIFIC KENNEL CLUB.

Editor Forest and Stream:

A number of gentlemen appreciating the importance of a kennel club with a membership extending all over the coast, recently met and perfected such an organization under the name of the Pacific Kennel Club.

The objects, as expressed in its constitution, are as follows: First—To promote, encourage and improve the breeding of a superior class of dogs and their exhibition. Second—To publish a kennel register or stud book for the registration of pedigrees. Third—To own dogs for stud and breeding purposes only. Fourth—To hold bench shows and to adopt rules and regulations for conducting the same. Fifth—For mutual improvement and dissemination of knowledge on all matters pertaining to dogs, and to procure and maintain a library for the use of the members. The admission fee is as follows: Any person joining within sixty days from the 8th of September, 1886, $2.50. Any person joining after the 8th day of November, 1886, and before the 8th day of January, 1887, $5, and any person joining after the 8th day of January, 1887, $10. The monthly dues are 50 cents, payable quarterly. Each application must be accompanied by the admission fee.

The present officers of the club are as follows: Col. Stuart Taylor, President, Naval Officer, Custom House; Ramon E. Wilson, Esq., First Vice-President, 419 California street; H. T. Payne, Esq., Second Vice-President, Los Angeles; James E. Watson, Secretary and Treasurer, 516 Sacramento street. Executive Committee—Dr. C. G. Toland, 7 Montgomery avenue; J. Homer Fritch, Esq., 143 East street; J. H. Mangels, Esq., 327 Market street; S. Cameron Alexander, Esq., Bank of British Columbia, Sansome and California street; H. H. Briggs, Esq., Breeder and Sportsman, 508 Montgomery street; John F. Carroll, Esq., 1,323 Oak street; Ely I. Hutchinson, Esq., 419 California street.

For further information apply to the secretary, P. O. Box 1838, San Francisco.

THE EASTERN FIELD TRIALS ENTRIES.

WE publish below the list of entries for the open stakes of the Eastern Field Trials Club, to be run at High Point, N. C., next month. There are 35 in the All-Aged Pointer Stake, 44 in the All-Aged Setter and 6 in the Champion Stake. The latter will possibly have two more entries, as the winners of the All-Aged Stakes will be eligible to compete. The number of starters for the several events will undoubtedly be unprecedented in the history of field trials, and the meeting promises to be even better than the brilliant one of last year. The grounds of the club were drawn last week by Messrs. Albert A. Holton and E. A. Smith, who report birds more plentiful than last year, although a majority of them were only about half grown. There is plenty of food, however, and they will be well grown when the trials take place. Many of the handlers with their dogs have already gone to the vicinity and are hard at work preparing for the trials.

Mr. Coster has received no reply to his letter to the Pa. R. R. requesting free transportation of dogs to the field trials. The Richmond & Danville R. R. Co. have issued instructions to baggage masters to allow free transportation for dogs over their line when accompanied by an attendant, who must present certificate signed by Mr. Coster.

Following is a list of the nominations:

ALL-AGED POINTER STAKES.

RICHMOND (John E. Gill, Franklin, Pa.), lemon and white dog (Don—Beulah).

DON'S DOT (John E. Gill, Franklin, Pa.), liver and white bitch (Don—Cremorne).

HALF AND HALF (Edward Dexter, Boston, Mass.), liver and white dog (Priam—Malt).

HOPS (Edward Dexter, Boston, Mass.), black and white ticked bitch (Mike—Romp).

PRINCE (J. O'H. Denny, Pittsburgh, Pa.), lemon and white dog (Minnesota Prince—Countess).

TAMMANY (F. R. Hitchcock, New York), liver and white ticked dog (Tory—Moonstone).

DUKE OF BERGEN (F. R. Hitchcock, New York), liver and white dog (Bang Bang—Fan Fan).

BANG BANG (Westminster Kennel Club, Babylon, L. I.), orange and white dog (champion Bang—Princess Kate).

NASO OF KIPPEN (Westminster Kennel Club, Babylon, L. I.), liver and white dog (Naso II.—champion Maggie).

LUCKYSTONE (Westminster Kennel Club, Babylon, L. I.), liver and white bitch (Tory—Moonstone).

OLD PEBO (C. D. Ingersoll, New York), liver and white dog) Bang Bang—Kelly's Lill).

DIXEY (J. R. Andrews, New York), lemon and white dog (Sensation—Lotta).

ROBERT LE DIABLE (Highland Kennel, New York) liver and white ticked dog (Croxteth—Spinaway).

BILL (James P. Swain, Jr., Yonkers, N. Y.), lemon and white dog (Rush—Nan).

NEVERSINK (Neversink Lodge Kennel, Guymard, N. Y.), liver and white dog (Croxteth—Lady Gwendoline).

FLASH R. (D. S. Gregory, Jr., New York), liver and white bitch (Ranger—White Lilly).

RESULT (J. E. Thayer, Lancaster, Mass.), liver and white dog (Hart's Shot—Floy.

RAPID (Bayard Thayer, Boston, Mass.), orange and white dog (Bang Bang—Rue).

Rue II. (Bayard Thayer, Boston, Mass.), orange and white bitch (Bang Bang—Rue).

DEAN (T. M. Aldrich, Manton, R. I.), liver and white dog (Sensation—Daisy Dean).

JIMMIE (C. J. Peshall, Jersey City, N. J.), liver and white dog (Start—Maude).

NICE OF NASO (C. J. Peshall, Jersey City, N. J.), liver and white dog (Naso II.—Pettigo).

LALLA ROOKH (L. W. White, Ramsey, N. J.), orange and white bitch (Sensation's Son—Grace).

CONSOLATION (Charles H. Odell, New York), orange and white dog (Bang Bang—Grace III.).

JETSAM (Pittsburgh Kennel, Pittsburgh, Pa.), black bitch (Sambo—Diana).

FLOTSAM (Pittsburgh Kennel, Pittsburgh, Pa.), black bitch (Sambo—Diana).

SWEEP (Pittsburgh Kennel, Pittsburgh, Pa.) black dog (King—Lulu).

DRESS (Clifton Kennels, Jersey City, N. J.), liver and white ticked bitch (Donald—Darkness).

JOE PAPE (John Drees, Little Rock, Ark.), black dog (Sancho the Devil—Spot).

MALITE (Highland Kennels, New York), liver and white bitch (Meteor—Dell).

ROD (Castleman Kennels, Trenton, Tenn.), liver and white dog (Meteor—Dell).

KRUPP (Castleman Kennels, Trenton, Tenn.), liver and white dog (Meteor—Dell).

QUEEN BOW (Clifton Kennels, Jersey City, N. J.), liver and white bitch (King Bow—Bow Queen).

NAMELESS (Royal Robinson, Indianapolis, Ind.), liver and white bitch (Meteor—Dell).

NELLIE F. (Castleman Kennels, Trenton, Tenn.), liver and white bitch (Croxteth Ranger—Fannie).

ALL-AGED SETTER STAKES.

ENGLISH SETTERS.

GLOSTER (Edward Dexter, Boston, Mass.), black, white and tan dog (Dashing Rover—Trinket).

BELLE OF PIEDMONT (Edward Dexter, Boston, Mass.), black, white and tan bitch (Dashing Rover—Belle of Hatchie).

PRINCESS HELEN (Ramapo Kennels, Ramsey, N. J.), orange and white bitch (Thunder—Bessie).

PRINCE IMPERIAL (Ramapo Kennels, Ramsey, N. J.), orange and white dog (Emperor Fred—Bessie).

CLIFFORD (Ramapo Kennels, Ramsey, N. J.), black, white and tan dog (Emperor Fred—Fairy Belle).

BRANDON (J. O'H. Denny, Pittsburgh, Pa.), lemon and white dog (Royal Rock—Nellie).

ROY MONARCH (E. W. Clark, Jr., Philadelphia, Pa.) black, white and ticked dog (Dashing Monarch—List).

GAY GLADSTONE (B. P. Holliday, Prairie Station, Miss.), orange and white bitch (Gladstone—Flounce).

MANDAN (R. B. Morgan, Akron, O.), blue belton dog Count Noser—Lola).

MACK (N. Wallace, Waterbury, Conn.), black and white dog (Perry's Pete—Knight's Tip).

ST. ELMO IV. (Dr. S. Fleet Speir, Brooklyn, N. Y.), black, white and tan dog (St. Elmo—Clio).

WINDERMERE (Dr. S. Fleet Speir, Brooklyn, N. Y.), orange and white dog (Druid—Countess Louise).

DASHING NOBLE (Pittsburgh Kennel, Pittsburgh, Pa.), black, white and tan dog (Count Noble—Dashing Novice).

DAISY QUEEN (Pittsburgh Kennel, Pittsburgh, Pa.), black, white and tan bitch (Rock—Meg).

PENDRAGON (Geo. T. Leach, New York), black, white and tan dog (Count Noble—Floy).

BEN PARTINGTON (T. M. Aldrich, Manton, R. I.), black, white and tan dog (—— —Floy).

GEM (T. M. Aldrich, Manton, R. I.), black and white dog (Druid—Ruby).

MISS ELSIE (E. F. Thomas, Hoboken, N. J.), black, white and tan bitch (Count Noble—Ruby).

KING LEO (E. F. Thomas, Hoboken, N. J.), black, white and tan dog (Count Noble—Ruby).

DAISY F. (D. E. Rose, Lawrenceburg, Tenn.), lemon and white bitch (Gleam—Dean).

BOB H. (Dr. R. J. Hampton, Athens, Ga.), black and white dog (Count Noble—Belle Boyd).

CAN CAN (Dr. R. J. Hampton, Athens, Ga.), black, white and tan bitch (Count Noble—Belle Boyd).

BOB GATES (Whyte Bedford, Horn Lake, Miss.) black, white and tan dog (Count Rapier—Belle of Hatchie).

LILLIAN (P. H. & D. Bryson, Memphis, Tenn.), black, white and tan bitch (Gladstone—Sue).

PET GLADSTONE (P.H. & D. Bryson, Memphis, Tenn.), black white and tan bitch (Gladstone—Sue).

CHICKASAW II. (P. H. & D. Bryson, Memphis, Tenn.), black, white and tan dog (Gladstone—Sue).

DAN GLADSTONE (P. H. & D. Bryson, Memphis, Tenn.), black, white and tan dog (Gladstone—Sue).

LADY C. (B. M. Stephenson, La Grange, Tenn.), black, white and tan bitch (Coleman's London—Belle of Hatchie).

NOBLE C. (B. M. Stephenson, La Grange, Tenn.), black, white and tan dog (Count Rapier—Belle of Hatchie).

BRIDGEPORT (E. E. Pray, Denver, Col.), black, white and tan dog (Dashing Monarch—Vannette).

GATH'S JOY (Dr. J. N. Maclin, Keeling, Tenn.), black, white and tan dog (Gath—Gem).

BELLE (O. W. Bird, New York), black and tan bitch (Dan—native bitch).

FRED W. (Sanborn Kennel, Pittsburgh, Pa.), black, white and tan dog (Count Noble—Spark).

CANADA PEG (Memphis & Avent Kennel, Memphis, Tenn.), black, white and tan dog (Cambridge—Marchioness Peg).

JUNO A. (Memphis & Avent Kennel, Memphis, Tenn.) black and white bitch (Druid—Ruby).

JEAN VALJEAN (Memphis & Avent Kennel, Memphis, Tenn.) black, white and tan dog (Mingo—Twin Maud).

CHANCE (Memphis and Avent Kennel, Memphis, Tenn.), black, white and tan dog (Roderigo—Bo-Peep).

CASSIO (Memphis and Avent Kennel, Memphis, Tenn.), black, white and tan dog (Count Noble—Lizzie Hopkins).

FANNIE W. (Sanborn Kennel, Pittsburgh, Pa.), blue belton bitch (Sig—Bessie).

IRISH SETTERS.

MOLLY BAWN (Charles F. Thompson, Philadelphia, Pa.), bitch (Glencho—Colleen Bawn).

NELLIE (Chas. F. Thompson, Philadelphia, Pa.). bitch (Glencho—Bess).

BANKER (Jean Grosvenor, Boston, Mass.), dog (Glencho—Zelda).

GLENCLAIRE (Claire-Reeta Kennels, Palmyra, N. Y.), dog (Glencho—Claire).

GORDON SETTERS.

SLOCUM (John Simpkins, New York), dog (Turk—Beauty).

CHAMPION STAKE.

MAINSPRING (J. T. Perkins, Brooklyn, N. Y.), liver and white pointer dog (Mike—Romp).

DRAKE (Neversink Lodge Kennel, Guymard, N. Y.), liver and white pointer dog (Croxteth—Lass).

FOREMAN (W. Tallman, Tarrytown, N. Y.), black, white and tan English setter dog (Dashing Monarch—Fairy II.).

GATH'S MARK (Dr. J. N. Maclin, Keeling, Tenn.), black, white and tan English setter dog (Gath—Gem).

RODERIGO (Memphis and Avent Kennel, Memphis, Tenn.), black, white and tan English setter dog (Count Noble—Twin Maud).

PAUL GLADSTONE (Memphis and Avent Kennel, Memphis, Tenn.), black, white and tan dog (Gladstone—Lavalette).

THE MANITOBA FIELD TRIALS.

[From a Special Reporter.]

THE first field trials of the Manitoba Field Trials Club were held on Sept. 21, 22, 23 and 24, at Morris, some forty miles below Winnipeg, Manitoba. The meeting was quite a successful one, although the birds were very wild and consequently some of the heats were prolonged. The country over which the trials were run is only slightly rolling with frequent patches of brush. Upon the whole the dogs performed their work in a very creditable manner, some of them showing great natural ability. Mr. J. M. Avent, of Hickory Valley, Tenn., filled the office of judge and performed his duties to the general satisfaction of all. Three events were on the card. The Derby, for pointers and setters born on or after January 1, 1885, had eleven entries. The All-Aged Pointer Stake had three entries, and the All-Aged Setter Stake nine entries.

THE DERBY.

The trials commenced on Tuesday at 12.40, with the first brace in the Derby, Swift and Prince. The former is a white and lemon English setter dog, by Dan out of Belle, owned by H. Galt, who handled him. Prince is a Gordon setter dog by Bow out of Lill, owned by W. W. Wellband, and was handled by Geo. Handcock. After nearly three hours work with but few birds they were given a rest while the next brace were run, Dash B. and Darby. Dash B. is a lemon and white English setter dog by Dave out of Nellie, owned by Thos. Johnson and handled by T. Moore. Darby is a black, white and tan English setter dog by Druid out of Frost II., owned by F. Watercouse and handled by Geo. Handcock. After a half hour's run the heat was decided in favor of Dash B. He showed good speed and style and ranged and quartered nicely. Darby was unfit to run and gave it up after a short time and would not work, his owner stated that he was sick and unable to work. After this heat was finished Swift and Prince were again put down and worked until night, but no decision was reached, and the heat was finished on Wednesday morning after nearly three hours work. Swift was decidedly the fastest and widest ranger on the first day, and showed the most style, but he let down on the second day while Prince improved and was nearly his equal, except in style, at the close of the heat. This closed the first series as the only other starter had a bye. Rock is an Irish setter by Rock out of Belle, owned by W. Cleverly and handled by H. Pickering. The first heat of the second series was between Rock and Swift, both were somewhat unsteady and Rock lost all chance by breaking a good point and jumping in and flushing his bird, when the heat was awarded to Swift. While Swift was getting rested T. Johnson's dog Bert and C. W. Armstrong's bitch Belle, the only brace in the pointer stake, were run awhile and taken up without deciding the heat. Dash B. and Swift were then put down to decide first prize, both dogs went very well with Dash a trifle ahead in speed. He also proved to be more steady. Swift followed the example of Rock in the previous heat and put himself out of the race by breaking a point and flushing his birds and also breaking shot. This ended the heat in favor of Dash B., and he was declared the winner of first prize. Darby, the only other dog beaten by Dash B. having been withdrawn on account of sickness, Swift was declared winner of second prize. This left only Rock and Prince to compete for third, which was awarded to Prince after a short run, Rock having repeated his bad conduct.

THE POINTER STAKE.

Only two of the three entries for the All-Aged Pointer Stake put in an appearance. They ran a short heat during the running of the Derby with not much difference between them, and the managers decided to divide first and second prizes equally between them.

THE SETTER STAKE.

There were eight starters in the All Aged Setter Stake. They were run in the following order: S. L. Bedson's Gordon dog Shot, (Dan—Lill) handled by R. B. Morgan, against F. Sprado's red Irish dog Rock, handled by T. Johnson, Manitoba Kennel Club's black, white and tan English bitch Belle, handled by T. Moore, against C. A. Boxer's black, white and tan English bitch Q'Appelle Belle (Mark—Betse handled by owner. D. Smith's orange and white English bitch Fannie M. (Count Noble—Prairie Belle), handled by R. B. Morgan, against Manitoba Kennel Club's orange and white English dog Dash B. (Dave—Nellie), handled by T. Moore. Dr. Ferguson's black, white and tan English dog Don (Dime—Frost II.), handled by H. Pickering, against R. B. Morgan's blue belton English dog Mandan (Count Noser—Lola), handled by owner. The first brace Shot and Rock were put down a few minutes after the finish of Derby. Both started off fairly well with not much difference in speed. Shot displayed the most style and made a couple of nice points while Rock flushed and chased twice. This threw him out and Shot was awarded the heat. Belle and Q'Appelle Belle were the next brace. Both went well and some very good work was done, there was not much to choose between them except that Belle was not quite so steady as her competitor. After an hour's work the heat was declared in favor of Q'Appelle Belle. This finished the work for the day. On Thursday morning Fannie M. and Dash B. were the next brace in order. Both showed good speed and ranged and quartered well. Fannie had much the best of it in experience and steadiness, she also showed the best nose. After nearly two and one-half hours the heat was decided in favor of Fannie M. Don and Mandan were the last brace and the latter won easily after a short heat, showing some good work while Don was very unsteady. Shot and Q'Appelle Belle, the first brace in the second series, were put down at mid-day. Both started off well, but at the end of an hour and a half Shot gave up and would not work, and the heat was awarded to Q'Appelle Belle. The next heat was between Fannie M. and Mandan. From some cause Fannie would not let out and after a heat of over two hours, Mandan was declared the winner. He was lucky in catching her off as had she gone as well as in her previous heat he would have hard work to beat her. The next heat, which proved to be the last one, was between Q'Appelle Belle and Mandan to decide first money. It was half-past five when they were put down, and the birds were so wild that only one good point was made and that by Belle. They were taken up at night to go down again in the morning. In the evening the managers decided that the judges should award the remaining prizes after first was decided. On Friday morning the brace was again put down and run until past eleven o'clock, when the heat was decided in favor of Q'Appelle Belle and she was declared winner of the first prize. The dogs were very nearly equal and had Mandan backed properly the decision would probably been different. Following is the result:

DERBY.

Dash B. first, Swift second, Prince third.

ALL-AGED POINTER STAKE.

Bert and Belle divided first and second money.

ALL-AGED SETTER STAKE.

Q'Appelle Belle first, Mandan second, Fannie M. third, Dash B. and Belle divided fourth.

[We gave last week a complete summary kindly sent us by the judge, Mr. J. M. Avent.]

THE INDIANAPOLIS DOG SHOW.

Editor Forest and Stream:

The second bench show of dogs given under the management of the Indiana State Fair Association was held at Indianapolis during the fair week, from Sept. 27 to Oct. 2. The classes were not as well filled as they should have been to make the competition interesting, but the quality was very good. There were no dogs from outside the State, as the show was not advertised in any of the sporting papers. This department is a new feature with them, but the management are greatly pleased with the results, as no other special feature on the ground attracted so much attention. Exhibitors are promised a special building next year, and if this is done, with a little judicious advertising, there is no reason why the show should not be a grand success, as the central location of Indianapolis makes it easy of access from all parts of the country. J. M. Freeman, of Bicknell, Ind., was superintendent, and Ed. S. Shultz, of Attica, Ind., judged all classes. Mr. Shultz's decisions gave general satisfaction.

On Tuesday evening during the show a number of breeders met and formed an association to be known as the Indiana Kennel Club. D. C. Bergundthal, of Indianapolis, was elected President; Ed. S. Shultz, of Attica, Vice-President; S. H. Socwell, of Indianapolis, Treasurer; and Dr. Parsons, of Indianapolis, Secretary. The club starts with about twenty-five members, and there seems to be no doubt but it will be a success. Following is the list of awards:

MASTIFFS.—1st, G. E. Townley's Ashmont Victor; 2d, Geo. Jackson's Beech Grove Rab.

SKYE TERRIERS.—1st, P. Maerbach's Jumbo.

ENGLISH SETTERS.—*Dogs:* 1st, P. T. Madison's Rush Gladstone; 2d, S. H. Socwell's Change. *Bitches:* 1st, J. Becker's Beauty R.; 2d, H. Bradshaw's Flora Glen. *Puppies:* 1st, J. Gasper's Lady Change; 2d, A. H. Bradshaw's unnamed.

GORDON SETTERS.—*Puppies:* 1st, P. T. Madison's Don's Boy.

IRISH SETTERS.—*Dogs:* 1st, H. A. Comstock's Royal C.; 2d, D. D. Calkins's Rex. *Puppies:* 1st, H. A. Comstock's Flora Temple; 2d, J. McDowell's Chief Wilkes.

POINTERS.—*Dogs:* 1st, C. Foster's Spot; 2d, A. R. Edmond's Mack. *Bitches:* 1st, Mr. R. William's Topsy; 2d, A. R. Edmond's Queen.

MISCELLANEOUS.—1st, H. B. Gates's pug bitch Dot; 2d, G. Eaglen's Siberian bloodhound Lion. Best bitch with litter, C. J. Tremper's Spark.

VIGO.

Indianapolis, Ind., Oct. 6.

THE DAYTON DOG SHOW.

Editor Forest and Stream:

The dog show held here last week was a very successful one. It was held by the Southern Ohio Fair Association and proved to be the leading attraction of the show. There were nearly 200 dogs entered, many more than could be conveniently accommodated in the building set apart for them. Major J. M. Taylor, of Cleveland, O., judged the pointers, setters and hounds, and Mr. George H. Hill, of Madeira, O., the remaining classes. Following is a list of the

AWARDS.

MASTIFFS.— 1st, Dr. Batterson's Leo; 2d, J. F. Nicholson's Bruno.

ST. BERNARDS.—1st, Mrs. E. F. Hill's Abbess II.; 2d, J. Hilwagen's Jumbo. Very high com., C. Sanders's Cæsar. High com., J. Michel's Nero.

DEERHOUNDS AND GREYHOUNDS.—1st, J. F. Nicholson's Belle; 2d and very high com., McGrew & Wylie's Twilight and Snowflight. Very high com. reserve, D. H. Stone's Daisy.

ENGLISH SETTERS.—*Dogs:* 1st, Kyles & Keely's Blue Peter; 2d, Dayton Kennel Club's Bob. Very high com. reserve, G. I. Grimm's Pat. Very high com., A. Sander's Woodcock, C. E. Pease's Dash and Miami Kennels' Sam Sterne II. High com., C. E. Pease's Frank. *Bitches:* 1st, G. H. Volker's Lady V.; 2d, Dayton Kennel Club's Rose. Very high com., Miami Kennels' Clara F., A. W. Hitch's Lillian B., Kyles & Keely's Slip, and E. R. Watrous's Red Wine. High com., Miami Kennels' Nellie Morgan and C. E. Pease's Leda. Com., Miami Kennels' Melissa and Jessie, and C. E. Pease's Fannie. *Puppies:* 1st, Kyles & Keely's Rose of Canada; 2d, Dayton Kennel Club's Dash. Very high com. reserve, A. Sanders's Woodcock. Very high com. and high com., C. E. Pease's Dash and Lucy. Com., G. H. Volker's Whip and G. Warder's Cora.

BLACK AND TAN SETTERS.—1st, M. Weber's Printz; 2d, G. Stoddard's Dash.

IRISH SETTERS.—CHAMPION—H. E. Chubb's Zella Glenduff. OPEN—*Dogs:* 1st, W. N. Kuhn's Mack N.; 2d, C. Bickham's York II. Very high com., W. D. Bickham's Dash. Com., H. E. Chubb's Mickey C. *Bitches:* 1st, G. H. Volker's Duck; 2d, H. F. Casey's Beauty Belle. Very high com., E. V. Hale's Maggie H. *Puppies:* 1st, H. Gebhart's Queen Belle; 2d, G. F. Kuhn's Chance. Very high com. reserve, W. E. McElderry's Duke. Very high com., H. E. Chubb's Madhra Rhue. Com., J. L. Wood's Gipsy Nell; G. H. Volker's Willard; W. E. McElderry's Gipsy Queen and R. Weaver's Snoozer.

POINTERS.—CHAMPION—Reserve Kennels' Patti M. OPEN—*Dogs:* Large—1st and very high com., Dayton Kennel Club's Pap Smizer and King Shot; 2d, Idstone Kennels' Patterson.—UNDER 55LBS.—1st and high com., Dayton Kennel Club's Rumpty and Bull's Eye; 2d, Kyles & Keely's Leon. Very high com , G. Zettler's Glendale. High com., G. A. Pomeroy's Tip. *Bitches:* Large and small—1st, very high com. and high com., Idstone Kennels' Romp, Lilly Bang and Actress; 2d and very high com. (2), Dayton Kennel Club's Meteor's Maid, Dayton's Pride and Meteor's Trinket. Com., Mrs. C. I. Engel's Accident. *Puppies:* 1st, Idstone Kennel's Patterson; 2d, Dayton Kennel Club's Bodine's Best. Very high com., Mrs. C. I. Engel's Lady Trinket and A. W. Hitch's Queen Bow.

COCKER SPANIELS.—1st, Kyles & Keely's Trinket; 2d, C. Sanders's Boll S. Very high com., W. D. Keating's Julia and L. P. Samp's Bessie S. High com., C. Sanders's Nellie S., C. Anderson's Fanny and W. D. Keating's Fanny. Com., Mrs. W. E. McElderry's Prince.

FOXHOUNDS.—1st and 2d, G. L. Makely's Dick and Hunter.

BEAGLES.—1st, 2d and high com. (three), Mrs. G. H. Hill's Banker, Majority, Topsy, Minnie and Pansy. Very high com., E. R. Watrous's Guy.

DACHSHUNDE.—1st and 2d, Idstone Kennels' Wallexie and Prince.

BASSET HOUNDS.—1st and 2d, Idstone Kennels' Fanchon and Nimrod.

COLLIES.—1st and very high com., W. M. Hunter's Collie and Bruce; 2d, G. Will's Rob Roy III. High com., G. H. Volker's Shep.

BULLDOGS.—1st, G. Will's Rose; 2d, P. Bannan's Jack. Very high com., J. Zimmer's Jack. High com., C. W. Mack's Loaf and W. P. Quirk's Fannie. Com., C. Collins's Lady Pilot.

BULL-TERRIERS.—1st and 2d, G. Will's Flirt and Fan. Very high com., H. Justice's Gem.

BLACK AND TAN TERRIERS.—1st, G. Will's Three Cheers; 2d, A. W. Hitch's Tip.

HARD-HAIRED TERRIERS.—1st, W. S. Jackson's Elswick Lad II.; 2d and very high com., J. F. Nicholson's Nellie and Little Nell.

YORKSHIRE TERRIERS.—1st, Miss Bessie L. Rowe's Paddy; 2d, G. Will's Midge. Very high com., Mrs. E. L. Rowe's Mouse.

KING CHARLES SPANIELS.—1st, Mrs. H. Gillespie's Felice; 2d, Chas. Sanders's Victoria.

PUGS.—1st, J. D. Smith's Dido; 2d, H. B. Pruden's Fritz. Very high com. reserve, H. Sanders's Minnie. Very high com., R. G. Swadener's Sweetness and A. A. Thresher's Pip. High com., C. G. Lowry's Ko Ko and Miss H. S. Lowry's Nick.

MISCELLANEOUS.—1st, McGrew & Wyler's Beauty; 2d, Miss Carrie S. Murphy's Bird.

SPECIAL PRIZES.

Best collection English setters, Miami Kennels. English setter, Kyles and Kelly's Rose of Canada. Bitch owned in Dayton, G. H. Volker's Lady V. Irish setter, H. E. Chubb's Zella Glenduff. Bitch in open class, G. H. Volker's Duck. Puppy, H. Gebhart's Queen Bell. Gordon setter, M. Webber's Printz. Pointer, Dayton Kennel Club's Pap Smizer. Bitch, Reserve Kennels' Patti M. Largest number in miscellaneous class, Dayton Kennel Club, best in class, McGrew and Wylie's Italian greyhound Beauty.

RESERVE.

DAYTON, O., Oct. 5.

THE DANBURY DOG SHOW.

Editor Forest and Stream:

The fifth annual bench show of the Danbury Agricultural Society was held in connection with their fair this week, Oct. 5 to 8. There were about 150 entries, the same being received up to the time of the show, although the entries were advertised to close Sept. 29. Mr. Geo. E. Sears and J. H. Seeley were advertised as superintendent and assistant, but the duties of the position were performed by Mr. Wm. Tallman, who also officiated as judge of sporting dogs. Mr. Edward Lever judged the non-sporting classes. Mr. Tallman not only judged but fed and virtually ran the show, as no one else would. Billy does not like to see things left undone, and everything would have been left so but for him. The awards gave satisfaction and the classes were well handled. Another year I hope that the society will appoint some one in the position of superintendent that is familiar with the business. Below I give the

AWARDS.

MASTIFFS.—*Dogs:* 1st, T. W. Towner's Max; 2d, J. H. Billing's Major. Very high com., J. P. F. Daitchy's Hero. *Bitches:* No entries. *Puppies:* 1st, M. Woodruff's Jill. Very high com., C. Lyke's Cassie. High com., M. Woodruff's Jack.

ST. BERNARDS.—*Dogs:* 1st, N. M. George's Adonis. *Bitches:* No entries. *Puppies:* Absent.

NEWFOUNDEANDS.—1st and 2d, W. G. Martin's Major, Jr. and Juno.

DEERHOUNDS.—CHAMPION—J. E. Thayer's Lance.—OPEN—1st and 2d, J. E. Thayer's Duncan and Thora. *Puppies:* 1st, J. E. Thayer's Dauntless.

GREYHOUNDS.—1st, J. H. Seeley's Flash; 2d, H. Deforest's Prince.

POINTERS.—CHAMPION—Absent.—OPEN—*Dogs:* 1st, A. Collins's Captain Fred; 2d, J. H. Seeley's Rex. *Bitches:* Absent.

ENGLISH SETTERS.—OPEN—*Dogs:* 1st, Rosecroft Kennels' Fairy King; 2d, G. W. Neal's Pride of Orleans. High com., C. Phillip's Duke. *Bitches:* 1st, G. W. Neal's Daisy Foreman; 2d, C. Phillip's Millie. High com., Rosecroft Kennels' Hazel. *Puppies:* 1st, Rosecroft Kennels' Forest Belle; 2d, A. J. Lee's Don Belton. Very high com. reserve and very high com. and com., J. L. Bronson's Belton, Rhœbe, Prince Foreman and King. High com., C. Phillip's Midget.

IRISH SETTERS.—CHAMPION—M. Richardson's Hazel. OPEN—*Dogs:* 1st, A. W. Pearsall's Redstone. *Bitches:* 1st, W. W Kendall's Lorna Doone; 2d, A. W. Pearsall's Belle Ida. *Puppies:* 1st, 2d and very high com. reserve, A. W. Pearsall's Ginger, Agnes and Sweetness.

GORDON SETTERS.—CHAMPION—*Dog:* J. E. Thayer's Argus. *Bitch:* H. C. Glover's Norah.—OPEN—*Dogs:* 1st, B. C. Lynes's Dick; 2d, withheld. *Bitches:* 1st, B. F. Lewis's Rose. *Puppies:* Withheld.

FIELD SPANIELS.—*Dogs:* 1st, Armstrong and Wallace's Wilkies.

COCKER SPANIELS.—*Dogs:* 1st, Fay & Baxter's Ned Obo; 2d, Armstrong & Wallace's Tobie. *Bitches:* 1st and 2d, Fay & Baxter's Yum Yum and Widow Cliquot. Very high com., Armstrong & Wallace's Miss Wilkies. *Puppies:* 1st, Fay & Baxter's Yum Yum; 2d, Warwick Kennels' Nigger.

CLUMBER SPANIELS.—1st and 2d, M. Richardson's Newcastle and Tyne.

FOXHOUNDS.—1st, H. De Forest's Frank; 2d and high com., C. Philips's Sailor and Rock.

BEAGLES.—CHAMPION—*Dog:* A. H. Wakefield's Little Duke. *Bitch:* A. H. Wakefield's Bush.—OPEN—*Dogs:* 1st and very high com., Somerset Kennels' Jubiter and My Maryland; 2d, G. Laick's Goodwood Rattler. Very high com. reserve, high com. and com., A. H. Wakefield's Racer, Jr., Leador and Trifle. *Bitches:* 1st, very high com. and com., A. H. Wakefield's Twinkle, Chase and Silver; 2d, very high com. reserve and high com., Summerset Kennels' Jessie, Nellie and Virginia. *Puppies:* 1st and 2d, J. H. Seeley's Nellie and Lillie.

FOX-TERRIERS.—*Dogs:* 1st and very high com., J. E. Thayer's Richmond Tyrant and Tip; 2d, W. W. Silvey's Jaunty. High com., C. I. Bailey's Jack Whitton. *Bitches:* 1st and 2d, J. E. Thayer's Di and Jaunty. Very high com., C. I. Bailey's Miss Slick. *Puppies:* 1st, James Watson's Nellie; 2d, C. I. Bailey's Pond Lilly.

COLLIES.—*Dogs:* 1st, Hempstead Farm Co.'s Lourie; 2d, C. E.

Osborne's Montrose. Very high com., H. T. Farnum's Rex of Clyde. *Bitches:* 1st, Hempstead Farm Co.'s Twilight; 2d and very high com., C. E. Osborne's Midlothian Lassie and Lady Edgecombe. High com., T. Glennon's June Fairview. *Puppies:* 1st and 2d, Hempstead Farm Co.'s Twilight and Lourie. Very high com. and high com., Rosecroft Kennels' Shepherdess and Daisy. Com., W. G. Martin's Cow Boy and F. D. Sulley's Sandy McDonald.

BULLDOGS.—CHAMPION—J. E. Thayer's Romulus. — OPEN—*Dogs:* 1st, J. E. Thayer's Moses; 2d, E. K. Sperry's Taurus II. Very high com., C. D. Cugle's Fostic. *Bitches:* 1st and 2d, J. E. Thayer's Juno and Josephine.

BULL-TERRIERS.—CHAMPION—Divided; F. F. Dole's Count and W. J. Comstock's Victoria.—OPEN—*Dogs:* 1st, W. W. Silvey's The Baron. *Bitches:* 1st, F. F. Dole's Lady Tarquin; 2d, withheld. *Puppies:* 1st, G. H. Davidson's The Duchess.

BLACK AND TAN TERRIERS.—1st and 2d, G. D. Woodill's Queen and Victor.

TOY TERRIERS.—1st, B. C. Lynes's Cosetti; 2d, Dr. W. F. Lacy's Nannie.

PUGS.—*Dogs:* 1st, withheld; 2d, Mrs. S. A. Barnum's Zip. *Bitches:* 1st, J. H. Seeley's Susie; 2d, J. J. Hanlon's Mamie. *Puppies:* 1st and 2d, J. H. Seeley's Peek-a-Boo and Fidget.

MISCELLANEOUS.—1st and 2d, J. H. Seeley's terriers Fannie and Don Pedro.

SPECIAL PRIZES.

Best collection, J. E. Thayer. Second, A. H. Wakefield. Best pointer, A. Collins's Captain Fred; setter, M. Richardson's Hazel, collection from Danbury, B. C. Lynes. Best bull-terrior, divided, F. F. Dole's Count and W. J. Comstock's Victoria. Collie, also puppy, Hempstead Farm Co.'s Twilight. Collection of pugs, J. H. Seeley. Best St. Bernard, N. M. George's Adonis. English setter, G. W. Neal's Daisy Foreman. Kennel Irish setters, A. W. Pearsall. Cockers, Fay & Baxter. Best field spaniel, M. Richardson's Newcastle. Beagle, A. H. Wakefield's Little Duke; beagle puppy, J. H. Seeley's Nellie. Bulldog, J. E. Thayer's Romulus. Pug, J. H. Seeley's Susie. Smallest dog, B. C. Lynes's Cosetti. Fox-terrier, J. E. Thayer's Richmond Tyrant. Gordon setter in open class, B. F. Lewis's Rose. Newfoundland, W. G. Martin's Major. Jr. Greyhound, H. Seeley's Flash. In miscellaneous class, J. H. Seeley's Fanny. Brace of beagles, A. H. Wakefield's Little Duke and Twinkle. GEDO.

COLLIE SWEEPSTAKES.—Under the auspices of the Collie Club of America.—First collie sweepstakes, for puppies born in the United States or Canada, on or after March 1, 1886. Entrance $5 each, to be paid to the Secretary of the Collie Club at the time of entry. The sweepstakes to be decided at a show in the spring of 1887, to be selected by the Executive Committee of the Collie Club. The winner to receive 50 per cent. of the sweepstakes; 25 per cent to go to the second, 15 per cent to the third, and 10 per cent to the fourth. In entering dogs for the show at which it is decided to hold the collie sweepstakes, it will be necessary to enter them according to the regulations of that show, paying the entry fee, and placing them in such classes as the exhibitor may choose; and also specifying on the entry blank that they are "to compete for the collie sweepstakes." Entries close December 1, 1886. Blanks may be obtained by addressing the Secretary, Mr. George A. Smith, 520 Walnut street, Philadelphia, Pa.

THE IRISH SETTER CLUB.—The executive committee of the Irish Setter Club have decided to hold field trials this fall in North Carolina the week after the finish of the Eastern Field Trials. There will be but one event, an all-aged stake, open to all Irish setters, with first, second and third prizes. As soon as arrangements are perfected the public will be notified through the columns of FOREST AND STREAM. All interested in the Irish setter should lend their influence to make the trials a success. For information relating to details, communications may be addressed to Mr. Max Wenzel, Hoboken, N. J.

SAN FRANCISCO DOG SHOW.—In comments, page 169, first column, for "marshal" read martial; second column, for "nondescript animal" read magnificent animal.

KENNEL MANAGEMENT.

R. McE., Alloway Lodge.—A collie bitch, fourteen months old, caught distemper at Boston show. She quickly recovered excepting a cough that still clings to her. Can you recommend treatment for her? Ans. Give an aloes and iron pill night and morning.

A. C. M., New York.—A dog has had eczema for fifteen months, and I have tried almost every remedy without effect. Ans. If there are scattered spots, wash with carbolic soap and rub in gently ointment of Peruvian balsam. If the whole body is affected dust the surface with calomel. Give Fowler's solution of arsenic in food—five drops night and morning.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

WILMINGTON, Del., Oct. 8.—On the 6th the Wilmington and West Chester rifle clubs shot two matches at Stockton Range, Camden, N. J. Massachusetts target, 200yds. off-hand:

During the progress of the matches other members of the Wilmington Club shot at 500yds. The score is as follows out of a possible 50 points:

H Simpson	4444544434—40	W O'Connor	2424204204—24
J E Newman	5323443333—33	W A Bacon	2022254042—23
E M Clark	5432302254—27		

Before leaving the grounds a match was arranged between the Wilmington and West Chester clubs, to take place at Schuetzen Park, this city, on Oct. 20.

THE MASSACHUSETTS RIFLE ASSOCIATION.

WALNUT HILL RANGE, Oct. 7.—The fall meeting of the Massachusetts Rifle Association was begun at the range at Walnut Hill to-day. The attendance was much larger than is usual on the first day. The wind blew from 1 o'clock and was very trying to the riflemen. Mr. Chase made two clean scores of 70 in the rest match. Mr. Small, editor of the *Rifle*, with Capt. Ira Paine, the well known shot, visited the range, and the latter gentleman, though not competing for a prize, made a splendid score of 244 out of a possible 250 in the revolver match, putting in 10 consecutive tens, and also making one clean score at 25yds.

Oct. 9.—The meeting closed this afternoon. It has been a success as far as the small-bore men are concerned, but the absence of military shooters was noticeable. The revolver match, the first of its kind ever held at a meeting of this association, was a success, Capt. Paine, a professional, beating J. Francis, an amateur, but 10 points on the total, a record of which Mr. Francis can well be proud. The meeting was held under the most favorable auspices ever enjoyed by the association, the weather being as near perfect as can be expected for three consecutive days at this season of the year.

Among several of the best shots the competition was especially warm. Indeed, in the off-hand match the leadership was constantly shifting, and during the closing half hour this afternoon the position of "high man" was held by three different contestants. Mr. Reed made 9 consecutive 10s (upon the standard American target) being the largest run of 10s ever made upon this target in an off-hand match. His aggregate score reached 311, placing him in the lead. Mr. Francis then returned to the contest, having been devoting his time to the revolver match, and in a few minutes had bettered his score, which had been the leading one, making an aggregate of 312. This placed him again in advance of all others, but Mr. Richardson resumed the struggle, making a score of 66 in 7 shots, and an aggregate of 315, thereby again displacing Mr. Francis from the lead. The interest during this portion of the contest was intense, and congratulations were cordially bestowed upon the successive leaders. The shooting in the off-hand match closed at 4 o'clock and the prize list was made up and the prizes distributed in season for all to return to Boston on the 5:52 train. The fine weather, in connection with the efficient work done by the employes, has left little to be desired by those who entered the matches. Following are the names of the prize winners in the various matches:

Decimal Off-hand Match.

E F Richardson	61 62 62 64 66—315	R B Edes (mil) +20	47 47 50 53 55—272

BRIDGEPORT, Conn., Oct. 9.—Bridgeport Rifle Club at Readmoor this afternoon, 200yds:

S H Hubbard	9	8	9	9	0	9	6	6	10	10—85
W H Beardsley	10	7	8	10	9	9	9	7	6	6—81
D E Marsh	7	5	10	8	10	8	6	8	9	7—78
Geo E Betts	3	8	5	8	8	8	8	9	9	10—76
W R Wheeler	8	7	7	8	10	8	7	10	3	7—75
Dr F A Rice	8	10	9	6	7	7	6	8	8	5—72
R S Basset	9	8	9	5	5	5	7	8	10	4—70
A R Lacey	6	5	4	6	6	8	6	2	6	7—56
M S Warner	7	4	5	5	8	5	5	3	5	3—52
Dr A Lyons	4	3	5	4	2	1	4	5	10	5—45
H H Scribner	5	2	8	9	4	4	5	0	5	1—43
W E Howes	7	3	3	3	2	4	5	8	2	4—41
C H Barber	7	1	4	4	6	4	1	3	4	6—40
Z Goodsell	5	1	4	4	3	5	4	6	4	3—39

Beardsley wins the badge for best average. Beardsley, Hubbard and Marsh competed in the match of 50 shots with the following result: Beardsley 390, Hubbard 379, Marsh 362. The club's prize shoot will be held about Oct. 14 and will continue for two days. Cash prizes to the value of $155 will be offered in addition to a large list of other prizes.

JAMESTOWN, N. Y., Oct. 9.—Regular medal shoot, 200yds., off-hand, Creedmoor count:

DeLisle	5455555555—49	Hazeltine	4444444454—41
Brown	5445555454—46	Ward	4354444343—38
Burns	4454554455—45	Blanchard	3334354444—37
Kapple	4554454355—45		ZERO.

MANCHESTER, N. H., Oct. 7.—There was an excellent attendance at the rifle range this afternoon, and the sport provided by the various matches was heartily enjoyed. The team shooting was the leading event in which the rather small total of 656 was recorded, the marksmen not doing as well as ordinarily. Lack of practice and a bothersome east wind was the cause. Mr. Dodge's 82 card was first-class. The record made in the various events is appended:

Practice Match, Possible 210.

J B Anthony	37	40	45—122	
E I Partridge	30	00	00— 30	

Handicap Prize Match, Possible 100.

W Morris	7	9	8	4	6	7	7	7	8	8—71
E J Knowlton	9	7	9	7	8	2	3	10	10	5—70
Re-entry	9	4	7	7	6	9	8	8	9	3—70
Re-entry	9	7	6	5	7	5	8	6	4	7—64

Medal Match, Possible 100.

T C Williams	8	10	6	9	8	6	6	5	4	6—68
Re-entry	7	4	8	10	6	8	5	7	8	6—69
A B Dodge	10	10	5	6	4	5	5	6	9	8—68
G A Leighton	5	8	6	6	7	6	8	6	10	4—66

Team Match, Possible 100.

A B Dodge	7	10	10	6	10	6	7	8	10	8—82
C D Palmer	9	4	6	7	10	9	6	7	6	6—70
E C Paul	7	7	10	8	4	6	5	8	7	6—68
W M Boothby	6	7	7	8	5	7	9	5	5	8—67
E I Partridge	5	8	6	7	8	5	7	7	5	6—64
L W Colby	6	8	6	9	4	6	3	7	6	8—63
J A Barker	2	9	6	9	4	5	9	6	7	6—63
G A Leighton	5	6	4	5	8	6	8	5	8	7—62
C W Temple	5	7	4	5	7	6	6	4	9	5—59
J L Niven	5	7	8	4	6	6	5	4	3	10—58
										656

A match, six men to a team, will be shot next week, and the final event, 10 men to a team, the same as to-day, will be shot the week following.

BOSTON GALLERY SHOOTING.—The all comers' match at the Mammoth Rifle Gallery, Boston, which opened on the first of the month, has already brought out some good shooting. The match is best 10 scores or a possible 500, 50yds. off-hand, during the month. The contest for the prizes promises to be very close, and more brilliant shooting can be looked for later, as many riflemen now busy with the Walnut Hill and other out-door matches have signified their intention of entering:

A B Loring	44 44 43 43 43 43 42 42 41 41—426
J A Gay	44 44 43 43 43 42 42 42 41 40—424
H O Arnold	43 43 43 42 42 42 42 41 40 40—418
J Williams	44 43 43 42 42 42 41 40 40 40—417

These four are the only ones completing 10 scores, although there are over 30 entries:

BUFFALO, Oct. 7.—The annual competition for the State trophy by teams from the several organizations of the Fourth Division of the N. Y. State National Guard took place at Bay View to-day. There was a large attendance of military men on the range and great interest was manifested in the competition. Company B, 74th, and Company F, 65th, head the list, and the State prize is carried off by Company B by just a single point. The competition was under the supervision of Col. P. P. Beals, assistant inspector general of rifle practice, assisted by Major A. H. G. Hardwick, inspector of rifle practice for the Fourth Brigade. Each team consisted of six enlisted men. The scores were as follows out a possible 25 per man at each target:

Company B, 74th Regiment.	200	500		200	500	
Sergt E L Gager	19	12	31	Corp Chas Bogart	16	11	27

			122				118

At the conclusion of the contest for the State trophy, a subscription match was shot, which was won by Capt. Wm. Franklin with a score of 41; Sergt. E. A. Amsbury, of the 1st Sep. Co., second with 35, and Sergt. F. W. Ives, of Co. B. 74th, third with 34.

HAVERHILL (MASS.) RIFLE CLUB, Oct. 9.—Record match:

J Busfield	10	9	6	8	10	5	7	7	10	7—79
F Merrill	8	4	10	6	10	5	9	9	8	7—76
H Tuck	9	8	9	7	7	7	8	6	6	10—75
A Edgerly	7	10	8	9	6	6	8	5	7	5—71
C Brown	9	4	4	6	5	6	9	5	5	7—60
C Bliss	7	4	6	7	8	3	3	6	7	9—60

The weather conditions during the match were good. Telegraph match, Oct. 2, with the Franklin Rifle Club, of Hartford, Conn., 200yds., off-hand. Nothing below 4 to count:

W D Palmer	10	10	8	10	8	9	10	10	10	7—91
H Tuck	6	7	8	6	7	7	8	7	8	4—68
J Busfield	6	6	8	7	8	7	8	6	8	9—73
A Edgerly	7	7	10	10	7	10	4	6	8	6—78
S Johnson	8	4	4	4	7	7	6	9	6	7—62
J F Brown	0	4	9	5	9	7	6	5	0	9—54
W Worthen	6	6	6	9	7	7	5	7	8	8—66
F Merrill	6	6	8	4	8	5	5	8	8	5—63
C B Wright	5	5	8	8	7	9	0	5	8	5—60
J Munroe	6	7	6	0	5	0	4	6	6	4—44—659

Franklins telegraphed that they were unable to shoot.

Record Match.

W D Palmer	9	10	6	5	5	10	7	10	10	8—81
H Tuck	6	4	10	6	10	6	6	3	10	6—67
W Worthen	9	10	7	5	6	5	5	6	5	8—66

Mr. Palmer made a fine score in the match and in both scores, which were shot in succession, 10 out of 20 shots; count 100. A pretty good showing for off-hand work.

GARDNER, Mass., Oct. 6.—At the last regular meet at Hackmatack Range of the Gardner Rifle Club the standard decimal target was used. The shooting was off-hand, distance 200yds. The results were as follows:

G F Ellsworth	82	88—170	G C Goodale	75	76—151
Geo R Warfield	85	76—161	C N Edgell	72	76—148

WALNUT HILL.—Ira Paine will give an exhibition of his skill with the revolver at the range of the Massachusetts Rifle Association, Walnut Hill, Oct. 15. The weapon will be the regulation Army revolver, .44 calibre, distance 50yds., 160 shot on the Standard American Target.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

HAMILTON, Ont., Oct. 6.—Quarterly sweepstakes of the Wild-Fowlers' Gun Club, held at John Dyne's, Burlington Beach. Shoot No. 1, 7 Peoria blackbirds, 2 traps, screened, 18yds. rise:

Riorden	0111111—6	John Smyth	0000 w—0
Hipkins	1111101—6	Griffiths	0111110—5
A Smyth	0010110—3	Pett	0001111—4
Bowron	1111011—6	Cline	1100111—5
Jenne	1111111—7		

Jenne first, Riorden, Hipkins and Bowron divided second and third.

Shoot No. 2, class shooting:

Jenne	1111101—6	Griffiths	1010111—5
A Smyth	1011101—5	Stephens	0111111—6
Bowron	1101111—6	E V Spencer	1100100—4
Hipkins	1100010—3	Weir	1001010—3
Riorden	1011111—6	Cline	1010111—5
Crooks	0011011—4	Morris	0100001—2
McLean	0000111—3	Riorden	1101111—6
Booker	0100011—3	W Stroud	1011011—5

In the shoot off Stephens won first, A. Smith, Griffiths and Stroud divided second; Crooks third, McLean fourth.

Shoot No. 3.

W Stroud	1111111—7	Stephens	1111110—6
Pett	0110111—5	Hipkins	1110100—4
D B Spencer	0101101—4	Jenne	1111111—7
A Smyth	1011110—5	Cline	1110030—3
Bowron	1111101—6	Jno Smyth	0011011—4
Riorden	0110100—3	Griffiths	1110110—5
Crooks	0011010—3		

Stroud and Jenne divided first and second, Bowron and Stephens third.

Shoot No. 4—Class shoot:

W Stroud	0111111—6	J Smith	1001101—4
Petts	1010010—3	Crooke	1110110—5
Stephens	1101011—5	Griffith	1010111—5
Bowron	0111111—6	Booker	1110001—4
Jenne	1111111—7	McLean	1100001—3
Hipkins	0010100—2	Morris	1100001—3
Riorden	1111111—7	Cline	1101001—4
A Smyth	1100111—5	Weir	1110111—6

Riorden first, Stroud, Bowron and Weir divided second, Griffith third.

Shoot No. 5:

Griffith	11111—5	Hipkins	11010—3
Pell	10100—2	Jenne	10110—3
Stephens	11001—3	A Smyth	10011—3
Bowron	10011—3	Weir	00011—2
Cline	10101—3		

Griffith first, Cline and Jenne divided second.

Shoot No. 6.

Cline	11101—4	Stephens	00010—1
A Smyth	11111—5	Bowron	01111—4
Stroud R	11111—5	Hipkins	10110—3

A. Smith and Stroud divided.—JACK.

LONG BRANCH, Oct. 9.—The return match between the South-Side Gun Club of Newark and the West End Gun Club of this place was shot here this afternoon and was won by the home club by a score of 190 to 188. King, of the Newark team, hit every bird. The conditions were 20 clay-pigeons each, 18yds. rise, from a screened trap. Misses were scored by the ringing of an electric bell in the scorer's tent by the judges at the screen. The score:

West End Club—	Charles Morris	19,	Bearmore	16,	Cubberly	16,	W. Price	17,	Jophia Van Dyke	14,	S. Brutt	14,	A. Cubberly	19,	E. E. Taber	11,	W. D. Campbell	19;	total	190.
South Side Club—	Hobart	19,	McFadden	12,	Wheaton	18,	Thomas	17,	Terrell	16,	Heritage	15,	Phillips	17,	Pickering	14,	Whitehead	12,	Breintnall	18,
C. Von Lengerke	10,	King	20;	total	188.															

LA SALLE, N. Y., Sept. 30.—Niagara River Shooting Club match for gold medal, 15 Niagara Falls blackbirds, 18yds.:

Kellogg	110011100000111— 9	Smith (E H)	101111111111111—14
Barker	011101011110111—10	Treat	111010111111101—12
Hopkins	110011101101101—10	Jenne, Jr	011111111111011—13
Jewett	001011110111011—11		

E. H. Smith wins medal.

Match for gold badge, 15 Niagara Falls blackbirds, 18yds.:

Kellogg	110010010101111— 9	Jenne, Jr	110001111101101—10
Barker	111010110101101—10	Treat	010011011111161—10
Hopkins	00010 w.	Smith (E H)	101111111101000— 9
Jewett	011100111111111—11		

Team shoot, 10 blackbirds:

Jenne, Jr	1111111111—10	Barker	0001110111— 6
Kellogg	1111010001— 6	Smith	0010110111— 6
Jewett	1101010101— 6	Howard	1000111100— 6
Treat	1110011101— 7—29	Hopkins	1100111001— 6—24

Match for Port Colburn badge, Barker challenged by Jenne, Jr., 15 bats, 10 clay-pigeons,

Barker	110101110101110—10	0010110001—4—14
Jenne, Jr	011101111010110—10	1100001100—4—14

Ties: 5 each, bats and pigeons:

Barker	0110010111—6	Jenne	011110111—7

Jenne holds badge till next challenge:

JERSEY CITY HEIGHTS.—The sixth shoot for the cup of the Jersey City Heights Gun Club took place on the grounds of the club at Marion on 7th inst., 7 birds, both barrels, second barrel ½ bird:

	Yds.		Yds.
W Hughes	27 ½ 1 1 1½ 1 1-6	Cummins	25 1 1 1 1 0 1 1-6
W Siegler	28 1 1½ 0 1 1 1-5½	Holcomb	27 0 0 1½ 1 1 0-3½
Day	25 1 1 1 1 0 0 1-5	Burdett	25 0 0 0 1 1 1 0-3
Dickens	26 1 1 0 1½ 1 1-5½	Quinlan	27 ½ 1 1 0 1 0 1-4½
Heritage	26 ½ 1½ 0 1½ 1-4½	Baier	25 ½ 1 1 0 0 1 0-3½
Newbold	23 ½½ 0 0 0 w -1		

On the toss up (first money divided between Cummins and Hughes) Cummins taking cup and handicap for next cup shoot. Siegler and Dickens dividing second money. Day taking third alone.

After which shoot, and before, in fact, a number of sweepstakes were engaged in and resulted, as usual, in the old troopers carrying off the bullion. Al Heritage, the distinguished caterer for the J. C. H. G. C., and known throughout the shooting fraternity as "Old South Paw," has leased the grounds of the club for a grand two days' tournament some time next week or the following week (due notice of which will be given). Al has now nearly 700 birds on hand, and expects to have from 1,000 to 1,200 good flyers. A large delegation from Bridgeport and New Haven (where live bird shooting is not allowed by law) have sent word that they will be on hand and are anxious. Also shooters from Philadelphia, Mattawan, Long Branch, Long Island, etc., have signified their desires. It looks (weather permitting) that there might be a large number of the old trap shooters gathered together. That there will be a good time and a satisfactory shoot under the auspices of "Old South Paw" and young Al no one will doubt.—JACOBSTAFF.

UTICA, N. Y., Oct. 9.—At Riverside Park yesterday afternoon the members of the Oneida County Sportsmen's Club had their monthly shoot for the Booth-Clark prizes. Following was the score:

Elliott	1111111110—9 11 10 10 10 11—7—16
Howe	0111010010—5 11 01 11 11 00—7—12
Scott	1001011110—6 00 10 01 11 10—5—11
Dexter	1101001011—6 10 00 01 10 00—3— 9
Wheeler	1111010110—7 11 00 00 00 00—2— 9
Harris	1010000011—4 01 00 11 11 00—5— 9
Gates	0101101101—6 00 01 01 01 00—3— 9
Beckwith	1011011001—6 11 10 11 00 10—6—12
Fisher	1111000001—5 11 00 00 00 10—3— 8
Fox	1111110101—7 10 00 01 00 00—2—10
Roth	1000100010—3 00 00 00 00 00—0— 3

Elliott won first place, and in shooting off the tie for second place Howe won over Beckwith.—PORTSA.

BOSTON, Oct. 6.—Trap shooters assembled in large numbers at the range at Walnut Hill to-day, and several events were shot. In the diamond match, Smith, Lawson, Wardwell and Nichols won prizes A, B, C and D and Edwards won F in the order named. Six clay-pigeons, 3 singles, Swift; 6 blackbirds, 3 angles, Lawson; 6 clay-pigeons, doubles (Walkup match), Stanton; 6 clay-pigeons, Wardwell and Stanton; 7 single clay-pigeons (diamond sweep), Edwards and Stanton; 3 bats, double (diamond sweep), Wilson; 10 clay-pigeons, all angles, Wardwell and Lawson; 6 clay-pigeons (novelty match), Swift; 3 pair clay-pigeons, doubles, Edwards and Stanton; 8 clay-pigeons, pairs, Wardwell; 6 clay-pigeons, Swift and Nichols; miss and out match, Swift and Wardwell divided.

Diamond Match.

Swift	1111111—7 11 10 10—4—11
Lawson	1011111—6 10 11 01—4—10
Wardwell	1111101—6 01 00 11—3— 9
Snow	0111101—5 11 10 10—4— 9
Stanton	1111111—7 10 10 00—2— 9
Nichols	1101100—5 10 10 10—3— 8

Visitors' Match.

Edwards	1111111—7 10 10 11—4—11
Wilson	0110101—4 11 01 11—5— 9

SAN FRANCISCO, Sept. 26.—A large number assembled at Blanken's Six Mile House, on the San Bruno road, to-day, to witness the pigeon shooting match for $100 a side between G. Schultz and A. Lawson, both of this city. The conditions were 12 single birds, 30yds. rise and 10yds. boundary. Ten-bore guns were used, and the match was shot under Hurlingham rules. The pigeons were sprung from plunge traps, and it was noticeable that a majority of the birds were of a white color. This fact should have insured far better scoring than was made, but the low death rate may no doubt be attributed to nervousness and anxiety on the part of each of the contestants to carry off the honors. Schultz having won the toss selected to shoot first, and opened the ball with a miss, the bird—a white one—flying against the wind and escaping both barrels. Lawson dropped his first bird with the second barrel, and Schultz missed his second bird, making Lawson's chances look good. Indifferent shooting on both sides left the matters lies on six when they started on the eleventh bird. Neither of them killed till the end of the 12-bird match, so that the tie still remained. The following are the scores. The figure 2 denotes second barrel:

Schutz	001200111100—6	Lawson	221011010000—6

It had been provided that in the event of a tie three double birds were to be shot at. This latter match was under similar conditions, with the exception that the rise was 18yds. Schultz killed one bird each in his three doubles, and his opponent only killed one in his last pair, upon which Mr. Blanken declared Schultz the winner. The scores made in shooting at doubles were as follows:

Schultz	01 10 10—3	Lawson	00 00 01—1

Lawson immediately challenged the victor to a $10 match, 6 single birds, at 50yds. Schultz acquiesced and again came out victorious, killing 5 out of the 6, while Lawson only secured 3.

The birds, taken all through, were good strong flyers, and although scouts were numerous and kept up a perfect fusilade on those who managed to get out of bounds, the majority of the feathered fugitives managed to get home to their barns.

The stock of live birds having become exhausted, a sweepstakes match at clay birds was inaugurated. Four shooters contested, and the all-conquering Schultz again won first money, $20.

Mr. Blanken acted as judge in the events of the day and supplied the birds.

OCEAN GROVE, N. J., Oct. 6.—Match at 20 live pigeons each, between Jos. L. Cliver, of Ocean Grove, and Robt. J. Gravatt, of Asbury Park, shot at Chadwick, Oct. 5, for $50. Mr. Cliver shooting a Lefever hammerless 6½lbs., and Mr. Gravatt a Colt hammer gun 8¼lbs., 21yds. rise, 80yds. boundary; use of both barrels:

Gravatt	11101111101110*10011—16
Cliver	11011111001111111111—17

*Dead out of bounds. Mr. Gravatt used second barrel 10 times. Mr. Cliver used second barrel 3 times. Mr. Cliver lost his ninth bird by failing to shoot, not having released the triggers of his gun.—B.

FOUNTAIN GUN CLUB.—There was a good attendance at the half-mile track, Parkville, L. I., on the 6th, to see the pigeon match between L. Duryea and C. Kendall, but it did not come off, owing to the illness of the latter. The spectators, however, did not lose anything, as some remarkable shooting was done in the Fountain Gun Club shoot. In Class A, Dr. Wynn, 30yds., and A. Eddy, 27yds., tied for the prize. In the shoot off, each killed 20 birds straight. Then the Doctor missed his next two and Eddy killed his second and won, making a total of 27 out of 29 to the Doctor's 26 out of 29, each having missed one in the first shoot. In Class B, Dr. Leveridge, 27yds., killed 6 out of 7 and won, and Nat. Cooke, 21yds., won in Class C, also killing 6 out of 7. Out of the 123 birds shot at, but 22 got away, some of these falling dead just out of bounds. The referee was the well-known "double rise" pigeon shot, Ben West. Long Island rules governed the contest.

BAYOU GOULA, La., Oct. 5.—The final and most interesting tournament in clay-bird shooting for the championship badge of this (Iberville) parish took place to-day a few miles above Bayou Goula between the St. Gabriel and Fabian gun clubs. Two other clubs, the Sunshine and Anandale, were invited, but declined to participate. This being the last tournament for the champion badge of 1886, and it having been won once each by the above mentioned clubs, caused quite a flutter of excitement among their respective friends. The shooting grounds were admirably selected at Point Pleasant, close upon the bank of the Mississippi River, just in front of a grove of towering cottonwood trees. It was estimated that there were not less than 300 persons present. It was well understood throughout the parish that the St. Gabriel and Fabian clubs were well matched. In the contest to-day the St. Gabriels were led by Capt. Fred Swoop, and the Fabians by their President, Capt. James A. Ware. The score at the close stood as follows:

St. Gabriel—Dr. Browne 11, Hebert 7, Le Blanc 9, Mire 12, Stingle 14, Swoop 16, Pritchard 13, Grassin 17; total 99. Fabian—Dr. Owen 12, Williams 10, Feltus 15, Murrel 13, Jumel 16, Tuttle 17, Randolph 15, Ware 14; total 112.

WELLINGTON, Mass., Oct. 9.—The weekly shoot of the Wellington Gun Club was held this afternoon. The first prize winners in the several events were as follows: Six clay-pigeons—Wardwell. Six bluerocks—Shumway and Stanton. Six clay-pigeons—Sanborn. Three pairs blackbirds—Shumway. Six clay-pigeons—Stanton. Six bluerocks—Adams and Stanton. Six bluerocks, straightaway—Stanton. Six bats—Shumway and Stanton Six bats—Shumway and Wardwell. Six bluerocks—Stanton. Three pair clay-pigeons—Snow.

MR. J. E. BLOOM, well known in connection with the Ligowsky Clay-Pigeon Company, of which he is vice-president and general manager, was on Oct. 8 admitted to the bar of Ohio.

Yachting.

CLOSED AND GIVEN TO THE JURY.

A VERY FINE YEAR FOR CUTTERS.

Clara, by Fife.

Six beam cutter, waterline 53ft., beam 9ft., draft 9ft., displacement 38 tons.

May 30.—Seawanhaka Corinthian Y. C. Opening race, cruising trim. Clara won as she liked from a fleet, wind light, course 20 miles.

June 1.—Larchmont Y. C. Course 28 nautical miles, wind light to moderate from S.W., sea smooth. Clara beat Cinderella 1m., Athlon 13m. 15s. and Thistle out of sight.

June 15.—Atlantic Y. C. Course 35 miles, wind moderate N.E., sea smooth. Clara did wonders, beat Cinderella no less than 15m. 31s., Roamer 12m. 22s., Athlon 11m. 15s., Thistle 50m. 50s., Vivid 1h. 20m. 14s. Ask Thistle and Vivid how much Clara is "fundamentally wrong" and about how "right" Thistle and Vivid are in comparison! Clara also beat the 70ft. sloop Gracie by about a quarter of an hour, Gracie being in the class above.

June —.—Sweepstakes off Larchmont. Clara beat Cinderella.

June 17.—New York Y. C. Course 38 miles, wind light and variable, sea smooth. Clara beat Cinderella 18m. 37s., Daphne 31m. 2s. Athlon 32m. 32s., Whileaway out of sight, Vivid out of sight, Gaviota out of sight, Bertie out of sight, Regina out of sight, Espirito out of sight. But then Clara is "fundamentally wrong," so much so that on 52ft. loadline she beat the 70ft. Gracie by 14m., without time allowance!

June 19.—Seawanhaka Corinthian Y. C. Course 37 miles, wind variable, sea smooth. Clara beat Cinderella 16m. 43s., Daphne 14m. 5s., Regina out of sight, Athlon out of sight.

June 29.—Eastern Y. C. Course 15 miles twice over, strong wind N. W., sea smooth. Clara beat Active 25m. 35s. Clara is "all wrong" and Active is, of course, "all right." Evidently Active could be improved by being made a little more "wrong."

July 5.—Larchmont Y. C. Course 28 nautical miles, wind moderate from S. W. Clara beat Cinderella 31m. 2s.

Aug. 7.—New York Y. C. Goelet Cup Match. Clara won sweepstakes in strong E. wind with some sea, beating Cinderella 3m. 55s., Stranger 1m. 31s., Fannie 1m. 55s., Hildegarde out of sight, Athlon out of sight, Gaviota out of sight. Clara is 53ft. waterline. It can easily be seen how "fundamentally wrong" she must be, for she beat the 65ft. Stranger and the sloop Fanny of 66ft. This in a strong wind is a little snort of marvelous.

Oct. 2.—Larchmont Y. C. Course 28 nautical miles, wind strong N. W., Clara beat Cinderella 1m. 30s.

I believe Clara also sailed and won a sweepstakes in spring against Cinderella and Athlon, but can find no details, hence do not include the race. When Clara appeared in American waters last fall she sailed and won four matches in succession. Total to date, fourteen starts and fourteen firsts. This record has never been equaled by any yacht of any kind in America.

Bedouin, by Harvey.

Four-and-a-half-beam-cutter, loadline 70ft., beam 15ft. 6in., draft 11ft. 6in., displacement 105 tons.

June 17.—New York Y. C. Course 38 miles, wind light and variable, sea smooth. Bedouin beat Gracie 48m. 50s., Fanny 37m. 40s., Thetis 36m. 45s. How is that for a boat which is "fundamentally wrong?" What does the defeat of the Galatea amount to alongside of the style in which Bedouin wiped out her class? Bedouin did much more. She beat all the big sloops of the 80ft. class without time allowance, excepting the Priscilla, and beat Priscilla all hollow with allowance applied. There was, however, a good deal of fluking in the race by which Bedouin profited most.

June 19.—Seawanhaka Y. C. Course 37 miles, wind variable, sea smooth. Bedouin beat Gracie 18m. 44s.

June 29.—Eastern Y. C. Course 50 miles, strong wind, N. W., smooth sea. Bedouin beat Thetis 9m. 53s.

Aug. 7.—New York Y. C. Goelet Cup match. Bedouin won sweepstakes, beating Gracie 8m. 33s., Fanny 11m. 22s.

Ulidia, by Fife.

Six-beam cutter, loadline 43ft., beam 7ft. 2in., draft 8ft., displacement 19 tons.

July 7.—New Rochelle Y. C. Ulidia had a sail-over in her class, but beat the Santapogue, 39ft., by 30m. 04s. This race does not figure in the summary, though from a technical point of view it is entitled to full consideration.

Aug. 7.—New York Y. C. Goelet Cup matches. Ulidia won sweepstakes, beating her class out of sight. Strong wind and quite a sea for her size. Carried a lady over the course. Ulidia has also had scrub brushes with Crocodile and others of the kind and beaten them with great ease. There is no yacht of Ulidia's loadline in American waters which can approach her.

Oct. 5.—New Haven Y. C.—Ulidia beat a whole fleet of first centerboards out of sight. Course 20 miles, moderate northerly wind, smooth water.

Shona, by Watson.

Six-beam cutter, loadline 32ft. 9in., beam 5ft. 8in., draft 6ft., displacement 7½ tons.

June 29.—Eastern Y. C., Shona sailed over, no Eastern sloop venturing to tackle such a tough morsel in a slashing breeze and sea.

Sept. 4.—Beverly Y. C. open match.—Wind strong E. and choppy sea. Shona beat 35ft. 7in. Viking 47m. 23s., 34ft. Percy 46m. 38s., Lydia gave up. These figures show how wretchedly the Eastern keel sloops compare with the keel cutter. Some of these sloops were nearly three times as wide as Shona, drew more water, and had more displacement, with 30 to 50 per cent. more rig. There is not a keel sloop in America of Shona's waterline which can come within a quarter of an hour of that cutter. In this same race Shona beat the 34ft. centerboard sloop Shadow, hitherto considered invincible, by 3m. 16s., 30ft. centerboard Magic by 10m., 33ft. 8in. centerboard Violet by 32m., 32ft. 6in. centerboard Maggie by 32m., 34ft. 8in. centerboard Gracie by 51m., 33ft. 6in. centerboard Mabel by 53m. But then Shona is "fundamentally wrong" and the centerboards and keels above given are "scientifically correct."

Galatea, by Webb.

Six-beam cutter, loadline 87ft., beam 15ft., draft 13ft. 6in., displacement 157 tons.

Sept. 9.—America Cup, New York Y. C. course, 38 miles. Mayflower beat Galatea 12m. 2s., light and fluky wind, smooth sea, much interference by excursion steamers.

Sept. 11.—America Cup, twenty miles to leeward and return outside Sandy Hook, wind fluky with calms. Mayflower beat Galatea 29m. 9s., Galatea lay becalmed 20m.

Summary: Twenty-three races and twenty-one victories for the cutters against two for the sloops. The twenty-one victories were consecutive. To win twenty-one out of twenty-two is something.

To win twenty-one races *consecutively* is a great deal more than the figures convey.

There must have been times when the number of opponents, luck or conditions were heavily against the cutters.

But they captured twenty-one straight and at the tail end of the season lost two!

There were other races besides those given above. In these the cutters and sloops took it pretty much turn about, with the record somewhat in favor of the cutters.

But these lesser events have no bearings on the issue, for the contestants were not first-class flyers on either side.

It is conceded that a tolerably good sloop can spoil some kind of a plug, and that dubbing the plug a cutter won't mend matters a bit

It will also be conceded that, if a tolerable sort of cutter runs amuck among a fleet of local centerboards of inferior breed, it is likely to be an off day for the sloops. Such races go for naught in the question. I have for that reason confined the foregoing list to the recognized cracks in their classes.

Where, then, do Stranger and Thetis come in? The answer is that neither has a record as a crack, and that no well-defined class exists which takes in their sizes. They are usually lumped with larger or smaller divisions. Their true gauge is, therefore, not easily discerned. So far as these yachts have made a record, I do not intend to shirk the result, but add below a comparative table from which the two can be judged, apart from their doings with the odds of size against them.

It is natural that the lay press should draw its conclusions exclusively from the great international races. The lay writer knows nothing else, and to him the record above will be a revelation.

It is natural that "the people," whose knowledge is derived from the lay press, should accept without reservation the erroneous inferences promulgated by the uninformed pens of many an editorial desk.

But the opinions of the lay press and "the people" are ciphers in the world of yachting. The "insiders" establish the fashion and to these specialists my words are addressed with the confidence that a summary of facts is sufficient to counteract what little evil the recent avalanche of editorial reviews from questionable sources may have effected.

It is tacitly assumed in many quarters that every conceivable kind of a tub which happens to pass current as a cutter must beat every crack sloop in American waters to establish the claims made in behalf of the cutter, and that a single failure on the part of some tub to bring about such uninterrupted slaughter is enough to impeach the worth of the type as a whole to which the tub may have more or less distant relation.

The recent international matches can be taken in illustration.

I have in a previous issue of FOREST AND STREAM reviewed the Galatea's defeat, and traced her failure to the unnecessary deficiency in canvas. But in this argument I can afford to accept the opposite version and grant that she was out-topped on her general merits as a racer.

Galatea's defeat is interpreted as proof positive that cutters as a class must be fundamentally wrong and the construction of our sloops clearly right.

It is to this summary style of verdict I strenuously object. The conclusion is wholly unwarranted.

No person open to the logic of events will confess to such snap judgment.

Facts are dead against a sweeping verdict derived from generalizing from a single instance, utterly oblivious to the mass of testimony in rebuttal supplied by the record compiled above.

It is incomprehensible to me how any person able to reason and weigh evidence can so far delude his own sense as to invest two races with more weight than twenty-one others entitled to equal attention.

If Galatea is fundamentally wrong, how can the success, the extraordinary success of like principles in Bedouin, Clara, Ulidia and Shona be reconciled to such belief?

If a hundred times to come the cutters are defeated, the success of *some* still remains an indelible truth.

If upon *one single* occasion in a fair, square race, *one* cutter, only one, manages to win an honest victory from a first-class sloop flyer, that one occasion is sufficient to show what *can* be done on the lines of a cutter.

Now, what *has* been done *can* be done again.

A single victory for one cutter, fairly gained, ought therefore to be enough to place the *possibilities* of the type beyond the realm of controversy.

Instead of one lone triumph, I point to a record of *twenty-one consecutive* demonstrations of what the cutter is capable as a prime racing craft.

Why then ignore the above record and permit a couple of counts against the Galatea to drive from mind all just citations in contradiction?

Is such a process logical?

If I tried my level best to accept the widespread illusion that cutters are fundamentally wrong, my supply of horse sense would rise in revolt with the statistics of the season before me.

I do not complain because the lay press overlooks the performances tabulated above. Nothing more thorough is to be expected from such a superficial source. But to the specialist it should be unnecessary to point out that the tonnage of the racers, the glamor surrounding a well-advertised Cup, and the focusing of international attention upon one event, do not in the least warrant greater weight to the result of Galatea's bold but ill-advised fight than should be accorded to comparatively obscure contests in which the same issues are fought out under the same conditions.

If Galatea was beaten by Mayflower, and cutters are "therefore" all wrong, then, because Shona beat Shadow, sloops are at least equally "all wrong."

So, what are you going to make of it?

Your position is untenable in the face of such flat contradictions.

My position is not.

Time and again I have given to the public that "declaration of faith" under which the contradictory achievements of cutter and sloop can alone be reconciled in a rational manner. I have maintained and supported by facts that "type" cannot be considered as entering the competition at all. That the defeat of a Galatea can be sufficiently explained by inferior fashioning or equipment without the need of impeaching the cardinal dimensions answerable for her type. That, on the other hand, the defeat of a Shadow sloop is no better evidence that the sloop type is "fundamentally wrong," but that the victory of a Shona cutter is logically to be ascribed to better mould or rig on *her* dimensions than a Shadow has upon her own particular beam and depth in turn.

Outside influences being assumed equal.

For it is possible to build a very slow Galatea. She would certainly be beaten by a smart Mayflower.

It is also possible to build a fearfully slow Mayflower. She would equally certainly be beaten by a smart Galatea.

The smarter boat will beat the duller boat every time. Once it will be the cutter which gets the home gun first. Then again it will be the sloop.

Individual merit of design, without reference to type or dimensions within the ruling limits yet experimented upon, decides the contest.

Such has always been my position.

Such is the lesson of the above record.

Only upon such a position can current racing events be truly reconciled.

I have never pretended that the cutter possessed innate or fundamental superiority to the sloop under normal conditions of wind and water. My whole course since 1879 has been to establish the cutters claim to *equal* recognition with the sloop as a racer and to combat prevailing prejudice to the contrary, in the hope that at least those very modifications in mould, ballasting, rig and equipment which the orthodox American death trap has undergone in late years, might be hastened with all possible speed for the sake of the best interests of the sport.

Individually I and others may prefer the cutter on other grounds than her speed, but this review is confined to the possibilities inherent in the types for the production of racers.

For seven years past I have met every phase of this question of type and all opposition which came to the surface. The volumes of FOREST AND STREAM from 1879 furnish a veritable encyclopedia of information upon naval design and a history of the cutter in America from an infinitessimal beginning to this day, which finds her a permanent factor and the pivot of interest in American yachting.

I beg to be excused from further tiresome repetition of a topic which has been thrashed out several times over, and leave the shreds for other people's picking.

In the words of Cooper's red chieftain, "I have spoken."

C. P. KUNHARDT.

P. S.—Record of Thetis:

June 15.—Atlantic Y. C. Thetis beat Gracie 1m. 42s.
June 17.—New York Y. C. Bedouin beat Thetis 36m. 45s.
June 29.—Eastern Y. C. Stranger beat Thetis 6m. 56s.
Sept. 20.—Newport to Marblehead. Thetis beat Stranger 4h. 10m., distance 150 miles.
Oct. 1.—Marblehead. Thetis beat Stranger 2m. 22s.
Oct. 2.—Marblehead. Thetis beat Stranger 6m. 23s.
Oct. 5.—Marblehead. Stranger beat Thetis half an hour.
Oct. 11.—Marblehead. Stranger beat Thetis 10m.
Summary: Thetis sailed 8 races and won 4 firsts.

Record of Stranger:

June 17.—Dorchester Y. C. Stranger beat Huron 2m. 57s.
June 29.—Eastern Y. C. Stranger beat Thetis 6m. 56s.
July 5.—Boston City. Stranger beat Siren 46m. 8s.
Sept. 20.—Newport to Marblehead. Thetis beat Stranger 4h. 10m. Distance 150 miles.
Oct. 1.—Marblehead. Thetis beat Stranger 2m. 22s.
Oct. 2.—Marblehead. Thetis beat Stranger 6m. 23s.
Oct. 5.—Marblehead. Stranger beat Thetis about half an hour.
Oct. 11.—Marblehead. Stranger beat Thetis 10m.
Summary: Stranger sailed 6 races and won 5 firsts. By dint of suppressing information concerning Stranger and making a great

ado over Thetis, the public has been led to believe the sloop had 'conclusively proven that Stranger was fundamentally wrong.' In truth it is a toss up between the two, and neither in present trim is exactly a flyer of first water. Even the 55ft. cutter Clara has beaten the 65ft. Thetis hand over fist in some races. But being on the wrong side of the sloop man's ledger "it don't count." I have been generous enough to overlook such defeats of the sloop in the above record, because of the difference in size. The record shows quite enough without exhausting the comparison to the last drop.

C. P. K.

BURGESS BOATS AND SKIMMING DISHES.

Editor Forest and Stream:

Another American sloop, built specially to defend the America's Cup, having thoroughly beaten, on every point of sailing, an English cutter designed specially to take that cup away: this would seem a good time to note the vast difference between the two boats as to type. Of course, now that nearly everything claimed by the narrow beam and heavy displacement school having been so conclusively proven fallacy, nothing remains but the choice between unqualified surrender and an attempt to show that the American boat is a re-hash of so-called cutter principles; or, in other words, that Mayflower is a new type of cutter with much greater displacement, depth, etc., than has heretofore been known in American sloop designing practice. The lead-miners have chosen to adopt the latter course, and by so doing have stranded themselves higher and dryer than they were before. Mayflower, as compared with many racing and cruising sloops favorably known for the past 15 to 30 years, is in reality a boat of light displacement and moderate depth for her size, while, relatively to Galatea, the contrast in these respects is simply so conspicuous as to render any assertion to the contrary utterly ridiculous. To prove this statement I send herewith the following figures concerning some centerboard sloop yachts well known to all of us:

	Length Over All. Ft.In.	Beam. Ft.In.	Draft. Ft.In.
Sadie	50.06	16.07	5.09
Shadow	36.00	14.08	5.04
Orion	49.07	15.02	5.03
Nepenthe	45.00	15.00	5.06
Julia	80.00	20.00	7.01
And—			
Mayflower	100.00	23.05	9.06
Galatea	100.00	15.00	13.05

If we are not appealing to an audience of upland sailors, I think further comment is not necessary. THOMAS CLAPHAM.

ROSLYN, L. I., Oct. 2.

[In view of the result of the past two or three seasons' racing, except only the two boats of a special class, built to defend the cup, and as the wins have been almost entirely for the cutters, wherever the sloops have entered against them, it would be as well if Mr. Clapham advanced some proof in addition to a mere statement that narrow beam and displacement have succumbed to opposite principles. The records of Bedouin, Oriva, Clara and Ulidia, not made in one or two races, but running over several seasons, will show this in a way that cannot be gainsaid by the few and unsatisfactory races between Mr. Burgess's pair of compromises and Mr. Webb's narrow cutters. Clara alone is sufficient proof that up to the present year, 1886, America has not a centerboard sloop of any type that can sail with the most extreme of narrow cutters. Let us have the proof to the contrary before any call is made to surrender. Only a few weeks since the famous Shadow, instanced above, the fastest of her class, a boat whose standing cannot be questioned, after she was defeated, as was the case with Wave, Schemer and other sloops that have succumbed to the cutters, was decisively beaten by a deep and narrow cutter of great displacement, not in a gale nor a drifting match, but in fair yacht-racing weather.

Our original proposition in regard to Mayflower was that she as well as Puritan was indebted to English ideas and English practice for her rig, both in general plan and in detail; for her outside lead, for the presence of a deep and substantial keel, moulded to form part of the hull, and for the secondary features of her design, plumb stem, overhang, raking sternpost, round bright bowsprit, etc. Also that while retaining the centerboard, an American feature, and also a much greater beam than the modern cutter, she is both deeper and narrower to a marked degree than has been customary in all American building for thirty years, and that the tendency of both Mayflower and Puritan is to do for the sloop model what Mr. Clapham's ex-sharpie Vidette was doing with the sharpie model, incorporate less beam, more draft, lead keel and displacement.

Referring to Mr. Clapham's figures, it may be a coincidence, but in all but one boat, to be noted later on, he has selected his representative examples from the work of the one builder who has always been remarkable for the depth of his models: a point which, in spite of the success of the boats, was peristently ignored for years by dozens of other builders, who calmly blundered on in the production of shoal and wide flatirons. We venture, too, to correct Mr. Clapham's figures on the basis of Olsen's excellent little yacht list of 1875, about the period at which the "American sloop" was at its best, and just before the invasion of foreign ideas, which has given a victory for Mayflower instead of defeat for a big Fanny or Coming. We select the waterline lengths instead of over all as a fairer basis of comparison, though the change rather helps Mr. Clapham's side. The revised table reads:

	L. W. L. Ft. In.	Beam. Ft. In.	Draft. Ft. In.	Ratio of length to beam.	Ratio of draft to beam.
Sadie	46 10	16 02	5 03	2.90	.31
Shadow	33 05	14 04	5 04	2.33	.37
Orion	46 00	15 01	4 08	3.07	.30
Nepenthe	42 00	15 00	4 10	2.80	.32
Julia	71 02	20 00	6 02	3.56	.30

Julia's dimensions are variously given, but the depth given by Mr. Clapham was evidently taken when she had a keel added, her draft when restored to her original form and rig in 1882 being 6ft. 2in.

What these figures really show is this: That for years the Herreshoffs have been building boats of comparatively great depth. What the general practice was is better exemplified by a boat built by them for Mr. Clapham himself, 39ft. 8in. on waterline, 14ft. 4in. beam and 3ft. 3in. draft, a proportion of only .23 of beam for draft.

As to the practice about this time, in the good old ante-cutter days, there are plenty of examples in the same list, and we quote some of the best known:

Sloops.	Length L.W.L. Ft. In.	Beam. Ft. In.	Draft. Ft. In.	Ratio of length to beam.	Ratio of draft of Beam.
Fanny	66 00	23 09	5 00	2.77	.21
Schemer	36 04	14 06	3 00	2.50	.20
Undine	49 00	17 06	4 09	2.80	.27
Petrel	54 06	16 00	3 00	3.30	.18
Active	50 00	16 06	4 06	3.03	.27
Dolphin	50 00	17 00	3 00	2.94	.17
Genia	39 00	14 06	4 04	2.70	.30
Kaiser Wilhelm	41 00	14 00	3 09	2.99	.27
Wayward	43 00	15 05	3 09	2.78	.24
Coming	57 00	23 00	5 00	2.48	.22
Addie	56 06	17 04	4 00	3.25	.23
Cora	50 10	17 06	4 06	2.90	.26
Kate	48 00	18 06	4 06	2.60	.24
Meta	63 06	19 06	4 06	3.25	.23
Gracie	65 00	21 03	6 03	3.06	.29
Windward	40 06	16 00	4 02	2.50	.26
Whitewing	55 00	18 08	5 00	2.94	.27
Haswell	49 09	18 06	4 06	2.68	.24
Nianthe	43 00	16 00	3 06	2.70	.31
Arrow	61 08	20 02	5 06	3.05	.27
Cornelia	55 02	17 00	4 08	3.24	.27
Whitecap	35 00	14 04	3 09	2.44	.26
Annie	45 06	17 06	3 09	2.60	.21
Vixen	44 11	16 00	4 04	2.81	.27
Lizzie L	43 00	15 00	3 05	2.87	.29
Ariadne	51 05	15 04	4 03	3.35	.28

The above list includes not merely a few boats carefully selected to prove a certain point, but a fleet of nearly thirty representative yachts, comprising practically the American racing fleet of ten years since, many of the yachts being then only one to three years old, and all more or less known as racers. The figures are fairly accurate, giving the boats as they were then sailed, though many have now been rebuilt. The displacements are not accessible now, but the dimensions give a fair idea of the boats, the draft of all including little or no keel, only three or four inches outside of rabbet.

What do the figures show? First, that only 8 out of 27 were 3 beams in length, the average being 2.88 times beam, while many run as low as 2.60 beams; Mayflower's proportion of length to beam being 3.62, or if the actual beam at waterline is taken, 3.07. Next, as to draft, the average of these boats is .25 of the beam, some running as low as .18 to .20. The Coming, a fast boat in her day, had a draft of 22 per cent. of her beam, Fanny stands at .21, Meta .23, Schemer .30, Addie .23. Compare these with Mayflower's proportion of 40 per cent. of beam. Of course, this is partly due to keel, but on the other hand, as the length and size increase the proportionate depth decreases, an 85ft. yacht naturally drawing less in proportion than one of 45ft.

But beam and depth are not the only points in dispute. Can Mr. Clapham tell of any of these yachts fitted with double head rig, housing topmasts, low, broad sail plan, outside ballast, or even, at that date, with lead ballast inside. Perhaps here and there throughout American yachting annals these things may be found on trial during the last thirty years, but our point is that they were not common in American practice, their value was denied by all, and American yachts were built, sparred and raced on diametrically opposite principles. True, the Vindex had come out with a cutter rig and moderate dimensions. Active was built with a plumb stem and a long counter, but every one knows that the American sloop of 1875 bore not the slightest resemblance in any way to a cutter, while the so-called sloop of 1885-86 is so much like her British cousin that a careful scrutiny was needed to tell them apart at a little distance.

We have never attempted to prove that Mayflower is a copy of Galatea or Genesta, or that she is a narrow English cutter, as Mr. Clapham's letter would imply. The two types are distinct and separate, but on the other hand there is fully as great a difference between Mayflower and the real American sloop; a wide and shoal boat of light displacement and with a well-defined rig peculiar to the model. This latter boat has entirely disappeared, it has succumbed to the march of improvement; and the principles involved in its modelling, ballasting and canvasing have been proven to be false. Now at the last minute come the defenders of these principles with an attempt to save themselves by the victory of a totally different type of yacht; a craft they all would have disowned two or three years since, as too thoroughly English for any good American.

Now that the boats have been proved successful, they are the first to shout for the "Yankee sloop." Fortunately for the present and future of American yachting, their voices have been little heeded of late years or Puritan and Mayflower would never have been built. It is an undisputed fact that, as American yachtsmen and designers have gone further afield, have enlarged their range of thought and study and have considered what was being done outside of New York Bay and the Sound, their yachts have improved and yachting has prospered to an extent never before known. That Americans have learned something as to rig, ballast and details at least, within the past eight years, is evident to any one familiar with yachting, and the source of these improvements is perfectly plain to any one who compares a modern cutter to a sloop, Oriva with Fanita or Madge with Wave, for instance. Now which is the fairer course: To give proper credit to others, to admit that America has learned a little from England; or to claim that she knew it all long ago or else has lately discovered it for herself; that the sloop rig always included double head sails; that Galatea's stern was copied from Mayflower and her bowsprit an imitation of America's, or that lead keels were invented at Bay Ridge?

Of course there is a vast difference still between Mayflower and Galatea in beam, draft and displacement, but there is a difference also between Mayflower and the older American yachts, and while it is highly improbable that the narrow cutter will be generally adopted in America, it is no less certain that the skimming dish has gone to stay and the last of the big flatirons has been built. Further we claim that the whole tendency of to-day, and especially of Mr. Burgess's work, is away from the examples given above and nearer and nearer in proportion to the British cutter, not of necessity a 5-beam boat, for there are many wider ones. The resemblance in rig and ballast is already so close as to be nothing but a clever adaptation of English ideas to American uses, as instanced in the rig of the leading yachts to-day; and the same ideas are finding their way surely through all American designing and building.

REPORTS OF RACES.

CLUB secretaries and yacht owners are requested to send in reports of the races of the season, in the case of clubs sending names of starters and winners, and the case of yachts the number of starts, and prizes, first, second and third, with extra cups, sweepstakes, etc. We desire this year to make our record as full and accurate as possible, as on these qualities its value depends; and this we can only do by the aid of the clubs and individual owners. The latter are sure to take pride in their boats, which should lead them to secure as correct an account as possible, while it is to the advantage of the clubs also to score as large a list of wins as they can. The record is now in preparation, and an early attention to the matter will greatly facilitate the work.

THE SECOND CLASS RACERS IN 1887.

THE races of Thetis and Stranger this season promise more of the same sport next year, and the prospects are that the interest in the second class will depend mostly on the smaller boats. Bedouin and Gracie are the only ones of 70ft., and after this season it is not likely that their contests will create any great interest. In the size below, however, is quite a fleet, and most of them will be in the racing next year. Thetis and Stranger will no doubt be at it again. Huron, now in New York, will have a try under her new owners. Ileen will fit out early next year for racing. Mischief will be in commission again. Besides these there is Wenonah, probably the best of the lot, laid up because her owner has gone into steam, and waiting a purchaser. That she is a fast boat has already been shown, and the man who buys her is certain not to be last in his class. These boats we have mentioned are very evenly matched in size, ranging only over 5ft. difference, thus:

Thetis	64.00×19.00	Wenonah	60.00×14.00
Stranger	65.00×13.06	Mischief	61.00×19.10
Ileen	65.04×11.04	Huron	63.00×15.09

The six cover all types, from the moderate centerboard, Mischief, to the extreme cutter, Ileen, and the battles between them may show some more definite conclusions than those of this year. There are now plenty of racing men whose money and labor are thrown away on outclassed sloops whose racing days have gone forever. Should any one of them decide to make an effort to keep up with the times, and put Wenonah in the racing in good form, he would be sure of a well-built and handsome cruiser of good accommodations, and it would rest only with himself and his skipper to set a pace that some would find it hard to follow, and to aid greatly in the promotion of some very fine racing.

THETIS AND STRANGER.

AGAIN the much vaunted yachting weather of Marblehead has proved disappointing as usual, causing three postponements of the last race between Thetis and Stranger, which was to have been sailed on Wednesday last. The wind was light from N. E. at the start on that day, and Stranger left Thetis as she always does in such weather, outsailing and outpointing her, leading her by a mile by the time that 10 miles had been sailed. The wind had dropped so that the race was abandoned and both towed in, Friday being set for the next trial. On Thursday there was a good N. E. wind and calm sea, but on Friday and Saturday there was no wind.

Monday morning brought a moderate S. W. wind with smooth water, and at 11.06 the signal was given. The course was from Half Way Rock 14 miles to windward and return, to be sailed in 6 hours. Thetis was first over at 11.06.20 with Stranger at 11.06.30. Both had clubtopsails and jibtopsails aloft. Stranger at once left Thetis, beating her 16 minutes on the 15 mile leg to windward. When around the mark Stranger set spinnaker for home, followed by Thetis. The latter gained somewhat on the run, but was badly beaten at the finish. The times were

	Start.	Finish.	Elapsed.	Cor.
Stranger	11 06	4 54	5 48	5 48
Thetis	11 06	5 04	5 58	5 57

THE LOG OF THE ARIEL.—A midsummer cruise from Boston along the shores of the Gulf of Maine to Portland, Mt. Desert and the other harbors, has given an excuse for a very quaint and unique volume, entitled, the "Cruise of the Ariel." This little steam yacht, 45ft. long and 8ft. extreme beam, made the cruise in safety, carrying a party of eight, including two ladies, besides a crew of two. Each day a run was made, the party making port at night and sleeping at hotels. Thanks to the skillful work of the Photo Gravure Co. of New York, the log is almost literally the handiwork of one of the party, Mr. L. S. Ipsen, who has carefully written it out in a very legible hand and liberally interspersed with pen sketches, the whole being reproduced by photography. Most of the sketches are excellent, and give a life to the narrative that is missing in any story told only in cold type, the best of them being the head pieces of the various chapters. There are, besides, a number of full-page reproductions by the same process, direct from photographs, including a very good picture of the yacht. The book is an oblong octavo, printed on heavy paper and bound with silk cord in Japanese style, and in its artistic make-up is a very agreeable change from the usual combination of cloth and gold leaf. The publishers are Messrs. Cupples, Upham & Co., of Boston.

A SUCCESSOR TO THE LOUETTE.—Com. Hoskins will build a 30ft. sloop this winter, the order probably being given to Higgins & Gifford of Gloucester.

NEW ROCHELLE Y. C., Oct. 9.—The last race of the season in the New Rochelle Y. C. was sailed on Oct. 9, the prizes being a $50 cup, given by Com. McAlpin, for cats of the New Rochelle and Pelham clubs under 23ft., and another cup of the same value given by a member of the club for sloops and cutters of 30 to 42ft. The course for the larger boats was 20 miles, and that for the smaller was 15 miles. The start was made at 11:15 A. M. with a very light wind, the starters being:

Ellen	11 17 30	Olive N	11 20 00
Gracie L	11 17 30	Punch	11 20 00
Crocodile	11 18 00	Nettie	11 20 00
Ulidia	11 19 50	Narrioch	11 20 00
Sara	11 20 00	Santapogue	11 20 00
Mona	11 20 00	Lotus	11 20 00
Cruiser	11 20 00		

All but four were handicapped. There was hardly any wind, the fleet being nearly an hour in the short leg to Execution:

Crocodile	12 03 50	Olive	12 23 30
Ulidia	12 09 40	Ellen	12 25 15
Sara	12 14 35	Gracie L	12 25 30
Mona	12 16 50	Cruiser	12 30 45

At Matinnicock buoy they were timed:

Crocodile	1 18 00	Gracie L	1 56 30
Ulidia	1 35 10	Ellen	2 03 05
Sara	1 43 05	Cruiser	2 10 00
Mona	1 45 00	Santapogue	2 14 00
Olive N	1 54 50	Narrioch	2 14 30

The yachts anchored at the buoy for nearly three hours before a little wind came from the west. The next mark was timed:

Crocodile	4 54 45	Sara	5 12 20
Ulidia	4 57 15	Santapogue	5 21 30
Mona	5 12 00		

Here Ulidia gave up, as did some of the others, there being no wind. Crocodile held on finishing at 5:55; Mona also held on, beating Santapogue. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Santapogue	11 20 00	6 36 00	7 16 00	7 16 00
Crocodile	11 18 00	5 55 00	6 37 00	6 30 56
Mona	11 20 00	6 35 00	7 15 00	7 13 19
Lotus	11 20 00	Did not finish.		
Sara	11 20 00	Did not finish.		
Ulidia	11 19 50	Did not fiuish.		

The catboats will race again next Saturday. The regatta committee included Messrs. T.P. Jenkins, D. B. Miller and H. A. Gouge.

THE NAVY DEPARTMENT AND THE YACHTS.—A letter to the following effect has lately been sent out by the Navy Department: "DEAR SIR—Will you have the kindness to inform me of the total number of officers and seamen employed in the yacht squadron under your command. If the returns are made from all yacht squadrons, statistics will be obtained in regard to our yacht service which cannot but prove of much general interest and of no small value to the Government. Very respectfully, S. B. LUCE, Rear Admiral commanding United States Naval force on the North Atlantic Station." A list of steam yachts capable of being utilized in case of need for torpedo boats, dispatch boats, etc., has also been made out by the Naval Board of Inspection, as follows:

Vessels.	Owner.	Length in feet.	Tonnage.	When built.
Alva	W. K. Vanderbilt	252	1,311	1886
Atalanta	Jay Gould	212½	558	1883
Corsair	J. P. Morgan	173	248	1880
Electra	Elbridge T. Gerry	174	304	1884
Falcon	Joseph Stickney	102½	120	1880
Lagonda	Jos. C. Hoagland	150	129	1884
Namouna	J. G. Bennett	219	846	1882
Norma	N. L. Munro	138	129	1884
Nourmahal	Wm. Astor	235	745	1884
Ocean Gem	W. P. Clyde	90	114	1875
Sentinel	J. A. Aspinwall	102	75	1883
Orienta	J. A. Bostwick	113	96	1884
Reva	Pierre Lorillard	111	..	1886
Tillie	W. H. Starbuck	177	202	1886
Utowana	E. V. R. Thayer	138	257	1883
Viking	S. J. Tilden estate	138	257	1883

TORONTO Y. C. COMMODORE'S CUP, OCT. 2.—In order to encourage racing in the smaller classes, Com. McGaw some years since presented to the Toronto Y. C. a handsome challenge cup to be raced for each year. In 1883 Iris won it, in 1884 Mischief took it from her, and in 1885 she retook it. The last race was sailed on Oct. 2, being the final event of the club for the season, and both Mischief and Iris entered, besides Meteor, Molly, Daisy, Naiad and Maria. The wind was fresh from the west, the first leg being to windward with Mischief leading around first mark, Meteor came second and Iris third, but lost some time through trouble with her halliards. Mischief also led around the second buoy with Meteor again second, having bypassed Iris who had headed her for a time. A hot fight followed for second place between the two, Meteor leading by only 10s. at the finish. The times were:

	Elapsed.	Corrected.
Mischief	1 45 00	1 42 38
Meteor	1 50 10	1 48 38
Iris	1 50 00	1 50 00
Molly	2 00 00	1 54 45

The club will keep up its meetings all winter, the house being kept open. Next season a class for yachts of 20ft. waterline will be established for the benefit of the younger members.

THE RACE AT BRIDGEPORT, OCT. 7.—The race for the citizens' challenge cup, of Bridgeport, was sailed on Oct. 7 over a 15-mile course, from the outer beacon to Point-no-Point, thence to Fayerweather Island, off Black Rock, and back to start. The wind was strong from the west with smooth water. The entries were limited to boats from 18 to 23ft., and there were nine entries, the times being:

	Start.	Elapsed.	Corrected.
Alice	1 00 02	1 48 50	1 47 05
Uarda	1 00 37	1 50 21	1 51 21
Tilda Jane	1 00 49	1 53 15	1 51 36
Hornet	1 00 30	1 54 42	1 52 32
Tripoli	1 00 45	1 56 04	1 53 54
Molly Pitcher	1 01 35	1 57 06	1 56 50
Little Casino	1 01 30	2 02 28	1 59 08
Reindeer	1 00 49	2 09 00	2 05 40
Ida May	1 00 00	2 16 09	2 13 29

The judges were Messrs. Isaac Davis, William Lewis and Chas. Ferguson.

GALATEA.—On Oct. 7 at 6:30 A. M., Galatea sailed from Marblehead for New York, where she will lay up for a time, arriving at Larchmont at 7 A. M. on Oct. 9. When coming through the Sound she was nearly run down by a steamer, as told by Lieut. Henn in a letter to the *Herald:* "On Friday last, at 3:15 A. M., the cutter-yacht Galatea was proceeding on her passage from Marblehead to Larchmont. She was steering W. by N. and was distant from The Race, at the entrance of Long Island Sound, about three miles and going through the water some nine knots an hour, with the wind on the starboard beam. Her lights were burning brightly and the night was fine and very clear. Vessels under sail were plainly visible at a distance of from two to three miles. About five minutes previously a steamer's green light was sighted about a point on Galatea's port bow, which showed that the steamer was steering a course which would bring her in dangerous proximity to the yacht. Expecting, as we approached, to see the steamer alter her course, as she was bound to do by the rule of the road at sea, Galatea's course was unaltered until the last moment, when a collision seeming inevitable I ordered Galatea's helm to be put hard to port, and answering it quickly, she was brought on a course parallel to that of the steamer, which saved her from being sent to the bottom. The steamer, which never took the slightest notice of repeated shouts and hails, kept on her course and crossed Galatea's bows so close that she barely cleared her bowsprit end, and the wash from her wheels wet Galatea's deck. The vessel which acted in this manner was a large, white, side-wheel steamer, with two smokestacks, and she appeared to be covered in on deck like a freight boat. She disappeared, heading in the direction of Point Judith, and I regret to say that in the confusion of avoiding a collision her name was not observed. I have been at sea for many years, and in all my experience never saw a worse case of what can only be called 'culpable negligence.' The only thing that saved the Galatea and probably all our lives, was the rapidity with which she answered her helm. At the time it was put down the steamer was not more than 50yds. off and was heading straight for the Galatea's main rigging. Further comment from me is needless, but making this incident known may cause the captain of the steamer in question to keep a better lookout in future, and to remember that steamers are bound to obey 'the rule of the road at sea' in all cases and to keep out of the way of sailing vessels." On Monday she came down to Bay Ridge where she now lies. Lieut. Henn has been proposed as an honorary member of the New York Y. C., and will be voted on at the next meeting, Oct. 28.

THE VERA'S RECORD.—This little keel sloop of the Corinthian Yacht Club, has made herself a name in her class, winning from keels and centerboards. She has started 7 times taking 6 firsts and one 5th prize, on the last occasion being covered by an outside boat over a part of the course.

PIRATES ON THE HARLEM.—Robberies from yachts and along the waterfront above and below Hell Gate have been so frequent all summer that of late special precautions have been taken to discover the thieves. A short time since an attempt was made to rob the yacht Vision, Mr. A. J. Hutchinson, off 120th street, East River, but a watchman on board was roused by the noise made in boarding and discovered the thieves trying to remove a brass binnacle in the cockpit. They leaped into a boat alongside and were rowed off by their confederates who were ready at the oars, the boat finally being picked up by a small sloop yacht which was awaiting her. The party escaped, but a short time after one of the gang, Browney as he is called, disclosed to the police the headquarters of the gang and the names of the members. The former was in an old stable along the river near 90th street, the entrance being under a dock. Here a large quantity of plunder, including several boats, was found. Four of the gang were also captured and later on the captain, Robbin, 17 years old, was captured and sent to the Juvenile Asylum, where he has twice visited before.

THE SOUTH BOSTON SCHOOL OF YACHT DESIGNING.—On Oct. 4 the classes in yacht and ship drafting of the South Boston School of Art, maintained by the John Hawes Fund, began the session at the Lincoln schoolhouse. The class numbers 34 members, those in the second year's course numbering George F. Lawley and E. A. Lawley, of Lawley & Son, builders; A. Wilson, the sailmaker; A. G. McVey, of the Boston *Herald*, and Wm. K. Pryor. The new students include Chas. A. Borden, Capt. Edward Sherlock and Mr. Mansfield. Under the same fund instructions are given to residents of South Boston over 16 years of age in mechanical and freehand drawing, modeling in clay and phonography. The instructor in yacht drafting is Mr. John L. Frisbie.

A RACE OF NEWPORT CATBOATS.—On Oct. 9 a race was sailed at Newport over a course from off Fort Adams around the Brenton's Reef Lightship, thence around the buoy off Beaver Tail, finishing at Brenton's Reef. The entries were the catboats Princess Ida, sailed by Mr. Woodbury Kane, and Alice, Mr. W. R. Hunter. The times were:

Princess Ida	12 16 00	3 43 00	4 27 00
Alice	12 14 00	3 52 31	4 38 31

NORSEMAN.—On Oct. 9, at 2 A. M., the schooner Norseman' Mr. Ogden Goelet, arrived at Newport from Cowes, Isle of Wight, being 24 days out with good breezes as far as the banks and light for the rest of the passage.

THE SCOTCH CHALLENGE.—Nothing further has been done about Mr. Bell's challenge, which is made by him as the representative of a syndicate of the Royal Clyde Y. C., who will build the yacht. The main point at issue just now is the size of the boat, dependent on what the New York Y. C. will agree to put against her, the challengers preferring to build a boat of 65 or 70 tons rather than 90. She will be a thorough cutter in all respects, but probably wider than the Y. R. A. rule admits, and Mr. G. L. Watson will begin work at once on a design in which all but waterline length will be left to his judgment.

WINTER CRUISES.—The yachts are now preparing for a winter cruise and a number of them will make trips to the South this season. Montauk is at Tebo's Pier, where her winter sails are being bent. She will soon run down to Charleston to wait ror Mr. Brooks. Stranger, steam yacht, is also at Tebo's fitting out for the South. The little petroleum motor launch Wonder is also having masts stepped for a cruise at sea. Schooner Edith, ex-Com. Prime, Yonkers Y. C., is away for a month's cruise in Albemarle Sound. Carlotta, schooner, Mr. Henry Belknap, is to cruise to the Mediterranean later in the season. Amy, steam yacht, Mr. E. D. Morgan, leaves soon for an Atlantic voyage. Atalanta, steam yacht, is at Delamater's for a new ice machine, prior to a trip South.

A SMALL YACHT ON A LONG CRUISE.—The well-known 18ft. catboat Teaser has been sold by J. A. Relyea to Mr. E. S. Babcock, Jr., of San Diego, Cal., and is now on her way overland. The Teaser has a record of 28 races sailed, 26 first prizes and 1 special prize.

SAIL AREAS.—Since the publication of the communication "What Galatea Really Did," I have ascertained the actual sail area of Galatea to be 7,505sq. ft. and of Mayflower 8,634sq. ft., as per measurement of the New York Y. C. rule. The transposition of some words in the article also makes one paragraph obscure. It should read: "If my explanation of Galatea's defeat is logically exact, then, and then only, does the performance of Clara, Ulidia and Shona admit of rational interpretation."—C. P. K.

A RACE AT ROCKPORT.—On Oct. 6 a sweepstakes race was sailed over the Sandy Bay Y. C. course, open to boats of less than 23ft. l. w. l. Three yachts, Osceola, Louette and Whitewings, entered, Petrel arriving too late and sailing over alone. The east wind was very light and finally left the yachts becalmed, Whitewings giving up. Osceola held on and won in 5.00.25, with Louette in 5.21.17. The stakes were $30.

YACHTING ON LAKE ERIE.—A race was sailed off Toledo, O., on Sept. 30, over a course of 15 miles to leeward and back, between the Fanchon and Alice Enright, of Toledo, and the Sylvia, of Detroit, for $250 a side and a champion flag. The wind was very strong and the yachts sailed under two reefs and bobbed jibs. Fanchon won in 4.19.33 corrected, with Sylvia 4.26.22. The Alice Enright was disabled for a time. The judges were Com. G. W. Gardner, Messrs. John Prindiville and S. W. Skinner. The Sylvia has challenged the others to race again on Oct. 14.

GREAT HEAD Y. C.—The Great Head Y. C. has lately established a Winter Club with permanent rooms in Boston, at No. 8 Bosworth street. The club quarters include a billiard room, reception room and card room. The officers are: H. A. Joslin, President; Dawson Miles, Vice-President; E. H. Bradshaw, Treasurer; E. B. Mudge, Secretary, and Messrs. C. C. Frederick, R. H. Mitchell, E. A. Cook and L. A. Dean, Directors.

A CRUISING CUTTER FOR SALE.—Mr. Edward Burgess has now for sale a fine little cruising cutter, 30ft. l. w. l., a boat that has cruised up and down the New England coast successfully for the past three seasons. She has room for one man in forecastle and makes up berths for 2 or 4 in cabin, the latter being especially neat and cosy in its appointments. Mr. Burgess is now at work on a larger cruiser, schooner rigged for her owner, so she is offered for sale.

NEW YORK Y. C. MODEL ROOM.—The latest additions to the collection are the schooners Coronet and Mohican. The Navy Department has requested the models of the Mayflower and Galatea from the club.

MUMM'S YARD.—Mr. John Mumm has returned from a vacation in Europe and resumed control of his yard at Bay Ridge.

RENA.—Sir Roderick Cameron's schooner has arrived at Staten Island from a summer's cruise in Canadian waters.

NEW STEAM YACHTS.—Mr. Burgess is now at work on the plans for two steam yachts, 115 and 120ft. over all.

ATALANTA.—Mr. Piepgrass has hauled out the Atalanta, schooner, for a 4-ton lead keel.

MEDIA.—Steam yacht, has been sold by Field & Young to Mr. Faber, who will use her in Florida.

NEARLY EIGHTEEN THOUSAND MEN in 1884 were paid cash benefits under accident policies in the Travelers, of Hartford, or sixty for every working day.—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

YONKERS C. C. FALL REGATTA.—The fall regatta of the Y. C. C. was held on the Hudson River on Sept. 25, at 2:30 P. M. H. L. Quick, in the Bubble, won the sailing race; the tandem was won by Messrs. F. K. Shears and A. B. Patton in Goblin; single, by S. Simpson in Rip Rap.

SAGAMORE C. C. FALL REGATTA.—On Oct. 9, the Sagamore C. C. held its fall regatta at Lynn, Mass., ending with a dinner at the Revere House in the evening.

AMERICAN CANOE ASSOCIATION.

MEET OF 1886, GRINDSTONE ISLAND, ST. LAWRENCE RIVER, AUG. 13 TO 28.

PROGRAMME OF RACES.

First Day, Monday, August 23.

No. 1. 9:30 A. M.—Paddling, Class II., 1 mile.
No. 2. 9:45 A. M.—Paddling, Class IV., 1 mile.
No. 3. 10:00 A. M.—Sailing, Novices, Classes A and B, no limits to rig or ballast (open only to members who never sailed a canoe prior to Sept. 1, 1885), 1½ miles.
No. 4. 11:00 A. M.—Paddling, Class I. (This race exempt from "1 man 1 canoe rule") 1 mile.
No. 5. 11:30 A. M.—Paddling, Class III., 1 mile.
No. 6. 2:00 P. M.—Paddling tandem, Classes III. and IV., open canoes, 1 mile.
No. 7. 2:30 P. M.—Sailing, Class B, sail limited to 75ft., any ballast, 3 miles.
No. 8. 2:45 P. M.—Sailing, Class A, sail limited to 50ft., any ballast, 3 miles.
No. 9. 4:00 P. M.—Upset race, any Class II. or larger canoe (no special appliance allowed, at signal every canoe must be turned completely over), 200 feet.

Second Day, Tuesday, August 24.

No. 10. 9:30 A. M.—Paddling, Class IV. (canoe and load to weigh at least 200lbs.), 1 mile.
No. 11. 9:45 A. M.—Paddling, Class III. (canoe and load to weigh at least 160lbs.), 1 mile.
No. 12. 10:00 A. M.—Paddling and sailing combined, Classes A and B (paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile), 3 miles.
No. 13. 11:00 A. M.—Paddling Class II. (canoe and load to weigh at least 120lbs.), 1 mile.
No. 14. 11:30 A. M.—Paddling tandem, Classes III. and IV., decked, 1 mile. (Canoe for this race must be decked on half their length.)
No. 15. 2:00 P. M.—Sailing, Class B, no limits in rig or ballast, 3 miles.
No. 16. 2:15 P. M.—Sailing, Class A, no limits in rig or ballast, 3 miles.
No. 17. 3:00 P. M.—Sailing, unclassified canoes, no limits in ballast or rig, 3 miles.
No. 18. 3:30 P. M.—Hurry-scurry race, 100yds. run, 20yds. swim, 200yds. paddle.
No. 19. 4:00 P. M.—Tournament and gymnastics.

J. B. McMurrich (chairman), S. G. Fairtlough, Reade W. Bailey, Regatta Committee.

Commodore, F. S. Rathbun, Deseronto. Ont.; Vice-Commodore, R. W. Wilkin, Brooklyn, N. Y.; Rear-Commodore, Dr. G. L. Parmele, Hartford, Conn.; Secretary-Treasurer, Dr. C. A Neidé, Schuylerville, N. Y.

These officers, together with Messrs. B. W. Richards, Brockville, Ont., W. B. Wackerhagen, Albany, N. Y. and Geo. M. Roger, Peterboro, Ont., constitute the Executive Committee of the Association.

Clerk of course, Wm. M. Carter, Trenton. Time keeper, Col. Cotton, Kingston. Starter, W. P. Stevens. Judge at finish, W. H. Barnett.

Volunteers were stationed at every buoy in all races to note the turns anp report fouls. Twenty races were contested, and there were in all 385 entries.

The Record is based on the results of five races for each man and canoe, and a man must use the same canoe in all five races—two sailing, two paddling and one combined. Every man entering any Record race, whether he tries for a single prize or a place on the Record, is given a place according to the number of points scored. A man may compete in one, two, three, four or all five Record races as he pleases. Fifty points are the greatest possible for the five races. The winner of a race is credited with ten points. The last man over the line at the finish, when all who start complete the course, gets one point. The next to the last man in gets one point plus nine (the number of points between one and ten) divided by the number of starters in the race less one. That is, if five start and finish the first man gets ten points. The last man gets one point. The next to the last man gets $1+\frac{1}{4}=3.25$. The third man in gets $1+2.25+2.25=5.50$. The second man in gets $1+2.25+2.25+2.25=7.75$. The five men therefore get, respectively, 10—7.75—5.50—3.25 and 1.

Those who do not finish get nothing, but the others get the same number of points as though all had finished, and the men who dropped out are put down as though they came in at the tail end. The five leaders on the Record each get prize flags.

Last year the Record was based on seven races (possible 70 points), and about forty men appeared on it. Then the working of the Record was not well understood, and few men competed in all the races, making the difference between first and second much more marked than this year's result. It is a fact worth noting that the first and second men on the Record sailed Class A canoes. The first A race had eight entries and but five finishers; the second race had nine entries and eight finishers. The B races had 34 and 39 finishers respectively, and included several Class A canoes. The popularity of B canoes gives the A men a great advantage in getting good records, the competition not being so great in two A races. C. J. Bousfield, who got the most points on the Record, secured but one first prize. Grant E. Edgar, Jr., second on the record, got both Class A races. M. V. Brokaw, W. G. McKendrick and L. Q. Jones did not win a single first prize. Jones entered four races and got but one-hundredth of a point less than McKendrick, with five races entered; 1, 2, 3 and 4 on the record entered all five of the races. No. 6 entered five races; 7, 8, 9 and 10 entered four races; No. 11, Barney, won both sailing races, the only ones he entered, and Johnson, also No. 11, won both paddling races he entered. Gibson, who won the first Record prize last year, (53.15 points for seven races, being the only man who entered all the races—one man entered six, one man entered five, the others four or less), entered but two races this year and did not win either, though he did win the great race of the meet—The Trophy Sailing Race, with twelve cracks against him.

The Record races were: Event 1. Paddling, Class II. 2. Paddling, Class IV. 5. Paddling, Class III. 7. Sailing, Class B (sail limit, 75ft.). 8. Sailing, Class A (sail limit, 50ft.). 10. Paddling, Class IV. (canoe and load to weigh 200lbs.). 11. Paddling, Class III. (canoe and load to weigh 160lbs.). 12. Paddling and sailing combined, I., II., III., IV., A, B. 13. Paddling, Class II. (canoe and load to weigh 120lbs.). 15. Sailing, Class B. 16. Sailing, Class A—eleven races in all.

The A canoes are allowed to enter the B races if the owners so desire, but cannot sail in the A races too. A canoes sail at a disadvantage with the B canoes. Class IV. canoes can paddle in Class II. or III. races at the discretion of their owners, as they are then at a disadvantage; but can enter but one class. Likewise Class III. can compete in Class II. races. This privilege was taken advantage of by many in the paddling races, where a large number of entries in one class made the chances better for winning by competing in a smaller class with fewer contestants in spite of the size handicap.

RECORD TABLE.

Giving in the most compact form the official report compiled from the Race book. This table, together with the following full list of competing canoes in all the events, tells the entire story of the A. C. A. racing at the meet of 1886.

Rating.	Name.	Club.	Canoe.	Asso. No.	Size of Canoe.	Class Entered.	Points.	Rac's
1...	C. J. Bousfield	Bay City	Regina	961	14.02×27	A. 2	36.76	5

14....Neidé	St. Hubert	—	7.21
15....Borden	Palmer	—	7.00
16....Bailey	Delight	—	6.78
17....Vaux	Lassie	—	6.57
18....Morrow	Fleeta	—	6.35
19....Stewart (H. M.)	Marie	—	6.14
20....Walters	Vixen	—	5.93
21....Thomas	Annie O	—	5.71
22....Fraser	Una	—	5.50
23....McKendrick (W. G.)	Mac	—	5.28
24....Ward	Vindente	—	5.07
25....Edwards	Verena	—	4.86
26....Sinclaire	Guenn	—	4.64
27....Leys	Alouette	—	4.43
28....Brown	Stag	—	4.21
29....Robertson	Gertie	—	4.00
30....Rogers	Wa Wa	—	3.78
31....French	Elf	—	3.57
32....Mellen	Surprise	—	3.36
33....Laney	Cora	—	3.14
34....Shiras	Ello	—	2.93
Twenty more canoes entered for this race but did not sail.			
Event 8. Sailing, Class A, 50ft. sail:			
1....Edgar	Peggy	1 53 35	10.00
2....Bousfield	Regina	—	9.50
3....Finel	Magog	—	7.00
4....Weller	Zulu	—	5.50
5....Baldwin	Irene	—	4.00
Two other canoes started, but did not finish. Had they completed the course their points would have been 1 and 2.50. Therefore the last man who did finish got 4 points.			
Event 9. Upset race, Class II. and larger, 200ft., 21 entered for this race. Mellen in Surprise won. Andrews, Weller and Heighway tied for second place and paddled a second heat, won by Heighway.			
Event 10. Paddling, Class IV., 1 mile, load 200lbs:			
1....McKendrick (H. F.)	Lena	12 55	10.00
2....Turner	Olive	13 04	8.20
3....Kipp	Nellie	13 25	6.40
4....Brokaw	"570"	—	4.60
5....McKendrick (W. G.)	Mac	—	2.80
6....Leys	Alouette	—	1.00
Twelve canoes entered did not start.			
Event 11. Paddling, Class III., 1 mile, 160lbs.			
1....Johnson	Rapid	11 50	10.00
2....Wilkinson	Merle	12 10	7.75
3....McClean	Flora	12 12	5.50
4....Edgar	Peggy	—	3.25
Nine entries in all, five starters, one dropped out before finish.			

Name.	Canoe.	Time.	Points.
Event 12. Paddling and sailing, A and B, 3 miles:			
1....Vaux	Lassie	45 00	10.00
2....McKendrick (W. G.)	Mac	45 06	9.43
3....Jones	Venture	45 12	8.87
4....Mellen	Surprise	—	8.31
5....Brokaw	"570"	—	7.75
6....Edgar	Peggy	—	7.18

4....Butler	Blanche	1 42 56	—
5....Jones	Venture	1 43 01	—
6....Bailey	Delight	1 43 28	—
7....Wackerhagen	Turtle	1 44 22	—
8....Baden-Powell	Nautilus	1 48 50	—
9....Walter Stewart	Pearl	1 49 31	—
10....Brokaw	"570"	1 51 30	—
11....Murphy	Cheemaun	1 58 19	—
—....Richards	Mona	Disabled during race.	
—....Andrews	Sofronia	Disabled during race.	
—....Edgar	Peggy	Disabled before start.	
15....Whitlock	Wraith	Disabled before start.	

Very few canoes, comparatively, dropped out of the races after starting. This good result is no doubt largely due to the Record.

THE CALLA SHASTA FALL MEET.

ABOUT 30 canoeists with 18 canoes assembled at Calla Shasta to hold the fall race meeting of the New England Division of the A. C. A., and race meeting it was in name only, there being hardly a breath of wind during the entire meet. Notwithstanding the lack of wind every one declared that they had a grand good time, talking models, comparing the Stranger (Com. Jones's new Joyner canoe) with Mr. Barney's Pecowsic, etc., and the evenings passed away at the most enjoyable camp-fires imaginable. In fact those camp-fires were something not soon to be forgotten, with a gorgeous full moon and Patterson full of good songs and banjo music, two kegs of sweet cider, presented by one of the members, and a camp-fire full of good wood, and in fact everything full but the canoeists. Very few tents were pitched, the canoeists preferring to camp out on the floor of Mr. Lester's parlor and eat Mr. Lester's repasts at the table spread on the barn floor in order to accommodate the whole party.

As the party were sitting around the camp-fire Friday night, a team drove up and a voice came through the darkness, "A. C. A. Ahoy!" and Whitlock, of the Brooklyn C. C., appeared and received a hearty welcome. Mr. Joyner, the builder, was also present. As Vice-Com. Paul Butler was unable to be present, Rear-Com. Barney presided during the meet.

Saturday morning there was just enough wind to warrant starting the no limit race, which was sailed with the following result: Venture, L. Q. Jones, H. C. C. first; Pecowsic, E. H. Barney, S.C.C., second. The wind then fell so light that none of the other events were sailed, it being considered hardly a fair test of sailing; but a scrub race was indulged in between Mr. Barney in Pecowsic, Com. Jones in the new Stranger and Mr. Whitlock in the Venture, the canoes finishing in the order named.

The sailing races of the Springfield Club's regatta, which were named for the same day, also had to be postponed, the only event of interest on that programme which took place being the paddling race, 1 mile, for the club medal, which was won by Mr. John Bowles.

Saturday evening a meeting of the N. E. Division of the A. C. A. was held, Rear-Com. Barney in the chair. At this meeting a decided opinion was expressed in favor of a salt-water meet next year for the A. C. A., and it was voted unanimously that delegates to the Executive Committee meeting to be held in New York this fall vote for such a meet.

The meeting also instructed delegates to suggest a change in the constitution to the effect that each 30 men on the roll of each Division of the A. C. A. who are canoe owners, be entitled to one vote at the annual Executive Committee meeting instead of, as it now stands, having each 30 men at camp entitled to one vote.

It was also voted that the Executive Committee appoint time and place for the spring meet, but it was the general feeling that they should try and arrange the time so as not to conflict with that of a meet of any other branch of the A. C. A., thereby rendering it impossible for members to attend both.

Voted that officers of N. E. Division have power to receive votes on important subjects by mail.

Rear-Com. Barney then appointed Mr. Nickerson, of Springfield; Com. Jones, Hartford, and Mr. Murphy, of Salem, to act as regatta committee, Mr. Nickerson as chairman, and the meeting adjourned.

The officers of this Division are: Paul Butler, Lowell, Vice-Com.; Mr. E. H. Barney, Springfield, Rear-Com.; W. B. Davidson, Hartford, Purser, and Dr. Geo. L. Parmele, member of Executive Committee.

ROCHESTER C. C. FALL REGATTA, OCT. 7.—The fall regatta of the Rochester C. C. was sailed on Oct. 7 over the club course of 1½ miles, two rounds, on Irondequoit Bay, there being three races, one for the Moody Cup, the W. H. Sour's prize and the Leimgruber Cup; one an open race and the third a consolation race. The first race, the final one for the Moody Cup, was timed thus, starting at 1:10 P. M.:

	1st round.	Finish.	Points.
Surprise	2 04 00	2 34 00	9
Sofronia	2 04 15	2 34 15	8
Vixen	2 06 00	2 40 00	7
Marie	2 05 00	2 40 15	6
Bounce	2 07 00	2 41 00	5
Hero	2 06 00	2 43 00	4
Wanderer	2 13 00	2 46 00	3
Louise	2 18 00	Drawn.	..
Eleanor	2 20 00	Drawn.	..

The records of the five races of the series stand:

	Points.		Points.
Sofronia, Andrews	30	Wanderer, Ward	8
Marie, Stewart	23	Hero, Ruggles	4
Bounce, Gray	18	Louise, Moody	3
Vixen, Wolters	13	Eleanor, Angle	3
Surprise, Mellen	9		

Sofronia takes the Moody cup, Marie wins the W. H. Sour's prize, a pair of marine glasses, and Bounce wins the Leimgruber cup. At 3 P. M. the open race was started, the times being:

	1st Round	Finish.
Marie	3 30 15	4 13 30
Sofronia	3 36 00	4 21 30
Vixen	3 39 00	4 21 32
Hero	3 39 15	4 21 34
Surprise	3 39 10	4 32 00
Bounce	3 38 00	4 32 10
Louise	.. ..	.. ..
Wanderer	.. ..	.. ..
Eleanor	.. ..	.. ..

Marie wins an A. C. A. badge, and Sofronia, second, a pair of shooting boots. The consolation race suffered for lack of wind most of the starters giving up. Captain Ruggles, in the Hero, held on to the finish and won a handsome silk flag. After the races a clambake engaged the atttention of the club and their guests.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

O. C. W.—Go down to Lane's, at Good Ground, Long Island.

MISS LILLIAN F. SMITH.—A letter so addressed is at this office

S. M.—For bears select a large caliber; .44 is a favorite with hunters of this game.

G. U. N.—The gun can be altered by any of the firms whose cards will be found in our columns.

C. H. M.—In western Massachusetts you will perhaps do well to try the vicinity of Great Barrington.

A. J. K., Eau Claire, Wis.—Hunting hares will hurt the grouse hunting of your dog. The partridge hunting is all right.

W. N. F., Nantucket.—One receipt for waterproofing is 12oz. of beeswax boiled for two hours in a gallon of linseed oil, with a little dryer added.

J. B. F. AND WIFE, of Baltimore, Md.—Can find good fishing and hunting by addressing Jos. K. Bramble, East New Market, Dorchester county, Maryland.

R. H. Mc., Tampa, Fla.—A cubic foot of salt water will weigh 65lbs., and will float that weight in the form of a box of one cubic foot capacity, including weight of box, if metal.

G. W. C.—The skipjack was fully described in the FOREST AND STREAM of Sept. 27, 1877, copies of which can be had at this office. See also "Small Yachts" for additional information and plans.

C. W. S.—For wildfowl shooting go down to Long Island, to Lane's at Good Ground, or Foster's, at the same place. For quail and partridge go to Sullivan county, or out into Orange county to some of the Erie Railroad stations on the Newburgh short cut.

DOUBTING, St. Louis.—The stories you see in the papers about women with lizards in their stomachs and men with minnows in their lungs are all rubbish and foolishness. A swallowed lizard or fish could not live any more than a swallowed oyster or clam.

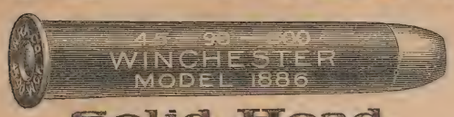
"Highest Quality" Fish Hooks.



Anglers are so familiar with our name and Trade Mark and the quality of our goods, that we have no hesitation in calling them to witness to the excellence of all hooks made by us. Though our hooks have always been fully equal to any ever made, about seven years ago we came to the conclusion that anglers would welcome a very high grade of fish hooks—something far beyond what they had ever used. Consequently we perfected arrangements for the manufacture of what has become so widely and favorably known as "Abbey & Imbrie's Highest Quality" fish hooks. All boxes containing these hooks have our trade mark and the words "Abbey & Imbrie's Highest Quality," distinctly printed on the label. Also the name of the hook, viz.: "Sproat," "O'Shaughnessey," "Aberdeen," "Carlisle," "Sneck Kendall," or "American Trout." When "snelled" on silk worm gut or gimp the hooks are put up in packages containing one-half dozen of hooks. Each one-half dozen is labeled.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page folio illustrated catalogue.

AUCTION SALE

OF ENGLISH AND AMERICAN

BREECH-LOADING GUNS,

By the following celebrated makers:

Westley Richards & Co., W. & C. Scott & Son, Parker Bros., Colt Fire Arms Co., W. W. Greener, Hollis & Son, C. G. Bonehill and others, at the

BARKER ART GALLERY,

47 & 49 Liberty Street,

THURSDAY & FRIDAY, OCT 21 & 22

Commencing at 1 o'clock P. M.

Guns will be on exhibition from Monday, Oct. 18, from 9 A. M. to 6 P. M. until time of sale.

For the past ten years we have made a specialty of the sale by auction each fall of breech-loading guns, during which time we have sold many thousand, including entire stock of several importers who have retired from business.

Sale will consist of about 100 new guns, and about 25 slightly used weapons.

Full descriptive catalogues will be ready two days before the sale and will be mailed free.

GEORGE I. BANKS, Auctioneer.

Send two 1-cent stamps for my descriptive circular of pet stock. Ferrets ringed and trained for hunting a specialty. WM. PARHAM, Tyngsboro, Mass.

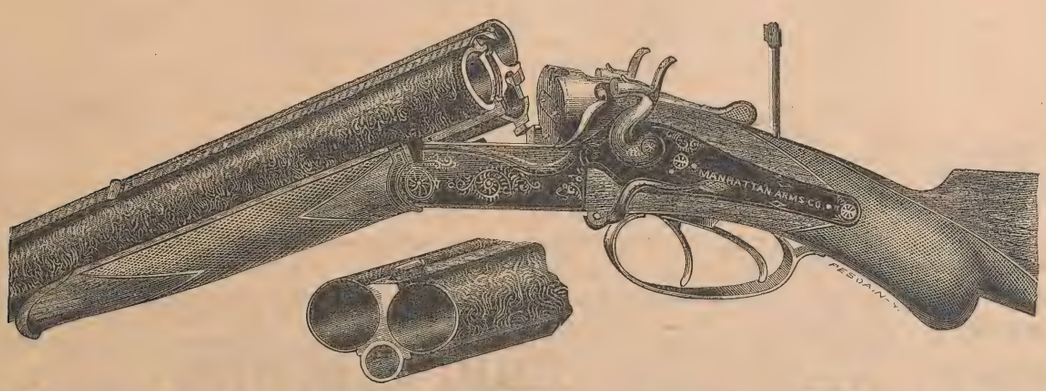
CHARLES DALY HAMMERLESS

IS THE FOREMOST GUN OF THE DAY!

No other Hammerless Gun can Hold a Candle to it.



PRICE:

No. 115—10 and 12 Gauges, Laminated Steel Barrels, Plain Engraving, -	$110.00
No. 120—10, 12 and 16 Gauges, Damascus Barrels, Neat Engraving, -	125.00
No. 200—10, 12 and 16 Gauges, Diamond Quality, - - - -	225.00

DALY HAMMER GUNS.

Pices Reduced.

No. 42—10, 12 and 16 Gauges, Damascus Barrels, ...	$70.00
" 53—10, 12 and 16 Gauges, Damascus Barrels, Double Bolt, Plain Engraving,	80.00
" 55—10, 12 and 16 Gauges, Damascus Barrels, Double Bolt, Fine Engraving,	90.00

Manhattan Three Barrel.

This Gun has met with an unprecedented sale for an arm of this kind—far beyond our expectations. In order to get them it is necessary for the present to enter orders in advance.

They are made with fine Damascus Shot Barrels, Best Steel Rifle Barrels. Matted Rib, Locks and entire work of the very best quality.

Pushing the Top Lever to the left, the rifle barrel is fired by the right-hand lock. This mechanism is very simple, but effective and durable, and does not admit of any mistake being made.

A Folding Peep Sight throws down flush with the tang of the frame; a hinge back sight is placed on the barrel, which is flush for shotgun use and can be turned up for rifle use.

Price, with Sights Complete, $85.00.

THE PUREST BRED

ST. BERNARD PUPPIES

Every offered in this country, ought to be of great interest to breeders.

By JUPITER ex BEDA (A.K.R. 3962).

Jupiter is owned by the Geheimräthin von Deichmann in Switzerland, who purchased him from the monks on the grand St. Bernard Mountains last fall.

Beda took 2d prize at Basle, Switzerland, May, 1885, and was imported July 15, and whelped Aug. 14, 1886.

These pups are very fine, and are the purest stock possible.

Also a litter of puppies, by **Nero** (A.K.R. 3762) ex **Flora II.** (A.K.R. 3149).

Also all my grown dogs for sale, very cheap, as on account of lack of necessary time, have decided to give up breeding.

ANSWERS TO CORRESPONDENTS.

THE SEASON AND THE GAME.

THE very widespread drought is entailing grievous losses upon farmers, who see their wheat fields drying up and withering away. Lakes and streams are very low. Stumps in Greenwood Lake which have been invisible for years stand out boldly enough now. Many brooks have dried up, and fish are dying by myriads. October gunners report that the woodcock covers are dry; many famous haunts, usually wet at this time of the year, are parched and cracked, and barren of birds. Many woodcock have been killed, but they have been found only along the water courses and in the deepest covers. They have been rarely found on the high grounds. The same holds true of grouse; they are reported fairly plenty, but wild and very much scattered.

Shooters relate that where birds were plenty in August and September, they fail to find them in any supply now. Some shooters hold the theory that on account of the early season the birds matured sooner than is usual and scattered earlier. Better shooting is anticipated next month, when the birds shall have become settled in their winter quarters. Possibly one reason why more grouse have not been found is that, as they are notorious wanderers at this season of the year, because of the extreme dryness of the ground, scent has not lain well and the dogs have been unable to follow their trail.

One novelty of the season has been fair shore bird shooting in haunts where for several years past disappointment has rewarded a day of hard work. The advantages of a general and absolute cessation of spring shooting are gradually dawning upon the minds of sportsmen, and a sentiment is making in favor of the abolition of all shooting in breeding season. The men hardest to convince of the wisdom of permitting the birds to go unmolested on their way to northern nesting grounds are many of them to be found among the oldest gunners, who, just because they have always enjoyed full license to shoot in the spring, have come to regard any other order of things as a direct interference with their long-established personal rights and privileges. It is a subject of sincere regret that these shooters, favored beyond their younger brethren, should not all come to the conclusion that, having had a fair share of the fun with gun and shore birds, they should be the first and most willing advocates of a new order of things.

A USE FOR FALCONRY.

SOME attempts have been made in England and on the Continent to revive the antiquated sport of falconry, the great hunting amusement of the lords and ladies gay of the Middle Ages; but the number of those engaged in the sport is meagre and does not appear to increase very rapidly. In America the art of hunting birds and small game with trained hawks is practically unknown; it is perhaps foreign to the genius of our institutions, or it may be there has been no opportunity to make anything out of it. If, however, it can be shown that falconry would be a profitable form of sport, it might be introduced into the United States; and there is some likelihood that we may soon see just such a curious phase of the development of civilization. This at least has been suggested by Dr. C. H. Merriam, the Government ornithologist of Washington.

Under the direction of Dr. Merriam the Department of Agriculture has been making a series of investigations into the food habits of various species of birds, to determine their economic value or harmfulness. Some of the conclusions drawn from data already collected have been given to the press. The English sparrow appears to deserve all the ill that can be said of him; Dr. Merriam is reported to have placed the bird at the head of the list of feathered pests which threaten destruction to valuable branches of industry. The present rate of increase of the sparrows is enormous; the new country invaded by them each year is estimated at more than 130,000 square miles.

Another bird to which the Bureau of Economic Ornithology has given much attention is the bobolink of the North or rice bird of the South. In the North this bird is insectivorous, and because of its services to agriculturists, is very properly protected from destruction. But when the bobolink puts on his traveling suit and goes to a warmer clime, he reaches the Southern rice fields just at the time when the rice is in its milk stage and a most inviting food for small birds. The rice birds tarry some three weeks, in myriads upon myriads, and their havoc is stated to be enormous. Their annual destruction of rice is estimated to be in value between $3,000,000 and $4,000,000. Many devices are employed to keep them off or drive them off from the fields. Men and boys with guns and other noise-producing instruments are employed, and American ingenuity has been exhausted in the invention and devising of multitudinous forms of scarecrows; but in spite of the hubbub and shot and effigies, the birds devour the rice. Dr. Merriam has been on the ground investigating the situation for himself, and he is reported to have suggested as a solution of the difficulty the employment of trained hawks. According to the press reports he "caused a number of stuffed hawks with wings outspread to be suspended by strings from tall poles, so as to sway with the breeze over the fields. This device proved a safeguard for only two or three days, by which time the bobolinks had mastered the trick, and thereafter they treated the dummies with contempt. However, one day while the effigies were still swinging, and after the robbers had again settled down to their work, Dr. Merriam noticed a single live hawk high up, sailing over the flats. The bobolinks rose in great clouds and remained in the air until the peril was passed, although the hawk apparently paid no attention to them. Dr. Merriam thinks that a single hawk trained as were the falcons with which the sportsmen of the Middle Ages amused themselves would be an effective protection to a rice field of 200 acres. It is probable that an experiment in this direction will be tried if a person of sufficient experience in the training of birds can be found to undertake it."

Here, then, is a new field for sport, enterprise and profit. There are hawks enough in the country to protect the fields, if hawks will do it; and by following the very clear and explicit directions for their training, to be given in the FOREST AND STREAM, any person of average ability who has a taste for the work and an inexhaustible stock of patience may become an expert falconer. The first of these papers is given to-day, and the others will follow.

We commend this scheme of protective falconry to some of the epicurean philanthropists, who are so concerned for the Southern rice planter, that out of pure love for their fellow man they consume reed birds on toast in Northern restaurants, and protest vigorously when the law of the land happens to interfere with their gustatory deeds of benevolence.

THE MAINE BORDER BANDITS.—As time goes by the several classes of those who pursue game and fish are becoming better defined, and the public is given superior opportunities to judge of the character and deserts of the number who obey the statutes and hunt or fish only in season, and those who attempt to evade all law and play the pirate. One very significant incident was the descent of a number of New Brunswick lawless characters upon the fire-stricken town of Eastport, Me., last week. These fellows came in true buccaneering style, ransacked warehouses and stores, and loading their plunder aboard made off with it to their strongholds in Passamaquoddy. Now these men are the same plunderers who in winter and spring, when the crust serves, cross over the border into the Maine woods and butcher yarded deer, smuggling the carcasses and hides into Canada. They are, as a class, piratical ruffians, a curse both to New Brunswick and Maine. It is difficult for the game officials to reach them, and their illicit hunting goes on year after year. It is only when some such opportunity as that afforded by a town in flames brings out their misdeeds into full publicity, when their crimes are committed in the glare of a burning seaport the world sees them in their true light; the atrocious villainies they commit in the depths of the forest are little known.

IN WEST VIRGINIA deer hunters are not afraid to wet their feet. The President went to Romney, West Virginia, on a deer hunting expedition last week, and had an experience down there somewhat different from his Adirondack hunting under the tutelage of Dr. Ward. The last deer shot by the Cleveland party in the Adirondacks was stated to have sunk to the bottom of the lake, and it took the guides three hours to recover the carcass. In the West Virginia incident there was no waiting for hired men to fish up the prize. The deer took to water and was followed by the hunters, Messrs. Bivins and Miller, the latter, according to reports, "plunging through water up to his shoulders." This last feat would be impossible anywhere outside of a newspaper report of a Presidential deer hunt. Mr. Bivins, who was also plunging through the water, shot at the deer and just missed Mr. Miller, and then Bivins and Miller and the buck and a shotgun and knife and reporter's fancy played their respective parts, and the deer was brought ashore in triumph.

MAKE IT A PRESERVE.—At the recent meeting of the Supervisors of Suffolk Co., N. Y., at which it was proposed to stop netting in the Great South Bay (see account elsewhere), Mr. S. A. Titus, of Babylon, opposed the scheme as one looking to turning the Great South Bay into a great fish preserve for the benefit of a few favored visitors to the South Side. If instead of saying "for a few favored visitors" Mr. Titus had said "for the benefit of every man who lives about the Bay or visits it," we would agree with him. We have steadily maintained that the value of the fish taken in nets in the bay was but a trifle compared to what would be left among the baymen by anglers if the fish were protected there. By all means make it a preserve for the benefit of all, including Mr. Titus and the net fishermen who will get more money out of it as a preserve than their nets now bring them.

THE FIELD TRIALS OF 1886 promise to be more numerous and more largely attended than those of any previous year. The entries published in our columns for the several meetings show an unprecedented number of entries, and of them a large proportion are of superior merit. The handlers who have gone South with their dogs report that there will be some fine work when it comes to running the heats; and if their enthusiastic suggestions are to be accepted as literally true, about one-half of all the dogs that run will deserve, if they do not receive, the first prize in each stake.

NESSMUK'S POEMS.—The forthcoming volume of poems by "Nessmuk," to be issued by subscription, will contain a portrait of the author. We repeat this week the blank subscription form, which intending subscribers are requested to kindly return promptly.

SAM LOVEL'S CAMPS.—IX.

RADIANT in the light of the camp-fire they found Antoine rejoicing over a baker's dozen of bullpouts, which he was about skinning. The dressing of these fish was a revelation to Sam and Pelatiah, who had never before seen it done. One cut of the knife forward from behind the sharp-spined dorsal, a rip down the back, a snap of the backbone attended by a pistol-like pop of the bursting air bladder, and the fish was stripped, beheaded and disemboweled by another motion with a suddenness that made it and these two observers gap with astonishment.

Jimmy, after looking on a short time, drew forth and opened his knife, and after carefully licking from the blade the gummy morsels of tobacco adhering to it, sharpened it on his boot and picked up a bullhead, which, with more cuts and a little less speed than Antoine used, he rid of its incumbrances of big head, skin and entrails to the saving of some meat.

"Saves a mou'f'l er tew o' good meat," he remarked, displaying the dressed fish a moment before he cast it into the pan with the others. Then wiping his knife on the ground, he shut it, returned it to his pocket, grunted and lapsed into his normal silence and slow rumination, making no response to Antoine's comment, "Ma way save tam, bah gosh, an' tam was worse more as meats. Mans dat know say tam was money, an' paoun' of money worse more as paoun' of meats, don't it, hein?"

When they adjourned to the scow to divide the night's catch of the spear, Antoine could not repress his admiration of the fine pickerel, and, more than all else, of the great turtle. "Here, Peasoup," said Joe, bearing it ashore, where it landed right side up and began an aimless journey, perhaps in search of its head, "yer pardner says you eat these 'ere overgrowed bugs. 'F you want it, take it."

"Oh, bah gosh!" cried Antoine, heading off the ponderous present, if a headless thing can be headed off, and hastening to tether it with a cord to a bush, "Ah'll veree tousan' tam ob-laige to you seh! More as Ah can tol of it. Ah'll took dat home an' fat up all my waf an' chillens wid him, you see 'f Ah'll don't, Sam."

It was noticeable that while Joe treated Sam with a rude deference and respect, toward Antoine he bore himself with a half contemptuous condescension hardly comporting with the mein of the conquered in the presence of the conqueror, but when their visitors had departed Antoine said with a grin of great width and satisfaction, "Ant you'll see haow good dat man's 'have itsef every sin Ah'll luk it? Dat was de way for mek hugly mans be good, you betteh b'liev so, bah gosh."

The next morning's round proved the spring crop of muskrats so nearly exhaused that the traps were forthwith taken up and strung in rusty dozens for transportation, and the disused tally-sticks went drifting away to contribute their mite of driftwood to various shores.

Late in the afternoon, while Antoine's comrades were assisting him in the final vivisection of the turtle, a team of horses came in sight hauling a lumbering wagon slowly across the fields toward the further shore of the Slang.

"Hello!" cried Sam, "there comes aour baggidge waggin. Who is 't a drivin'? Jozeff Hill, I guess, b' the dumplin' shape on him, an' the way he jounces 'raound on the seat, toes jest techin' the waggin bottom. Yes, that's Jozeff," after an intent consideration of the approaching teamster, who presently could be heard bumping out snatches of tuneless song mixed with broken words of encouragement and reproof to his team, as they passed across the rough field.

"Odn Maadnsfield Maounting onct didn ndwell-ell,
N-a likeli you-ugh-th I-ee knowed full well-n,
"Git up, ol' mare!
"Cur-d-nel Maaryit's onli sodn,
N-a-a-abaout the aage of twedntl-wodn-n-n.

"Go 'long, Jim, why don't ye, con-ugh-sarn yer ol' pictur'! er be ye goin t' other way, you ol' snugent o' the de-sarts!"

Sam went over in the dugout to meet him and helped him to unharness the horses and shelter and feed them in the shed of an untenanted barn that stood in the middle of the field. Arriving at camp Joseph was cordially welcomed by the others, and soon began to unladen himself of his burden of neighborhood news, to hear which now would remind one of the items of a country paper of today. While his late dinner was cooking, and while he ate with full enjoyment the fried pickerel, he told them that it had been "a good sugarin' year—just chop—wal, more 'n midellin, anyway," and undertook to tell how many pounds each neighbor had made, though as usual he was never quite sure which neighbor it was, nor of the number of pounds. Also, that "Hanner Ann Jones er her sister Huldy Jane was a-goin' to teach in their deestrick this summer; that Joel Bartlett an' 'mongst 'em seen a bear up on the side o' Haug's Back—big one er little one, didn't know, but they seen tew—'n' Joel, he was a-gittin' ready to fix up his haouse—er mebby 'twas his barn—'n' they was a-buildin' tew er three new haouses for the workmen to the forges—goin' to du hell an' all, er more, to the forges this summer, fer iron had riz, er was a-goin' ter. His father's rheumatiz was wus—didn't know as they was raly wus, but he was a-sufferin' more pain with 'em, seem 's 'ough, 'n' he hedn't no gret of an ap'tite t' eat much. Ol' Mist' Pur'nton he was toll'ble well this spring, an' Mis' Pur'nton she was smarter 'n a crickit, 'n' the hull fam'ly wus well, he b'lieved, though mabby some o' the younger feemale portion was a-gittin' sor' er lunsome—like 'nough, he didn't know." Then wagging his head toward Pelatiah without taking his eyes from the not quite unfleshed bones of the bit of pickerel in his hand, "Peltier's folks is well, I b'lieve, though they be gittin' sorter oneasy 'baout his not comin' back hum; guess they kinder need him 'baout spring's work—do' know 's they zactly need him, but they kinder want him, er think mabby he might 's well be t' hum, naow, er putty soon; 'n' Antwin's folks an' young uns is well an' hearty, an' was a polly voorin' like all git aout when I come along past airly this mornin', I *think* they was, mabby 'twas the frawgs a-bellerin' ov' t' the pawnd, but frawgs hain't a-bellerin' naow, I guess 'twas Antwine's family a-polly voorin'."

Then when he was relieved of the chief weight of his gossip, he had as great a burden of questions to unload, concerning the luck and adventures of the trappers, and more things than they had seen or heard of.

As evening drew on they all began to gather a pile of wood to illuminate that night's bullpout fishing, which was to be the great final event of this spring's camp life. Antoine had provided plenty of bait and the angling outfit for his friends after the approved fashion of his own, except that possibly some of the poles were straighter than his, and at dusk they lighted their fire and began fishing. The fish were plenty and blessed or cursed with good appetites, and one after another with a sluggish, stubborn, downright pull for life and freedom, was torn from its watery hold and came walloping and creaking to land. To Sam, Joseph and Pelatiah the unhooking of one was at first a rather perilous feat, and Pelatiah gave a bellow of pain when his finger was impaled by the horn of his first fish. "You wan't caffle, Peltiet," said Antoine, as the young fellow came to the fire, by turns sucking and inspecting the injured finger, "dem bullpawt he's bit pooty hard wid hees horn, Ah tol you! Touch hol' of it jus' sam' lak Ah do, you t'umb an' fingler 'hind hees side horn, you palm you hand of it 'fore hees top horn—so. Den squeezle heem, *haard!*" and they all soon got the knack of it after the added lesson of some sorely punctured hands.

The generously fed fire sent up great tongues of flame licking at the gloom and showered an upward rain of sparks into the branches that waved and tossed in the rising currents of warmed air. Across its dusky-edged circle of light, as the fishermen went to and fro, fell elongated shadows of legs, here joined to the gloom as if that was some enormous beast of undefined ponderous form noiselessly circling about the fire, there stretching from where the distorted, shadowy bodies flitted like gigantic goblins among the spectral boles of great trees. On the water side the poles and lines were defined against the darkness with seeming unreality, as if they were the angling gear of piscatorial ghosts, and when a plunging bait and sinker, or a writhing outdrawn fish broke the water and wavering skimmers of reflected light started forth and vanished in the blank silence, it was as if they had broken on the intangible shores of the land of ghosts. But by the cheerful, living fire there was life enough, and such sport as satisfied these jolly but most unscientific anglers.

By midnight they had sport and bullheads enough to have satisfied greedier men than they were, and Antoine's highest hopes were realized in the catching of a great eel. To have heard him curse and vituperate the unfortunate fish while he was unhooking it, one would hardly think he valued it so much. "Oh, bah daamn you to damnashin, you hugly hol' daam snakes! What for you ant lied steel an' let me steek you 'tween de necks, hein, you slaamy hol' coss? You'll ant fit for be decent, bay gosh all feesh hook! Saay, you'll goin' be dead littly, naow, saay, bah damn you?"

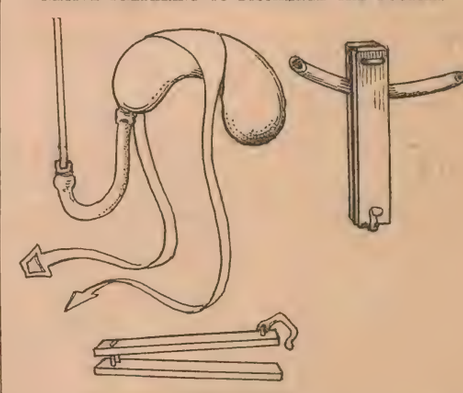
When he had stamped and stabbed it into a quiet acceptance of fate, then with a sigh of satisfaction, "Bah gosh! if ma woman don't happy tomorroh naght wen he'll got hees husbin come home an' brought it bullpawt, an' mud turkey, an' heel, bah gosh, it don't no uses for try mek it happy in *dis* worl."

Next morning the sleepy occupants of the shanty awoke late, and even while Antoine was cooking the appetizing breakfast of fish, the others bestirred themselves in making ready for departure. And when the breakfast had been made speedy way with, the canoes began to pass across the Slang with cargoes of peltry and camp gear. By the middle of the forenoon the boats had made their last trips, and with the baggage were snugly stored on board the wagon, the horses were hitched on and the homeward journey began. All but Joseph Hill, who drove, trudged beside and behind the load through the greening fields that lay between the Slang and the highway. They were not very jolly as they set their faces toward their native hills, for who ever left a camp where few or many happy hours have been spent without a touch of regretful sadness? Even the hound seemed touched with this feeling, and sent wistful glances backward as he ranged the fields and snuffed the faint odors of last night's fox trails. As Sam cast a last look on the spot that had been his home for a month, a bittern's booming and the lazy quack of a dusky duck came from afar across the hazy marshes like friendly farewells, and the samp squirrel chattered from his favorite hemlock a not unkindly adieu. A wreath of smoke fluttered away from the dying camp-fire like a gauzy flag lowered and trailing on the ground.

Not many days passed before mink and skunk and woodchuck began boldly to visit the deserted shanty, and mouse and chipmunk took up their abode in it. Moss and lichens began to grow on the slowly rotting roof, blades of grass and weeds sprang up among the brands and ashes of the fireplace, and growth and decay began to obliterate the traces of human occupancy.

TRAVELS IN BOON GAH ARRAHBIGGEE

FROM THE DIARY OF JOSEPH GOATER.



EDITED BY F. H. TEMPLE BELLEW.

(Continued.)

WITH venison from the axis, and the meat of pod rabbits, kangaroos and the jerboa, which we found in abundance, together with winged game, water fowl and fish of various kinds, our table was profusely and luxuriously supplied. The small game we killed in various ways, sometimes with the bingee, sometimes with the bow and arrow, the use of which by the way I taught, they being strange to say, wholly ignorant of that primitive and universal weapon, and oftener with a marvellous native weapon, the like of which I have never seen elsewhere. This instrument consisted of a large bag made of an elastic gum closely resembling india rubber, crossed and recrossed with fibres of the gobwich to give it strength. To this bag was attached a flexible tube and to the end of that again a reed tube of about four or five feet in length. On the top of the bag was a kind of saddle from which, in place of stirrups, depended two long straps that could be fastened together at the ends, so forming a loop. This bag the natives would inflate with air to the full extent of its elasticity by blowing through the reed tube, then they would stop the escape of air by means of a wooden clamp made something on the principle of a lemon-squeezer or bullet mould, consisting of two pieces of wood with a hinge at one end and a hook to fasten it at the other. When ready they would place the sack over their right shoulder, and forming the strap into a loop of the desired length, would pass one strap down the back and the other over the chest, abdomen and down the other side af the right leg, planting the hollow of the foot in the loop, the straps being just of sufficient length to cause them to stand in a slightly stooping attitude. Having charged the tube with a short dart, or a pellet of hardened clay with a tuft of gobwich at one end, they were ready to discharge the

NATIVE PREPARING TO DISCHARGE THE FOUFAH.

THE FOUFAH.

piece. With the right hand holding and aiming the reed barrel, and the left hand on the clamp or trigger ready to release it and so allow the escape of air, the marksman would straighten himself up with all his strength. This would bring the strap to a great state of tension, and at the same time cause a pressure of from 150 to 200lbs. to bear on the already distended air reservoir or bag. This combined pressure naturally forced the air, when released, with great power through the tube, propelling the missile (pellet or dart) with immense velocity. This

FAC-SIMILE FROM J. GOATER'S NOTEBOOK.

weapon would readily kill small game at 200ft., and carry effectively 300. The natives use this with great skill and rapidity, getting three shots out of one charge of air.

Besides this instrument these people use the simple blow pipe in the same manner as do the natives of South America.

They often employ their air gun or Foufah, as they call it, to shoot fish when basking near the surface of the water, in which case they have a small detachable cork, containing a fine line of the gobwich coiled up inside, attached to the dart, which disengages itself when the fish is struck and marks its course. This is something like whale fishing on a small scale, and is rare sport, large fish being captured in this way. I have myself caught specimens of the mongaboo, weighing over 100lbs., in this manner—a vicious, wily game fish that will rarely take the hook.

THE SPORT OF HAWKING.

I.—The Peregrine Falcon.

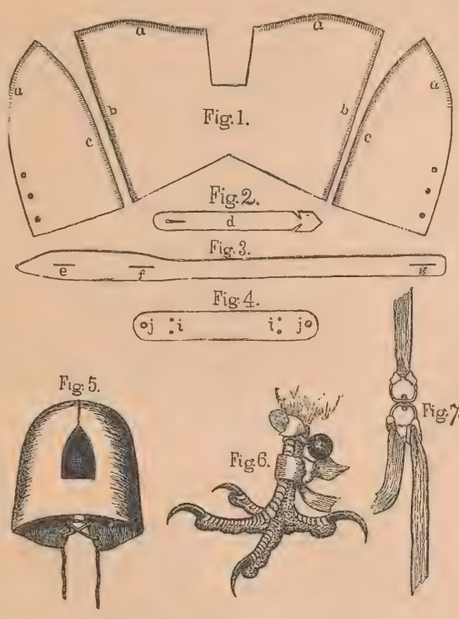
THE peregrine falcon (*Falco peregrinus*) is well named the wanderer, for it ranges from the northern shores of the American continent to Tasmania, and from the ice bound regions of Asia to the Argentine territory. For its size it is the most powerful bird which flies, and among all his fierce congeners there is not one to equal him in dashing flight and reckless courage, and few, if any, which surpass him in destructive powers.

The plumage of the adult bird is bluish-black above; beneath cream color. The under surface, with the exception of the chin, is traversely barred with black. There is a black patch extending from the bill to the ear coverts. The young, when fully able to fly, are blackish-brown above and brownish white beneath, with brown-black bars, which are placed longitudinally instead of being transverse as in the adult. The form is compact and robust; the bill is short, very powerful and curved from base to point, near which is a distinct strong tooth. Nostrils circular, wings long and pointed. The peregrine is a "dark-eyed hawk," a true falcon, the irides being dark hazel. The total length of this hawk is about 20in., the wing often measures more than 15in. from base to tip. A full grown female weighs rather above 2½lbs., a fine male falcon but little over 1¾lbs.

This falcon is not uncommon in the wild and mountainous portions of the Northern States, and breeds even in the mountains of Massachusetts. It also builds its eyrie among the cliffs of the Pennsylvania hills, and in the Adirondacks I have seen several magnificent specimens. It is commoner on the sea coast than inland, and preys largely on ducks and those birds, whence it has derived its common name of duck hawk. It kills its prey in the air, pursuing it with the swiftness of an arrow and driving its great talons deep into the body of its quarry. The stoop of a peregrine is a beautiful and spirit-stirring sight; first ascending above its victim, it flies downward for a short distance to gain impetus, then closes its wings, and coming obliquely through the air with fearful speed, rakes its hind talons through the bird aimed at, the legs being kept perfectly stiff and in one position. The quarry, unless unusually large and powerful, is generally killed at once by such lance thrusts, when the hawk seizes it in its claws. If the dead bird be not too heavy the hawk carries it off bodily to devour it unmolested, but should the prey be a heavy duck it is pushed obliquely as it falls, so as to drop in a suitable position. Snipe are one of its favorite foods, and a peregrine will wait for hours on a tall tree beside a marsh, waiting for the longbills to take flight, when it stoops upon them and seldom fails to secure a victim.

The falcons are dainty feeders. Throwing a bird on its back, it is held by the hawk's claws while the feathers are torn off by his beak; the prey is then broken up by bill and talons and swallowed in large pieces, the least inviting portions being left unless the captured bird be a small one. The flight of this species is wonderfully rapid and powerful. It rarely sails, but flies in the manner of the pigeon, and so swift of wing is it that few, if any, birds can escape it when pursued.

The nest of the peregrine is built upon the most inaccessible mountain peaks and cliffs, of twigs and grass, and is sometimes hardly more than a bunch of grass or seaweed thrown loosely into a hollow in the rocks. The birds return year after year to the same locality, and are bold and savage in the protection of their eyrie even before the eggs are laid.



The eggs are from two to four in number, almost spherical, and are reddish brown in color, marked with spots of a darker shade. They measure about two inches in length, and are deposited early in April. The young are at first thickly covered with soft, white down, which is gradually replaced by the proper plumage. They are ready to leave the nest by the latter part of May.

Of all the falcons, the most effective in the hawking field, the easiest to keep, and the most satisfactory for general use is the peregrine. From the earliest records of falconry this noble bird has been the idol of the falconer, and in the allotting of hunting birds to degrees and orders of men in bygone times the peregrine was given only to the earl or his superiors in rank.

Falconry is a sport of very old date, it being known in China as early as the year 2000 B. C. In Southern Asia, too, the art of hawking is a very ancient one, and is also practiced in great perfection at the present day. It was introduced into England about 860, and was for many years the national sport. It is now practiced in that country only by a very limited number of gentlemen. By falconers throughout the world the hawks are divided into two great classes: First, falcons, long-winged or dark-eyed hawks; second, short-winged or rose-eyed hawks. Of the former the peregrine is the type, while the latter class is well represented by the goshawk.

Among all hawks the female is the largest, strongest and most prized by falconers, and she alone is called a falcon by them, her smaller mate being known as a tiercel. Not only is the peregrine the most satisfactory falcon to train and hunt, but it is the most easily obtained. Either the wild adult birds (haggards) may be caught and trained or the young birds may be brought up in captivity.

In several States of the Union the duck hawk, as before stated, is moderately common, and the adult may be captured—along with many other common hawks—by the following method: First a bow net is required, it consists of a net of fine twine with sufficient "bag" to it to make sure of the hawk not being injured by its pressure when caught; the frame of the net consists of two semicircles or bows of ¼in. iron, looped together at the ends so as to form hinges. The completed net should measure 3ft. 5in. from hinge to hinge, and rather more than 4½ft. the opposite way. To capture the hawks a blind is first built of branches and turf large enough to contain the falconer; a dozen yards away from this the bow net is spread upon the ground, and one bow firmly pegged thereto; to the center of the other bow is tied a piece of strong and flexible line, a soft trolling line answers admirably. The entire net is then lightly covered with grass or weeds, and in its center is tied by one leg a pigeon, to the other leg of which is tied another line with which to "stir it up" when a hawk appears in view. Another pigeon or two near the net, each provided with a sod box to retreat into on the approach of the hawk, is not a bad thing. The mode of operation of the falcon trap is evident; the falconer keeps close watch from his blind; a hawk appears—the bait cord is twitched, and the pigeon made to flutter—the falcon will probably stoop down on the bait, and while he is killing it the net is quickly jerked over him, and he is a captive. A rufter hood, a pair of jesses, with swivel and leash, either one or two bewits with their bells, and perhaps a brail or two should have already been prepared, and should now be at hand. The rufter hood (Fig. 5) is a cap of stout chamois leather, lacing up the back, and provided with a triangular hole in front, through which the beak of the hawk passes. Fig. 1 shows a very good and simple pattern for the hood, the lines *a a* and *a a* are stitched together, and the edges marked *b c* on both sides are sewn fast; three eyelet holes are then punched at the sides behind, as shown in the drawing, and a lacing string passed through them—a soft corset cord has been used by us with satisfaction. A hood before me, made for and worn by a red-tailed hawk, measures 2in. across that part which covers the eyes, and 2¾in. from edge of beak opening to back of hood, measurements being made with a pair of dividers. A peregrine would not require one quite so large, but by far the best plan is to model the cap over the head of a stuffed bird of the same species for which the rufter hood is intended. A jess (Fig. 3) is a strip of stout but soft leather (heavy dog skin is to be preferred) half an inch broad at its widest part, and 8in. long, in it are cut three longitudinal slits ¾in. in length, as shown in the cut; they should be well oiled and as soft as possible. Some of the hawks proper are so powerful and savage that they manage to tear off any ordinary jess, and for them a strap like the one represented in Fig. 4 should be used. It consists of a 2in. strap of heavy oiled leather ¼in. in breadth; *i i* are four awl holes punched through the leather. The strap is brought round the hawk's leg, and a U-shaped loop of brass wire forced through the four holes and firmly

twisted together on the side opposite the curve of the U, so firmly binding the strap to the leg. A split ring is then passed through the eyelet holes *j j*, and short straps from the leash looped thereto. These straps should be placed upon both legs like the ordinary jesses. Bewits are 1⅛in. straps of the same leather as the jess cut, as shown in Fig. 2; at *d* is firmly sewn a light, clear sounding bell. The bewits are fastened round the legs above the jesses, and are useful in following the hawk when flown at game, or finding it when lost. They are put on at first in order that the haggard may become accustomed to them as soon as possible. The brail is a strip of soft leather with a slit in its middle long enough to admit the pinion joint of the hawk, and so confine the wing. The ends are tied together on the outer surface of the pinion after having first passed under the wing. This is not often used except to confine very violent newly-caught birds. The newly-captured hawk is removed from the net as carefully as possible, the hands being heavily gloved, and a rufter hood is clapped over his head and laced fast behind. It is useless to give directions how, we practiced on a stuffed hawk before we first attempted it on a living bird, and succeeded fairly well in our first attempt; do the best you can, look out for your fingers, and don't hurt the bird; of course, you will need an assistant gloved like yourself. This hood is never to be taken off until the falcon shows marked signs of "coming to" or becoming tame. It will usually have to be worn at least two weeks. The jesses are next put on as follows: The space between *e* and *f* (Fig. 3) is for the hawk's leg; the point and slit *h e* are brought round the leg and passed through the slit *f*, after which the end and slit *g*, and the whole remaining length of the jess are pulled through the cut *e* and then through *f*. The jess will then take the position shown in Fig. 6, and is perfectly firm, and by far the neatest and lightest fastening for the purpose. It is used by all European falconers. The bewits are then fastened on as shown in Fig. 6, which represents the foot of a hawk fully harnessed. The free end of each jess is then looped round one ring of the swivel—Fig. 7—to the other ring of which is then looped a well oiled strap 4ft. in length; this is the leash. The swivel should be very light though strong, and made of brass or German silver. The rings should move freely on one another, or the jesses will soon become tangled.

The hawk is now tied, with only a few inches of free leash, to a mound of earth and is left alone, protected from sun or rain, for a few hours. At the end of that time the hand or wrist, properly protected by a heavy falconry glove, is worked under his feet and he is induced to step on to the wrist. The bird is now constantly carried about on the hand, and frequently lightly stroked with a feather. At the end of a few hours draw a piece of very tender beefsteak over his feet; he will snap at it, and as he does so slip a small piece into his beak, after several attempts it will probably be swallowed, and the first lesson will have been completed. Carry him about as much as possible and late into the night. On retiring tie the hawk to a padded pole close to the ground in a room perfectly dark at all hours, so that no gleam of light may find him in the morning. Repeat the process the next day, but now each time the hawk is fed blow on a chosen whistle—a dog call is a good thing; constantly carry him about, the hood and jesses of course being always in position. In a couple of weeks the haggard will bend down and feel for food as soon as he hears the whistle, and will feed eagerly through the hood. If he also steps quietly up on the wrist when it is placed under his claws, and sits quietly without bating or fluttering from the hand, he is "coming to" or becoming tame, and training proper may commence.

Up to this time the falcon should have perfectly lean raw meat; beef and pigeon have been found to be the best foods for the newly caught haggard. He should be fed twice daily for the first two weeks, early in the morning and again late in the afternoon. The meat should always be given in small pieces from the hand, and the whistle must be frequently sounded while the hawk is making his meal.

OSPREY OR EAGLE.

VICKSBURG, Miss., Oct. 8.—For two weeks past a very large bird, said by the local papers to be an eagle, has been seen at times, generally in the morning, perched upon the very top of the cross which surmounts the steeple of the Catholic church in this city. As the spire is a tall one, and the church itself is situated upon a hill 200ft. ormore above the Mississippi River, the bird was visible to almost the entire population, and was an object of no little attention and curiosity. His regular daily visits to his elevated position and his protracted stay there led to the supposition that he took his breakfast there, though no one could exactly determine with the naked eye as to that, nor lay down to a certainty the character of his meal. Occasionally his highness was disturbed by the whiz of a ball, when some amateur sportsman violated the city ordinance by shooting within the city limits and took a crack at the bird. One claimed finally to have broken a leg and cited in evidence that as the bird flew a foot could be seen to hang down. The bird circled about in the air for some time, hovered over it without lighting, and finally went away and was seen no more up there that day. The next day he was back in his usual position, but only for a brief time. The next day he was absent altogether, and it was regretted by some that the bird had been shot at and frightened from his choice perch, but others suggested that he was off foraging and would return as soon as a morsel could be had. To determine something more definitely an engineer's transit with a good telescope was obtained and placed at a favorable window in Mr. Dorsey's store. But it was not until this morning that the bird deigned to return. The window was lowered at once and just as the instrument was focused on him, he took wing for other parts. He was not in trim for inspection just then. An hour later he returned in full dress, his chief embellishment being a good-sized fish which was held securely in his left talon. The fish was not dead, as a lively shaking of its tail indicated; and it evidenced not the same relish in the performance that the bird did. The bird began at the head, tearing it off and eating it by pieces, and worked his way slowly back toward the tail. The top of the cross being round one way, considerable trouble seemed to be had keeping the fish in place. The perch became slippery and the fish would keep slipping down the side of the cross, but the talons seemed equal to the emergency and the fish was promptly hauled back each time. The bird was occupied some twenty minutes over his breakfast, when the crack of a rifle rang out and he stopped to think awhile. Then another crack of the rifle, and he concluded he had eaten enough for the time being and flew away in considerable haste. A Creedmoor shot of distinction was here and was desirous of a shot, but failed to get a rifle. We are unable to call the bird by name. We take him to be a hawk of a very large species. His back and head are quite dark while all the under feathers are nearly white. Could you suggest his name?

BURROW OF STRIPED SQUIRREL.

TO-DAY I saw something that reminded me of the erroneous idea that many people entertain in regard to the burrow of the striped squirrel. Most people think that the squirrel while digging its burrow carries the dirt, which it excavates while digging, away from the entrance, and thus they account for the absence of a bank of dirt. At the present time there are two burrows, one finished and one unfinished, in sight of my house; and to-day I saw the tenant of the completed one taking home a load of provisions in his cheeks for use after the dormant season. The entrance is about 18in. north of the trunk of an apple tree, which stands about 12in. from a stone wall, and there are some hazelnut bushes by the side of the wall, so that in approaching his dwelling the squirrel climbs a bush that almost touches a limb of the apple tree, jumps upon the limb and follows it to the trunk of the tree; descending this he is within a few inches of his burrow, which he enters to deposit his load. On leaving he does not take the precaution to climb the tree and run along the limb and descend the bush, but runs upon the ground. But I started to write you something about the method of constructing the burrow instead of telling how careful its occupant is in getting to it so that his enemies cannot track him there. The squirrel digs a hole into the ground, leaving the dirt which he digs out at the mouth or entrance, until he has got his subterranean channel long enough, then he stops up the mouth of the burrow so nicely with dirt that the inexperienced will not know where that little pile (a bushel or more) of dirt came from. The squirrel now digs up to the surface at the other end of the burrow. This leaves his new house completed without any dirt about the front door. I have said there is an unfinished burrow in sight of my house, and my reason for calling it unfinished is because the end of the hole where the dirt is dug out is not stopped up.

Popgun.

Tyngsborough, Mass., Oct. 12.

AN EXCEPTIONAL SNAKE.

IN describing an abnormal, or to speak more correctly, an unlooked-for habit of constricting prey in certain small-sized snakes (see FOREST AND STREAM of Oct. 22 last), allusion was made to the Lacertine snake (*Cœlopeltis lacertina*), which had recently been the subject of scientific investigation. One result of these is that a posterior tooth longer than the rest is found to be connected with a poison gland, and that this snake, hitherto supposed to be harmless, can actually inflict a deadly wound with this back tooth. Here is another instance of the strange contradictions which we find to exist throughout the ophidian families, and which have induced me on more than one occasion already to affirm that where snakes are concerned exceptions to rules are so abundant as almost to exceed the rules themselves. For example, we should hardly have expected to find constricting habits in a burrowing snake such as the Indian worm snake (*Gongylophis*) described in my last paper; still less so in a venomous snake whose poison tooth is supposed to compensate for non-constricting powers; nor should we expect to find a noxious fang at the back of the mouth, when the idea that the venom tooth is in front has so long prevailed.

Thus, in the rapid advance of science do the discoveries of to-day upset the teachings of yesterday. A man whose arduous labors and research have constituted him the authority of his time may find himself superseded by his juniors perhaps even to-morrow. Yet he enjoys the satisfaction of knowing that the results of his own researches have been the starting point for the younger student, stepping stones to enable him in his turn to add another landmark in that especial science.

Regarding this Lacertine snake, which is now known to be both a constrictor and venomous, I could almost declare it has changed its nature before one's eyes. Its name would imply some lizard affinities, though I am unable to say what. In the summer of 1874 several of these snakes were in the London Zoological Gardens, occupying a cage with a few of other harmless kinds. I watched them on several occasions while feeding and recorded my observations as follows: "The Lacertines, on the alert for food, are always first to seize the sparrows thrown in to them, swallowing one quickly and then seizing a second, often as not in the mouth of a companion. They struggle together until the one having the weakest hold of the bird is obliged to relinquish it. One of them, after dispatching its own sparrow, seized the head of a snake which had a half-swallowed bird in its mouth and held it in such a firm grip that the keeper was summoned to the rescue, when he shook off and dragged the aggressor away, boxing its ears, figuratively, for its bad behavior. It retired in a sulky mood for a time, then thought better of it, and, with recovered composure, caught another little bird and and ate it."

With regard to the several modes of seizing their prey, and perhaps somewhat mixed by their specific name, I again affirmed in some published papers on the *Ophidia* (1876): "The Lacertines, glass snakes, and some others approaching the saurian characters swallow their prey alive, snapping it down rapidly in lizard-like fashion." It is true that I might therefore have watched these Lacertines with preconceived ideas, and on the lookout for lizard habits, yet I can hardly think that coiling a bird or a mouse would have escaped my notice had it occurred. My custom was to make notes at the time of what I saw, and with a view to the publication of my larger work, "Curiosities and Wonders of Serpent Life," and I spent a great deal of time in careful observations at the Reptilium on feeding days. Not until 1880–81 do I remember observing the constriction of prey in any other snakes than the larger and recognized constrictors, and was at that time much surprised to witness this management—if not actual killing of prey in certain small species, causing me to state in my work on "Snakes," p. 570: "Some *Heterodons* (they were *d'Orbigniis*), and even the Lacertines often assist themselves with coils in overcoming their prey, though nat themselves constrictors; but the venomous snakes have not the slightest notion of aiding themselves in this way, as if confident that in time their venom would do its work." The latter was in allusion to the vipers and the *elapidæ*, but now we discover that a snake hitherto supposed to be allied to the most harmless and helpless families, does actually constrict its prey with an intent to kill, while in possession of a venomous tooth as well.

Lately I have again, with renewed interest and attention, watched the feeding. Last summer when the Lacertine snake was found to be furnished with a grooved fang and a poison gland, an individual then in our collection was transferred from its harmless associates to a cage containing two copperheads and a cape adder. Some young rats were put into the cage, one of which was quickly caught and constricted by the Lacertine, who held it coiled in a spiral, longitudinal twist for at least a quarter of an hour by the clock. Meanwhile, the anterior half of its body being disengaged, it reconnoitred for further prey, and presently possessed itself of a mouse, which had been struck and killed by the cape adder, catching it by a hindleg and working it round till it got the head into its mouth. While swallowing it the cape adder came to secure his lawful supper, saw it fast disappearing and seemed inclined to remonstrate; but while investigating proceedings, the coils of the Lacertine gradually relaxed from the rat still retained, and which was now quietly appropriated by the cape adder who, without opposition (the Lacertine constrictor was, indeed, *hors de combat*, with his jaws hard at work already), dragged it away and proceeded to swallow it. Thus the Lacertine had a mouse flavored with a condiment of adder venom, and the adder made its supper on a constricted rat deprived of the peptic virtues which its own venom should have imparted. Later in the summer I saw the same Lacertine snake catch a mouse, and without loosening its hold with the jaws, partially constrict and begin to swallow it before it was dead; the following week it caught and constricted one which it held in its coils for four minutes, but not so tightly as to kill it before swallowing it.

Only surprises, therefore, have awaited my observations. So far as I have seen no use is made by *Cœlopeltis* of its venom fang while feeding. Nor did it invariably constrict when I happened to watch it. That once only did I see the prey actually killed by prolonged constriction, and often the coils are so slack that an attempt to kill would not occur to the observer. As a most interesting combination of a venomous-constricting snake, the next *Cœlopeltis lacertina* which arrives at the Reptilium will be very closely watched, and my observations will be duly recorded. From the evolutionist's point of view one might suppose that this highly endowed snake has not been a constrictor long enough to be an expert at its work, and that the fang at the back of the mouth is a useful adjunct in this incompetency. The *Xenodons* and *Heterodons*, together with a number of other snakes, possess a fang-like posterior tooth, mobile in a few cases; but I believe I am safe in affirming that they have no connection with a poison gland—that is, at present.

To some Italian ophiologists we are, I think, indebted for this discovery of a new member to the families of poisonous snakes. Mr. G. A. Boulenger, of the Herpetological Department of the British Museum, informs me that the experiments of M. H. Peracca and C. Dirigibus have proved *Cœlopeltis lacertina* to be poisonous, "although the effects of its bite appear to be fatal only to small animals."

The maxillary (a specimen is before me) is half an inch long and sustains 12 small and not very regular simple teeth, which are separated from the longer grooved tooth. The longer and stronger back teeth of some of the harmless snakes are supposed to assist the reptile in retaining live prey which otherwise might escape; but *Cœlopeltis*, furnished not only with a venom gland but with constricting abilities, becomes an object of exceedingly interesting speculation.

In conclusion I may add that my diligent researches fail to afford good reason for its specific name *lacertina*. Its generic name is from a Greek word signifying *cavus*, a hollow; in French *creusé* or *excavé*; and *peltis*, French *bouclier*, a shield; from the hollow plates or shields of the head, especially those in front of the eyes. In adults the scales on the back are also concave. Wagler, in 1824-26, called this snake *Natrix lacertina*, but afterward, on account of the form of the head shields, preferred the name *Cœlopeltis lacertina*. As the specific name has been retained by many subsequent herpetologists there should be reason for it. Dumeril, Gray, Günther, and others retain the specific. Also Schlegel, who assures us from competent authority that it feeds entirely on the green lizards which belong to the same habitats. Both are found throughout Central and Southern Europe, Palestine, Asia Minor and North Africa, including, perhaps, Egypt. Schlegel affirms that he has dissected a great many individuals and found that only the green lizards had been taken as food, but this fact insufficiently accounts for its specific name *lacertine*, which ought, if so, to have *phagus* in its composition. There is only the one species of *Cœlopeltis* at present. I may again add, since what with "developments," discoveries, and multitudinous classifiers persistency of nomenclature seems hopeless. *C. lacertina* is not a favorite in the menageries, bearing the character of being spiteful, obstreperous, and generally unamiable, also short-lived in captivity; all of which inconvenient traits may be accounted for, if in other menageries also, it is fed on rats, mice, birds, and what not, which may impair its digestion, and as a consequence its temper. Green lizards (*Lacerta viridis*) in London are too costly, and truth to tell, *Cœlopeltis* takes very readily to furred and feathered suppers, seizing the creatures as if nothing came amiss to him. One should add that this snake is closely allied to the *Psammophidæ* and is *Psammophis lacertina* of Schlegel and some other ophiologists.

CATHERINE C. HOPLEY.

RATTLES AND FANGS.

Editor Forest and Streau:

I have just read in your last issue a number of observations on rattlesnakes and their fangs. I have been interested to learn whether venomous snakes shed their frangs annually. I dissected the head of a rattlesnake some years ago and found several pairs of immature fangs alongside of the matured ones. This summer I examined the head of a cotton-mouth moccasin and found five pairs of soft, immature fangs, of a white color, in a bunch, resting in the cartilaginous envelope which surrounds the full-grown fangs.

A friend of mine killed a rattlesnake some 6ft. long a few days ago which had very recently shed its skin. The slough was in close proximity to the snake when killed. This snake had no fangs at all in the usual position. Another gentleman informed me that he had recently killed a cotton-mouth which had no fangs. This is just the season for the shedding of skins, and these facts seem to indicate, without doubt, that venomous snakes do shed their fangs annually.

In my swamp explorations this summer I encountered many cotton-mouth moccasins, none more than 3½ft. or 4ft. long. They are very thick in proportion to length, have plenty of virus and long fangs; they are generally disposed to get away, when they can do so readily, but when cornered are very vicious. Their colors are, rusty black on the back, mottled black underneath, and white in the interior of mouth and throat. They frequent low, marshy lands in the Mississippi bottoms. COAHOMA.

MEMPHIS, Tenn.

LIVE RUFFED GROUSE.—*Editor Forest and Stream:* As you are aware, for the past two years I have been carrying on some experiments with ruffed grouse to test the possibility of their domestication. What has been the result of these experiments I hope to give your readers at no distant day, since a very full record has been kept covering the entire time. But the object of this note is to ask the readers of the FOREST AND STREAM who are fortunate enough to secure any live grouse this fall to aid me in these investigations by sending me such birds. I can assure them that the captives will receive the best of care and any such favors will be most gratefully appreciated.—JAY BEBE (Lox Box 110, Toledo, O.).

CURIOUSLY MARKED SQUIRREL.—Halstead, Pa., Oct. 6.—A short time ago a farmer brought into town a squirrel which was killed by his son near here. It was about the size of an ordinary gray squirrel, but was of a pure white color, except light streaks of red down sides and back and light spots of red on fore shoulders and head. It was placed on exhibition in a drug store and created considerable conjecture as to what breed, if any, it belonged. I consider it a cross of red and gray squirrel. Perhaps some of your readers can enlighten me on the subject, as I have considerable curiosity in regard to it.—F. E. S.

FOOD FOR THE CAGED WOODPECKER.—Hartford.—If "Sportsman" will feed his pileated woodpecker on mocking bird food I think he will have no trouble with him. This food is prepared for insect-eating birds. Meal worms would be good, and if "Sportsman" will visit any grist mill and turn over boxes and barrels he will find thousands of meal worms, as they can be found around old barns under the floors (double floors are better). Don't feed too high, say about six or eight per day would be enough.—A. C. C.

CROWS IN THE WATER.—Providence, R. I., Oct. 15.—As I was riding in the country a few days ago, admiring the beautiful changing foliage of the maple trees, and keeping my eyes open for all odd-looking autumn grasses and bright berries, to be used in decorating the rooms this winter, I came to a small pond, and on looking over the other side I saw, as I thought, some black ducks, but on approaching nearer, discovered them to be crows. They would wade into the water as far out as they could touch the bottom, and seemed to be picking something up from the bottom. Were they catching small fish? I never saw crows in the water before and thought I would write and see if any of your readers had.—BASIL.

NEWFOUNDLAND CARIBOU HUNTING.

THE morning opened with promise of a genuine spring day. The trees dripped, for some snow had fallen in the night, and a couple of robins whistled joyously from the top of a tall larch. "These fellows are not around till the winter is broken up," the traveler assured me; "and we may expect the deer to-day." But the deer did not come that day. Toward sundown I observed with my glass a herd of four or five grazing in a browsy marsh about a mile distant, but it was plain that they were not on the march. Through the winter scattered herds would be found in this region, for it was not as severe as other parts, the thermometer seldom falling more than 8° below zero, browse and lichen being likewise obtainable in the marshes.

It was then resolved that one of three courses lay open for us. To return to the trader's house till the march had commenced; to penetrate further into Avalon and seek the deer in their resorts, or wait their arrival on the tilt. The latter was the most desirable course, but our "prog" was getting scarce, that is to say the bread portion of our larder, and our tea and sugar. Starvation was not to be feared, for we had beef, a tilt full of game, but game, game, game, three times a day soon wears out its welcome. It was finally resolved that if no "sign" appeared on the following day that one of the party should return to the trader's for flour, tea and sugar. No sign did appear and the officer of our commissariat set out on the second day afterward for a supply of the needed stores.

We saw another herd of five deer, probably they were the same as those already mentioned, on the day that our purveyor left us. They were distant from the lead and feeding in a marsh on the edge of a swollen stream. They were difficult of approach and it took nearly three hours to stalk them. Sometimes aided by the shelter of bushes, hummocks or rocks, we could walk or run, but the greater part of the distance we had to crawl. Fancy crawling on a marsh made sodden with melting snow. I was wet to the skin with this chilly snow water and I thanked the brain that first devised schnapps. Then it was salutary to take a glass, for even the chilly spring water can do little harm on the outside with spirits within. At last the firing place was reached and a wave of the trader's hand told us to make ourselves ready. We got quietly into the bushes and could see the herd without being seen by them. There they were with their tender, timid, luminous eyes browsing about all oblivious of the deadly muzzles pointing toward them. One, a large, plump doe, was not twenty paces distant from where we lay, but the others were scattered over the marsh considerably beyond range. I must confess that it required some restraint on my part to refrain from firing, when this fat prize turned her head toward the river and began to move in the direction of the others. "They'll graze round here bumbuy," whispered the trader; "all we have to do is to keep quiet." It was chilly work standing in the deep snow amid dripping branches, when every stitch upon us was soaking wet. But patience had its reward. The herd now turned their heads toward the skirt of the droke, and slowly but steadily moved up toward where we lay concealed. The doe was not nearest this time when we held consultation about firing. But I wanted her and requested the other two to take those nearest them. "Ready!" said the trader; "Fire!" and the three guns went off simultaneously. My doe was down, but not for long. I saw her make off at a speed almost incredible on three legs, two fore and one hind. She was standing side on when I fired, so that I made a double error in drawing my muzzle slightly to the right, besides letting it drop too much. For the rest, the trader had shot his, a small buck, stone dead, the bullet piercing him "abaft the fore shoulder," which brought it within an inch of the heart. The other did not strike his, though the game was not thirty paces off, and browsing from an alder tree when the sportsman fired at him. I followed up my doe and gave her another barrel, but this time—I was nervous I suppose—I missed again. I was not, however, disposed to surrender the coveted beauty. I was ready very soon again, ran with all speed, and laid her low as she was, with incredible speed, hobbling around the point of a ridge. From a small flock this was not bad, and after having drawn our game and cut off a choice haunch for supper, we started for the tilt.

To our surprise on our return to the tilt we found a large herd of dogs, four or five sleds, and as many deer hunters posted in camp and busily engaged preparing a meal. The trader knew them. They had come from some point on the bay about forty miles distant for the double purpose of deer slaying during the passage season and for carrying away those killed in the autumn. Then I learned from the trader that it had been the custom for several years back for two or three parties to fit themselves out in spring and fall for shooting expeditions. The carcasses of those killed in the early winter were covered with ice and snow, under which they remained

till hauled away in a state of perfect preservation. This very party had during the preceding marching time shot about thirty, the carcasses of which were buried about a mile from salt water and a day's journey distant from the tilt. Having by hauling ropes, fastened to sleds, and assisted by dogs, drawn the carcasses down to the water's edge, their boat would come up, take them on board, and sail with him to St. Pierre, where three-quarters of a franc per pound would be obtained for the venison. This, in fact, was the very object that the trader himself had in view. Hence, the enthusiasm with which he hunted was the enthusiasm of commerce.

We now had plenty of provisions in camp, for these men had come to stay. Two days later we set out for another camping place about twelve miles distant, this being the center of the isthmus and within a short distance of the main line of deer travel. Two or three of the new party had been out along the hills with their glasses and seen what they called "signs." The signs, I learned, were two or three large herds moving with regular motion toward the north. "You'll have lots of fun to-morrow," the trader said; "everything comes round to him who waits." We slept soundly that night and were early astir in the morning. The day dawned in russet and pink, something unusual for the season, and some of the party predicted that it was going to be a "borrowed day." A borrowed day, I learned, was an unusual mild or sunny day, coming in the better season, and always followed by "dirty weather." "Borrowed," I suppose, because its fineness had to be paid back and storm received instead. But it would be a good day for the deer, they said. We would have rain afterward, and "they (the deer) go to the norrid like everything when it is soft."

It was decided that we should divide into two parties, and I was among that which had choice position—that is to say, of the two posts taken in covert near the main marching lead, those at the point where the herds first pass, had the choicest one. If not frightened the herds came easily along, now turning to the right or the left to crop a mouthful of browse, or to frisk with one another. One can then get a choice shot. But after they have been alarmed they run for several miles, and sometimes do not stick to the lead but scatter confusedly over the marshes. So the other part had to take a chance like this. From a ridge that overlooked the lead at about ten in the morning we discovered with our glasses several stragglers moving slothfully along toward the north. As we deemed these to be a sort of advanced guard of the main body, it was thought best not to fire at them. It was very tempting, too; we might have got two of them as they moved on, now grazing, and again tossing their heads into the air as if they had a sort of presentiment that there were enemies near if they could only make them out. Once more out upon the ridge and this time with better luck. A flock containing not less, we estimated, than eighty, was moving toward us. We took up position again in the fir bushes. At the signal of the trader we were all to fire, he, too, arranging which animal each was to fire at. I could not exactly say how many marched abreast on the lead, but they seemed to me to be tangled up; sometimes three or four seemed to move neck by neck, again two would walk side by side, and now only one. Then a break would seem to occur, which was soon mended, however, by the hastening footsteps of those lagging in the rear.

Midway in the herd we found the objects of our aim; and the guns went almost simultaneously. It was good work, five deer fell; and before they got off I knocked over another. The six were not killed, but were so grievously wounded that they could not get away, and we did them to death upon the marsh with our knives. Upon the firing of the shots the flock ran in wild confusion in every direction, but soon recovered their bewildered wits, for the stag, though frightened as badly as the rest, held his way unswervingly along the lead. His followers soon marshalled themselves in order again. Not many minutes had elapsed when we heard the distant cracking of muskets. Two animals, one of them the leading buck, fell, which made a total of eight.

But it was not as those who had observed the caribou at other times stated, that the flocks were linked together in a continuous line. Till late in the afternoon no other deer came in sight, but then a herd of about twenty came trotting briskly about our ambush. "There's some other out further up," the trader whispered to me, "and these fellows are frightened." They ran confusedly over the marsh beyond our range, all excepting two. The six guns fired at these without discrimination, but only one fell. In this, however, there were four bullet holes.

I need not draw at too great length what remains to be told. On the following day we got five others, although nearly a hundred head must have passed us; but, as we discovered afterward, a couple of parties were "to win'ard" of us, as my companions said, and frightened the herds with firing into them. The day following was more propitious, and the number that fell was twelve, which for the three days of the "spurt" made twenty-two. On this day several hundred must have passed us. One of the party said there were nearly a thousand, but the flocks were so large that a couple of hundred got by, and you had the chance only with a slow single-barrel of getting one shot. Fancy a half dozen sportsmen there with repeaters, or even with the ordinary breechloader. After the only stragglers put in an appearance, and when I asked the trader if this probable ten or eleven hundred deer were all that inhabited Avalon in the winter, he told me that you had no way of determining the numbers. "It is my belief," he said, "that large numbers of them passed here during the night; at any rate it is rather early yet, and it may be three weeks before those remaining will start." We stayed three or four days longer, and got about one deer per day, after which I with the trader and the original party returned. The rest remained, and, I learned afterward, got some sixteen or seventeen deer about ten days later. J. E. COLLINS.

TORONTO.

ADIRONDACK NOTES.—Mr. Phelps Smith and party from Bridport, Vt., while spending a few days in the Adirondacks near the Borens River, one evening caught in two hours 256 bullheads, one weighing three and a half pounds. During their sojourn they also succeeded in shooting three deer and one bear, the latter tipping the beam at 300lbs. Mr. Smith has returned to his home on Lake Champlain, and as he is one of the crack duck shots on the lake, we hope he will succeed in winging a few of our boodle aldermen during their flight to Her Majesty's Dominion.—W. H. R. (New York.)

NESSMUK'S POEMS.

WE have already announced a forthcoming book of poems by "Nessmuk." Last week we gave a list of the poems and printed some of the shorter ones. The book will be published by subscription. The price has been fixed at $1 for copies ordered prior to Nov. 15, the publishers reserving the right to advance the price after that date. Subscription should be sent in on the order blank found on page 258; and intending subscribers are requested to return their orders as early as practicable. The book will contain besides the poems an autobiographical sketch and a portrait of "Nessmuk."

WHERE ARE THE WOODCOCK?

THE opening of the shooting season in northeastern Connecticut was auspicious. The leaves on the maples and alders were perhaps too thick for good shooting, but, blushing so delightfully, their laziness in falling was easily forgiven, and the air, far from being cold, was of that crisp, bracing nature typical of October days in New England. Quail have been abundant in the fields the past summer, but as they had not been molested much by shooting—for we are law-abiding here pretty generally—nor by cold, rainy weather, they had not yet centered in the runs. So the day was to be spent in search of the grouse, noblest of his race, and woodcock. Up here we do not count our bags by hundreds, nor by tens. A half dozen birds, shot after hard work on the part of men and dogs, the bracing air and the excitement incident of the surroundings, the hour spent at lunch during which each one tells of the birds he has missed in the morning and why, and of the birds he is to shoot in the afternoon, and why not? The moments' chat with the farmers (there are no "boards" for us, luckily) about the condition of the corn, potato and apple crop—this last reference, accompanied by a sidelong glance toward the cellar, generally producing the desired effect—and the brisk drive home in the still, frosty twilight.

This is what makes Octocer so dear to me, so long to be dreamed of, never to be forgotten. Seven grouse were bagged and plenty were left for other days; but high and low though we hunted, not a single woodcock did we start, though we took one home. Bang, pointing in a thick bunch of alders, was told to "rout 'im out." He took a step forward and then picked a bird from the ground, brought it to me alive. Upon examination, I found that one shot had broken his wing and that he had lived in this condition he alone knows how long. This is the only woodcock we flushed (?) all day long, hunting in all those moist, black-earthed spots so dear to them, yes, and so frequented by them but a year or two ago.

Where are they all? What is your answer, you who go to make up that noble battalion of sportsmen (?) stretching out in long lines from Maine to Florida, and with smoking guns from one year's end to another? Will we high-pressure Americans never learn anything, even from experience, that best of teachers? Cannot we go fishing, yachting, riding, canoeing, enjoy a hundred and one things during the summer months, letting the poor, gasping birds increase, grow and fatten for a short season at least, and then when October comes, with gun and dog we can step out over the crisp fields for a day's shooting, not butchery? F'LIN.

HUNTING IN THE ROCKIES.

CORBET, Wyoming Territory.—Cabin on the Stinking Water River.—It is so easy to portray a hunt when five or six happy voices are all sounding in one's ear at the same time. The old log cabin on the bank of this beautiful stream, from whose inviting fireplace, 6ft. long, with two or three large logs all aglow with fire and flame, can be heard the dash and splash (I was going to say of the trout but certainly) of the water, one can scarcely realize that he is in the midst of sights and sounds too grand and sublime to be appreciated from a pen description. One must come and see for himself. Not being able to write while we were seated around the fire, roasting elk, bear and deer meat, I put paper in my pocket, and after a walk of ten miles, here I am in one of the many grand cañons. I was up here the other day, and, seeing signs of elk and bear, concluded to try and get my specimens to mount. There are many tracks, but as they travel by night, and hide during the day in places I do not care to go, I find it slow work. This stream is alive with trout and I find it great sport to pull them out. The Stinking Water is named from hot sulphur springs, which, you know, have a tendency to smell a little. Its pure green water is ice cold the year round.

I only wish that all true sportsmen could enjoy what I have in the last four months, and what I expect in the next month. We have killed all the game we could use, but it has been too warm to keep. Last week Mr. Frost was standing in the cabin door; on looking up the mountain side, he saw two elk standing, so grand and proud, gazing down on the scene below. He called in a most emphatic way to his son Jessie, a lad seventeen years old, the thrilling word, "Elk!" Jessie had his gun in a moment, and was bounding away to see if he could not get near enough to shoot. He did; and need I say there never was a prouder boy when in a little time he had two immense bull elk lying at his feet. I could spend much time writing the details of this, but I will tell of my own hunts simply.

After a walk of a few miles one bright, clear morning, I saw a band of seven antelope. I spent most of the day in trying to get near them; but they keep one on guard all the time; while the others rest the guard will stand and look in all directions, and if he gets the least scent of you off they go. There were two bucks, three does and two kids. Toward evening, after I had seen the beautiful, graceful things play and gambol, I got near enough to kill one of the does; then a buck. Then I followed over hill and valley till I got another shot, killing the second buck, and then a doe. The rest stood still and I shot the third doe, and was about to shoot the kids when I thought of what I was doing and let my gun drop, for I was ashamed to think I had killed five of the seven. Mr. Frost had killed a fine deer. The next thing was to get our game to camp. We went for the ponies and soon had it all hung up. This is only one of the many hunts, for they occur each day, but I mention this for the reason of having killed five out of a band of seven, and I could have killed all.

Early on the morning of Sept. 14 Mr. Frost and I started up the river to be gone two or three days. We found a fine beaver in the traps set a day before. After supper we started out to watch for elk. We had seen some signs along the river and it encouraged us enough to try watching for them. Following up the river, my companion had gone half a mile from camp when I heard four reports of his rifle in quick succession, and I thought he had missed his game from having fired so often and so fast. As I sat on a high knoll overlooking a small creek running into the river, pining over my bad luck in not seeing any game, I concluded to go over and see what Mr. Frost had been doing. As I started up a little ridge I discovered a fresh elk track. I followed it a short way, saw that he was going down to the creek, and thought that by getting down and following up slowly I might have the good luck of seeing him. When I got into the creek bed it was so dark I could not see the sights of my rifle. After going five or six hundred yards I caught sight of him. Oh, how big he looked. I raised my gun, but it was too dark to see to shoot at that distance. He seemed to be aware that something was wrong, for he started up the opposite bank on a trot and disappeared over the ridge. As it was getting darker all the time, I had a notion not to follow, but thinking it was now or never, I sat down, pulled off my shoes and started up the stony ridge in my stocking feet in a keen jump. I got up there all out of wind. I saw my elk or the outline of him just about the same distance away. It was too dark to shoot, but I looked over the barrel of my gun and pulled the trigger. I knew I hit him by his action, for he wheeled and came like the wind down the hill broadside to me; but a Winchester is always ready, and as he passed me I gave him another shot. Down he came; I could hear him plow up the earth as he fell. I congratulated myself in getting him, when up he sprang and off he went. I had to load my gun but got another shot before he was out of sight and hit him. I could hear the brush crack and stones rolling down the hill as he pursued his wild charge high up on the mountain. It was too dark to follow a track, so I had to turn my face toward boots and camp; but the boots were not to be found, for the darkness made all the stones look like boots, and as I ran about from one to another, I concluded they had petrified and that I should have a fine specimen after all if I did not find the elk. I was just about to give it up when I heard something coming toward me through the brush like a race horse. I jumped into a clearing just in time to see my wounded elk as he passed about fifty yards away. My rifle spoke, he stopped in his mad career, and I got another standing shot which brought him down on his knees. I would not risk anything, for I did not know where I was hitting him, so I gave him another and another, which laid him low. I ran up and cut his throat. Then I began to believe he was dead, but I would not trust him till I got his head cut off for mounting; then I did not care so much if he did run off. Just then I heard Mr. Frost shoot and yell. I answered and in a short time he came up, hunting for me. He thought I was lost because I had been shooting so much. He took it to mean a signal. When he saw the elk he told me he had killed a large one too. The next morning we returned for the elk and killed a bear. And so it goes—the finest sport a man ever enjoyed. My elk weighed eight hundred pounds. ELLIOTT.

GOATS, SWIFTS AND BEARS.

Editor Forest and Stream:

While among the north spurs of the Cœur D'Alene Mountains, this September, I shot three white goats, and as they are rather rare game for Eastern sportsmen the fact may be worth recording. Where I was the mountains were timber-clad to the tops, the goats kept in very rough country, sometimes in the woods, sometimes on the bare shoulders. The climbing was terrible, the mountain sides being extremely steep and covered with round stones, loose slates and rotten logs; but the goats seemed to rely largely for protection upon the inaccessible nature of their haunts, not being particularly shy themselves.

This season I killed near my ranch two elk and a number of blacktail and whitetail deer; and in the spring a good many buck antelope for food.

Where did the myth about the little swift fox being so fast arise! It is always known on the plains as the swift, only the larger red prairie fox being called fox; but it is the slowest animal that we course with greyhounds. The swiftest is the antelope. the whitetail deer coming next, the jack rabbit stands almost on a par with the latter; the coyote comes next, then the red fox, and last of all the swift. Yet both swift and coyote have great reputations for speed. A good greyhound, or even a Scotch deerhound, will overtake either very soon.

I would like through your columns to protest against one form of "sport" which stands about on a par with the old Adirondack method of running a deer into the water and then knocking it on the head with a paddle. It is said that certain Eastern sportsmen going to the Rockies to kill bears catch the latter in traps and then shoot them. Now if a man wishes to destroy bears for the bounty, or because they are hurtful to his stock, he is perfectly justified in trapping or poisoning them, or killing them in any other way; but there is not a particle of sport in shooting them while in traps. I understand that it has been claimed to be a "dangerous" amusement to kill them in this way; but on what theory it is impossible to imagine. One of my men trapped eleven black bear once, and he killed some with a hatchet and the rest with a .22-caliber pistol. Another hunter that I knew broke his rifle while trapping big bears—the so-called "silver tips" and "cinnamons"—after which he nevertheless caught five and killed them with an axe. THEODORE ROOSEVELT.

SAGAMORE HILL, Oct. 12.

NEW MEXICO.—Rioville, Sept. 26.—Quail and rabbits are quite abundant here; they are not shy at all; are mainly cottontails. Geese and ducks have not begun to come around much; the latter are always few, the former feed on young grain during winter and migrate in the spring. I saw a small flock of cranes this morning, about sixteen, which is a rare thing here.—B. F. B.

WASHINGTON TERRITORY.—A Whatcom correspondent, "J. G. C.," suggests that when the new road from Whatcom to the summit of the Cascade Mountains is completed mountain goat hunters will find quick and easy access to the vicinity of good hunting grounds.

SOUTHERN CALIFORNIA.

SAN DIEGO, California, Oct 5.—Quail season has opened with several immense bags of game being brought in. Will Hamilton, of this place, has brought in town from 10doz. to 14doz. quail, the result of one day's hunt on several different occasions since Oct. 1. I bagged 53 in 5 hours shooting on tar-weed in Mission Valley last Saturday. The hunting is splendid this year and bids fair to hold out well.

Market hunters are sending in some fair bags of ducks from the bay shooting, Henry Seebold bringing 51 ducks, (mostly "sprigs"), two dozen curlew and two dozen "yellow-legged" geese or gray brant. Our duck shooting will not be very good until about Nov. 15, when the ducks commence to stop on their southward flight.

Deer hunting, in the vicinity of San Diego, has been very good this past two months, some 46 having been sent in, the result of market hunting. One weighed nearly 200lbs. I hope to be able to send you some accounts of our hunts on land and sea before the New Year if the expected flights of honkers take place ere that, as no hunt for water fowl is complete without the capture of some of that noble species of water bird. Several matches for trap and field shooting among the boys are on the calendar and will send you result when they come off.

AD. B. PEARSON.

THE DISMAL SWAMP.

ABOUT all our deer hunting is in the Dismal Swamp. The growth of reeds is so dense one cannot see 20ft. ahead, except in few places; this dense foliage lasts through the whole shooting season, and the only way to get the game is with dogs. In 1884 within a radius of three miles over fifty were shot during the season; the next year on the same stands not over two or three. To a person not acquainted with the facts the conclusion would be at once that the lessened number was because so many were killed the year before, but the facts are that a portion of the swamp had been burned last year and they had gone back further in the swamp, and ran to Drummond Lake instead of Nausemond River. In 1884 our stands were on the Norfolk & Western Railroad, commencing three or four miles below Suffolk. When you take into consideration the thousands of acres they have to roam over, and the never failing supply of green reeds for food, and the few numbers that are killed, you can judge there are hundreds. I have lived here 16 years and never saw a piece of venison for sale. We usually make up a party of eight or ten; if we kill one or two they are taken home, each hunter having a joint, and the rest is sent to friends. I often wonder why New York men will go so far from home when they can come here in fourteen hours and have as good deer hunting and quail shooting as they could wish, sleep in a good bed every night and in bad weather have good quarters. But only sportsmen are welcome, pot-hunters not tolerated. The fox hunting for real amusement beats all other hunting; we now have twenty dogs when all are together and he must be an old stager if he is not caught in three or four hours. We hunt on horseback and after one or two chases a horse takes as much interest as the dogs or hunters.

SUFFOLK, Va.

ROCHESTER NOTES.

THE sportsmen of this vicinity have during the present fall experienced a great surprise, none the less agreeable from its rarity, by finding game more abundant than it has been for years, and within easy drive of the city, in fact several fine bags of snipe have been shot within the city limits, while on grounds a few miles out the sport was phenomenal, recalling the glorious days of old that the veterans of the county tell of. Two men got 29 one day, another scored 17, a third shot 53 on a small patch of ground within the city during the flight, and innumerable smaller bags were secured. The gray plover came again this season in greater numbers than for years past and their ranks were thinned by the chokebores as usual. The woodcock and ruffed grouse have also been found in very satisfactory numbers, one man distinguishing himself by bagging eleven grouse without a miss and that in thick cover.

In contrast with the good luck of the men alluded to above was the hard fortune that befel the most indefatigable member of the shooting guild here. One day this week in driving out for a shoot, his favorite gun was knocked out of the buggy by his dog and when the loss was discovered and the grouud searched where the gun had fallen the latter could not be found, for it had undoubtedly been picked up by the three men who passed him on the road. This was bad enough for one week, but worse remained behind. A day or two after he went for partridges, and when a bird was flushed on a steep hillside, fired from the bottom of a gully and killed both the bird and his setter, this latter being hidden in the cover.

People who like squirrel shooting have found the woods full of them, and so it is that the year is one of wonders at which the sons of Nimrod marvel greatly.

E. REDMOND.

ROCHESTER, N. Y., October.

GEORGIA GAME.

AUGUSTA, Ga., Oct. 14.—*Editor Forest and Stream:* Interest is being aroused all over Georgia to frame a general game law for the State. Twenty or thirty years ago game was plenty anywhere, and even deer have been captured within a few miles of this city, but since "freedom" the brother in black has waged an indiscriminate and unceasing warfare on every species of game, until it is fast disappearing. They kill everything from the sparrow to the turkey, regardless of the season, and game is very scarce only on such land as is "posted," principally to keep them out. While our brother in black was a slave the laws prevented him from carrying firearms, but with the first inspiration of freedom and with the first $5 he earned, the dilapidated double barrel or single barrel gun was purchased, and he has been banging with it ever since. In many instances they also use the old smoothbore musket.

Our State is not well protected for game. We have no general law, but about one-half the counties have a local law. These vary in a remarkable degree. Our State is large, and the breeding season in some portions are at least a month earlier than in other sections. For instance, the local law allows quail shooting in the county adjoining this—to the south—a month earlier than in this county, and so on with all game.

The Augusta Gun Club, with a view to getting a perfect law for this county, recently sent out circulars to prominent sportsmen in three counties adjoining us. The nature of the circular consisted of questions regarding the proper season for shooting the various game in this locality. As an example of the varieties of opinion I will only state that on quail, the dates varied from Sept. 1 to Nov. 1. On other game there was a like variety of opinion. For our county we want to put it at Nov. 1, so that the young birds will have a chance to grow, get good wings, and not be mercilessly slain by the freedman before they can fly—for be it known, the freedman is prowling the woods and fields every day with his "fusee." If the law is adopted as we have it framed, it will be a great protection to the birds, and those who go for a day's sport can enjoy it.

There have been very few ducks as yet about here. A cold spell three weeks ago brought flocks of teal; not many stopped about here, however. Summer duck shooting has been very good this season, and there have been more about than have been known in years. The long drought we have had dried up most of the lagoons, and compelled them to seek water near the city, which has contributed to the bags of the sportsmen. Quail shooting has not fairly opened yet, on account of the hot and dry weather. After a rain and a cool spell the boys will be into them. Since the enactment of the stock law (keeping up cattle and hogs) the birds have accumulated. Hogs have been the greatest enemies to quail—they destroy both the eggs and the young.

Can any of your readers tell me how many broods of quail a hen will raise in a year? J. M. W.

[Generally two broods; sometimes three.]

PROPOSED PRESERVE IN CANADA.

THE following details of the proposed game and fish preserve in New Brunswick, to which reference has already been made in the FOREST AND STREAM, have been furnished by Mr. Edward Jack, of Frederictown, who is now in this city: "Mr. Jack offers to dispose of to any association of sportsmen a tract of land containing 20,000 acres in New Brunswick, Canada, reserving the right to cut the timber and logs and the privilege of bringing them to market by means of the streams. This reserve, on which moose are found, and on which caribou are abundant, Mr. Jack will agree to protect from trespassers, giving due security for the performance of this to the satisfaction of intending purchasers. This preserve is intended not only as a moose and caribou preserve, but also as one of the best trout preserves in Canada, there being from seventeen to twenty lakes and ponds on it within a radius of five miles, in all of which trout are abundantly found. Salmon are also to be taken in Rocky Brook, which runs through it, as in the adjoining Miramichi River.

"The reserve is situated on the waters of Dungarvan, Rocky Brook and the Sisters, which empty in to the Southwest Miramichi River, which discharges into the Bay of Chaleur.

"Of this district W. Henry Braithwaite, the best sportsman in New Brunswick, says: 'On this tract on the Sisters, Rocky Brook and Dungarvan, there are probably in radius of five miles twenty lakes, varying in size from about one-quarter to three-quarters of a mile each, the water in them is clear and bright; there has probably never been a fly thrown on them. I have always fished them in the winter and have always got all of the trout that I wanted. I have caught grilse and salmon in Rocky Brook. These lakes are good for moose calling; moose and caribou are plenty there yet and there are some beavers to be found about them, though these animals are becoming scarce on this ground. Partridges are plenty on this tract and in autumn black ducks and geese frequent the lakes. The trout in the lakes vary from ½ to 2lbs. in weight, occasionally a 3-pounder is taken. They are generally red; trout in some of the lakes are redder than others, the bottoms of these lakes are generally of sand and gravel.

"The tract of 20,000 acres, measuring from the center of it, is about 30 miles distant from Boiestown on the Southwest Miramichi, which has railway communication daily with Fredericton, the capital of New Brunswick, from which it is less than 50 miles distant. Fredricton has first-class hotels. From Boston to Fredricton is one day's journey by the express 'Flying Yankee.' Up the Southwest Miramichi for a distance of 10½ miles above Boiestown, there is a good wagon road. The remainder of the 30 miles must be made by lumbersome portage, which can by an expenditure of money be made passable for riding wagons. At present the journey can be made on horseback. The reserve offered for sale is covered with an unbroken forest of hard and soft woods, and has numerous hills and valleys which serve as shelter for the game of the country."

We will take pleasure in putting any one who may be interested in direct communication with Mr. Jack. Of the salmon fishing on the Southwest Miramichi, Fishery Commissioner J. H. Phair writes as follows:

FREDERICTON, N. B., Sept. 25.—*My dear Mr. Jack:* In reply to your inquiries respecting the salmon fishing on the Southwest Miramichi, I would state that I have fished that river almost continuously each season for the past thirty-five years, and I prefer it to any other river in New Brunswick, although the fish are larger and more abundant on the Restigouche than on the Miramichi, but on the latter river the fish are far more gamy, and altogether the sport is more exciting and more skill is required to kill your fish than on the former. I am well acquainted with the Three-Mile Rapid and have fished it, I may say, hundreds of times; it is a favorite ground with me, and situated only about a quarter of a mile below the ground owned by Judge Steadman and myself. I have killed a large number of fish in the Rapids, and for early fishing there is none better on the river, it also gives good grilse and fair salmon fishing all through the season. Mr. Orr and some others a few years since purchased a small lot at the head of the Rapids. Merely enough to cover what was known as the salmon hole and which was at that time a sure cast. Within the last four or five years, however, a very large rock which lay at the foot of the hole has been carried by the ice a few hundred yards below their ground, and the salmon hole has ever since been gradually filling up and a new one forming where the rock now lies. There is good fishing all through the Rapids and some good casts in the pool at their foot. There is also another very good pool about one mile further down the river, it is called Pilot Rock, also one about 200yds. below the mouth of the Sisters, and again another in Rocky Pond, just above Rocky Brook, all the above are on the tract proposed by you as a moose and game preserve, and I consider them very valuable. I tried last year to purchase the Rapids, but the price asked was beyond my means. I have never fished on Rocky Brook, but I know a large number of salmon go up it each season, and it is a favorite resort of the poaching community; they sweep the pools every year and are said to get a large number of fish. The late Professor Campbell always preferred fishing on Rocky Brook to any part of the Miramichi. From what I can learn from the men on the river (and I have made much inquiry in the matter) the salmon go considerably above the grounds available to the poachers and are thus beyond their reach. I might mention the following incident to give you an idea of Judge Steadman's (one of our oldest salmon fishermen) situation of the Southwest Miramichi. We have fished it together for the past twenty years, but the last season he was not well and was a little afraid of camping out, a friend of mine in Boston placed his waters on the Nepesiquct (known as the Rough Waters) at my disposal, and as there was a nice comfortable fishing lodge on it I invited the judge to occupy it. He did so, and remained on the river for about two weeks, having fair fishing. My friend has again given me the water after July 15 for next season, and I told the judge if he liked it he could have it again next year; but he declined, saying that he found no fishing anywhere equal to the Miramichi. Now there are few men in America who have had as much experience as the judge, and his opinion ought to have some weight. It was Judge Steadman and myself who fought out the question of riparian rights with the Dominion Government and recovered for the owners of the land the exclusive right of fishing opposite their several localities; this right had been claimed and was seized by the Dominion Government.

I might add that the Dungarvan Lake is, if not within the boundaries of the tract you propose purchasing, it is very near it, and the Dungarvan River would, with protection, be a splendid salmon river, though at present it is fearfully poached. I visited it about four weeks since and caught three salmon, though the nets and spears had preceded me. It will be offered for lease next February, and could be guarded at a small outlay; and most probably the rental will not exceed $100 per year.

J. HENRY PHAIR,
Fishery Commissioner, New Brunswick.

GARDNER, Mass., Oct. 15.—To-day members of the Monomonock Sporting Club went out for their annual hunt. The captains of the two teams were Charles H. Newton and Edric Coelman. Game was rated as follows: White rabbits scored 100 points; coney rabbits, 50; gray squirrels, 100; red squirrels, 50; chipping squirrels, 25; crows, 100; partridges, 100; bluejays, 50; red-headed woodpeckers, 50; partridge woodpeckers, 50; blackbirds, 25; robins, 20; skunks. 10. The principal game brought in was squirrels. The result of each man was as follows:

Newton's Side.		Coelman's Side.	
Charles Newton	170	Edric Coelman	835
George Nichols	220	Amos Coelman	510
C. S. Bent	1,320	John D. Edgell	220
Thomas Greenwood	1,400	John R. Williams	1,055
Fred Frelick	90	H. L. Graham	000
Geo. F. Ellsworth	600	L. W. Brown	425
L. L. Sawin	300	Fred Garland	250

ORITANI SNOW SHOE CLUB, Oct. 15.—*Editor Forest and Stream:* The Oritana Snow Shoe Club held its fourth annual meeting at the rooms of the Canadian Club in East Twenty-ninth street, on Tuesday, Oct. 12. A goodly number of members were present, and the reports of the officers showed that the club was in a sound and flourishing condition. The number of members is thirty-six with a prospect of a rapid increase. The following officers were duly elected: Honorary President, Erastus Wiman; President, G. M. Fairchild, Jr.; Vice-Pres., Wm. B. Ellison; Secretary and Treasurer, Wakeman Holberton. The club adopted a uniform consisting of a gray blanket coat and knee breeches trimmed with blue, blue toque and stockings and garnet sash. Invitations were received from several members to visit their respective homes near New York, as soon as the snow was in condition, including one from Mr. Erastus Wiman to visit his elegant place on Staten Island. A committee was appointed to make arrangements for the tramp and also for a trip to Montreal during the carnival. This club, we believe, is the first snow shoe club in or near New York and it is to be hoped that their good example will be followed by many more lovers of out of door sports.—H.

WILL WILDWOOD BOOM?—If it does not it will be owing to no failure of rosy tinted advertising by the boomers. Wildwood is a town that is to be down in Southern New Jersey. "The spot is a very novel one." We should say so, for in the words of the scribe: "Near by are numerous saline caves, in which congregate fish of all sorts. A moment's row will bring the angler to hidden inlets, where can be found bass, herring, sea pike, dotted turbot, porgies and smelts. The flying fish hover around constantly. In several of the caves are known to be sharks and enormous porpoises. This will afford sport for the adventurous disciple of Walton. The woods, eight in number, are so close to the shore that they cast shadows out over the sea. In the woods are all sorts of small game. The sportsman may stand where the spray from the surf can nearly reach him and shoot rabbit, quail, sea duck, wild geese, robins and cedar birds. The other day a couple of surveyors shot a great big eagle, measuring 9ft. from tip to tip."

HE KILLED IT.—An Erie, Pa., correspondent records a feat by a greenhorn of that city. A Kane, Pa., sportsman invited the Erie man to go woodcock shooting. The Erie man had never seen a woodcock, and did not know one from a stump. They got into the woods, the Erie man saw something moving in the brush, yelled "I see him," let drive both barrels and screeched "I've hit him." So he had, but the Kane man said he wouldn't have taken a thousand dollars for that dog.

A GROUSE CAPTURED IN TOWN.—Albany, N. Y., Oct. 16.—Last Monday, just after 1 o'clock, a boy was delivering some wood at my house, in a thickly settled portion of the city, and he came to the house and inquired what kind of a bird we kept there. As we keep no birds, his question excited some surprise, and he was told to catch it if he wanted it. He returned to the woodshed and in a few minutes came back with a full-grown partridge. The night before had been foggy, and my impression is that he started out in the morning, got bewildered in the fog and got under the grape arbor, and as it grew lighter got into the woodshed, where he hid the balance of the day, and probably would not have been discovered except for the boy emptying a barrel of wood into a bin in which he was secreted. Partridges are usually so hard to find in fields and woods, and instances of their being seen in cities so rare, I thought you might be interested in this incident.—WILLIAM E. FITCH.

TWO DAYS AT BARNEGAT.—We were no sooner settled than the ducks began to fly in every direction, but none of them came within gun shot for over an hour, when we bagged two broadbills out of a small flock, which, I should say, were fully 75yds. away. After that we did not get a shot for several hours, when we had quite a lively time firing at single birds; but they were all long shots. The day's total only amounted to 2 redheads, 6 broadbills and 3 widgeons. We tried a second day with about the same luck, and went home the day after, feeling just as happy over our small string of 23 birds, as the majority would over three times that number. We decided to try it again, but in the fall instead of the spring, as the last few years. The birds are sadly decreasing in numbers, and this is mostly due to spring shooting.—C. U. B.

THOSE SHACKER LIBEL SUITS.—We announced last week the withdrawal of the Shacker libel suits against Dr. Samuel B. Hunter of this town, for his alleged authorship of an article in the FOREST AND STREAM newspaper last summer. Since the suits were withdrawn a rumor has gained more or less currency that the Doctor procured the withdrawal by the payment of a considerable sum of money. A flat contradiction of all such statements appears necessary. We are informed on the best authority that Dr. Hunter did not make or authorize any overtures for settlement, and did not pay, and under no circumstances could have been induced to pay, one cent for the withdrawal of the case against him.—*Machias, Me., Republican, Oct. 16.*

QUAIL IN NEW YORK CITY.—Last Saturday while playing tennis in Spuyten Duyvil, I was surprised to hear the unmistakable whistle of a quail, and a moment later an answer from another a few rods away. They were in a small piece of woods thick with underbrush. I have frequently seen gray squirrels there and have heard stories of trout, but no sportsman need apply, nor dogs either. There are plenty of the latter, large and unmuzzled.—FLIN.

PENNSYLVANIA LAWS.

Editor Forest and Stream:

I inclose a leaf from "Philadelphia Times Almanac," which agrees with Pamphlet Laws, and is handy for use. Before 1883 the season did extend to Dec. 31. But so many deer were slaughtered on the first snows, generally in latter part of December, that we got this among other changes in the law. It should be corrected (of course in your own way) because you are looked to as authority in such matters. Here we think the season for grouse should open Sept. 1, because the squirrel fellows shoot them any way, they go for hair and get feathers. Have just come in with a string of grouse and write this in a hurry to catch the mail.

The inclosure is printed in full as follows:

Pennsylvania Game and Fish Laws.

GAME.

No person shall kill or pursue any wild deer, save only between the 1st of October and the 15th of December of any year, under penalty of $50. Nor have in his or her possession, or offer for sale, any wild deer or fresh venison, excepting from Oct. 1 to Nov. 30, inclusive.

No person shall, at any time, kill any fawn when in its spotted coat, or have the fresh skin of such fawn in possession, under penalty of $50. Dogs pursuing deer or fawn may be killed by and person, and the owner of such dogs shall be liable to a penalty of $10 for each deer killed by such dog, except in Centre, Clinton, Fayette, Lycoming, Luzerne, Schuylkill, Union and Wyoming counties.

No person shall kill, or have in possession after being killed, any gray, black, or fox squirrel between Jan. 1 and Sept. 1—penalty, $5 for each squirrel; hare or rabbit, between Jan. 1 and Nov. 1—penalty, $5 for each rabbit; wild turkey, between Jan. 1 and Oct. 15—penalty, $10 for each turkey; upland or grass plover, between Jan. 1 and July 15—penalty, $10 for each plover; woodcock, between Jan. 1 and July 4—penalty, $10 for each woodcock; quail or partridge, between Jan. 1 and Oct. 15—penalty, $10 for each quail; ruffed grouse or pheasant, between Jan. 1 and Oct. 1—penalty, $10 for each pheasant.

No person shall, at any time, kill or take any wild turkey, grouse or pheasant, quail or partridge, or woodcock, by means of any blind, torchlight, trap, snare, net, or device whatever, under penalty of $10 for each bird.

No person shall hunt or permit the hunting of hares or rabbits with ferrets, under penalty of $10 for each rabbit caught or killed by such means.

It is illegal to kill, trap, or expose for sale, or have in possession after being killed, any night-hawk, whippoorwill, thrush, lark, finch, martin, swallow, woodpecker, flicker, robin, oriole, red-bird, cedarbird, catbird, bluebird, tanager, or any other insectivorous bird, under penalty of $5 for each bird.

No person shall destroy the eggs or nests of any wild birds whatsoever (only predatory birds, such as are destructive of game or insectivorous birds), under penalty of $10.

No person shall catch, kill, or disturb wild pigeons while on nesting-grounds, under penalty of $50. No person, not a citizen of Pennsylvania, may trap or net wild pigeons in any county, unless he shall have first taken out a license from the treasurer of the said county, and paid therefore the sum of $50, for the use of the county.

No person shall hunt pheasant during the night time, in any manner whatever, under penalty of $10 for each offense.

It is unlawful to hunt, shoot, or destroy any web-footed fowl except from Sept. 1 to April 30, inclusive. At no time it is lawful to hunt, shoot, or destroy such fowl from or with any craft or boat propelled by steam or sails.

FISH.

It is made illegal to catch speckled trout, save only by rod, hook and line, at any time, or to place any set lines or set nets across any stream inhabited by them, under penalty of $25.

No person shall kill, sell, or have in possession after being killed, any salmon or speckled trout, save only from the 15th of April to the 15th of July, under penalty of $10 for each fish. No person shall take, for sale, any trout less than 5in. long, or fish in any waters for three years, in which brook trout have been planted by the Fish Commissioners, when public notice of said planting has been given, under $20 penalty.

No person shall catch or kill, save only with rod, hook and line, at any time, and no person shall catch or sell, or have in possession after being killed, any bass, pike, pickerel, or Susquehanna salmon, between the 1st of January and the 1st of June, under penalty of $10. Any person taking or capturing a bass of less size than 6in. in length hall immediately return the same to the waters whence taken, under penalty of $10.

No person shall kill or catch fish by placing any torpedo, giant-powder, nitro-glycerine, or other explosive substance, in any of the streams of this Commonwealth, under penalty of $50.

No person shall catch or destroy fish by shutting off or drawing off any of the water of the State, or by dragging small nets or seines therein, when the waters are wholly or partly shut off, under penalty of $50.

No person shall place any fish-basket, pond-net, gill-net, eel-weir, kiddle, brush, or facine net in any of the waters of this State, under penalty of $25 for each offense.

It shall be lawful to fish with fyke or hoop nets, in any of the streams uninhabited by brook or speckled trout, during the months of March, April, May, September, October and November, provided that the meshes of said nets shall not be less than one inch in size, and shall not be placed at the confluence of any wing-walls, and if any salmon, bass, trout, pike, pickerel, or any other kind of fish introduced by the Commonwealth in said waters, shall be taken or captured by means aforesaid, they shall be returned alive to the waters whence taken, and any person violating the provisions of this act shall be subject to a penalty of $25.

It shall not be lawful, at any time, to catch fish by means of the drawing of a seine or seines, in any of the waters of this State, under penalty of $25.

Shad shall not be taken in the Susquehanna or Juniata rivers, from sunset on Saturday to sunrise on Monday, during the run of shad, from March 15 to June 25, or with seines less than four and one-half inches in the mesh, under penalty of $50 and three months imprisonment.

Sea and River Fishing.

THE NEPIGON.

IN a recent issue of the FOREST AND STREAM I read a short article on the Nepigon which recalled a very pleasurable experience of mine on that famed and beautiful stream whose swift cold waters afford so much sport for the angler.

In the summer of 1867, in company with my cousin, I was engaged in manufacturing in the city of Detroit. We were in the oakum business, and those who are acquainted with the article know its qualifications for disappearing very suddenly in smoke. We were engaged in putting in new machinery and one day when all was lovely and serene and we, in fond imagination, were coining shekels in the near future, the fire fiend descended through the cloudless air and with one fell swoo-hoop disappeared in flame with our possessions—and we stood and let 'em go. Thirty minutes sufficed and my cousin thusly unto me spoke, "That bursts our little bubble," and I, remembering a slender bank account, looked at him affirmatively. The machinery was sold; and about the time we got things straightened up, an excursion party from Buffalo or Cleveland on the propellor Ironsides, arrived at Detroit bound for Lake Superior and a good time. With a view of driving "dull care" and the memory of our misfortune away, and in anticipation of good fishing somewhere, somehow, of which we were both very fond, O. suddenly suggested that we join the party, if yet there was room. There was room, just one stateroom left, and we engaged it, got our grips and fishing rods together, and one night when the moon shone bright we went aboard and to bed, awaking the next morning as the boat was passing through Lake St. Clair.

Our trip through the river, Lake Huron and the Sault Ste. Marie was uneventful. Our party was a very pleasant one, the table good, the captain good-natured and obliging, and nothing was lacking to make the voyage enjoyable. We stopped a half day at St. Marie, saw the Indians catch whitefish, which we helped dispose of, ran the rapids in birch canoes (being the proper caper), were locked through the canal and launched forth into grand Lake Superior. That evening we enjoyed the most wonderful and glorious view of the aurora it was ever my good fortune to behold. We stopped at Marquette a few hours, and after looking over the place a little, O. and I took our rods to a stream a mile from town and took out thirty-five pretty trout. The next morning I was awakened by much ringing of engine bells and found we were poking our way through the tortuous, sluggish waters of Portage Entry, which connects Portage Lake with Lake S. or Keeweenaw Bay. We stopped a couple of hours at Hancock, a copper mining town on Portage Lake, visited mills and mines and then crossed to Houghton, a similar town on the opposite side of the lake, where we stopped a half day. Inquiring the whereabouts of trout streams, O. and I were soon hunting them up, but the labor exceeded the pleasure by large odds, for the brush was thick and musquitoes ferocious. We captured sixteen nice fish though, and I nearly ran a spruce stub through my neck as I slipped on a mossy log. Out again into Lake S. and to Ontonagon, stopping an hour or two.

The captain had decided to cross here to the north shore, but the passengers prevailed on him to visit Bayfield, near the western end of the lake; so thither we went. B. is a sleepy little hamlet, or was, but having a very fine harbor. O. and I engaged Indians and canoes and went trouting again, having fine sport, getting 42, one weighing 1¼lbs.—the largest trout I had ever killed. From Bayfield we steamed to Isle Royale, where we stopped a half day, finding a Government survey steamer making soundings and otherwise passing the time. From here we sailed to Fort William, a Hudson's Bay post, and anchored a mile and a half from shore in shallow water. Smallboats took us ashore, where we inspected the company's quarters and saw some Chippewas attempt a scalp dance and get beaten in a foot race with white men. One of their braves had recently returned from the Far West with a Sioux scalp, so represented, and the Indians gathered in the yard in front of the post and treated us to what was called a scalp dance, in order to gather in a little filthy lucre in return for a view of filth in other shapes. There may be among your readers those who have never seen a modern Indian scalp dance or any other dance, so I will briefly quote from my journal:

"But two or three of the bucks were dressed, or undressed as we supposed wild Indians would be, so far from civilization, the most of them having either coats, pants, shirts or boots on, and some all of these—a stove-pipe hat or two was sported with great pride. Two or three had nothing on but the traditional breech clout. All were painted hideously. The scalp was tied to one end of a stick about two feet long and around it were hung strings of beads, buttons, feathers, pieces of bright-colored cloth and other gew-gaws, so that with difficulty one could find the scalp. This stick they set up in the ground, while close by two or three with kegs covered with skins for drums, and one with a piece of stovepipe began the trouble. At first the men danced singly before the scalp, and beneath a British flag, which one of them held over them. The dancing consisted of stamping on the ground with arms bent, and placing themselves in all sorts of ridiculous postures. Each held in one hand a mustard box partly filled with pebbles which he worked for all it was worth; in the other a string of eagle's feathers, which he brandished. When one had hopped as long as he could stand it, he handed his box and feathers to another fraud, who hopped awhile. When all the noble ragamuffins had hopped singly, they combined the hop. When all had wiggled together, the squaws formed a circle around the scalp and musicians, the warriors on the outside and the circus began. The squaws hopped around the scalp, drummers and tom-tommers, the men hopped around the squaws, and all grunted and whooped their audience out of all patience and the show broke up."

I bought a heavy Mackinaw blanket here for the coming Nepigon trip, which I have yet, and in many a camp has it given me comfort since. Four of the party, Messrs. Cameron from Cincinnati, Dexter from Chicago, O. and I, hired four Indians and two canoes here for our Nepigon excursion, the first named gentleman having been to that stream for several seasons, and of course was a source of information on all points. The next morning we were in Nepigon Bay, a beautiful sheet of water, with beautiful islands and picturesque bluffs. At noon we cast anchor near the mouth of the river, and after dinner the bustle of preparation, so dear to the heart of the sportsman, began. In addition to the quartette above mentioned, the captain, steward and three ladies had concluded to go to Camp Alexander, about fifteen miles up the river, and camp out a day or so. The boats and canoes were soon loaded, and with parting salutes and good wishes from the passengers left on the propeller, we began the journey with high hopes of landing huge trout, taking along half barrels and salt to pack them in, which I thought rather superfluous, but I learned more of the number and size of Nepigon trout before I returned. After enjoying a most delightful trip and beautiful scenery, we reached Camp Alexander, a point round which the river rushed swiftly, at sunset, and pitched tents for the ladies. Here a portage must be made. As a matter of course we enjoyed our supper and pipes immensely and slept like logs. Early next morning Mr. Cameron took four trout larger than any I had ever seen, and my arms ached for the fray. They ached worse after it.

After breakfast the quartette took its departure for a point about 25 miles further up, where Mr. C. had camped previously. At the first portage of 2½ miles we met a party of Hudson's Bay Indians going down to Red Rock station for supplies for the interior, Red Rock being a post near the mouth of the river. The amount of goods of all sorts that these Indians will carry on their backs, supported by a strap passing across the forehead, astonishes a tenderfoot. We made four portages around rapids this day, the Indians carrying the canoes and duffle and we going light with rods. The scenery was grand. The rushing waters, precipitous cliffs, lovely islands, rocky cañons and bold mountains, combined to form most beautiful pictures, and just ahead of us were not the speckled b—usters waiting for us? Before sunset we made camp at the head of Hamilton Pool and fished until dark, taking 30, averaging 2lbs. What a feast we had at supper. The Indians could dress a trout and have him in the skillet before he fairly realized he was out of the water. And what a place of all places for a camp. At our back the unbroken forest rising to the mountains; in front and afar to the right the beautiful waters of Hamilton's Pool; to the left and just above the rapids, where the ice cold water rushed and foamed among the rocks, and under our feet a soft bed of pine needles where we might rest our weary bones and rise refreshed for another bout with the trout.

The next morning when I awoke, between 4 and 5 o'clock, a couple of polecats were rummaging around at our feet, but on our moving they leisurely and unconcernedly walked off into the woods. "We fished early and late this day, creeling 130 fish, averaging 3lbs. These the Indians dressed and salted down." Thus goes my journal of that day. Another entry stands thus: "Broke the tip of my rod to-day on a big fish—probably a 1,000-pounder." The mosquitoes and flies were just awfully awful. O. was bitten on the eyelid and lost the use of that peeper for twenty-four hours. The next morning we fished until 9 o'clock, but the fish did not rise eagerly; so we broke camp and returned to the next pool below, where we found a party of Toronto gentlemen who had followed us up. We had not quite filled our half barrels, so, at the invitation of these gentlemen, we pitched our tent near them and proposed to fill the packages, provided the trout were willing. Mr. Cameron and I took our canoe, with two Indians, and got up as close to the rapids as possible, one Indian holding us with the setting pole, the other handling the landing net, while Mr. C. and I handled the fish.

I quote again: "We caught in an hour 18 fish, 14 of which averaged 3¼lbs. We fished with from 40 to 60ft. of line out, and much of the time were each playing a fish at the same time, and lost many owing to the swift current. Almost every fish leaped its full length out of the water as it took the fly, and their red and yellow bellies flashed most beautifully in the sunlight."

The next morning, after a very pleasant visit with the Canadians, we got under way again, and after a thoroughly enjoyable ride, varied by the usual portages, meeting the Hudson's Bay Indians coming back loaded, we reached the Ironsides at 3 P. M., finding the passengers all agog for our return, having fought mosquitoes and flies until they were thoroughly disgusted and ready to depart. The captain and the steward had caught enough trout at Camp Alexander to make with what we caught about 800lbs., the bulk of which were distributed, salted down, to the passengers as they wished, to be sent home, the remainder put on ice and served up on board until we were surfeited with trout.

Such was trouting on the Nepigon twenty years ago. I give figures simply to show the abundance of fish at that time. I read of good fishing there now, but fish can hardly be as abundant as then, when I spent the red-letter day of my trouting experience. O. O. S.

NATIONAL ROD AND REEL ASSOCIATION.—The following notice has been issued: "New York, Oct. 15, 1886.—The annual meeting for the election of officers and the transaction of such other business as may come up will be held in the laboratory of Mr. E. G. Blackford, Fulton Market, on Monday, Oct 25, at 2:30 P. M. Dues may be sent to the secretary at Cold Spring Harbor, N. Y., by check, money order or registered letter. Signed, FRANCIS ENDICOTT, President; FRED. MATHER, Secretary."

STRIPED BASS FISHING.

CAPTAIN DECKER, of this city, an ex-soldier, without hands, one of the assistant doorkeepers at the Capitol, is an expert in the matter of angling. He can handle—well hardly that under the circumstances—I mean he can manage a rod and line with great success. He can drive a two-in-hand—no that won't do either—he can drive two horses as well as any one, and he can write an excellent hand—there it is again—I mean he can write first-rate, using his artificial digits, and play cards and do other things that would seem to require the sense of touch.

On the 12th of this month Captain Decker caught 101 striped bass, averaging about ¼lb. each, fishing from the deck of one of the old monitors that lies in Anacostia River at the Navy Yard. One day a short time before he caught 65, and on the 13th 141, and on the day following he landed one that weighed 6lbs. It may be stated with some emphasis that this is good fishing. To catch such strings makes an epoch for any one, a time to date from. If it were the undersigned he would frequently say: "Well, let me see, it was the year I caught 101 striped bass," and that would terminate any uncertainty or any indefiniteness in regard to date. For a man of the Captain's lack of manipulators it is something wonderful, and is complimentary to his energy and genial philosophy. In this sport he has to be assisted in baiting his hooks and taking off fish, which assistance he readily obtains. His rod is held between his arm and body and the way he plays his fish and lands him is surprising.

Speaking of striped bass, it may be interesting to add that, so far as these and adjacent waters are concerned, there is no diminution in numbers or quality. The Potomac River has long been noted for this fish, and still they come. There is some complaint that large fish, 10lbs. and upward, cannot be had; but the lack of size is made good, perhaps, by the greater number. Some Washington anglers capture them in large numbers with artificial flies, though more are caught with live bait. At Little Falls there is often very fine sport, and down the river at certain well-known points the catches have been all that could be desired. Let me add further, in reference to striped bass, that I am told by Dr. Bean, of the Smithsonian Institution, that there is no indication of a permanent diminution of this fish in American waters. His reply to the question was emphatic. Apparent scarcity at places where they have heretofore been plenty might be explained upon scientific investigation, which should be made. J. C. B.

WASHINGTON, D. C., Sept. 18.

MEMORIES OF MASTIGOUCHE.

THIS evening as I fixed my bamboo and lancewood rods to go out of commission and into winter quarters, and remembered how well they deserved the new silk windings and the fresh coat of varnish, together with the little fixings so deftly done, I thought to tell your readers of some of the pleasant times this season has brought to me. I need not repeat the account I gave of my trip to the Mastigouche lakes in the early spring. I then promised myself when the September days came to visit them again. The swift train brought us from our Pennsylvania homes, and the waiting buckboards after a day's ride brought us to our destination, forty miles north of the St. Lawrence, well into the wilderness that stretches unbroken to the Arctic circle. After a good night's rest at the club house, in the early morning we started out. It was a new experience for the ladies, and for Harry and Margaret, while to my two brothers, who had brought their wives and children, it was only a reminder of other days. The party is divided up, and with our rods and landing nets and our large lunch basket, we are seated in our two cedar and single birch-bark canoes, while Pierre, Felix and my Indian guide send us quickly across Lake Seymour to No. 2. We soon reach the inlet, and for a little way slowly sail among the lily pads and pluck the beautiful flowers. A half hour brings us to the portage, then a short walk to our fishing place. While the guides are bringing over the boats we are busy arranging rods and lines, and are soon moving up through the lake casting our flies, but without a single rise. We find the water so low and warm that the guides tell us the trout are in deep water and can only be taken by still-fishing or deep trolling. At the inlet L. and S. anchor their boats, while I, with the Indian in the birch-bark, loth to give up the fly, am slowly paddling around the shore tempting the fish with my most alluring hackle, but all in vain. Soon a shout and a merry laugh comes down the lake and I see Margaret holding her rod with all her strength as a fine trout—her first fish—bends it as he rushes through the water. Before it is landed another rod is springing, and so for an hour the guides are kept busy with the landing net. At last a strong heavy pull and Harry braces himself, his reel does not pay out fast enough and the strong fish draws the tip of his rod down into the water as it rushes under the boat, but like a veteran he bides his time and gives and takes until at last he draws within reach of the net a beautiful 2lb. trout. How proud he was of his catch! how proud I was of my nephew! We are reminded that it is dinner time, and sending the Indian back to the club house with Mrs. R., we started up the river; in several places we had to get out to lighten the canoes so they with the ladies could be pushed over the shallow bars. Some hot coffee and a hearty lunch are quickly spread for us by A. and we are rested for a short walk to the "river pool," where during a former visit in a short time we had taken over seventy fine fish. But not a rise rewarded us this time for our tramp. The sun was setting low and we hastened back and were soon floating down the river. As we entered Lake Seymour the shadows had settled down and our canoes were separated; out of the darkness came the notes of "Home, Sweet Home," while from the shore came the soft echoes; soon we saw the light from the great fireplace in the club house and our first day's fishing was over.

The next day L. and S. visited Lac la Clare, and brought out nearly a hundred trout for the day's fishing. Harry and I, with guides, blankets and provisions, started for the upper camp, but we were greatly disappointed to find so poor fishing on this, one of the best lakes. A short time before a lady from New York in two hours had taken four trout that weighed 11½lbs. We were in hopes we might find some of the same sort.

Our party was to break up, some to start for a trip down the St. Lawrence before they turned their faces homeward, while I concluded to put in all of my vacation here. Before they should start we planned to have another day's fishing at No. 2. Early the next morning we were anchored at the inlet; a number of trout were taken, but our previous visit seemed to have thinned them out. I was trolling in the birch bark along the shore some little distance from the inlet, when my Indian guide quietly dipped his paddle and whispered, "Canoes coming." I listened but could hear nothing. Soon there came in sight around a bend in the river, moving quietly as the shadows that crossed the mountains, two birch canoes. Swiftly they came as the paddles pushed them down the current. Under the slouched hats of the voyageurs we saw the heavy bearded faces of the poachers who had been up the river looking for beaver signs. As they passed those at the inlet a growl was the only response to the greeting of my brothers. For a few minutes the Indian's keen eyes followed, then he said, "I know him," and he seemed to be feeling in his girdle for his knife, as he told me how some years ago the leader had found his beaver traps far away on the St. Maurice, and had broken them all; how for long months he waited for his revenge, then through the wilderness on his snowshoes he took a long journey and found the trapping grounds of his enemy, how for several days he followed the stream until he had destroyed every trap that had been set; then he sent him this message: "My name is Thomas Porquet; you broke my traps; go count your own. If you want to see me I live at St. Thomas-Peterville." Then he quietly moved the boat and I again let out my line. The canoe moved slowly and still as my guide listened to the dip of their paddles long after they had gone beyond my hearing. That night as we sat before the fire at the club house a cedar canoe quietly pulled away from the shore. We guessed their errand as they started for Lake au Sable. In the morning we learned that the poachers did not camp there, but hurried over the divide to the other river. They had recognized Thomas Porquet.

The next day, after seeing my friends seated in the buckboards for their ride to the railroad, R., P. and I loaded our tent and provisions in our canoe, and with our guides started for a lake far up the river. After a long, tedious carry we reached it. Selecting the place for our camp, we left one of the men to gather balsam boughs and fire wood and to arrange the tent, while the rest started out to catch some trout for supper. In a little while the black clouds lifted their heads above the mountains that shut the valley in, and the rumbling thunder started us for the shelter of our tent. Soon the great drops pattered on the canvas, and from the lake came the rattle as they struck the water. A great blazing fire that the storm could not seem to quench lit up the tent. We rolled ourselves in the blankets and were soon fast asleep. In the morning we found that a bear had made us a visit, but the roaring fire the guides had kept piled high prevented undue familiarity with the cans and kettles. We were early casting our flies in the coves, but found that deep trolling was the only way in which we could take any fish. As we sat by our camp-fire the evening before, P. had told us of a strange sight he had seen as he came across the lake. A large school of fish swimming on the top of the water with their backs out of water so that he could see them packed like sardines in a box. In the dusk he was unable to see what kind of fish they were, but plainly saw they were of good size. We hoped in the morning to solve the mystery. We had been in our canoes only a short time when we saw here and there over the lake often a score of these schools in sight at once. We moved carefully toward them or put our boat in their course. As we came near them we found them to be trout; as soon as they saw us, with a swirl that made the water boil, they went out of sight. We repeatedly tried to have them take our flies, making long casts so as not to frighten them, but they always passed the bait unheeded. After they had disappeared we let out a long line, trolling deep and drawing it through the place where they went down, and often took fine gamy fellows. Tom proposed that I "should scratch their backs." A school was passing us some forty feet away, I cast my line, the leader fell right among them; a quick jerk and I hooked one in the back; the only smile I saw upon the Indian's face while I was in the woods with him was as he watched the antics of this trout with his back scratched. At dinner time, after cooking what we wanted, we had twenty-nine fine fish left. The weather was growing warm and we were puzzled to know how to keep them until we should go back to the club house. Tom said as he was coming in he passed a cold spring away back in the woods. In a few minutes he started with the catch, and toward evening returned, after covering them with moss as he laid them on the stones in the cold spring. In the evening we again had good success and brought in a nice lot. As Tom and I were nearing the camp he lifted his paddle from the water and whispered, "Hark." Down the valley came the clear plaintive call of a caribou. We listened until it died away as he passed through a sag in the mountain, and all was still until the call "Come to supper." We recounted the experiences of the day while we sat around the blazing fire. Then one by one we rolled our blankets about us and all were asleep. Toward morning the pattering rain awoke me, and remembering my boots that were hanging outside by the fire, I quietly went out; as I came back I picked my way among the sleepers and happened to put my hand on old Pierre's shoulder, he jumped and grasped his knife. "I thought you were the bear," he exclaimed, and without another word drew his blanket over him and went to sleep thinking of the many tussels he had with them during the forty years he had been hunting and trapping through this wilderness. The morning came, wet and lowry, and we concluded to bid adieu to Camp Richardson. On our way out we stopped at the cold spring; what was our disgust and disappointment to find that the minks had carried off all of our fish but seven. I am not acquainted with the Indian language, but judging from appearances I think the robbers got a good round cursing. A day of splendid sport at Lake Joe and my outing was ended.

Will some of your readers give a reason for the trout going in the schools as I have described; we only noticed it in this one lake and our guides had never seen anything like it before in any of the many lakes in these woods where they had fished for a score of years.

SPICEWOOD.

BIG BLUEFISH.—Just at the close of the bluefish season each year the big ones strike in on the coast and make us a flying visit. This week Mr. Blackford had a lot from Massachusetts which weighed from 12 to 16lbs. each.

CLEARING THE SUSQUEHANNA.—Towanda, Pa., Oct. 12.—On Friday evening a large tent with a huge camp-fire burning in front made a weird and picturesque appearance in the edge of a clump of willows below the bridge on the river bank opposite town. Much curiosity was felt among people on this side. An Elmira *Advertiser* correspondent visited and was introduced to the occupants by Fish Warden Thomas Kennedy, of this place. They were Fish Warden A. Bauer and his deputies, Adam Schwalb, Harry Choon and N. Miller, of Wilkesbarre, out on an expedition against eel weirs, fish racks and all other obstructions to the free passage of fish in the Susquehanna River. Mr. Bauer is acting under authority from H. H. Durr, secretary of the State Board of Fish Commissioners. He left Wilkesbarre on Sept. 15, the party trayeling down the river in two boats with their tent and luggage, camping out where night overtook them. They tore out forty-six eel weirs and fish racks between Nanticoke and Danville, in some places finding five sets of racks alongside each other extending clear across the river. Then the boats and baggage were shipped north by rail to Athens, and after camping on Tioga Point, at the junction of the Chemung and Susquehanna rivers, waiting for lower water, they proceeded down the river in their boats until at the upper end of Sheshequin they found the largest and strongest built set of racks which they had yet encountered, and set about destroying them. They were built of logs and stone raised step fashion, so that the fish would be caught either at low or high water. There were five series of these racks built with walls in the shape of a letter V, with the narrow end down stream, so that the fish were caught in the racks or nets at that point. This set of racks has been built for several years, and, as the owner of them claimed that they were chartered by the State, the local fish wardens have not dared to molest them. Chief of Police C. W. Dimmock and Thomas Kennedy, the present fish wardens, were sent out by the sheriff a couple of weeks ago and destroyed all the racks between the State line and the lower end of the county, excepting the chartered rack known as the Snyder rack. Legal advice had been sought, but it was not made clear that they had a right to destroy it, and they were ordered by the sheriff not to touch it. Mr. Bauer's instructions were to clear out everything of the sort, and he did good work in doing so. It took himself and associates some time to pull down the Snyder rack, but he left nothing excepting a shanty which had been built on stilts in the water and contained a stove and some clothing.

THE LEWISTOWN RESERVOIR BASS JIGGING.—Huntsville, Ohio, Oct. 13.—During the dry summer season the Lewistown reservoir, containing about 13,000 acres, which is the feeder of the M. & C. Canal, and supplies water for mills and factories, was drained so much that only the Miami River kept its place in this large fish pond. The reservoir was well stocked with fish, especially black bass, but the gate being opened to its last notch, the fish went with the water through the gate down into the Miami River. Then the rains came, the gate was put down, the reservoir and river rose, and the fish, true to their instincts, sought their homes in their native waters, and ascended the stream, only to be hived in a small basin or hole at the outlet. This little basin did not cover more than a quarter acre. Many thousands of fish were gathered in this small basin. I stood upon the banks a day or two ago and witnessed the most fearful slaughter and wanton destruction of the noble, gamy bass. A hundred people were equipped with gangs of hooks so arranged that they were veritable grabhooks (three in a bunch); hundreds and thousands were impaled and landed, and as many more were torn and lacerated and escaped only to be rehooked or die. This was what might be called "hogging" fish. Sportsmen and gentlemen anglers were disgusted with the sight, and stood with their hands in their pockets, knowing that the law permitted fishing with hook and line, and that they could not interfere. A way will be found (they think) to break up this terrible slaughter. It is safe to say that not less than 10,000 black bass have been taken in this way within four or five days. During this great slaughter your correspondent found nine counties represented in the line of these destroyers of the people's fish food and the true sportsman's favorite game fish.—HUNT.

DEATH OF ANDREW CLERK.—Andrew Clerk, of the firm of Abbey & Imbrie, died Wednesday, Oct. 13, at his home in Jersey City, N. J. Born at Ballater, Aberdeenshire, Scotland, Nov. 30, 1812, he came to America in 1835 and settled in Jersey City, where he continued to reside for the rest of his life. He was by profession an architect and civil engineer; the firm of Clerk & Bacot made the maps to which nearly all titles to real estate in Hudson County, N. J., refer. In 1857, associating with him his brother, Wm. F., he formed the firm of Andrew Clerk & Co., fishing tackle dealers, in this city, succeeding to the firm of J. & T. Warren, which had been founded so far back as 1820. The establishment of the Clerk brothers, of No. 48 Maiden Lane, became the headquarters for gatherings of the salmon anglers of the older school. In 1875 the firm of Abbey & Imbrie was formed; in this Mr. Clerk became special partner, and in 1881, after the death of Mr. Abbey, general partner. Mr. Clerk was himself an enthusiastic and accomplished angler. For a number of years he held the lease of a salmon river in Canada; but of late years his favorite fishing waters have been among the Thousand Islands, and it was here, last September, that he was taken ill with malarial fever. Mr. Clerk engaged in a number of enterprises, and held many positions of trust. He was President of the Institution for Savings of Jersey City and a Director of the First National Bank of Jersey City. He was a Free Mason, a member of the First Presbyterian Church of Jersey City, and Vice-President of the New Jersey Club.

BASS IN THE UPPER DELAWARE.—Fishing on the Delaware this year has not been up to the standard of previous seasons, the water has been lower than for many years, occasioning much difficult rapid-shooting in the pursuit of likely eddies. The fish also have taken hold so gingerly this season that unless a chromo was thrown in gratis with the bait, there generally was ample time for napping between the acts. The writer, with Shafer of Lackawaxen, one of the best guides in that neighborhood, succeeded in landing twenty bass of fair size, though nothing over three pounds was captured at Lackawaxen this summer.—W. H. R.

NETS IN GREAT SOUTH BAY.—At a meeting of the Supervisors of Suffolk county, N. J., held at Riverhead on Monday, Oct. 12, Supervisor Robins, of the town of Islip, introduced the following: "An act for the restriction of net-fishing in Fire Island Inlet, Main Channel and Dickerson's Channel and East Channel. Sec. 1. It shall not be lawful for any person or persons to use nets of any description in the waters or channels or head of the channels in the Great South Bay known as follows: Fire Island Inlet from the bar on the south to the head of the main channel on the north, Dickerson's Channel from Main Channel to where it intersects with West Whig Inlet Channel, East Channel to Range Channel, opposite East Fish Factory. Sec. 2. Any person who shall violate any of the provisions of this act shall on conviction forfeit and pay the sum of —— dollars and shall be deemed guilty of misdemeanor. Sec. 3. Any person may in his own name prosecute before any justice for and recover the penalty specified in this act and on recovery shall receive the penalty after deducting the expenses. Sec. 4. This act shall take effect ——. The authority to pass this act is found in Chapter 194, Laws of 1849 (Section 4, subdivision 13) and Chapter 842, Laws of 1875." Several persons spoke for and against the passage of this act, but before a vote was reached the discussion was cut off by a motion to adjourn to Monday next. There seems to be a fair chance of its becoming a law.

A "JUMBO" BASS.—Castleton, Vt., Oct. 8.—*Editor Forest and Stream:* In answer to your inquiry about a large black bass which was reported in a Troy paper, under the head of "A Jumbo Bass," I will say: I never wish to say anything in relation to fish which I cannot prove. I never saw a black bass, unless the fish which we call "Oswego" bass are black bass. I am told that black bass never grow to over 6lbs, weight unless in the Southern States. I leave this matter to those who know more of the different species than I do, and call those in our waters here (Bomoseen Lake) "Oswego bass." I know that the fish which I found was a bass, an Oswego bass, we have no other bass save the common rock bass in our lake. I can furnish affidavits from fifty good truthful men, some from New York, who saw the dead fish, to sustain my statement, and Mr. S. S. Goodwin held the steelyards. Mr. Goodwin will swear that the fish weighed 25½lbs. I am ready to answer any other questions you may send regarding this.—ALBERT H. SMITH, Fish Warden. [The name "Oswego bass" is often applied to the large-mouth black bass and this fish is as much a black bass as the small-mouth is. Anglers generally have dropped the name of "Oswego," except in a few localities where it lingers temporarily. The fish was a most extraordinary one for a black bass of either species.]

THE ST. RAYMOND DISTRICT.—Tranie's "Notes of Canadian Angling," in your issue of the 7th inst., are so interesting that I beg leave to ask him through your columns to give a little more information about St. Raymond and its fishing. I should like to know if there are any lakes or ponds near the village where trout or bass can be caught, and if so, the size of the fish. I should also be greatly obliged for the names of the proprietors of several of the best boarding houses.—CONSTANT READER. Our correspondent replies to the above: There are no ponds or lakes in the immediate vicinity of the village where good fishing can be had. I have been told wonderful stories about the size of trout to be taken in a lake about half a day distant. Near the Little Saguenay and Piguemouche there are several good lakes which the guides will point out. I cannot speak of any of them by personal experience, except that I saw some fine trout (nearly 3lbs. fish) which were taken in a lake near Piguemouche. I do not believe there is any bass fishing. I stayed at Labrique's, opposite the station. There are about half a dozen of the family of Plamoudon who keep boarding houses.

NORTH CAROLINA ANGLING QUERIES.—Fort Stanton, N. M.—I would like some information about the fishing in the western Piedmont region of North Carolina, say from the Yadkin west to the Blue Ridge. Will some of your correspondents who live in that section kindly answer the following? First—Is there good black bass fishing near Morganton in the Catawba? Second—How is the fishing in the vicinity of Newton, Shelby and Rutherford? Third—Are the streams in Burke and Catawba counties good for fly-fishing for black bass, that is, are they swift, rapid streams, with occasional shoals and rapids? Fourth—Have any of the rainbow trout (*Salmo gairdneri irideus*)—popularlarly and wrongly miscalled California trout, as they are native to other States and territories beside California—which were planted in the Catawba eight or nine years ago been caught, and are they at all plentiful? Fifth—Are there many pickerel (*E. reticulatus*) in the Upper Catawba? Sixth—Are the game fish decreasing much in the absence of fish laws and the constant fishing of the negroes and use of "spring nets" and traps?—CYRTONYX.

AN ANGLER'S PERIL.—Following are the details of the narrow escape from drowning of Congressman Knute Nelson, at Alexandria, Minn., on the 11th inst., as reported in the Madison, Wis., *Journal:* He was fishing in Lake Victoria in a boat by himself. Just after dusk, while pulling in a fish, he tripped and fell into the lake. He is a powerful man and good swimmer, but was so hampered by his clothing that he could not regain his boat. He managed to keep afloat, however, and shouted for help. For a long time his cries attracted no attention, but a man, half a mile away, finally heard them and ran to the lake. The boat had drifted to the shore and the rescuer rowed it out to the middle of the lake, finding Mr. Nelson in an insensible condition but still floating. For several hours three physicians worked on Mr. Nelson, and finally succeeded in snatching him from the jaws of death, but it was a narrow escape. A remarkable feature is that he was in the water about an hour and was insensible when found.

WYOMING GRAYLING.—There were caught in July, 1886, in the Smith Fork of Greene River (Wyoming Territory), at the base of Uintah Mountains, two grayling, one ¾lb. and one 2lbs., taken on the golden-rod fly by Prof. W. M. Sloane, of the Princeton Scientific Expedition. These fish fought very hard, and apparently would take no other fly.—H.

Camp-Fire Flickerings.

"That reminds me."

192.

YESTERDAY A. and myself gave a forenoon to the partridges. We found them few and far between, only getting one. The gray squirrels, however, were quite plenty. We traced one in a very tall pine, but for the life of us could not see him, so off came my shooting coat and up I went to dislodge him. When I was almost to the top of the tree, the squirrel took a flying leap for a maple twenty feet away. A. fired one barrel while gray-coat was in the air, and the other after he had got well into the maple, missing both times. I made the woods ring with laughter while still well toward heaven in the pine, when A. yelled: "Get your gun, Charlie, shoot him quick, he's going for another pine." MOSE.

BOSTON, Oct. 10.

THE NEW YORK COMMISSION.

THE fourteenth report of the Commissioners of Fisheries of New York, just issued, is a biennial report covering the years of 1884 and 1885, ending with Dec. 31 of the latter year. It is a very complete record and covers 209 octavo pages. The results are tabulated and therefore are in more perfect form than in previous reports, in which they have been, in some instances, spun out. The several divisions are: The report proper of the Commissioners, which covers condensed statements of the production of the different hatcheries, expenditures, amendments to the game law and much other information; next come reports of the superintendents of the State hatcheries at Caledonia, Cold Spring Harbor, Adirondack, and Clayton; reports of private hatcheries at Palenville, Schroon Lake, Bisby Club and the Fulton Chain; report of Commissioner Sherman on the location of the Adirondack hatchery; the official proceedings of the Commissioners; reports of the game and fish protectors; abstracts of expenditures at the different stations; table of carp distribution; answer to inquiries, etc.

In speaking of fishways which were partly built on the Oswego and Seneca rivers in 1883, by the State Superintendent of Public Works and then left, the Commissioners say:

"The law requires that these fishways shall be maintained by the Superintendent of Public Works. The Commissioners will call the attention of that officer to the subject.

"It is the duty of the Commissioners of Fisheries to put up the signs spoken of. They have not done it hitherto for the reason that they have had no funds applicable to the purpose. They have now, however, a small reserve fund, out of which they will provide for erecting the signs as soon as the season will permit.

"The fishway in the Mohawk River below Schenectady is also reported out of order, and for that cause useless. The Commissioners will cause an official inspection to be made of these works next season, and make note of what is needed to make them effective for the purpose for which they were built.

"These structures seem to be waifs, under the responsible care of nobody. The Legislature, having appropriated so much money to build them, ought to put them in charge of some department that will take proper care of them. The Commissioners, however, doubt that fishways in this State will be of sufficient utility to compensate for the cost of building and maintenance. The same amount of money expended for hatching fish to be deposited at the head of the streams will do a much more valuable service than fishways on those streams."

There is a notable improvement in nomenclature used by the Commissioners in speaking of fishes, as compared with former reports, thus bringing them into line with the naturalists and intelligent anglers, for instance, dropping the term "California trout," which might cover several species which exist in that State, for the more specific term, rainbow trout; and there is a disposition to speak of pike-perch instead of "wall-eyed," "blue" or "yellow pike." We shall not be surprised to see further advancement in this line in the next report by the exclusion of the names "Oswego" bass and "salmon trout," and the substitution of the proper terms, big-mouth bass and lake trout. While on this subject we would remind the Commissioners that the printer has located one of their hatcheries at "Cold Spring," which is a large town on the Hudson River, instead of at Cold Spring Harbor, a smaller place on the north shore of Long Island. The portion relating to the deer laws is very ably written, and fully indorses the passage of the anti-hounding act of 1885. Concerning the cost of production and expenditures the Commissioners say:

"By examining the tables given of production and expenditure, it will be found that the cost of hatching 100,000,000 fish, including expenditures for real estate, buildings and permanent appliances, as well as labor, has been, in round numbers, $250,000. This is one-quarter of a cent for each fish produced. Estimating that of the fish planted, one-fourth only (which is a very small proportion) live to maturity, we have 25,000,000 of fish costing one cent each. The lowest estimate that should be put on the value of these fish for market is an average of fifteen cents. Thus the public has a return for the money appropriated for artificial fishculture of fifteen hundred per cent, or for the expenditure of $25,000 a return of $3,750,000 in production.

"If there is any other industry fostered by the State government that pays like this, let it be demonstrated."

In the report of the superintendent of the Caledonia station, he says:

Of stock fish we have on hand at present:

9 ponds containing	12,000	brook trout.
¼ ponds containing	10,000	Cal. Mt. trout.
1 pond containing	3,000	McCloud River trout.
3 ponds containing	8,000	hybrids (¾ brook trout and ¼ sal. trout).
1 pond containing	1,000	salmon trout from 5 to 18lbs.
2 ponds containing	5,000	salmon trout three years old.
1 pond containing	3,000	German carp three years old.
1 pond containing	2,000	German carp two years old.
3 ponds containing	....	German carp.
Total	44,000	

The above number we have carefully estimated and are nearly all breeding fish raised from the egg.

Besides the above we have—

Yearling brook trout	5,000
Yearling hybrid, ¾ brook trout	5,000
Six months old brook trout	5,000
Six months old California trout	5,000
Two year old hybrids (¾ salmon trout, ¼ brook trout).	2,000
Two year old hybrids (½ salmon trout, ½ brook trout).	2,000
Total	24,000

Here we have the worst collection of popular names in the book, for probably no man but the superintendent knows what are meant by "California mountain trout" and "McCloud River trout," either of which may be included in the term "California trout," while "salmon trout" and "Oswego" bass are commonly spoken of. As California has four or five of the large-scaled black-spotted trouts, and none of them bear these names in their native lands, this nomenclature is something of a puzzle, as is also the term "German trout" for the brown trout, when there are two trouts from Germany now in America. From the Caledonia hatchery there were distributed in 1884 3,013,000 lake trout, 1,022,000 brook trout, 2,185,000 California trout, and 50,000 hybrids, brook trout and lake trout, 499,300 eggs of the different species named, 1,204 mature fish from Western Wide waters, bass, perch, catfish, etc., and 1,467,000 shad deposited in the Hudson. In 1885 there were 1,200,000 lake trout, 1,031,000 brook trout, 1,676,000 "California" trout, 250,000 whitefish and 65,000 hybrids, besides 464,000 eggs of the different species, 291 carp, 905 mature fish from the Western Wide waters and 1,728,500 shad deposited in waters of the State.

The superintendent of the Cold Spring Harbor station reports that the same arrangement with Prof. Baird, the U. S. Commissioner of Fisheries, to the effect that a share of the expenses is borne by the general government in consideration of hatching certain fishes, mainly salmon, still exists, and that since the last report the station has been furnished with twenty-five McDonald hatching jars by the U. S. Commission, which are used entirely in hatching whitefish, smelt, shad and in the salt-water experiments, and that one man using these jars can do the work of three under any system where the eggs must be removed by hand. During 1884 the hatchery was run with the assistance of one man and a boy, but the man, Mr. F. A. Walters, was called by the Commissioners to superintend the new hatchery in the Adirondacks, and two new men were substituted for the boy. In 1884, 500,000 eggs of the Atlantic salmon were hatched and distributed in the waters of the State, and on Oct. 9, 1885, Mr. A. N. Cheney, of Glens Falls, wrote that the fry were to be seen in great numbers in Clendon Brook, near that place, and sent specimens to Mr. Blackford. During 1884 78,000 shad eggs were hatched in spring water and planted in the Nissequogue River, on Long Island, but a trial of the eggs made later failed entirely, and there is no reason given for the failure, whereby any estimate of the value of spring water for hatching shad can be made. This is a serious omission for the fishculturists who seek information regarding the proper temperature of waters for hatching shad. An account of the success at this station is given and is followed by the following tables of hatching and distribution: Penobscot salmon in 1884, 428,200; in 1885, 419,550; landlocked salmon, 1884, 50,000; 1885, 19,500; brook trout, 1884, 7,000; 1885, 16,300; blue-back trout, 1885, 11,000; Rangeley brook trout, 1885, 19,500; brown trout, 1884, 40,000; 1885, 28,900; rainbow trout, 1884, 11,500; 1885, 14,500; Lochleven trout eggs, 1885, 90,000; eggs of the whitefish, 1884, 850,000; 1885, 990,000; smelt, 1885, 100,000; shad, 1884, 72,000; tomcods, 1884, 38,000; 1885, 750,000.

The superintendent of the Adirondack hatchery reports that between his appointment as superintendent and the spawning season of trout, the time was limited, as he did not arrive at the hatchery until Oct. 3, 1885. He began visiting the lakes and becoming familiar with the country, and in 16 different lakes 11 spawning beds were found. The hatchery was not at this time completed, and after his arrival the troughs were made and tarred, and while this was in progress the spawning season began, and all the eggs taken were placed on trays which were made into crates and set in the stream. He says:

"The crates held ten trays each and were make by taking four pieces of pine ten inches long by one inch thick and two inches wide for corner pieces, these were held together by slats along the sides and across the ends, the slats being two inches apart. There was a free circulation above and below each tray, and by turning a screw in the upper or lower slat as occasion might demand. the trays could be removed as easily as a drawer. On Oct. 15 we set our lake trout nets in Lake Brandon, but did not succeed in taking any spawn until Nov. 10. We were in the habit of visiting these nets through the night, usually at 10 P. M., and 2 A. M., and again at six in the morning. We went to the net on Nov. 13; they were then all right, but when we returned to them four hours later we found them cut up into a dozen pieces and scattered about the lake."

Mr. Walters immediately informed the Commissioner in charge, and a few days later posted a notice which gave the law creating the Adirondack fish hatchery, and the penalties for disturbing or injuring public property. The Saranac hotel keepers and guides came to his relief and pledged themselves to use every lawful means to bring the perpetrators of such outrages to a speedy punishment, and this pledge was also printed and posted. After this the dam broke, and the trout eggs, both lake and brook, were again placed in crates in the streams in order to save them. Superintendent Walters says that any amount of spawn of the frost fish can be obtained, as they are very plenty and easily caught. He says:

"The number of eggs taken were 9,000,000. As the glass hatching jars intended for hatching them did not reach the station, they were kept in troughs on trout trays but did not do well. I found it very difficult owing to their small size to care for them. I hope another year to have the necessary jars for this work. I have hatched whitefish in them at Cold Spring Harbor and have found them to answer the purposes admirably."

Mr. M. B. Hill, superintendent of the Clayton hatchery, reports that he has been in the employ of the Fish Commission since Oct. 1, 1885, and that he has taken lake trout spawn in Lake Ontario and also whitefish and cisco spawn, and that he has labored under many disadvantages; but has hatched 500,000 lake trout, 500,000 whitefish, 100,000 brook trout, 20,000 hybrid trout, and 1,000 hybrids from the whitefish and cisco.

After the report of the superintendents of the private hatcheries and of the game protectors we come to a "Report of the Commissioners of Fisheries in pursuance of the provisions of Chapter 643 of the Laws of 1873." In this report the Commissioners say their attention has been called to an official notification from the Comptroller to a law which requires every institution entitled * * * to receive money from the State to make an annual report to the Legislature, etc., and then without explanatory reasons why only biennial reports have been made for several years past, an account of moneys expended during the year ending Dec. 31, 1885, is given. This is the first time that the Commissioners have ever reported their expenditures in detail, and to those who care to look into those things, it will be found interesting.

Mr. E. G. Blackford makes a detailed report of the distribution of carp received in 1884 and 1885 from the U. S. Fish Commission, and distributed by himself. This shows a list of 245 persons who have received 6,210 carp for waters within the State. Some miscellaneous matter is added and the report as a whole is very instructive and is put in concise shape. The plate showing the hatchery at Caledonia is well executed, but the cuts of the Lake Brandon hatchery and dwelling are exceedingly crude. The report is put in such compact shape as to enable a reader to investigate any portion of the work by a glance at the tables which are somewhat of a new feature in State reports.

A FISHWAY AT SCHENECTADY.—Col. M. McDonald is now putting up an improved form of his fishway over the canal dam on the Mohawk, at Schenectady, N. Y. This one will be a type of those which he proposes to erect on several of the rivers of the State. The work is well under way and in a few days the structure will be finished and open for inspection and criticism. Those who have seen the model of the McDonald fishway in the central hatching station at Washington, where a small boat, or rather two

boats, held apart by a board, actually go up the fishway propelled by the jets of water from the sides, will hardly see how it could be improved. A large one is needed at Cohoes and should be built, while the upper Hudson is sadly in want of fishways. It is not enough to build good and efficient fishways and then neglect to keep them clear, but some one should be employed to attend to them and see that they are in working order and that no fishing is permitted in them nor within the distance of them which the law prescribes.

FIXTURES.

DOG SHOWS.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel Club. H. W. Wilson, Secretary, St. Johns, N. B.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 14 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4236.**

ENGLISH JUDGES ABROAD.

A SUFFICIENTLY soothing duration of time has elapsed, since the last great continental and American shows, to permit us to express a few thoughts upon the subject of English dog judges abroad without appearing to be making pointed and personal references. Not in all instances, we are relieved to say, but in far too many, have foreign committees who desired the presence of an English judge made disastrous selection from the ranks of our kennel men.

At times these committees have been led away by names that have long outlived their reputation in this country, and at other times their choice has lain upon the business dog-men who possess, with satisfaction to themselves, a certain notoriety here which abroad is easily mistaken for fame. However much we may be disheartened and disgusted, we confess to feeling but little surprise when after these foreign shows where such English judges have officiated, ignominious little bits of news leak out through the press, and more often through private correspondence. On the Continent and in the United States, English dog-breeders, exhibitors, and judges have been looked up to as the authorities in canine matters, and when members of our kennel world have visited foreign shows in a judicial capacity, they have been invariably received and treated with the highest consideration.

The classes who keep dogs abroad are usually of exalted social standing, and to them it is a rude shock when they find that their English guests combine with the appearance of a coachman or a reporter of coroner's inquests the needy tactics of a commercial traveler and the behavior of a Bacchanalian bargee.

We have on occasion been consulted upon the choice of English judges for abroad, and the application has been accompanied with the plaint: "Recommend to us men who are above running from one foreign nobleman to another, booking with nimble pencil orders for dogs, 'sporting or otherwise: tell me what you want and I'll get it for you when I return. Just say what's your figure, and a dog or bitch?'"

Above all, our friends abroad say they require men as judges who, for the time being at least, will act like gentlemen. It is a miserable scandal that shameless fee-snatchers should have exposed our kennel world to such reproaches and such taunts. We are confident of giving voice to the feelings of our readers when we beg that those unfortunate persons who are incapable of keeping themselves under control may not be regarded as fair samples of the whole community, and to this we must also express our concern that men so wanting in this virtue and self-respect should ever have been given the chance to slur the honor of English judges by the public exposure, in the very performance of their duties, of pitiful personal infirmities. This is a very grave matter, and how far its seriousness extends can only be fully realized by those who travel and miss the favorable regard that was formerly felt for our doggy countrymen. We have been extremely chary of giving advice, when solicited, upon the choice of judges, as the responsibility of doing so was more than we desired to assume. But we have much satisfaction in informing foreign secretaries that they have an accessible guide to hand whenever they require the services of Englishmen in their show rings. They need only refer to the recent catalogues of shows held by the Kennel Club. They will find there in the lists of judges the names of gentlemen who have been selected (by a body possessing special facilities for acquiring correct information—the Kennel Club committee) as being worthy of the exhibitors' confidence alike for their integrity and their power to fill the important office of judge in a capable and creditable manner.

In addition to this we would urge our foreign friends to take the additional precaution of inquiring into the characters of the persons their choice inclines to. This can be done of any responsible official in our kennel world, the secretary of the Kennel Club, for instance. By this means they would avoid the chance of selecting men who have mishaved themselves in our own shows or who have been suspended for discreditable conduct in connection with dogs. There are many who, by the high character they bear in this country, merit the honor of being chosen to represent the English kennel community abroad; with little trouble we could compose a list of them, but such an undertaking would not unlikely become an invidious one. We may, however, be pardoned by Mr. Redmond for publicly mentioning him, in order to state that in such a list his name would find a place, and in order to congratulate our American cousins upon having secured in this gentleman one of the judges whom we in England delight to honor. We have done; we have said what we have long contemplated saying. We have owned to past humiliations, it is for our friends abroad to profit by our candor, it is for them to spare us in the future the mortification of "excusing them whom we accuse."—*The Stock-Keeper and Fanciers' Chronicle.*

THE WESTERN FIELD TRIALS ENTRIES.

BELOW we give a list of the entries for the All-Aged Stakes of the Western Field Trials Association to be run at Abilene, Kan., Nov. 8. There are twenty-eight in all, just double the number last year.

POINTERS.

ROD (Castleman Kennel), liver and white dog (Meteor—Dell).

KRUPP (Castleman Kennel), liver and white dog (Meteor—Dell).

NELLIE F. (Castleman Kennel), liver and white bitch (Croxteth's Ranger—Fannie).

BULL'S EYE (Dayton Kennel Club), white and liver dog (Meteor—Diana).

RUMPTY (Dayton Kennel Club), white and liver ticked dog (Meteor—Diana).

PAP SMIZER (Dayton Kennel Club), white and liver dog (Meteor—Diana).

KING SHOT (Dayton Kennel Club,white and liver ticked dog (Meteor—Diana).

CORNER STONE (J. W. Blythe), liver and white dog (Meteor—Accident).

CROW (J. R. Daugherty) black dog (Starr's Broncho—Waddell's Fan).

GRAPHIC (Graphic Kennel), liver, white and ticked dog (Bonus Sancho—Fursdon Juno).

LAD OF BOW (Graphic Kennel), liver, white and ticked dog (Graphic—Climax).

BRACKET (Graphic Kennel), liver, white and ticked dog (Graphic—Bloomo).

REVEL III. (Graphic Kennel), liver, white and ticked bitch (Graphic—Beryl).

LASS OF BOW (Graphic Kennel), liver, white and ticked bitch (Graphic—Climax).

NELLIE TRUE (A. J. Gleason), white and liver bitch (Robert le Diable—Dixie).

ENGLISH SETTERS.

BRIDGEPORT (E. E. Pray), black, white and tan dog (Dashing Monarch—Vannette).

DON BURGLAR D. (G. H. Laughten), black, white and tan dog (Burglar—Queen Dido).

COUNTESS LLEWELLIN (G. H. Laughten), lemon and white bitch (Druid—Princess Draco).

BLITZ BURGLAR D. (W. B. Smith), black, white and tan dog (Burglar—Queen Dido).

DICK BERWYN (H. P. Dillon), black, white and tan dog (Dashing Berwyn—Vanity Fair).

SPOT BELTON (J. I. Case, Jr.), blue belton bitch (Dick B.—Belle Belton).

DICK B. (J. I. Case, Jr.), black and white dog (McKinney—Flossy).

KING BELTON (J. I. Case, Jr.), blue belton dog (Count Noble—Rosalind).

PEARL LAVERACK (A. L. Campbell), lemon belton bitch (Thunder—Princess Belle).

DICK T. (N. B. Nesbitt), black and white dog (Cashier—Flake).

LUFRA (N. B. Nesbitt), blue belton and tan bitch (Dog Whip—Juno).

NATALIE (J. Hayward, Jr.), black, white and tan bitch (Gladstone—Donna J.).

IRISH SETTERS.

Patsy D. (R. C. Van Horn) dog (Lord Dufferin—Queen Bess).

GREENSBURGH DOG SHOW.

Editor Forest and Stream:

The bench show held at Greensburgh last week in connection with the bounty fair was a decided success. The show was limited to dogs owned in the county and was tried as an experiment. The result was a surprise to the management, as the dogs proved to be the leading attraction of the fair. There were 125 entries, and for a first show they were a very good collection, many of them being good enough to show almost anywhere. Next year competition will be open for the entire State and perhaps for the world. Should the latter be the case I have no doubt that a capital show will be the result. The judging was satisfactorily performed by Mr. Chas. L. Dick, of Johnstown, and Mr. Joseph Lewis, of Cannonsburg. Below I give the

AWARDS.

SETTERS.—*Dogs:* 1st, G. N. Beckwith; 2d, C. F. Ehalt. *Bitches:* 1st, J. C. Head; 4d, T. F. Cummings.—PUPPIES—*Dogs:* 1st, J. C. Head; 2d and very high com., J. A. Hartman. *Bitches:* 1st, J. A. Hartman; 2d, J. C. Head.

POINTERS.—*Dogs:* 1st, J. A. Hartman; 2d, D. Shaner. *Bitches:* 1st, G. N. Beckwith; 2d, withheld. *Puppies:* 1st, G. N. Beckwith; 2d, withheld.

SPANIELS.—1st, withheld; 2d, E. W. Keenan.

FOXHOUNDS.—*Dogs:* 1st, 2d and high com., C. S. Vannear. High com., J. A. Showalter. *Bitches:* 1st, C. S. Vannear.

BEAGLES.—1st, withheld; 2d, J. A. Showalter.

COLLIES.—*Dogs:* 1st, withheld; 2d, R. Tyler. *Bitches:* 1st, withheld; 2d, A. C. Cochran.

BULLDOGS.—1st, withheld; 2d, B. W. Jones. Very high com., J. Jamison.

NEWFOUNDLANDS.—*Dogs:* 1st, S. Brown. *Bitches:* 1st, withheld; 2d, W. A. Clark.

ST. BERNARDS.—Prizes withheld.

GREYHOUNDS.—*Dogs:* 1st, A. B. Moore. *Bitches:* 1st, withheld; 2d, D. M. Wineman.

SCOTCH TERRIERS.—1st, J. Fess; 2d, S. G. Brechbill. High com., G. Brechbill.

YORKSHIRE TERRIERS.—1st, J. Thomas.

BLACK AND TAN TERRIERS.—1st, withheld; 2d, J. Dow.

SKYE TERRIERS.—Prizes withheld.

MASTIFFS.—*Dogs:* 1st, J. W. Little; 2d, J. W. Overholt. *Bitches:* 1st, F. Denny; 2d, J. W. Overholt. Very high com., J. W. Little. High com., J. C. McClure.

DALMATIANS.—1st, withheld; 2d, T. G. Bowie.

LADIES' PETS.—1st and very high com., Mrs. W. Evans; 2d, J. Zimmerman.

TRICK DOGS.—1st, withheld; 2d, A. Foster.

CANNON.

CANNONSBURG, Pa., Oct. 18.

THE IRISH SETTER.

BY a late issue of your publication, writes "Mont Clare" in the *Kennel Gazette*, I see that Arnold Burges is out with another of his spasmodic attacks on Irish setters, and endeavors to explain to the Rev. Robt. O'Callaghan a few points of which he thinks the latter gentleman ignorant. At the same time, evidently fearful lest he be considered either ignorant or prejudiced in what he writes, he informs his English readers of his own great experience with the red dogs in the field, on the bench, and as an importer and breeder of the race. It is passing strange that a man can see no good in anything except that which he may advocate or possess, and that he will permit the love of seeing his theories in print, as from a great authority, get the better of his honest, fair opinion. Mr. Burges is an agreeable and fluent writer, and has for a number of years written extensively for the sporting press on matters canine. Some of his theories have been good, and others the most foolish and inconsistent ever put before the public. Where one writes so much, there must of necessity be a good deal of chaff mingled with the wheat, but if it were possible to avoid exposing one's own inconsistency, it would be well to do so. When Mr. Burges had Irish setters in his kennel and for sale, there was no more jealous champion of the breed, and he used to assert they were not headstrong, but possessed all the qualifications of first-class field dogs; furthermore, he insisted that he owned the best specimens of the day. Believing in him, then, and thinking he really meant what he wrote, picture the inconsistencies of his later writings. He tells his English readers that he gave the Irish up for want of field merit; if he did, then the dogs he possessed must have been poor fielders, and I cannot see how he could have been honest in his opinion, as then expressed of their superior field qualities. Mr. Burges, writing of Irish setters in his series of articles on "Sporting Dogs in America," offers what purports to be an honest, disinterested opinion of their field qualities, and to illustrate permit me to quote from this same Mr. Burges's opinion of the breed when he had them in his kennel and for sale. He writes:

"I am not without experience of well-bred Irish setters, as I shall presently show, and my experience is that there are less good setters among the Irish than in any other breed."

And when this gentleman was in the midst of this experience, he wrote:

"Deservedly popular with the sportsmen of all countries is the gallant Irish dog which has done so much to make Ireland famous. Whether upon his native bogs, or transplanted to England or to this country, he has no superior for field qualities of nose, pace, endurance and style of work. In point of purity of blood and length of pedigree, the Irish setter stands at the head of all sporting dogs, having existed in some old Irish families for over a century."

Now I call that high praise from one who has had such great experience as Mr. Burges assures he has had, and am willing to place it against his opinion now that he is having no experience with the breed. Again he writes:

"I have seen Irish setters, descended from the best strains, that had to be re-broken at the opening of each season, and even then made more flushes than points from their rattle-headed way of going."

And yet, formerly he stated:

"A very common complaint against these dogs is that they are so wilful and headstrong that they require breaking at the opening of each season. On the contrary, we have not found this any more marked in the Irish than in any other breed of setters. Unquestionably the Irish setter has great dash and courage, and these, when undisciplined, will make him more wild than a dog of more moderate temper. Dogs which are not broken till fully matured, may, and probably will, be more difficult to break than those of quieter disposition, but as an offset to save this we have ever found Irish whelps easier to break when young than any other dogs, and once thoroughly broken they keep their breaking as well as any breed we have ever shot over. To bring up from a whelp and to make a thorough all-day practical worker, we prefer the pure Irish dog to any we have ever seen. They are ever ready to go, never grow faint-hearted and weary just as the sportsman gets among birds after a long fruitless hunt, are affectionate and sprightly in disposition, richly colored and all over a game sporting dog."

Did ever a man eulogize the Irish setter more highly than Mr. Burges when he owned the breed? Does any one now have more to say against the gallant red dog than he since he has become interested in another strain? Even his quotations from "Stonehenge" and Laverack as detrimental to the breed, are far-fetched and weak compared with his quotations from the same authorities in its favor, and he omits "Idstone" entirely, who says, "No better breed exists." In short, Mr. Burges in favor of the breed fairly smothers Mr. Burgess against the breed, and he can never write enough to blot out the eulogistic opinions from his pen which I have quoted. A breed never existed, does not exist, and I doubt if it ever will exist superior to the Irish setter as described by Mr. Burges, and his assertion that he was forced to give him up by the superiority of the Llewellin is idiotic. If the Llewellins were so much superior, then what he wrote of the superior qualities of the Irish setter was absolutely false, and he knew it. If he did not believe what he wrote then, how can he expect any one to put unquestioned faith in what he writes now? Was it ignorance or prejudice that made him soar so high in his praise of the superior field qualities of the Irish setter, and which is it now that brings him down so low in his condemnation of the breed? If Mr. Burges endeavors to point out some things to Mr. O'Callaghan that he does not know, I likewise have a few facts that the latter gentleman does not know, and that evidently Mr. Burges does not wish him to know. Mr. Burges reminds me of a certain writer who once, in his labored effort to assail the Irish setter, glowingly described a heat between two dogs, attributing the defeat of the vanquished to his having a dash of Irish in his veins. It read beautifully, and fairly made the blood tingle, but sad to relate, although purporting to be a fact, was only the work of imagination, for such a heat as the writer described never took place between the dogs he mentioned, and I took the liberty of making his error public. The writer had simply let his imagination and dislike of the Irish setter run away with his judgment and the facts, and Mr. Burges has jumped into the same boat. In that part of his screed which refers directly to my own dogs and experience, he replies to the Rev. R. O'Callaghan:

"Yes, I do know Mont Clare. * * * I was breeding and breaking dogs, with ample means at my command to get the best specimens, years before Mont Clare was far advanced in boyhood. * * * I have imported as many (and I think more) Irish setters than Mont Clare. * * * One of them, too, was good enough to lower the colors of Mont Clare's Elcho (the best dog he ever owned in the Irish line) under one of the best judges in America."

There is no doubt that Mr. Burges is an older man than Mont Clare, and he may have had more ample means at his command, but he must have been injudicious in purchasing his Irish setters. For if the Irish setter, as he once told the public, "has no superior for the field qualities of nose, pace, endurance and style of work," and he had ample means at his command to get the best specimens, then what must the public judge of his great experience as a breeder and breaker when he could not produce a single specimen fit to appear in a public field trial, let alone getting placed in one, and all this while he was blowing his Irish trumpet louder than any man in America? If Mr. Burges's experience has been so great, I wonder how many pure bred Irish setters he ever owned before I gave him Kathleen, a bitch that before she was a year old was deemed a wonder by her owner! At all events, he challenged the famous Guido to a field trial contest, who replied that had he a pup sired by my Irish Dick he would accept the challenge. Kathleen died before she could reap the benefit of Mr. Burges's years of experience as a breaker. When he assures his readers that he has imported as many—and he thinks more—Irish setters than Mont Clare, his imagination again runs wild; but when he writes that he once imported a dog that beat my Elcho, he states one of the few facts to be found in his whole letter. Mr. Burges did once import an Irish setter dog, and as he never hides his light under a bushel, the high qualities of that canine were sounded far and near over the land. He was the best Irish setter in America in the opinion of his owner.

Since Mr. Burges informs his English readers that his dog once beat Elcho, allow me, as an interested party, to give a little history omitted by him. There was, once upon a time, a dog show in Chicago, and so sure was Mr. Burges of carrying off first prize that he very generously donated a silver cup for the best Irish setter dog; but, sad to relate, under the judging of three well-known dog men, Elcho won that cup; the award was indorsed by the sporting press, and I never remember seeing a kind word for Elcho or his stock from Mr. Burges since. His dog did beat Elcho once, and I must admit that the man who judged was competent; but good judges err sometimes, and this judge's decision was

censured by the sporting press, thus calling forth a storm from Mr. Burges. However, I soon bottled him up, drove in the cork, and he never dared to show his dog against Elcho again, even under the same judge who once gave the wrong decision of which Mr. Burges boasts. He should have stated that he once imported a dog lucky enough—not good enough—to beat Mont Clare's Elcho.

Another of this writer's arguments against Irish setters is that Mr. E. F. Stoddard and the St. Louis Kennel Club tried them, and not being able to push them to the front, gave them up for pointers. As an historian Mr. Burges is a failure. He omits to state, accidentally of course, that Mr. Stoddard won the Champion Stakes at the Minnesota field trials of 1878, twelve dogs competing, with an Irish setter that was suffering from a wounded foot, which greatly affected her speed and style, and yet she scored higher than any other dog in the trials. He forgot to say that she alone of all the dogs that ran made a clean score, receiving no points of demerit, and her score of 57 stood 20 per cent. higher than that of any other dog that ran, one only (Jet) excepted; that among those beaten were the crack Llewellin field trial winners, champion Nellie and Strathroy, and the famous pointers Ranger and Countess Royal; and yet he had the audacity to assert that Mr. Stoddard had never succeeded in bringing the Irish setter to the front. Again Mr. Burges sings the same tune about the St. Louis Kennel Club and once more history shows that if he does not write from ignorance he does from prejudice. The facts are, some of the St. Louis Kennel Club shot over Irish setters, some over Llewellins and some over pointers, and they have had good ones of all these breeds. He says they gave up Irish setters for pointers, as they could not win with them; but he forgets to state that they gave up pointers also; in fact, gave up breeding dogs altogether. Permit me to give the records to show what an authentic historian Mr. Burges is. With one of their pointers they divided second and third in All-Aged Stake, Patoka, 1878, with a Llewellin setter, and won third in same trials in Brace Stakes with this pointer and his brace mate. Now, if there are any more winnings by pointers for the St. Louis Kennel Club, will Mr. Burges kindly make it public? I think he will be silent. On the other hand, the St. Louis Kennel Club, at the Tennessee trials of 1876, won first prize in Brace Stakes with an Irish setter and a Llewellin, also the Greenwood Plate Stakes for Irish setter with their brace winner; and at Hampton, 1877, they won second in Puppy Stakes with an Irish setter, and the great Llewellin, Gladstone, ran in same stake and never made a point; in fact, he was so very headstrong that his handler could not control him. But this same dash and courage (which Mr. Burgess says by right of inheritance belongs to the Irish setter) made Gladstone the acknowledged king of all Llewellins in America, and yet he even met defeat when in single field trial contest against Joe, Jr. (a son of Elcho). Will Mr. Burgess reconsider and inform his English readers with which breed the St. Louis Kennel Club got nearer to the front—their pointers or their Irish setters? The balance is in favor of their Irish, and yet this writer had the assurance to assert that they could not win with them. He says that Joe, Jr. is half native, being by Elcho out of a native bitch, and is the best field trial Irish setter ever born in America. But, as usual, he omits to state that while Joe, Jr. has defeated all Irish of pure imported stock brought against him, he has never met defeat in a single contest by any pointer or Llewellin. Therefore I cannot see why, so far as Joe Jr. is concerned, the Llewellins and pointers do not share the disgrace with the pure imported Irish. He is, as ever, death on Elcho, for he states that Berkley (another son of Elcho) is deficient in nose, and won the only trial his owners ever dared enter him in by the smartness of his handler. It does seem that the more Mr. Burgess writes the more careless he gets in regard to facts. The trial in which Berkley won was not the only one in which his owners ever dared run him, and he won because he had quality enough to beat all competitors but one. I should like to ask if Berkley was such a failure, why did not Mr. Burgess accept my challenge for a field trial contest against any of the get of his crack Irish dog? Now the simple facts are—notwithstanding Mr. Burgess boasts of breeding and breaking dogs with ample means at his command to get the best specimnns, years before Mont Clare was far advanced in boyhood—that I have seen more and better field dogs perform of the various breeds—Llewellin, Irish, and pointers—than Mr. Burgess ever saw; I have shot over the best Llewellins in America, I have bred more bench show and field trial winners of the Irish than Mr. Burgess ever has of all breeds combined.

I simply claim that, for beauty and field work combined, no breed excels the Irish, but I do not cast slurs upon any strain in which I am not interested. There are good and bad of all breeds; so when I find a man soaring aloft in his abuse of the gallant reds as Mr. Burgess has done, I propose to pluck a few feathers from his wing and bring him to the ground.

MONT CLARE.

THE IRISH SETTER FIELD TRIALS.

Editor Forest and Stream:

The field trials of the Irish Setter Club will take place Dec. 1, at Salisbury, N. C. There will be but one event, the All-Aged Stake, open to all. The entrance fee is $10. The prizes will be as follows: First prize, $200 and the Elcho Cup, donated by Dr. W. Jarvis, of Claremont, N. H.; second prize, $100; third prize, $50; fourth prize, piece of plate.

At the meeting of the club during the New York show the initiation fee of $5 had been paid and the committee had ordered all dues of the members collected, and they must be sent in at once to the president, Mr. W. Dunphy, Peekskill, N. Y., who will also take the entries of dogs and will supply entry blanks. It is required that all the pedigree obtainable be sent in with each entry, as these trials are for pure Irish setters only. Judges will be announced shortly.

MAX WENZEL.

MASTIFF TYPE.—*Editor Forest and Stream:* Will you please publish the following extract from report in London *Field* of the Aquarium show? "The head of this dog is of the old-fashioned stamp, longish, but strong and of capital shape, without the slightest particle of bulldog appearance, either in skull or expression. His capital hindquarters we alluded to long ago, and it is to be hoped this victory here, and his subsequent one when he secured the challenge cup, will again call attention to the type of animals, deformed in hindlegs, bad in action, and objectionable in head, that has often wrongly won of late years." Please remember all, that for the challenge cup, Victor Hugo (the dog referred to above) beat King Canute, Orlando, Cambrian Princess, Ilford Chancellor, Beaufort, Minting, etc., and that the judge was Mr. Hanbury, who, with the exception of Mr. Nichols, is the oldest breeder in England; the first to "down" Mr. Lukey, the breeder of more cracks than any other two breeders, the breeder of Rajah, the fount of short heads, and if there is an authority in England, it must be he. My poor lamp is completely extinguished now on the subject of "short faces" and I suggest that you fanciers undertake to prove that Mr. Hanbury doesn't know a mastiff, before you have anything more to say on the subject.—W. WADE, (Hulton, Pa., Oct. 14).

CAIRO DOG SHOW.—The Inter-State Poultry and Stock Association will hold a dog show in connection with their fifth exhibition at Cairo, Ill., Dec. 1 to 8. The association covers the territory of Southern Illinois, Southern Missouri, Arkansas, Northern Mississippi, Western Tennessee and Kentucky, and as many good dogs are owned in this section, the show should be a good one. For entry blanks or information address the Secretary, Mr. A. A. Cowdery, Cobden, Ill.

A DAY WITH THE LINDEN BEAGLES.—Linden, Oct. 11.—I give you a brief account of our first hunt of the season with the beagles. We started off at half-past five A. M., Oct. 9, Mr. Parry and the writer, for a day among the cotton tails. We had been in the woods scarcely five minutes before the music commenced. The game took a bee line across country for about a mile and circling came right back where the dogs started him, with the pack not 100yds. behind him in full cry, and Mr. P. scored a clean miss with his breechloader, but it was excusable as it was the first time he had used his gun this season. The rabbit only ran a few hundred yards further and went in a hole among the rocks, the dogs making it too hot for him. We went on a little further and away went the pack in full cry and in a few minutes the rabbit came by us at full speed, but Mr. P. was on to him this time and dropped him in face and eyes of the pack, and we had hard work to get him, for Joker, a pup, likes very much to turn them inside out and wipe up the ground with them, but after a little coaxing we managed to get it away from him and started off again. We thought we should never get another start, but after over an hour of tramping we started another and he ran out of hearing, but did not stop long, and in a little while back they came full cry and the rabbit went by us and Mr. P. scored another miss. In a few minutes we caught up to the hounds as they stopped driving and found them all together around a hole among the rocks. It was no use, could not get him out of there, so we called the dogs off and went on a little further. Mr. P. did better this time for he dropped him and the next two following, four in all. Then as it was getting late in the afternoon we started for home, arriving about 4:30 P. M., tired out, though the dogs seemed as fresh as ever. No doubt many of your readers will think this a small day's work for two men and four dogs, but game here is very scarce and hard to find. We have given up the foxhounds for the beagles and like them much better. You will hear from us again a little later.—W. S. C.

MR. WM. TALLMAN has accepted a position with Messrs. A. G. Spalding & Bros., the well-known dealers in sportsmen's goods. Mr. Tallman will devote his energies to the sale of Challenge dog food as well as to other specialties of the firm. His many friends will join with us in wishing him all succes in his new undertaking.

WINSTED DOG SHOW.—The following judges have consented to serve at the Winsted show, Dec. 15-17: Jas. Watson, the non-sporting classes; William Tallman, pointers and setters; N. Elmore, beagles. The beagles will be judged by the standard of the American English Beagle Club.

THE NATIONAL FIELD TRIALS.—All who are intending to run their dogs at the trials of the National Field Trials Club at Grand Junction, Tenn., in December, should not forget that the entries close Nov. 1. The secretary's address is B. M. Stephenson, La Grange, Tenn.

ST. BERNARDS.—Mr. K. E. Hopf informs us that the well known breeder Herr Tuchschmidt, of Romanshorn, Switzerland, has placed his entire kennel of St. Bernards in his hands for sale. Intending purchasers should communicate with Mr. Hopf, whose address is Arlington, N. J.

PEDIGREE OF NAMELESS.—*Editor Forest and Stream:* My pointer bitch Nameless, entered in the Derby and All-Aged Pointer Stake of Eastern Field Trials Club, is out of Dee, not Dell, as you have it in issue of Oct. 14.—ROYAL ROBINSON.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

Bonnie Duchess. Imported St. Bernard bitch (Valentine—Duchess of Leeds), owned by Coughcura Medicine Co., Eau Claire, Wis., Oct. 10, from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. F. P., San Francisco.—1. My setter dog, 2yrs. old, passes more or less blood in his urine. Generally on voiding his bladder (which he does freely and with perfect ease—no straining) the first few drops, more or less, are blood, followed by clear and healthy appearing urine. This has been going on for about a year. Dog otherwise in perfect health and can do a hard day's work in the field or follow my buggy 20 miles without trouble. Please prescribe. 2. Can a puppy of 4mos. (not beef-fed) develop canker in the ear? Mine has all the symptons and I am treating him for canker. Ans. 1. Your dog seems to have inflammation of the neck af the bladder, prostate gland or urethra. Give a gelatine capsule containing 10 drops of balsam of copaiba three times daily. You may conceal the capsule in a bit of meat. 2. Yes. Try the bromo-chloral and laudanum treatment, a drachm each of bromo-chloral and of laudanum and six drachms water. Mix. Drop in ear twice daily.

NEW POSTAL LAW—OF INTEREST TO FARMERS.—The new law permitting the sending of small quantities of fluids by mail is of wide value to the people at large. It is in the direction of the modern tendencies of trade which, while it centralizes the manufacture in the best possible form, brings its results to every man's door at the lowest possible price. England has gone very far in this direction, permitting packages of even eleven pounds' weight to be sent by post, while our limit is yet four pounds. The admission of fluids under certain restrictions is another step in advance. Until now, such packages could only be sent by express, and Humphreys' Homeopathic Medicine Co. have been obliged for twenty years past to require an order of at least $5 in order to send, free of charge, their invaluable Veterinary Specifics and Witch Hazel Oil to customers. They now offer to send them in any quantity to any address on receipt of the price. Thus the tendency of modern trade is everywhere to bring the manufacturer or producer and the consumer practically face to face. Every man thus has in practice the best medicine, dry good or book store in the country at his own post office.—*Adv.*

Very strong variable wind.

NEWSPAPER MARKSMEN.

BOSTON, Oct. 11.—Annually for the past eight years the representatives of the several daily newspapers, organized as the Boston Press Rifle Association, have met in friendly competition before the butts. During the history of the Association the *Herald* had captured the first prize team medals four times, with second medals once; and to-day's result gave the *Globe* boys their fourth victory in a manner that did credit to their nerve and skill. In response to circular letters issued by President Charles B. Danforth, who was also chairman of the committee on invitations, several visitors were present, among them being Henry H. Faxon and A. C. Gould, editor of the *Rifle*. The day was a perfect one for shooting, a light steady wind blowing across the range at the angle technically known as "8 o'clock." There were five matches—one for teams and four for individuals. They were shot on the 200yds. range, under the Association rules, and the following special conditions, and with the subjoined results:

Team match, 200yds., off-hand, rounds 10, allowance of two points for military rifles:

Danforth (Her)	4	7	6	9	6	5	6—43	6	5	6	5	6	8	7—43— 86

Visitors' Match.—For invited guests of the association. Distance 200yds., rounds 7; position, rest; one point allowed for military rifles. No competitor to shoot more than two scores; the highest score to win. No entrance fee. Members of rifle associations and members of the militia barred:

A L Delesdernier	3	4	4	5	5	4	4—28

BOSTON, Oct. 16.—The rifle matches during the past week have been well attended. The windy weather has tended to lower the averages of the scores. J. Monroe was so fortunate as to make a clean 100 in the rest match and did it under harder conditions than such scores are usually made. After this date the Thursday match day will be discontinued, but beginning with Oct. 27, the range will be open for the regular rifle matches every other Wednesday—alternating with the shotgun men. This arrangement will continue until further notice. Following are the best scores made during the week:

Decimal Off-Hand Match.

Bundy (mil) A	6	10	8	6	9	8	9	7	9	7—79
W Henry, D	7	8	8	9	6	7	10	8	6	9—78

C E Haskell	18	22								
C E Hurd	18	19	18							
Arthur Souther	18									

HOLYOKE, Mass., Oct. 16.—The Holyoke Rifle Club's first annual tournament at the Piedmont range. The attendance of marksmen of this vicinity was quite good. The bad wind made the scores smaller than was expected. The scores are:

O B Hull	45 41—86	S B Winchester	38 36—74
W M Farrow	43 42—85	C L Newcomb	37 37—74
H Engle	43 41—84	G E Day	36 36—72
C S Axtell	40 40—80	J T Danser	36 32—68
T B Wilson	42 38—80	T Rae	30 29—59
H Whitney	44 35—79	H E Ferry	30 28—58
W S Beeching	39 37—76	H H King	32 25—57
J Allen	42 34—76	J Kimball	29 24—53
Z C Talbot	39 26—75		

CENTRAL VALLEY, PEEKSKILL, NYACK.—Central Valley, N. Y., Oct. 12.—Match at 200 and 500yds., between Peekskill, Nyack and Central Valley teams for silver cups; 200yds. having to be shot for three times before winning; 6 members each, 10 shots. The score stood: Peekskill Club 243, Central Valley Club 232, Nyack Club 232. One man on Central Valley team shot four times on wrong targets. 300yds. range: Central Valley Club 226, Peekskill Club 222, Nyack Club 195. In pool shooting, 3 shots each at 200yds., each member putting in 50 cents, Central Valley won, 3 members making highest score, 14 out of a possible 15. M. Hanes, of Central Valley team, made highest score for the day, 44 out of 50.—A. B. Talcott.

GARDNER, Mass., Oct. 13.—Members of the Gardner Rifle Club shot to-day the second of the three matches for field prizes. The shoot was at Hackmatack Range. The result was as follows: W. C. Loveland 81, A. Mathews 80, I. N. Dodge 80, G. F. Ellsworth 79, G. C. Goodale 74, J. E. Newton 68: total 462.

CREEDMOOR, N. Y., Oct. 19.—The eleventh of the series of qualification and champion marksman's class matches was shot at Creedmoor, on Saturday, Oct. 16. The weather was clear and cold, a 9 o'clock wind almost blowing a gale across the range. The attendance, considering the bad weather, was very fair. Lieut. E. F. Young, Co. C, 7th regiment, was again the winner of the gold medal, this being the third time he has won it. The following are the scores of the winners of the cash prizes:

	200yds.	500yds.	Tl
Lieut E F Young, Co C, 7th regt	20	23	43
Lieut McC Butt, Co D, 12th regt	20	21	41
Sergt C E Bryant, N C S, 23d regt	20	21	41
Pvt H McA Toler, Co A, 23d regt	18	18	39
Pvt J B Conover, Co B, 22d regt	15	20	35
Pvt J D Foot, Co F, 7th regt	16	19	35
Pvt B W Anderson, Co B, 7th regt	19	14	33
Pvt J W Cochran, Co B, 7th regt	17	15	32

Saturday, Oct. 23, and Tuesday, Nov. 2 (Election Day), will be the last two days for members of the N. G. S., N. Y., to qualify for the marksman's badge.—J. Manz, Jr., Ass't Sec'y, N. R. A.

NEW ORLEANS, Oct. 10.—The Olympics scored a double victory to-day, defeating both of the Eicke teams. Both matches were exciting and were witnessed by a large audience. The prizes were 5,000 and 1,000 cartridges, respectively. Following are the scores:

Olympic Team No. 1.		Eicke Team No. 1.	
W Weiss	275	M Huber	284
Capt V Lambau	263	A Kuhn	251
J Dolhonde	268	Tom Brackett	215
C Husson	270	Hon H V Guillotte	272
J Lambau	266	H C Claiborne	294
C Hall	282	Geo Bodwell	292
	1624		1608

Olympic Team No. 2.		Eicke Team No. 2.	
C Boucher	264	J Kenny	267
Capt W Geneste	266	L Davis	253
Geo Miller	262	J Seeward	244
Louis Ruch, Jr	255	E Williams	261
L Boucher	254	E Reinhardt	215
C Ruch	252	J Beauregard	243
	1553		1483

The Olympics have won the most matches of the season; they will retire from rifle shooting this season, as most of their members are fond of hunting, and the game season is now open, therefore they will decline to accept any challenge from any rifle club from this time until next season.

HARTFORD, Coun., Oct. 9.—Ten men from the Franklin Rifle Club went to Collinsville to-day to shoot the third of the matches between the Canton and Franklin clubs. Each club had already won one match. The visitors were met by the Canton club and taken to lunch and later to the range. The men shot at 200yds., 15 shots each, and the Massachusetts target with 12 high and a possible 180 for 15 shots was used. The Canton club won by the following score:

Canton Rifle Club.

SAN FRANCISCO, Oct. 3.—The members of the San Francisco Schuetzen Verein had their regular monthly medal shoot at Shell Mound to-day, the conditions being the same as usual, namely, 200yds. range, 25-ring target and twenty shots for each marksman. K. Wertheimer won the firstclass medal, with 422 rings; F. Krahman the second class medal, with 347 rings; John Plath the third class medal, with 340 rings, and F. Atzroth the fourth class medal, with 162 rings. The Independent Rifles, under the command of Captain Schmalholz, mustered in goodly numbers to engage in their quarterly medal shoot. Each competitor fired 10 shots at 200yds., the shooting being off-hand with Sharp's .45-cal. rifle. The shooting will be continued next Sunday, when the medal winners will be adjudged. The following are the names of those who did the best work to-day and their scores:

Lieut J Kuhlke	4	4	5	4	4	4	4	4	4	4—41	Theo Lutje	4	5	5	3	3	3	3	3	3	2—32
Theo Saur	2	3	4	3	4	4	2	3	3	2—32	P Stademan	3	5	0	4	5	4	3	4	4	4—36
H Stademann	3	4	2	4	5	4	4	4	4	3—37	H Gaetjen	4	5	4	3	4	5	3	4	4	3—39
S Miller	4	2	2	4	4	4	4	4	4	3—35	J R Pahl	4	4	4	4	4	4	4	4	4	5—41
M Fischer	3	3	4	5	4	4	2	4	3	4—37											

The annual shooting match of Company C, Second Artillery, San Francisco Fusileers, under the command of Capt. Hubershot, for medals, also took place. The distance was 200yds., and each man was allowed five shots, Springfield rifles being used. The following are the highest scores:

Annual Medal.

Fred A Kuhls	5	4	4	4	5	5—22

Champion Class (10 Shots at 200yds. Range).

Fred A Kuhls	5	4	4	4	5	4	5	5	4	4—44

First Class.

L Haake	4	3	5	4	4	5	5	3	4	5—42

Second Class.

H Brooks	3	4	3	4	5	4	4	4	4	5—40
W Wessling	3	5	4	5	5	4	5	5	4	3—41

C. F. Waltham made the following score at the double distances:

200yds	4	5	4	4	5	5	5	4	5	4—45
500yds	5	5	4	4	5	4	4	5	5	5—46

FINE PISTOL WORK.—For several years past rifle shooting has been a popular pastime. Perhaps, as an innovation, the pistol, "the American weapon," as an Englishman once described it, may supplant the rifle for home practice, for winter shooting and for town practice. On the 15th inst. Mr. Ira Paine, a gentleman not unknown as an expert with the revolver, gave an exhibition of his skill with the weapon at Walnut Hill. He used the ordinary pattern of the U. S. A. revolver, .44-cal., 6½in. barrel, and he fired 100 shots, off-hand, distance 50yds., at the American standard target, with which all riflemen are familiar. For the benefit of the uninitiated, it may be said that the bullseye is a black spot 8in. in diameter. Out of 100 shots Mr. Paine sent a ball through the bullseye 62 times. With two exceptions every shot was within 7in. of the "dead center." He made on 10 strings of 10 shots each, in about 50 minutes of time, an aggregate of 791 points in a possible 1,000. He predicted that he would make 795, and he nearly reached the estimate. The weather conditions were, on the whole, unfavorable, particularly so far as variable wind and changing light were concerned. The exhibition was given in the presence of some 100 gentlemen, mostly familiar with gunpowder, several ladies, who were not adverse to the odor of its smoke, and under the direction of Mr. A. C. Gould, editor of the *Rifle*. There may be called, before long, a meeting of gentlemen who think they will be pleased to indulge in pistol practice, with the idea of forming a club. Mr. Paine's scores, made under conditions above mentioned, are appended:

First	7	7	8	6	9	7	6	8	9	9—76
Second	9	10	8	7	8	9	6	9	5	8—79
Third	9	9	7	8	7	9	7	6	10	6—78
Fourth	9	5	8	6	7	9	8	10	10	10—82
Fifth	8	6	9	8	8	7	7	6	8	10—77
Sixth	6	10	9	6	8	9	9	7	7	9—80
Seventh	9	9	10	8	6	9	7	10	9	7—84
Eighth	8	6	9	9	6	10	10	8	7	9—82
Ninth	10	8	10	7	8	8	8	6	9	6—80
Tenth	8	6	9	8	6	7	7	8	6	8—73—791

BRATTLEBORO, Vt., Oct. 7.—The Brattleboro Rifle Club had their first contest to-day in the series of field matches resulting in these scores, at 200yds.;

C L Cobb	10	10	10	10	10	6	10	10	9	10—95

R McCarter	5	9	6	6	8	6	5	5	8	5—63

Third Shoot.

C C Trimmer	7	8	10	6	4	7	7	8	10	6—73
R Thompson	7	8	10	7	4	8	8	7	9	8—73
J L Paine	7	7	8	7	6	7	6	7	9	7—71
F H Martin	8	9	4	7	6	6	3	8	6	6—63
R McCarter	3	5	7	9	8	3	7	6	7	6—61

C. C. Trimmer captured the badge by making three excellent scores. He got 221 out of a possible 300.

SALEM, Mass., Oct. 12.—The winners of the recent State match at Framingham, the team of Company D, First Corps of Cadets, under Lieut. Clark, went to Salem to-day and indulged in a friendly shoot with the winners of the fourth prize, the team of Company B, Salem Cadets, under Capt. E. W. Abbott. The shooting was at Grant Range, from the slope of "Witch" or "Gallows" Hill, at 200yds. Each team improved one point on its Framingham score. The scores were very good and the conditions were excellent for shooting. The score:

Co. D, First Corps of Cadets.		Co. D, Second Corps of Cadets.

ROCKVILLE, Conn., Oct. 7.—One of the attractions at the Agricultural fair held here on the 5th, 6th, and 7th was a clay-pigeon contest between teams of eight men from Manchester, East Hartford and Rockville. The individual shoot was declared off, as the society refused to guarantee $20 as advertised:

Manchester.		East Hartford.		Rockville.

CLAY.

ST. LOUIS, Oct. 14.—Our trap-shooting season ended to-day with a grand flourish of trumpets, blown by the Excelsiors. This club, composed mainly of all the best of our German sporting element, has enjoyed a splendid season. Its contests have been close and interesting; the prizes it has given have been very liberal, and on the occasion of its every shoot it has drawn a large attendance. Each of its gatherings has also shown a further cementing of the good fellowship of its members. The form shown by the shooters through the season is a great improvement on that of the past, and it may be added that the weapons used have also been superior to those of previous years. As is the case in every other pursuit, youth has shown in the Excelsiors that it will be served, and some of the club colts of a year ago have pushed into the very front rank. To-day's shoot was for the winter holding of three of its medals and the permanent possession of one of them, a very handsome $100 trophy given by Fred Trescher for the best average throughout the season. This, together with the first gold medal of the club, fell to the aim of Jack Schaaf, who has killed 128 out of the 140 birds he has shot at in sweepstakes this season. The second gold medal went to George Rinkel and the third into the holding of Theodore Brockman. The president, Mr. Joe Fischer, of Ninth and Franklin avenue, photographed the members in groups during the afternoon. The day was all that could be desired to begin with, but toward 4 a chill wind came down from the northwest which would make a Texas norther sick with envy and which materially affected the shooting. The birds were of unusually good quality and were supplied by Fred Trescher.

Medal Shoot.

Five birds, 26yds., 5 at 31, ties 31, miss and out:

J G Schaaf	1101111111—9	Joe Weiber	1110101111—7
J Renkel	1111011111—9	T Brockman	1110101101—7
Nolting	1111110111—9	J Fischer	1100101101—6
G Rinkel	1111111103—8	Schulte	1101101101—6
L Loerke	0011111111—8	J Pope	0111101001—6
H Griesdieck	1111001101—8	T Rick	1101100001—5

Griesdieck	11100—3	McDowell	00111—3
Pettker	11110—4		

Ties of 5 divided; Weiber and Pettker divided.

NEW YORK, Oct. 14.—The regular monthly shoot of the Algonquin Gun Club and the Washington Heights Gun Club took place at Sea View Park, New Dorp, S. I., to-day. Ten entries each, at 10 birds, handicap rise, two ft. & H. traps. The wind was strong from the southeast, and the sky cloudy, with occasional showers. The attendance was fair and the score as follows: Algonquins—Dinnseith 7, Brennan 6, J. Wade 7, Ridnisky 6, Ring 6½ (one bird gathered alive), Lorelly 9, Rimpson 7½, Kessabeer 5½, Meyer 2½ and Griswold 7; total 64. Washington Heights—Harrison 8, Fountain 6, J. Terriongle 5, Thomas Moore 5½, Wm. Terhune 7, Mr. Snook 5, C. H. Preyer 2½, J. Weitch 5, J. Kilbane 4½, George Snook 6; total, 56½.

BATON ROUGE, Oct. 11.—Another shooting match at clay-pigeons came off at Gardere's last Sunday evening, with the following result: Sunshine Gun Club—Joseph Babin 10, P. Dupuy 9, O. Richard 11, Mr. Crockett 12, E. Terrill 9, P. Hobert 11, T. Prichard 8, and Mr. Grasin 11; total 81. Manchac Gun Club—John Terrill 8, A. Matta 9, E. T. Leche 13, W. S. Walker 10, W. J. Knox 14, Henry Larguier 8, H. Wolfe 10, and Dr. Reynaud 5; total 77. After the clubs had concluded their match some fancy shooting at birds on the wing were indulged in by Messrs. Fergus Gardere, E. T. Leche, and Dr. Reynaud.

HOW TO STRENGTHEN THE MEMORY; OR NATURAL AND SCIENTIFIC METHODS OF NEVER FORGETTING. By M. L. Holbrook, M.D. Price $1. New York. M. L. Holbrook & Co.

MRS. CHARLOTTE LISLE, Chicago, ascribes the cure of a dangerous cough, accompanied by bleeding at the lungs, to Hale's Honey of Horehound and Tar. "My cough," she says, "threatened to suffocate me * * * * but this remedy has removed it." PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A CRUISE ON THE WISCONSIN.

HOW to plan a canoe trip so as to travel all the way down stream, and yet have neither too far to go to reach the starting point nor be too far away at the end of the journey, is always a grave question. In the summer of '84 six college students took a pleasant, if not exciting, trip, which had the agreeable feature of bringing the canoeists up at their own boat houses after a two weeks' paddle down stream.

Starting from Appleton, Wis., and chartering a whole freight car for our six canoes and necessary luggage, we found ourselves at dark on the 22d of July ready to go into camp on the Wisconsin River at the foot of the ten mile reach of rapids just below the city of Grand Rapids. Our party consisted of one senior, two juniors, two sophomores and one freshman, for canoeing breaks down all barriers, even those between a senior and freshman.

Each man had a style of canoe tent made after his own device, and as we made camp we looked at the gathering clouds and fancied that we should not have long to wait before testing their respective merits; and such was indeed the case, for from about 9 o'clock till nearly daybreak the rain fell in such torrents that we almost expected to be floated off the bank into the river, which we could see all night long foaming and gleaming in the incessant flashes of lightning.

When the first streaks of light appeared we thrust our heads out from under our tent flaps, and there, clearly defined against the sky, stood our senior, clothed, as the freshman said, in the grey light of the coming dawn, ruefully gazing into the canoe, where the water came over the bottom boards, as he tried to wring out a few garments in which to make a presentable appearance at breakfast. His superiority in college rank had availed him nothing; and though he had found out to his heart's content that his boat did not leak, he was very sure that his tent did.

However, our rain was a benefit after all, as it raised the river about four inches and saved us many a tug over shallow sand bars which were frequent enough as it was.

After a glorious breakfast we put our boats in the water and found the pleasure of a swift current almost balanced by a strong head wind which, however, only troubled us for a few hours. Our plan for getting meals, elaborated at home with due consideration, proved a very good one. It was to assign a particular article, as coffee or oatmeal, to one person as his duty for the whole trip, and at the end each had gained considerable proficiency in his own line so that we were able to construct a fairly palatable meal. Breakfast, bacon, scrambled eggs, canned vegetables, coffee, oatmeal with maple syrup, bread, butter, cheese, preserved cherries, etc., combine to make a very good camp fare.

The Wisconsin River flows with a remarkably swift current through thickly wooded, though rather flat country, over a sandy bottom, which it piles up in bars which sift from one side to the other making the main current turn and twist like an excited eel. Great numbers of islands, often lying two or three abreast, give variety to the scene, but often make the best channel a matter of much uncertainty. Above Portage City the river is now so shallow for steamers, though it is frequently half a mile wide. In former times boats used to make regular trips nearly to Grand Rapids.

It did not take long to bring out the respective tastes of the members of the party. The freshman and one of the juniors seemed to think that the chief end of life was to make as many miles between daylight and dark as possible, and for that purpose diligently labored in sun and shade, often getting far ahead, but we always camped together at night. Next came the other junior and the senior, who paddled leisurely and reflected philosophically on the beauties of nature. Finally came the two sophomores, whose paddles rarely felt the water, and whose chief occupation consisted in reclining luxuriously on their blankets, reading light literature. However, they had their share of work, as they were always running against sand bars and sticking fast. We fell together in these pairs the first day, and kept to them the whole trip.

Late in the afternoon we passed the forsaken town of Barnum, taking the left hand "slew" to avoid the remains of an old logger's dam. All the men of this town are said to have gone away during the war, and the place is practically deserted. We camped near a farmhouse in order to get milk for supper and breakfast. A flurry of rain toward morning found the senior well prepared this time.

We made an early start next morning to reach Petonwell Rock by night, which we did, though we made a late camp in a poor place. One of the would-be fast men broke his paddle and had to go inland a couple of miles to get it fixed. He brought back some beefsteak, which we divided in six equal parts, and each man cooked his own that night or next morning, according to taste. Cooked on a gridiron on which bacon had been fried just previously it had a most delicious flavor.

The two erratic sophomores, not satisfied with the camping place, insisted on going over to a great sandbar in the middle of the river. So they left our camp with one boat and a lantern, and after much splashing about and paddling they came to it. Next morning they reported a pleasant night and persuaded the rest of us to paddle over and join them for breakfast on their island.

After breakfast we climbed Petonwell rock, which is simply a pile of rocks 200 to 300ft. high, rising abruptly from the flat surrounding country, right at the river's edge. Such masses are found extending for many miles through the State, though often very far apart. They are the remains of an ancient and extensive line of cliffs. One of the party climbed Petonwell in rather scant attire, as he had awakened that morning to find his only pair of pants caught on a log projecting into the water and trailing down stream in the swift current, where they had evidently been all night. How they got there remains a mystery to this day.

A lazy afternoon, with a long stay at dinnertime and a short afternoon's paddle combined to make that day's trip a short one, and toward night the whole party agreed to try one of the huge sand bars, so frequently showing their broad brown backs in the sun. So we camped below the little sandy village of Germantown.

We found the sandbar an excellent camping ground and free from mosquitoes, the chief discomfort of Wisconsin River. The next day we had an idea that we might reach the Dells and were on the lookout for their appearance. Passing in the morning several rocks like Petonwell and some traces of the sandstone formation of the Dells, we came, about noon, to the Big Dells, a misnomer, since they are of much less interest than the Dells proper. These latter we reached at 3 o'clock. That is, four of us came to the head of the Dells at that hour. We had some time to wait for the always-lagging sophomores, but at last we heard the melodious sound of the tin horns, with which we were each provided, and our answering toots soon brought them to us.

Above the Dells the river is nearly a mile wide, shallow and swift, and dotted with numerous wooded islands. At the Dells the river suddenly narrows, and cuts its way through six miles of solid sandstone in a channel 55 to 80ft. wide, but nearly 80ft. deep at ordinary stages of water, while at the spring freshets it boils and surges along a torrent sometimes over 125ft. deep, bearing on its tumultuous bosom great masses of drift wood and débris of every description. The drift wood comes chiefly from the many sawmills of the Wisconsin and its tributaries, and furnishes excellent material for camp-fires. In gullies and ravines all along the river it gets lodged in great "ricks," which sometimes burn for weeks when set on fire.

The soft sandstone of the Dells is cut into every conceivable shape, noticeably the most striking resemblances to the hulls of great vessels, while cool grottos and caverns are to be found without number. Small streams of the coldest spring water have cut passages down to the river by winding and tortuous channels, making smooth-worn clefts in the rocks perhaps 75ft. deep, and often only a few feet wide, but here and there sweeping out great round caverns, and deep, pillared recesses. The sides of these clefts are covered with moss and delicate ferns, which are kept green and fresh by the spray from waterfalls, and from springs which trickle down the sides of the rocks.

But it would be too much to try to describe the Dells of the Wisconsin. One must see the Witche's Gulch, Cold Water Cañon, Stand Rock, the Devil's Jug, the Hornets' Nest, and all the fantastic forms which the tireless water has cut out. It is not to be wondered at that the Indians make long pilgrimages from the far West to spend a few weeks of the Indian summer in this locality, so long a favorite haunt with them, and still fresh in the memories of Black Hawk and his adventures.

We spent the rest of Saturday around the head of the Dells, and camped for Sunday and Monday in Cold Water Cañon. Monday afternoon we floated down she six beautiful miles between us and the pretty little city of Kilbourn, saluting all whom we met by the way with a chorous of five tin horns and a whistle. As we passed down the channel we could see in the branches of the trees, high up on the top of the sand stone rocks, the drift wood which had caught there when the spring freshets, "the wicked water," had swept through them, perhaps 40ft. above our heads.

Then on to Portage, where the Wisconsin and Fox rivers come within a mile of each other. There two of the party deserted, going by rail to Lake Mona for a few weeks camp. The rest of us, crossing by the canal to the Fox, proceeded down its sluggish and winding waters, whose channel, the Indians say, runs in the track of a great serpent which once inhabited the region. The journey down the Fox was uneventful, its chief variations being an occasional lock or dam. This river runs into Lake Winnebago at Oshkosh and out of the lake at the twin cities of Neenah and Wenasha, making its way thence to Lake Michigan. On reaching the lake a storm prevented its being crossed, but if the foot of the lake, twenty miles distant, could only be reached, home was but a few miles away. So the canoes were taken to the railroad station to await the northward bound train. As it came in the canoeists, watching their chance, as soon as the regular baggage was disposed of took the canoes and quietly but rapidly shoved them, one by one, into the baggage car, the baggage master looking on in dumb amazement and wondering if they were the president of the road and his suite that they should thus so coolly do so unprecedented a thing. As the last boat went in, the conductor came rushing up with the withering query, "Do you wear boats?" We told him we had worn little else for the past few weeks.

The conductor was in a quandary. The boats were in the car. If he stopped to take them out he would lose time, and a rival train on a track parallel to his own would get ahead of him. So the bell rang, the train moved, canoeists, boats and all, and at the proper station we took our canoes out as though it was an every-day custom. Mark this as one time when canoeists have got ahead of railroad companies.

The foot of the lake was now reached, but a furious storm of wind and rain prevented any further progress. So the depot, which was near the river, was taken as a camp ground, and each man rolled up in his blanket and dreamed he was at home. The next day was Sunday, and an early paddle down the river gave us all time to raise our boats and seek the friendly shelter of our own homes before the civilized world turned out to church.

GRETZEL.

FOLRIDA HYGIENE—DIET.

LET me, in treating of so important a branch of the study of hygiene as dietetics, enforce on the reader the full appreciation of the fact that every article of food which he allows to pass his alimentary canal will act directly and immediately with redoubled good or ill-effect on his system in a Southern clime; that the dietary indiscretions, which in his Northern home, he can, with apparent impunity, indulge in for a more or less lengthy space of time, will in Florida bring a dire retribution with startling celerity and alarming effect, despite the supposed vigorous qualifications of his gastric functions. Accepting the fact that Mother Nature has supplied us with intestinal coatings of marvelously accommodating and recuperative capacities, we must acknowledge, from the slow and painful stages of improvement of very dyspeptic or bilious persons, however careful and self-denying, with whom we come in contact, that these organs once degenerated, perfect convalescence is rarely and then but tardily achieved.

When we look into the culinary resources from which the average settler in Florida gains his diurnal sustenance, one has little difficulty in assigning the cause of any sickness that may prevail in the household; and a pallid skin cannot fail to take the place of the ruddy hue that should mantle the cheeks with the bloom of health and vigor, when indigestible substances accompanied with frigid or torrid liquids alone grace the family board.

Starting with the "staff of life," the almost unexceptional representative of bread is a steaming farinaceous compound termed "biscuits," that on mastication forms doughy pellets whose tenacity, which if swallowed will defy the attack of the gastric juices, for their normal state, for hours. The carnivorous appetite is appeased with slices of pork, that with some weeks of desiccation on the shelf has assumed a woody, fibrous consistency. This is fried with its adjunct of stearic-rancidity, the former testing the powerful disintegrating action of one's molars, and both collectively resisting the action of the digestive organs. A cup of seething hot tea or coffee, followed by a copious libation of ice-cold water is projected upon the whole. The whole of the process of pseudo-nourishment is crowded into the space of a few minutes, and indigestion, biliousness, dyspepsia or some other ailment is the outcome, for which the Florida climate, in all its innocence, is wrathfully anathematized.

That bread is the best staple aliment within the reach of humanity is an axiom, but that it should be eaten no sooner than twelve hours after baking should be equally axiomatic, and hot "biscuits" (as those small rolls are falsely designated in the Southern States) should be eschewed, even by the cast-iron constitutioned, with as much aversion as the most malignant poison. Let it not be supposed that bread, even in a warm climate, must needs get stale when kept a day. If placed in an earthen receptacle or crock, it will remain soft, moist and equally as palatable as new hot bread, without having the evil tendencies of the latter.

Bacon or salt pork (the "cracker" terms it meat, for it is the sole carneous nourishment his soul aspires to) should for the most part excluded, that abolition may commence the resolvent process of this fibrous and saline aliment which must otherwise overtax the gastric powers. Boiling will also tend to eliminate much of the superfluous salt, which, if swallowed, invariably causes pangs of thirst, a sure premonition of some abnormal taxation of the intestinal juices.

Regarding the subject of meat in Florida, I cannot refrain from expressing an opinion that the prevalent custom of serving it at meals a few hours after slaughtering, is both unnecessary and deleterious. Meat which is hung for a day or so in a dry place where a sufficient supply of air finds admittance will become tainted, and its improved flavor, combined with the tenderness acquired, renders it both gustable and easy of digestion, in fact a wholesome delicacy on the table, instead of being the source of arduous labor to dissect and equally laborious to digest. By the bye, pawpaw trees are, I am told, easy of cultivation on Florida soil and are met with in many parts of the peninsula. How many owners of that useful tree are aware of the fact that meat hung in its branches or wrapped around with its leaves will become tender, however tough it has been before? The leaves of the pawpaw contain saponaceous properties, and the lye acts on the animal fibre. Boiling the fruit of the pawpaw with meat will likewise produce the same effect. Do many of your readers know that in tropical America the saponaceous elements present in these leaves are utilized in the absence of soap.

One of the significant deficiencies of the Florida diet is cow's milk. The common excuse has prevailed that one is unable to raise grass in Florida. But the continuous attention that has been given to this subject in the papers, showing how some six different kinds of nutritious grass can be grown profitably in this State, together with the fact that there are a number (not many, however) of families who feed their milch cows successfully on grass raised on their homesteads, shows that the excuses for the absence of fresh milk are invalid, and that indolence or ignorance alone accounts for the lack. The writer has, unhappily, seen many an infant's death caused by the absence of this nutritious beverage. And that children with pallid faces and subject to chills are not more commonly met with is a matter of surprise to myself, when the chief element for infantine development is absent. Crab grass and Maiden cane are indigenous to Florida, and Johnson, Bermuda, Guinea, and Alfalfa or Lucerne grass are capitally adapted for Florida soil.

Before quitting the topic of beverage, I should say that the copious draughts of iced water during a hot day, poured into a heated stomach, are the cause of Florida's quasi-dysentery epidemics. The most astonishing suicidal feat I ever beheld without immediately fatal results, is often accomplished in Florida, when I see persons apparently in full possession of their mental power drink ice-water and boiling hot tea or coffee in the same minute at their meals. The climate of Florida cannot be very hard on the human system when it permits such freaks as are common in this country of sunshine.—*Petrel in The South.*

CANVAS BOATS AND CANOES.—*Editor Forest and Stream:* I would like to join hands with C. Wilmer Hallock in asking some of your readers who have been there, to give us through FOREST AND STREAM their experience with canvas canoes and boats. I would like something of the kind that would defy the baggage smasher, and could be shipped as far up our inland streams as they are navigable for light craft. I could then cruise down. Something light, easy to paddle; yet strong and large enough to carry two and luggage when necessary. In June, 1886, a friend and I made a trip of nearly 200 miles in a rough boat made of heavy lumber. We were eight days making the trip; it was all down stream, but when it came to a carry around a dam our boat was too heavy. Nevertheless we had a pleasant time, enjoyed the trip and hope to do it over again in a lighter boat.—CLARION (Ashbaugh, Pa.).

NATIONAL ASSOCIATION OF AMATEUR OARSMEN.—We have received the minutes of the fifteenth annual meeting and the report of the Executive Committee, with the regatta rules and laws of boat racing.

SAGAMORE C. C. FALL REGATTA.

THE first annual regatta of the Sagamore C. C. was held in Lynn Harbor, near Boston, on Oct. 9. There were three sailing races and a paddling race. The course for the sailing races was from a point off Hay's boat shop around Sand Point buoy, thence around buoy off Gas house wharf, thence to point of starting; distance 2½ miles. The prizes in the first class were: Club pennant to first, *The American Canoeist* for one year to second and a handsome silk American flag to third, second class the same as first. The prize in the paddling race was an oil painting for first and club pennant for second. The prize in the special race was a club pennant for the championship of the club presented by Captain Bellatty. This pennant is to remain the property of the club and can never be held permanently by any one winner.

The winners in the first class sailing race were Ibis, Frank Passmore, 1h. 30m.; Julita, Charles Carleton, 1h. 30m. 3s.; Yawata, John Center, 1h. 32m. The winners in the second class race were: Nellie F., John Raymond, 1h. 59m.

The course for the paddling race was from the same point as the sailing to First Channel buoy and return; distance ½ mile. The winners were John Center, 5m.; George Center, 5m. 4s.; John Raymond 5m. 6s. In the special race Yawata, John Center, came in first; Curfew, J. B. Center, second, and Ibis, Frank Passmore, third. The Ibis would have come in first if Yawata had not fouled her near the finish. At conclusion of the race the members of the club adjourned to the Revere house, where a dinner was served. Following the banquet Captain Bellatty presented the prizes to the several winners and he in turn was presented with a handsome boquet by F. J. Pettingill in the name of the club. Our club has 12 active members with 17 canoes and 10 of them are sailing.

LYNN, Mass. IBIS.

THE MODEL YACHTSMAN AND CANOEING GAZETTE.—This little journal, which has for some time devoted part of its space to canoeing, has now enlarged the canoe department under the direction of Mr. Thos. S. Holding, R. C. C., better known as "Severn," a cruising canoeist of experience. The October issue contains plans of a "Wear" canoe, by Alex. McLeod, Mate of Wear C. C. The dimensions of the boat are 14×30, with a single board well forward and a drop rudder. The design is carefully worked out and shows a good cruising boat, though the tumble home is a feature now generally condemned. The racing rig has two "Lassie" sails of 70 and 30ft.

TORONTO C. C. CHALLENGE CUP.—On Oct. 16 four canoes entered for the challenge cup of the Toronto C. C.: Isabel, Robert Tyson; Alouette, W. A. Leys; Yanowah, D. B. Jacques; Una, Colin Fraser. Before the race the wind was very squally, so Alouette and Yanewah set their small sails. Later on it moderated, and Isabel's big rig brought her in first. Una parted a halliard and was disabled for a time.

EXECUTIVE COMMITTEE MEETING.—Com. Rathbun will call the meeting of the Executive Committee in New York on Nov. 13.

A RODY PATTERSON FUND, for the benefit of the late Rody Patterson, Jr., has been started by the New York *Sportsman*.

Yachting.

YACHT RACE EXTRA.

THE Yacht Race Extra published by the FOREST AND STREAM is on sale at all news stands, or may be ordered direct from this office. It is a 16-page review of international yacht racing up to the last races. Has many illustrations, the lines of Galatea, Madge, America, Schemer, plans of Genesta, chart of course, etc Handsomely printed on fine quality paper. Price 10 cents.

THE LAUNCH OF THE ALVA.

FOR some time past America has enjoyed the somewhat doubtful honour of possessing the largest steam yacht in the world. As far as looks and style are concerned the less said the better; but in tonnage America was ahead. Other nations might, and did, own faster, handsomer and better steam yachts, but they were smaller and America was ahead in tonnage and bulk. Now that another large steam yacht is to be added to the fleet, it is a cause for congratulation that, besides being again the largest pleasure yacht afloat, she has some other pretentions. Steam yacht designing is a subject that as yet has received little attention in America, and while some fast and serviceable yachts have been built here, and some have been elegantly and luxuriously fitted up below, nearly all, especially in the larger sizes, have been crude and clumsy in design, savoring rather of the coaster and steam collier than of any relationship to the pleasure fleet. This is largely due to the few demands that have thus far been made on American yards, and to the fact that their practice has been almost entirely confined to trading vessels. The steam coasting fleet is almost the only division of either the navy or merchant marine which an American can look on with any degree of pride, the vessels being all of American design and construction, and admirably suited to their work. With this class of vessel only have American yards been concerned, only a dozen steam yachts of any size having as yet been built here, so that the latter branch of designing is as yet almost in an experimental state.

Beyond all question the handsomest and most imposing of the American steam fleet is Namouna, built on the Hudson River, but from an English design, and when Mr. Vanderbilt determined last winter to invest nearly half a million in a vessel intended to be the largest and finest pleasure craft afloat, he carried his patriotism only so far as to provide for building her at home, while he sought for the designer of the Namouna to plan the vessel. Mr. St. Clare J. Byrne, of Liverpool, Eng., has long been known as a successful designer of steam craft, among his larger boats being Amy, 639 tons; Lancashire Witch, 479; Namouna, 740, Sunbeam, 532; Miranda, 349; Rover, 565; Gitana, 471; Cuhona, 498; Jason, 416; Margaret, 395; Dobhran, 440; while he tops the list with the new Alva of 1,238 tons.

The object of her owner was to have a yacht capable of making the circuit of the globe, and large enough to give accommodations for his family and friends on the longest voyage. The contract was given to the firm of Harlan & Hollingsworth, of Wilmington, Delaware, long known as among the leading American builders of iron vessels. The specifications call for the highest grade of material and workmanship, the vessel being built under Lloyd's highest survey, and under the personal supervision of their principal inspector in the United States, Mr. Thos. Congdon. The dimensions of the Alva are:

	Feet.	In.
Length over all	285	00
Length for tonnage	256	00
Length on load water line	252	00
Extreme beam	32	03
Moulded beam	32	00½
Depth in hold	19	01
Depth moulded	21	06
Extreme draft	16	08
Diameter of wheel	13	06
Measurement, O. M.	1,692	00
Displacement in tons	1,300	00
Area of midship section in square feet	340	00

The hull is of low grade, open hearth, mild steel, made by the Linden Steel Co., of Pittsburgh, Pa. The scantlings are of the same size as for iron, though Lloyds allow a reduction of 17 per cent. for steel. The frames are of angle steel 4x3x⅜in., spaced 24in. centers throughout, with double frames at all bulkheads, also across the keel for one-half the length of vessel amidships the main frames extending alternately to the stringer plate and to the sail. The reverse frames are 3x3x5-16in. angle steel on every frame, and doubled in many places for strength. The floors are of steel plates, 7-16in. thick, by 36in. deep amidships, increasing in depth at the ends, and riveted to every frame. There is a center keelson of intercostal plates, 7-16in. thick, 28in. deep, attached to the floors by double steel angles, 3x3x⅜in., having also two bars, 5x4x7-16in., angles on top edge, extending whole distance fore and aft, also the main bilge keelsons, formed by two angle bars, 5x4in., back to back, running fore and aft, and ending in strong plate breasthooks; the upper keelson has a heavy bulb steel bar, 8x⅜in., between the angles, for a length of 100ft. amidships.

The main deck is of steel for 75ft. amidships, and also under the forward deck house. The engines are three cylinder compound direct acting, high pressure cylinder, 32in. in diameter, and two low pressure cylinders 45in. diameter, stroke 42in. The cylinders are all steam jacketed with separate wearing cylinders and faces; the valve motion is the Joy patent and the valves are of the Thoms patent, the high pressure fitted with the piston valves, the low pressure with slide valves. The piston rods and valve stem are of steel. The crank shaft is of steel and weighs 8 tons. The air, feed, and bilge pumps are connected to the low pressure crosshead. The two return tubular furnaces are of steel, 17ft. diameter by 10ft. long, each having four Fox patent corrugated furnaces 42in. diameter, and also 298 3½in. tubes. The working pressure will be 100lbs. The wheel is 13ft. in diameter and four-bladed, of manganese bronze, weighing 5 tons. It was cast in Scotland, the duties on it amounted to $1,100. The vessel will be rigged with three masts, square rigged on the fore. She will, of course, be fitted with steam steering and hoisting engines, electric lights, condensers and all the conveniences common to the large steam yachts.

The three deck houses are built in of steel, sheathed with teak. In the forward one is the chartroom, galley, reception room and main stairway. The middle house is devoted to the engine department, while the after one includes a ladies' saloon and a second stairway to the library.

The fore part of the vessel below is given up to the crew, while the extreme after part contains the officers' quarters. Immediately abaft the forecastle are staterooms, store and bathrooms, then a large nursery, the main staterooms, and a dining saloon 31×18ft. The pantry adjoins it, while stairs lead to the galley on deck and also to the storerooms in the hold where wine, ice, coal and provisions are kept.

From the dining saloon a passage way leads aft beside the engine space to a very handsome library, into which open more staterooms. On one side of the passage way is a small recess from which the engines may be seen. The finish below will be plain rather than elaborate, but all will be in the best of taste.

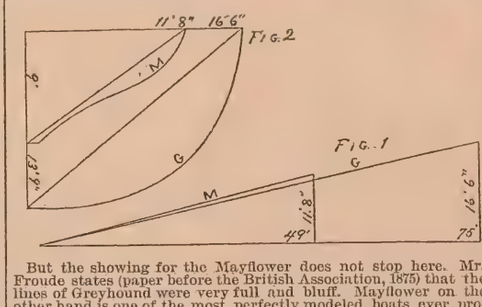
The bunkers will carry 500 tons of coal and the tanks 30 tons of water, while the condenser will supply 750 gallons per day.

On Thursday of last week the yacht was ready for launching and lay in a carefully built cradle with flags flying from temporary poles. During the morning a special train brought from New York her owner, Mr. Wm. K. Vanderbilt, his wife, and a party of friends, Mrs. Vanderbilt's sister, Mrs. J. A. Yznaga, Mr. Fred W. Vanderbilt, Mr. George Vanderbilt, Mr. Winfield Scott Hoyt, Mr. Forster, Mr. Gray, Mr. H. B. Hollins, Mr. Oliver King, Mr. Chauncey M. Depew, Mr. J. Fred Tams and Commodore A. Cass Canfield, Seawanhaka C. Y. C.

By noon they were on board the yacht, a platform being erected on the forward deck. Here a wooden trough was arranged, in which was a bottle of American wine. At 1:22 the first rally began and the wedges were driven home until the weight of the vessel rested on the ways. The keel blocks were then split out, the bilge ways were sawn free, and with a push from the jacks the yacht started, and at 1:39 entered the water. As she left the ways Mrs. Yznaga broke the bottle of wine with a silver-headed hammer and christened the yacht Alva, after Mrs. Vanderbilt.

After the launch the workmen were all dismissed for a half holiday, Mr. Vanderbilt paying for the time they lost. The yacht will be completed in about two months.

Christiana Creek is so narrow that the yacht struck the opposite bank and rested in the soft mud. On Saturday an attempt was made to haul her off by warps and a crab, when the warps parted and struck several of the workmen, injuring two and killing one outright.



RESISTANCES OF MAYFLOWER AND GALATEA.

Editor Forest and Stream:

One of the funniest things among the many funny things which the Mayflower-Galatea races have brought out, is the attempt to decide the merits of the two yachts by the question of the resistances which their hulls encounter to motion in the water, disregarding entirely the primary requisite in the design of any sailing vessel, whether for commerce or pleasure, that her form shall be such as to enable her to sustain the power from which alone any motion is obtainable. But preposterous as such a proposition is, it suggested a comparison of certain data, and the result is interesting, for a comparison of the yachts even on this basis of resistances.

It happens that in some important elements the Mayflower is almost identical with a vessel whose resistances are thoroughly known—the steamer Greyhound, famous through Mr. Froude's experiments with her on the resistances of ships. Not having the full report of Mr. Froude's experiments before me, I take the data from Mr. W. H. White's "Naval Architecture."

The beam of the Greyhound was 33¾ft., the length of her entrance was 75ft. Her entrance was therefore two and two-tenth times her beam or four and four-tenth times her half beam. I have not the exact length of Mayflower's entrance, but assuming it to be the same proportionally as that given in your issue of Aug. 26 for Puritan, viz., 58 per cent. of her waterline length, it would be between 49 and 50ft. Assuming it to be the same proportion as Priscilla's, viz., 60 per cent., it would be 51ft. Taking the lowest and most unfavorable figure (as her beam is 23½ft.) her entrance would be two and seven-hundredth times her beam, or four and fourteen-hundreth times her half-beam. Practically, then, the bow-wedge of Mayflower is identical with the bow-wedge of Greyhound. In other words, the Mayflower would be practically as sharp as Greyhound, and the most important element in wave-making resistance, when each were moving at her appropriate speed, would be practically identical in both boats. I have indicated this by a diagram, Fig. 1, drawn to scale, showing half the entrance wedges of Greyhound and Mayflower. Their almost complete identity is manifest.

But the showing for the Mayflower does not stop here. Mr. Froude states (paper before the British Association, 1875) that the lines of Greyhound were very full and bluff. Mayflower on the other hand is one of the most perfectly modeled boats ever produced on her dimensions, and unquestionably the real fineness of the yacht is indicated by a wedge sharper than that shown, while the fineness of the steamer must be indicated by a blunter wedge than is shown. In other words, the wave-making resistance of Mayflower is a less important element in her total resistances, at her appropriate speed, than was the wave-making resistance of Greyhound among her total resistances, at her appropriate speed. Now the wave-making resistance of Greyhound is a thoroughly determined quantity. At 8 knots (9 miles) her wave-making resistance was only 30 per cent. of total resistance (sometimes the frictional resistance is put as high as 80 or 90 per cent.). So, at that speed friction was more than twice the wave-making resistance. The appropriate speed of Greyhound is stated to have been 10 knots (11½ miles. Up to that speed her wave-making resistance did not increase disproportionately. Now we have seen that Mayflower's form is such as to make it very probable that at her appropriate speed her wave-making resistance is even lower proportionately than Greyhound's, her form being far finer. Taking Mr. White's formula for the relation between length of entrance and appropriate speed, it would follow that the appropriate speed of Mayflower is about plus 9 knots, but call it 9 knots (9 miles) per hour, up to which her wave-making resistance does not increase disproportionately, and we have good reason for assuming, until the matter is definitely decided by a towing test, that up to that speed her frictional resistance is the principal element which opposes her progress. Nine miles is very fair sailing speed, far higher than Galatea has been required to make in any of her races this summer. For a beat to windward with a fair breeze and not very rough water, it would be a very good speed indeed. I restate the result of the discussion in a sentence:

Up to the average speeds of a sailing yacht, the frictional resistances of Mayflower probably exceed all her other resistances put together, and are the ones chiefly to be considered.

Galatea's wave-making resistance is probably less than Mayflower's, but not by any means less in the proportion in which her beam is less. She has considerable of what is practically straight middle-body at her waterline, while Mayflower has practically none. The effect of this is a virtual widening of the bow wedge and increase of wave-making resistance, bringing Galatea in this respect nearer Mayflower's level. The effect of her straight middle-body is also more likely to affect her resistance unfavorably than favorably. So far as it goes, its effect is also to bring her nearer Mayflower.

As to the frictional resistance of the two yachts there is no question whatever. Galatea's is much in excess of Mayflower's, by reason of her immensely greater under-water body and its consequently increased friction-making surface.

Comparing Mayflower with a tested vessel (Greyhound) her resistances up to the speeds likely to be sailed are pricipally friction. Wave-making is less important. Galatea has a narrower wedge, but not narrower in the proportion of her lesser beam, and her middle body is also, in accordance with theory, probably an injurious factor. Her frictional resistances are unquestionably much in excess of Mayflower's and the conclusion is pointed to with great force, that the total resistance of Mayflower, at the speeds usually reached by both vessels, is not greater than—probably not equal to—but less than the resistances of Galatea.

This can only be absolutely determined by a towing test, but until that is made the conclusion above reached finds strong support in high quarters. It is clearly the opinion of so good a judge as the *London Field*. In its comments on the last Genesta-Puritan race, it said last fall: "The shallower form of Puritan being better adapted for high speeds, she slipped Genesta very easily."

Speaking of the resistances of sailing vessels, Mr. White says, in "Naval Architecture": "For speeds such as are ordinarily attained under sail, it appears not unreasonable to assume that frictional resistance furnishes by far the larger portion of the total resistance." And it is to be observed that he is speaking of merchant vessels, in which the element of wave-making resistance holds a much higher relative place than in the case of finely modeled yachts like Mayflower.

By one consent it has been admitted that the old America was a model of form. Now, her entrance on the scale given in your Yachting Supplement, was, in 1881, 52ft., her beam 23ft., practically the same as the Mayflower's. The entrance was two and two-tenths her beam, her bow wedge therefore almost identically the same as Mayflower's, taking for the latter's entrance 49ft.; if we take 51ft. then it was so near that even the practiced eye could not discern a difference in the angle. It will not be contended that America was more finely molded on her dimensions than Mayflower is, and Mayflower has the unquestioned advantage over America of a much smaller immersed surface. This last comparison is given to emphasize the high position Mayflower must take when the question of resistance is considered.

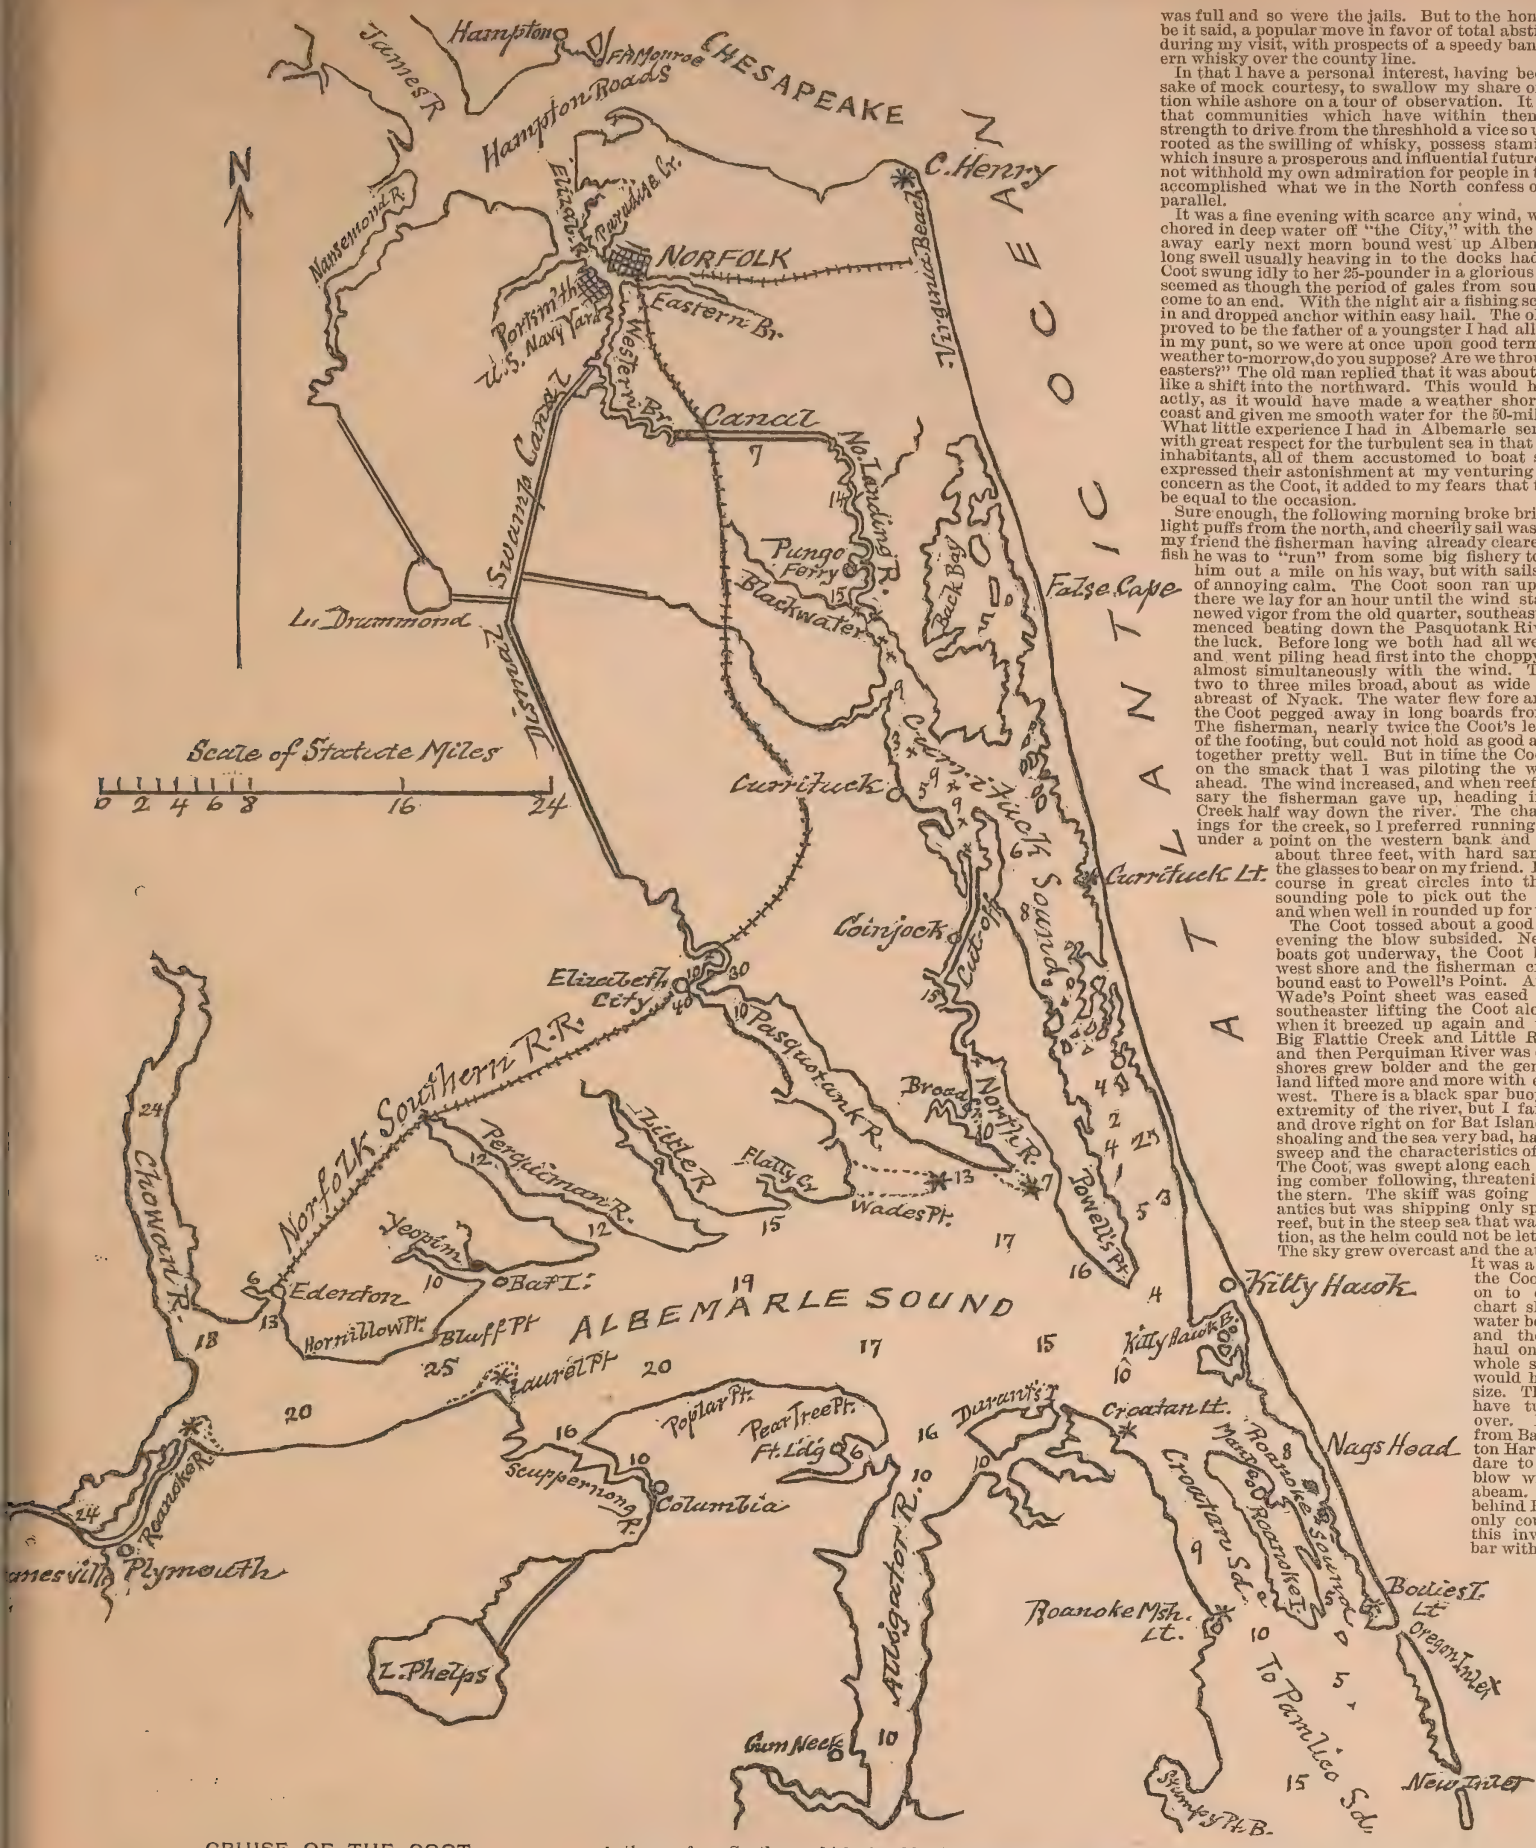
Mayflower has not been tested in very rough head seas, but Thetis, of the same type, has been, and the show she made of the cutter in exceptionally severe conditions is a part of the season's record. Sachem, a two-masted Mayflower, has been tested in a very stiff breeze and rough tumble of a head sea against the very flower of English racing craft, and the result is also a matter of record. As to Mayflower's probable performance, I cannot do better than quote the FOREST AND STREAM on the result of the first trial race and Mayflower's work on the seas outside the Hook. You said:

"Stately, with steady swing, the queen of the American fleet was claiming her due. With long, measured rise and fall, Burgess's best clipped the seas under plain sail in a style that proclaimed her unapproachable by aught native to our waters."

Yet there are some other boats "native to our waters," both keel and centerboard, which are very fine performers in a seaway.

Fig. 2 is drawn simply to indicate the superiority of form of Mayflower over Greyhound, to enforce the comparison of resistances above made. Mayflower is traced from prints published this summer. Greyhound is based on cross sections of British war vessels given by Sir Edward Reed in a paper on "Forms of Ships," read before the Institution of Civil Engineers last May. It undoubtedly represents Greyhound less full and ugly than she was, and so errs unfavorably to Mayflower. The triangles in Fig. 2 give a ready and forcible commentary on the absurdity of those who claimed last year that Puritan was "too shallow to go to windward." D. W. B.

ELECTRICAL LAUNCHES.



THE following account of the electrical boat Volta which lately crossed from Dover to Calais, is given in the London *Times:*

The latest example of an electric boat prior to the Volta is afforded by a steel launch built by Messrs. Yarrow & Co. during the present year for the torpedo service in the Italian Navy. This boat is 36ft. long by 6ft. 4in. beam, and is propelled by a screw driven by a duplex Reckenzaun motor. She made on the measured mile 8.33 miles per hour, and is now in regular service at Spezzia. In each case the electric current is stored in a battery composed of the Electric Power and Storage Company's cells.

The latest outcome of electrical science in the present direction is the Volta, which is steel built, measures 37ft. long by 6ft. 10in. beam and is fitted with a battery of 61 cells made by the Electric Power and Storage Company and a duplex Reckenzaun electric motor—that is, two motors carried on one driving shaft. By means of this motor the speed can be varied without affecting the accumulators, three speeds being obtained from it, namely, slow, medium and fast. For the slow speed the motors are coupled in series, for the medium speed one motor only is used, while for the maximum speed the two motors are used in parallel—that is, they are both worked at high pressure. Another important feature is that all these speeds are produced and the vessel started and stopped by means of one switch only, having one handle, thus reducing the control of the speed of the boat to the simplest terms. There is a separate switch for reversing the motion of the motors from ahead to astern and *vice versa*, and this is done by simply reversing the current through armature without interfering with the field magnets and requiring only two brushes to effect the operation, which brushes are never moved. The motors, which are placed well aft, directly over the keel, measure together 3ft. 10in. long by 1ft. 9in. wide and 12½in. high over all. They weigh 730lbs. and develop a maximum of 16-horse power on the brake. The Volta is propelled by a three-bladed screw 20in. in diameter and 11in. pitch, coupled direct to the motor shaft. The propelling machinery makes about 600 revolutions per minute at the slow speed and about 1,000 revolutions per minute at full speed. The storage cells weigh about two tons and are arranged along the keel of the vessel beneath a wood decking.

The battery of the Volta was charged by a dynamo on shore at Dover, the electric-motive force at starting being 120 volts at 28 ampères. She passed the pierhead at Dover at 10.41 A. M. and made the pierhead at Calais at 2.32 P. M., the run having thus occupied 3 hours 51 minutes. She carried on board Gen. Brine, R. E., Mr. Reckenzaun, Mr. Stephens, and several scientific gentlemen, making with the crew 10 persons in all. The Volta did not take the direct route, having gone somewhat off her course when nearing the French coast. She was propelled at slow speed (600 revolutions per minutes), in order to economize the current and insure its lasting the whole run, speed not being so much an object as to demonstrate the practicability of a vessel making such a voyage by electricity. On testing the battery at Calais no difference whatever was found, the cells still showing 28 ampères, as at starting. The progress of the boat through the water was very smooth and noiseless, so much so that, as stated by us yesterday, a sleeping gannet was captured by hand as the boat was passing it, and was conveyed back to Dover. On the returned journey, which was run at slow speed, Calais pierhead was passed at 3.14 P. M., and Dover pierhead made at 7.37 P. M., being 4 hours 23 minutes for the run —or a total of 8 hours 14 minutes employed in traveling the double journey, exclusive of the stoppage at Calais. The current remained constant at 28 ampères up to 5 P. M., but at 6 P. M. it was found to have dropped to 25, another ampère being lost before Dover was reached. An excellent margin of power, however, still remained, and the last half mile was run at the high speed, the motors and screw making 1,000 revolutions per minute. The practicability of electrical propulsion was thus successfully demonstrated and the way doubtless payed for the further application of the principle in the direction indicated by the class of craft to which it had previously been applied.

THETIS AND STRANGER.—*Editor Forest and Stream:* Mr. Kunhardt has made several mistakes in his resumé of this year's yacht racing, to one or two of which I should like to call attention. He says no sloop entered against Shona in Eastern race because they were afraid to do so; that is untrue. Shadow did not enter because her owner and sailing master were on the Puritan. The owner of Thetis was also on Puritan in consequence, and Thetis carried clubtopsail when Puritan and others were topmasts housed and was thereby handicapped. In the New York Y. C. regatta the Thetis won in her class, not Bedouin, as stated, Bedouin was in first class. In the Fourth of July race in Boston, Stranger had practically a walk-over, as Syren was only put out to oblige Mr. Warren and make a race without either hope or expectation of winning. Mr. Kunhardt has apparently entirely forgotten the Newport Cup race. The true record is as follows: Stranger 9 starts with 5 firsts; Thetis 9 starts and 5 firsts. There is nothing like being accurate. The owner of Thetis on request of Regatta Committee, N. Y. Y. C., gave up his claim to second class prize; but he did not give up his right to it. Mr. Kunhardt, as usual, shirks the point in the Stranger-Thetis matches. The sloop Thetis drowned out the cutter Stranger coming round the Cape from Newport to Marblehead. The Thetis is not sparred right for light weather, although she could never probably be made a first-class lightweather boat, and her owner wished to put off the match races till spring as her present gear and sails are worn out, having been severely strained during three seasons; but consented to sail the present autumn to oblige Mr. Warren. Stranger and Thetis have sailed together 4 races, 2 drifting matches and the Newport fiasco. Thetis won 3 races, Stranger 1 race, 2 drifts and the fiasco. Bedouin won Eastern Y. C. regatta, not Stranger.—SLOOP CRANK.

CRUISE OF THE COOT.

XXVI.

THE Coot lay off Elizabeth City for six days, taking occasional spins up and down river under reefed canvas, as the southeasterly winds continued to blow stiff. Upon purchasing some stores I discovered a material difference in quality in the hard bread and canned goods from those obtained in New York. So much of the trade of the Southern country merchant is derived from the African population that "nigger goods" lower the quality of the stock he carries. Soda crackers are not to be had below Norfolk, a substitute of cheap flour taking their place at 10c. the pound. Potatoes are scarce out of season, for want of suitable storage. Right in the heart of a potato growing country the people actually import from the North the very potatoes they shipped North in spring. Hence they sell at 35 and 40c. per peck. A good cigar is out of question, the man who buys six for a quarter being looked upon as a spendthrift, the average inhabitant indulging in "two for five." If the cruiser is at all particular in what he consumes, he should store up at Norfolk and make arrangements to have supplies shipped from time to time, which can be easily done via the Norfolk Southern R. R. and steamboat connections reaching nearly all the ports on Albemarle and Pamlico sounds. Compared to other towns on these inland seas, Elizabeth is, however, quite metropolitan and the last place which ranks more than a country village. It looked like a moral sort of town, but does not quite live up to its looks. Sunday I pulled ashore for newspapers and a "five scenter," incidentally inquiring for soda water, the day being quite warm. There wasn't any to be had on the Lord's Day, but if I chose to try the side door of a certain hotel they would not let me out without whisky enough to quench the thirst of a crowd. Now Southern whisky is the vilest poison on earth, rank fusel oil which speedily drives its victims into the madhouse, so the hint was lost upon me. No wonder that the cause of temperance has taken firm root in many of the counties I passed through and the curse of Southern fusel oil banished for all time. A person need not be a fanatic to concede that total abstinence from Southern whisky is a blessing so manifest that self-respecting communities should hasten to place the beastly compound beyond the pale of the law. I had excellent opportunities for observation during this cruise. In Dare county prohibition had been in force so long that the rising generation was growing up without the acquired taste for whisky and rejected the stuff with natural disgust. General thrift, cleanliness,, health, peace and content pervaded the villages and settlements of the county. Brawlers, wife beaters, loafers, highwaymen or thieves were unknown. The population of Dare county is composed mainly of fishermen, trappers, boat builders, storekeepers and persons following the sea. In the aggregate they are described by Northern travelers as semi-savage, illiterate and green in the ways of the world. In truth, I found them bright, honest, fearless, liberally disposed, sound in body and mind, a self-reliant community, working out its own salvation with courageous abnegation and a sense of duty to the general welfare which is totally wanting in Northern societies. Dare county will never go back to whisky. Not a man can be found willing to recede from the position taken. Yet these people were once the slaves of alcohol, and the influence of the groggery was as powerful in the politics of the county as it is in Northern cities at this day.

In Hyde county, the wealthies and richest agricultural section of the Old North State, Southern whisky has full sway, and the contrast with Dare was in some respects striking. The villages bristled with filthy dens, about which the country "bum" was plentifully represented. Bloated hangers-on loafed in the streets with no other object in life than to have some one "set 'em up" for their gratification. Dejected-looking specimens were pointed out by the score as So-and-So, who once owned a great plantation, but got to drinking, drove his family from their hearth, sold all he had and is now on the verge of starvation; or else it was a wreck of humanity who once had "the biggest store in town," but failed because he could not leave fusel oil alone. The rum shop has his wealth and warrants are out charging him with being a defaulter. Outrages against life and property were more common than in Dare, the pocket pistol was playing its part, the court calendar was full and so were the jails. But to the honor of Hyde county be it said, a popular move in favor of total abstinence was on foot during my visit, with prospects of a speedy banishment of Southern whisky over the county line.

In that I have a personal interest, having been obliged, for the sake of mock courtesy, to swallow my share of the rotten decoction while ashore on a tour of observation. It is safe to conclude that communities which have within themselves the moral strength to drive from the threshhold a vice so universal and deep-rooted as the swilling of whisky, possess stamina and character which insure a prosperous and influential future. Certainly I cannot withhold my own admiration for people in the South who have accomplished what we in the North confess ourselves unable to parallel.

It was a fine evening with scarce any wind, when the Coot anchored in deep water off "the City," with the object of getting away early next morn bound west up Albemarle Sound. The long swell usually heaving in to the docks had subsided and the Coot swung idly to her 25-pounder in a glorious moonlit scene. It seemed as though the period of gales from southeast had at last come to an end. With the night air a fishing schooner was wafted in and dropped anchor within easy hail. The old man at the tiller proved to be the father of a youngster I had allowed to pull about in my punt, so we were at once upon good terms. "What sort of weather to-morrow, do you suppose? Are we through with the southeasters?" The old man replied that it was about time, for it looked like a shift into the northward. This would have suited me exactly, as it would have made a weather shore of the northern coast and given me smooth water for the 50-mile run to Edenton. What little experience I had in Albemarle served to inspire me with great respect for the turbulent sea in that sound. When the inhabitants, all of them accustomed to boat sailing, uniformly expressed their astonishment at my venturing out in so small a concern as the Coot, it added to my fears that the boat might not be equal to the occasion.

Sure enough, the following morning broke bright and clear with light puffs from the north, and cheerily sail was made on the Coot, my friend the fisherman having already cleared out for a load of fish he was to "run" from some big fishery to market. I made him out a mile on his way, but with sails flapping in a zone of annoying calm. The Coot soon ran up in company, and there we lay for an hour until the wind started up with renewed vigor from the old quarter, southeast. We then commenced beating down the Pasquotank River, digusted with the luck. Before long we both had all we could stagger to and went piling head first into the choppy seas which made almost simultaneously with the wind. The Pasquotank is two to three miles broad, about as wide as the Tappan Zee abreast of Nyack. The water flew fore and aft the decks as the Coot pegged away in long boards from shore to shore. The fisherman, nearly twice the Coot's length, had the best of the footing, but could not hold as good a wind, so we hung together pretty well. But in time the Coot winded so much on the smack that I was piloting the way some distance ahead. The wind increased, and when reefing became necessary the fisherman gave up, heading into Little Flattie Creek half way down the river. The chart had no soundings for the creek, so I preferred running into shoal water under a point on the western bank and lowered away in about three feet, with hard sand bottom, and got the glasses to bear on my friend. He sailed a devious course in great circles into the creek, using a sounding pole to pick out the tortuous channel, and when well in rounded up for the day and night.

The Coot tossed about a good deal, but with the evening the blow subsided. Next morning both boats got underway, the Coot beating down the west shore and the fisherman crossing the river, bound east to Powell's Point. After getting round Wade's Point sheet was eased away, a pleasant southeaster lifting the Coot along finely till noon when it breezed up again and the sea ran high. Big Flattie Creek and Little River were passed and then Perquiman River was opened. Here the shores grew bolder and the general level of the land lifted more and more with every mile to the west. There is a black spar buoy off the western extremity of the river, but I failed to make it out and drove right on for Bat Island. The water was shoaling and the sea very bad, having a translatory sweep and the characteristics of regular breakers. The Coot was swept along each time with a curling comber following, threatening to pile in over the stern. The skiff was going through frightful antics but was shipping only spray. I wished to reef, but in the steep sea that was out of the question, as the helm could not be let go for an instant. The sky grew overcast and the atmosphere murky.

It was a toss up whether the Coot was not driving on to destruction. The chart showed only 2ft. of water between Bat Island and the mainland. To haul on the wind under whole sail in such a sea would have meant a capsize. The sea alone would have tumbled the boat over. It was 18 miles from Bat Island to Edenton Harbor, and I did not dare to stand on in the blow with a heavy sea abeam. To make a harbor behind Bat Island was the only course possible and this involved crossing a bar with 2ft. of water by chart. I relied upon an extra foot of water, owing to the prevailing southeasters, and steered into a seething mass of angry breakers. Numerous lines of stout poles with nets hung thereto, which could be made out with difficulty in the dusk, added to the trouble, as I tried to keep the sail from jibing while picking a way through. The last soundings with the oar had given 6ft. A moment more and we would be on the bar, which rises like a narrow wall. Anxiously I awaited the first thump. The sea would be certain to sweep me over and clear if the boat did not actually stick. In such an event she would have been slewed round broadside, thrown on her bilge and stove to pieces. The breakers became more forbidding, being now a mass of foam from crest to crest. The Coot steered very wild. I sounded again. Eight feet! We had crossed the bar without knowing it, and were safe in deep water beyond. The sea at once smoothed, and I felt a sense of relief which found vent in a fresh pipeful, while the boat was sailed into the mouth of the Yeopim River and rounded to in 5ft. for the night under the shadow of the densely wooded shore. Distance run 32 miles, though nearly 40 were made, allowing for the beat out of the Pasquotank. Bearing due south I could make out Laurel Point Light on the south shore of Albemarle. Its beams were like good company in the solitude prevailing all round. But I was not the only man within hail. After the evening meal, while I was filling my pipe, there came a noise of puffing steam and shouts made their way through the cabin doors. Before I reached the cockpit a familiar voice sang out: "Hello, Cap! You here! Bully for you!" Through the darkness I made out the captain of the tug Manistee, of Norfolk, who had offered me a friendly tow through the canal during the passage down. He had pulled alongside in a skiff. We exchanged yarns after which he left to look up an endless raft he was to tow back to Norfolk. Later in the cruise we met again and the Coot was glad to hitch on to just such a raft for a lift through the canal on the homeward voyage.

Got out early next morning and found the sea had subsided greatly during the calm night. The regulation southeaster had already struck in, so the Coot was logging it quite fast up the coast. The water shoals off Bluff Point as I found out by the increased sea and its onward motion. Hauled up to clear the red can buoy far out from the Point, there gave more sheet past Sandy Point and squared away for Horniblow Point. Here we jibed over, picked up the beacons leading in and with a stiff wind and follow-

ing sea drove up towards the town. The true wind was lost suddenly and sharp puffs ahead put the Coot to beating up with her gangway afloat, forcing her to beg frequently. The great number of seines and pound nets in the harbor stand for the chief industry of the place. The town from the water is pleasantly located, attractive and prosperous in appearance. Several prominent white buildings on a grassy knoll, some fine residence with handsome grounds and the terraces of the Norfolk Southern R. R. face the mariner coming up the harbor and make a very favorable impression. You keep the railroad docks close aboard after leaving the last black beacon to port and then steer up the middle of a creek for good protection and six feet of water. Vessels of more draft anchor below in the roads where there is 13ft. C. P. K.

THE COMING SCOTCH CHALLENGER.

NOTHING further has taken place in regard to Mr. Bell's challenge since our last issue, the letter to the New York Y. C. not being yet made public. The present position seems to be that the challengers would prefer to build a yacht of 70 to 75ft. rather than one of 85ft., and have written to know what size of yacht the New York Y. C. propose to meet them with. As there is not a boat in the fleet under 80ft. waterline that could hope to sail for the cup, and as it is extremely improbable that the defenders will consent to give up those already built and construct one or more of a smaller size, the question is easily answered.

For a week past Mr. G. L. Watson, of Glasgow, who will design the new boat, has been in New York and Boston, his purpose being to learn something of the American yachts and the conditions which prevail here, before deciding on the new boat.

The following account of Mr. Watson and his work appeared lately in the Boston *Herald*:

"Of the English yacht designers of the present day, Mr. George L. Watson, of Glasgow, Scotland, stands among the foremost. He is only 31 years of age, and 'at home' is generally considered the best 'all round' designer of the old country. It was while in the employ of Messrs. Inglis that young Watson turned his attention to yacht designing and building. Mr. John Inglis, Jr., was one of the most scientific shipbuilders in the United Kingdom, and Mr. Watson served his apprenticeship with a good master. During the time he was learning his trade he spent his evenings in the study of naval architecture, and in 1874 started in business for himself as a naval architect and marine surveyor. At that time the yacht Pearl was the famous five-tonner. She was built by Fife, of Fairlie, Scotland, and was at the height of her glory. Some dozen or more five-tonners had been built to beat her, but none of them succeeded in lowering her colors. The yachting interest at this time was building up in Ireland, and Mr. Watson received an order from an Irish gentleman to build a five-tonner, the conditions being that she should beat the famous Pearl, otherwise the yacht was to be left on the hands of the designer. Young Watson accepted the terms named, and soon after he began work on the plans. It was not long before the design was made, and the yacht was completed a few months later. She was named Clothilde by her owner, and he lost no time in accepting the challenge of the owner of the Pearl. In yachting circles the Pearl had such a record that Mr. Watson's boat was the subject of unfavorable comment, and the now famous designer was laughed at. There was but little interest taken in the match, as it was considered a foregone conclusion that the Pearl would win. It was a trying time for Mr. Watson, for he had put his money and brains into his yacht.

The Clothilde beat the Pearl and did it handsomely, and immediately Mr. Watson rose in the opinion of English yachtsmen. Orders came in fairly well after this, and in 1876 he designed and had built the 5-tonners Vril and Freak. These yachts stood at the head of the 5-tonners for some time. Since 1876 Mr. Watson has advanced wonderfully as a naval architect. The famous cutter Madge, now owned in New York, was designed by him. Her record is a remarkable one. She is a 10-tonner, and out of 24 starts won 22 first and two second prizes. Her performances in New York are well known, as she beat every American yacht she sailed against, with the exception of the Shadow. The latter beat her once, but the Madge beat the Shadow in return.

Beside designing sailing yachts, Mr. Watson has designed some of the best steam yachts in England, both for fishing and pleasure services. His skill in the profession he had chosen received the highest awards at the exhibition of shipwrights in London, and he was awarded the gold medal of honor for a design of a 700-ton steam yacht and also for a racing schooner yacht, which was about the dimensions of the American schooner yacht Fortuna. Beside being a naval architect, Mr. Watson has also been a contributor to scientific publications which are wholly devoted to naval architecture. About six years ago he wrote a series of articles on yacht designing for *Land and Water*. He is at present a member of the Society of Naval Architects of England, and his papers, which were recently read before that society, received the highest praise. Since being in business he has designed and had built for different parties over 180 vessels of all descriptions, including the little steam launch, the cruising yacht, the fisherman and the racing cutter. All his boats have turned out very well. Of those built in recent years, the cutters Vanduara and Marjorie, the 10-tonner Ulerin and the 5-tonner Doris rank among the best. The Vanduara, 90 tons, in her day held first place, and she was most always a prize winner in the races in which she started. The Marjorie, 68 tons, holds a high place in England to-day, and she is considered the best yacht "by the wind," the Irex not excepted. She has beaten both Irex, Galatea and Genesta on time allowance, and has won over 50 prizes. The 10-tonner Ulerin, built two years ago, has also a remarkable record, and she has won over 50 prizes in two years, including a "Queen's cup," valued at £105. Coming down to last year, the 5-tonner Doris stands with a record unequalled by any yacht in England. The Doris measures 33.58ft. on the waterline, 45.6ft. over all, extreme breadth 5.58ft., extreme depth, 8.6ft. She carries about 7 tons of lead on her keel. Before the Doris was built the 5-tonner Shona, now owned in Boston, was considered the best in her class, until the 5-tonner Delvin was built. The latter beat the Shona. The Delvin in 1884 stood at the head of the 5-tonners. A year ago last winter the Doris was built, and last summer was her first season. She beat the Delvin and Shona in every race she started against them, and at the end of the year the Doris had a record of 26 starts. She came in first 25 times and won 24 first prizes. In one race she carried away her rudder. She also lost one race through a protest. The Doris has started 7 times this season, and has taken first prizes in every race of the 5-tonners. The 5-tonner Nora, designed for Mr. Allan, of the Allan Line, was almost as successful as the Doris, and has won over 60 prizes in three years.

In steam yachts, the largest one that Mr. Watson has built is the Amy, 850 tons, for Mr. N. B. Stewart. He has also built the steam yacht Mohican, 700 tons, for Messrs. John and William Clark.

In appearance, Mr. Watson is a typical Scotchman, of slight build and an intellectual face. Mr. Watson has a great advantage in his business, being a practical shipbuilder and sailor. These two latter qualifications are of great help to him in his profession, as he can combine "rule of thumb" with "science." The only yacht of Mr. Watson's design in this vicinity is the cutter Bayadere, built last year for Mr. J. Malcolm Forbes. The Bayadere has not been sailed in any races here, so that no comparison can be made of her as compared with American yachts of her class. Her owner has been so engaged with the Puritan that he has not had time to get her in proper trim.

MEASUREMENT RULES ABROAD.

THE season being over and the fleet laid up, the British yachtsman now seeks sport and excitement in a renewal of the undying and always novel question of measurement. As usual, most of the discussion is neither instructive nor interesting, but some of the ideas are at least amusing. One statement advanced, not in joke but in sober earnest, is that Irex is hardly a match for Marjorie to windward; Marjorie is 65 tons, Y. R. A. measurement, Galatea is still slower than Irex; hence "we have virtually been racing a vessel of 60 tons or one of equivalent speed, but without time allowance, with drop keel sloops of from 140 to 165 tons under our measurement, and under these circumstances if we are beaten we are not disgraced." This makes it all perfectly clear, especially as it comes, not from an amateur but from a yacht designer well-known in his profession, Mr. C. P. Clayton. Without dealing in detail with Mr. Clayton's letter to the London *Field* of Sept. 25, we would point out that Americans are not increasing but steadily decreasing the beam, and long since reached the maximum limit; also that in America, at least, it is by no means hopeless to match a keel boat against a centerboard in any weather when there is wind enough to sail, as instanced by Clara, Bedouin, Oriva, Ulidia and Madge.

Another correspondent of the *Field* offers a universal panacea of guaranteed efficiency, which he sets forth as follows:

"For my part, my idea—which I am ready to support to the best of my ability, and hope to see flourish—is for the Y. R. A., or some other body of yachting men, to settle on the plan of a practical fast cruising five (to begin with), with fair beam and draft, and publish it, so that sailing committees could offer a prize for boats built on that plan. I believe, if men knew they would get a race for that boat, many who are about, or thinking of, building either a racing or cruising five would adopt the plan, and, if even five boats were built for St. George's Channel, there would be a class ready that would give a most interesting race—interesting to the competitors, as it would be one purely of skill of handling; interesting to the public, as it would be bound to be a close contest, and the first boat in would be the winner; easy to the committee, as there would be no time allowance or sail area to be worked out. I believe other men would quickly follow, and that the fleet would be a large one; and I have, to a certain extent, experience on the point, as I am at present working up a like class of open boats, and have already received more promises of boats being built on the plan than I anticipated.

"In addition to the advantages above mentioned, the class would have the following: First, the grand one of the boat being always a racer, as a boat three or six years old would be in with the latest arrival; as her sails could be renewed, and she would only be handicapped by the buoyancy of the new boat, which could be neutralized, and against which her time would be better known. Secondly, a useful class that could be used for cruising purposes. Thirdly, one that would sell well; and fourthly, one that would not be a risk of loss to the builder by being a failure. They would not, of course, have the speed of the narrow vessel with the great spread of canvas. But it should not be forgotten that speed is only found by comparison, and racing more or less dry in a boat doing eight knots would be just as enjoyable as being moist in one doing ten or twelve, provided the quicker boat is not in the race to look at. As all the boats of the above class would be close together, they would appear to have a quicker pace than quick boats with a long interval between."

The beauty and simplicity of this scheme is something admirable, the only objection to it being that it was not made known sooner. Had it only been adopted fifty or a hundred years since how much money would have been saved that has been wasted in building better boats, and what a fleet the world would have had now.

Here is another excellent remedy for the ills that affect yachting. The present Y. R. A. rule is $\frac{(L+B)^2\times B}{1730}$ The proposition is to amend it to read $\frac{(L+B)^2\times B\times \frac{L}{B}}{1730\times 5}$ The advantages of this plan are apparent, and need no comment or explanation.

Land and Water discourses as follows on the same subject:

"With the Royal Portsmouth Corinthian Y. C. regatta, held last Saturday, yacht racing may be said to have come to a conclusion. It has been an eventful season, and by no means such a poor one as was prophesied in some quarters at the outset. Further, it has tended to show that the noble pastime cannot exist many years longer if the attempt is made to carry it on under existing conditions. The *raison d'être* of the Yacht Racing Association may be summed up in the words, that it was instituted to "advance yacht racing," and such being the fact, the duty of a singularly practical body, having a secretary without peer in yachting knowledge, lies in the direction of devising a totally new formula in regard to yacht measurement. Even those yacht owners who have been most successful this season in what is called the inferior class, will admit that things could be put on a fairer footing by a modification of time allowances in mixed matches.

"But what we aim at is a matter of deeper import, viz., simply to put aside the present measurement rule, and in its place pass a law, not to be repealed for at least ten years, providing that yachts of all sorts and conditions should be measured and rated for time allowance according to load waterlength and sail area. We say, without the least hesitation, that such a step would give an impetus to yacht building; that it would bring to the fore naval architects of the highest talent; that, instead of such a miserable article as the wall-sided, unshapely, ballast-box Galatea, we should have vessels without a flat inch in them, and a much smarter craft, able to sail round the bastard tools, by courtesy called ships, with a centerboard in them, which have of late years defended the America's Cup.

"It is some years ago that Mr. Lampson, now Sir George, maintained at one of the Y. R. A. meetings, that the measurement rule should be settled to stand for a certain number of years, but he was either talked down or outvoted, yet the good sense of his argument is obvious enough to-day. By a sail area and load waterlength rule, we not only contend, but are convinced, that vested interests would not be interfered with, and no other way, in our opinion, presents to meet this, the most formidable opposition to the proposed new rule. The secretary of the Yacht Racing Association should, without doubt, be left unfettered in deciding on a formula, as the tinkering of amateurs has, in the past, damned every well-devised scheme. It is for the good and future welfare of yachting and yachtsmen we write thus strongly, and trust that our remarks may tend to getting the measurement laws amended ere another racing season comes round."

With the major part of the above we can heartily agree, but we must take exception to the extremely uncomplimentary manner in which the new American boats are spoken of. The British yachtsman has been accustomed to view all American yachting through a pair of spectacles, one lense of which shows the Y. R. A. rule as the epitome of the science of naval design, the one by which all things nautical must be judged; the other showing the centerboard as something physically and morally wrong, a contrivance that no honest yachtsman would tolerate; and those who use and defend it as worse than a man who shifts ballast secretly or uses other unfair means of winning. Of late the former lense has been somewhat dimmed, and many are found who discard it entirely, but they, for the most part, seek a clear view through a single glass instead of double, and view the centerboard with still more extreme horror.

Now, if there is a real desire for a reform back of all this discussion, we would call the attention of those interested to several facts very clearly seen on this side of the Atlantic. First, there is absolutely no scientific basis for the Y. R. A. rule, a measure that has lost whatever accuracy it possessed in its early days, and whose retention until now is due almost entirely to conservatism and the influence of large vested interests. These alone have enabled it to hold its own in the face of science and plain common sense. Secondly, whatever the merits of many boats built under the Y. R. A. rule, a boat may be as far outside of as Puritan and Mayflower and yet be an excellent craft in every respect. Thirdly—The two yachts above mentioned have already won a place which entitles them to the careful consideration and study of liberal and intelligent yachtsmen of all shades of opinion, and they cannot be disposed of summarily by a few opprobrious epithets as above quoted; but their merits and defects must be weighed with the utmost scientific accuracy if any improvement on them is to be made.

Further, the same remark applies to the centerboard. We do not favor its use for large yachts, but it is indisputable that safe, able and thoroughly seaworthy centerboard yachts and ships have been built and are in constant use. There is a deal for our cousins to learn in yachting, if they have taught us something of late years. The present outlook is that they will be soon beaten by their own weapons. If they would avoid such a conclusion it is full time to abandon the ostrich-like policy of hiding the head rather than facing the enemy; of measuring everything by their little foot rule and condemning on sight all that is too big for its capacity. Two seasons only have made a great change in the yachting world; Americans have wakened up to new ideas, new methods, and with their successes thus far to back them, the British yachtsman who will keep ahead of them will have need of every means within his reach.

CATBOATS ON JAMAICA BAY.—On Oct. 17 the first race of a series of three was sailed on Jamaica Bay for prizes offered by Henry Smith, of Ruffle Bar. The course was from Ruffle Bar to the can buoy off Point Breeze, thence to stake boat off Block Wall and home, 10 miles. There were 14 entries in the two classes:

CLASS I, 19 TO 25FT.

St. Nicholas, G. Reed	23.07
Secret, D. Linton	22.06
Julita, Joseph Hatch	21.06
Gypsy Baron, Professor Warner	20.04
Amphion, Dr. De Long	20.09
Gracie, John Myer	21.04
So-So, A. Brandsley	20.01
Ida K, C. Meyer	20.00½
Aurora, Warsching Brothers	19 05

CLASS II., 15 TO 19FT.

Ethel, J. Calmbach	18.09
Florence, Safford & Wilson	18.07
Rita, John Ives	16.03
Kate, J. Tillotson	16.02
Kitty G., ——	15.04

There was a wholesail breeze from S.W. during the race. Aurora won in 1:33:50 with Amphion second, 1:47:10. In second class the winners were Kate, 1:53:15, and Florence, 1:58:25. Ida K. capsized and So-So went to her aid. The judges were Commodore J. S. Roake, C. E. Safford and J. M. Wilson. The second race will be sailed on Oct. 24.

CATBOATS AT NEWPORT.—A second race was sailed on Oct. 13 between Ætna, Mr. G. G. King; Princess Ida, Woodbury Kane; Alice, W. R. Hunter; Dove, S. W. Warren. Atlanta won easily.

NEW ROCHELLE Y. C. FALL REGATTA.—The race for catboats, which was abandoned on Oct. 9 for lack of wind, was sailed on Oct. 16 in a strong N. W. wind. The course was from the entrance to the harbor, four miles east-northeast round red buoy off Scotch Caps Reef, leaving it to port, thence back to starting line, turning northerly stakeboat on port hand and out three miles south-southeast round Execution Reef, leaving all buoys on starboard hand and back to starting line. Distance, 14 miles. There were six entries, but Cruiser and Nettie could not secure crews, so did not start. The four which went over the line were:

		Length.	Allow.
Olive N.	Charles Noxon	22.00	Allows
Punch	Everett Rushmore	20.00	2.48
Narrioch	Lieut. Pitcher	18.06	4.54
Gracie L.	Eugene Lambden	18.00	5.36

At 12 M. the signal was given, the yachts, all but Punch, double reefed, the latter with one reef, crossed thus:

Olive N.	12 02 00	Narrioch	12 03 00
Gracie L.	12 02 45	Punch	12 03 45

On the first leg the water was smooth and wind fairly steady, so Olive and Punch each shook one reef, all having booms off to starboard. The times at the mark were:

Olive	1 07 37	Gracie L.	1 19 13
Punch	1 07 50	Narrioch	1 14 13

The next leg was free, the times at the mark not being taken. Olive N. was passed on the last leg, a beat to windward, by Punch, while Narrioch gave up and started for home. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Punch	12 03 45	2 06 01	2 02 16	1 59 28
Olive N.	12 02 00	2 06 49	2 04 49	2 04 49
Gracie L.	12 02 45	2 13 15	2 10 30	2 04 54
Narrioch	12 03 00	Did not finish.		

The prize was a solid silver goblet presented by Com. McAlpin. The Regatta Committee were Messrs. Gouge Jenkins and Miller.

A NEW CRUISER.—Mr. E. L. Williams, of City Point, has nearly ready a little cruiser, built for sale. She is 31ft. over all and 5ft. 6in. draft.

THE BURGESS BOATS AND SKIMMING DISHES.—*Editor Forest and Stream:* While thanking you for your lengthy comments on my short letter of last week, I have to say that the figures you give as corrections of those quoted by me are anything but accurate. The dimensions of Sadie, Shadow, Orion, Nepenthe and Julia were furnished me by Mr. John Herreshoff, builder of the four first named. Olsen's Yacht List is therefore not correct in these particulars. It would be an easy matter to furnish many more examples of old sloop yachts showing greater proportionate displacement than either Mayflower or Puritan, but even one would be all sufficient to verify the point I make, namely, the unfairness of the claim that Mr. Burgess has been obliged to borrow the shape of his boats from the unhandy English racing machine. The very great superiority of the Mayflower-Shadow type of sloop, is clearly demonstrated to any fair-minded person by the well-known fact that Galatea is a much larger boat than Mayflower, yet the two raced practically without time allowance. Our ingenious friend Mr. Kunhardt, has often told us that "size should give speed," but it would seem that size put in cutter shape does not pan out as well as he expected when the best cutter meets the best sloop.—THOS. CLAPHAM (Roslyn, L. I., Oct. 14.) [The differences between our figures and Mr. Clapham's do not materially affect the question, as we admit that the Herreshoffs have long built deeper boats than were common. In the case of the Julia her depth is probably nearly as we have stated when she sails as a centerboard boat. We have nothing to do with the "point" which Mr. Clapham makes, as the FOREST AND STREAM has never claimed that "Mr. Burgess has been obliged to borrow the shape of his boats from the unhandy English racing machine." Exactly what we claimed in regard to the two yachts was clearly set forth in our answer to Mr. Clapham last week, but this point he has entirely ignored, crediting us with views which we have never expressed.]

"WHAT GALATEA REALLY DID."—*Editor Forest and Stream:* I was under the impression that what Galatea really did most successfully was to illustrate her ability to "carry the target" for a procession of American single-stickers of her size, and to prove beyond a doubt that there must needs be another international race before the America Cup changed hands. I see now, thanks to Mr. Kunhardt's able article in the FOREST AND STREAM of Oct. 7, entitled "Just What Galatea Really Did," that I am all wrong. It appears that, owing to some slight oversight, Galatea did not have sufficient sail area. Now, surely we, as a nation, should be too honorable to take any advantage of such a technicality as the want of sail area on the part of Galatea. Sail area is a mere matter of detail, and when it comes to real yacht racing has nothing to do with the case. When I say real yacht racing, I refer to the races in which Puritan was ignominiously defeated by Genesta. These races were sailed last fall in the deep channels of the FOREST AND STREAM under the flag of "Whose Waterloo?" and no such trifles as sail area or actual result of the then recent international contest were taken into consideration. As I said before, in these FOREST AND STREAM races the Genesta won; and Mr. K. did it with his little pen and ink—and wind. Moreover, I venture to predict that, in his promised review of this season's racing, he will convince us that Stranger really did beat Thetis in their race from Newport to Marblehead. No, no, Mr. Kunhardt, we will grant you Clara, Ulidia and Shona; but don't try to convince us that the dog really did catch the rabbit.—YANKEE DOODLE (New York, Oct. 11).

A SUGGESTION FROM "LOYALTY."—*Editor Forest and Stream:* The yachting season just closed was a remarkable one, particularly so for the number of single-stickers and the absence of the "American sloop" and the prominence of the "hang-on-lead pile-on-sail theories." Science and rule of thumb rush hand in hand after some object, it is difficult to ascertain what. Whether it is to see who can force the greatest quantity of lead through the water at the highest rate of speed, or how much sail can be carried and how much lead will be required to carry it; or is it their object to see how large a hull they can force through the water with the largest amount of sail and lead to balance it? Is it a race of lead, sail or models? This would be more scientific. A model of a given length with the least weight and the smallest area of sail that will develop the most speed. Which can not be accomplished in a yacht whose beam, weight, draft and sail area are the proportions of the Mayflower and Puritan, and the time is not far distant when shoal draft and narrow beam will show to the front as a scientific production. Now is the time for the Englishmen (and they are justly entitled to the privilege) to reduce their draft, weight and sail area; a small increase of beam coupled with the centerboard and they have us at their mercy.—LOYALTY.

CAPSIZED SLOOPS.—On Oct. 17, the centerboard sloop yacht Emily, Hudson River Y. C., capsized off Fort Lee. Her crew were fortunately rescued by the steam yacht Cora. On the same day the centerboard sloop Ireue left South Norwalk to cross the Sound to Northport. Between Eaton's Neck and Smith's Island Light she capsized, though under double reef, and her crew of three held on to the keel for three hours until taken off by the coaster Jennie Rogers. The capsized yacht was towed into Bridgeport by an oyster dredge. On Saturday, the racing yacht Ida K., of New Rochelle, capsized in a race, but her crew were rescued.

RACING ON JAMAICA BAY.—On Oct. 10 a race was sailed on Jamaica Bay between the catboats Lyster, Chas. Ward, of Rockaway, and Lark, Wm. Doorman, of Broad Channel, over a 5-mile course from off Miller's Hotel to Broad Channel Drawbridge and Bay View Club house, 3 rounds, making 15 miles. The prize, presented by Mr. Henry Cogger, was a set of Dickens's works. The wind was strong S. E. The start was made at 2:14, Lark crossing 30sec. astern of Lyster. The first round was timed: Lark 2:55, Lyster 2:56:55. Lark finally won in 1.53.15 with Lyster at 1.56.31.

A YACHT ABANDONED.—The sloop Belle Brandon, from Bremen, Me., for Quincy, Mass., was picked up off Cape Cod on Sunday last by Pilot boat No. 5 of Boston. Her crew of two, Chas. L. Marion and Alton E. Pratt, were completely exhausted by their efforts to work the yacht safely through the gale of Saturday. They were carefully cared for on the pilot boat and their yacht was taken in tow, but she leaked so badly that she was soon abandoned. The two sailors left Boston by rail for their home in Maine.

LAKE ERIE.—On Oct. 14 a race was started off Toledo, but just at the start a terrific storm set in and drove the yachts out into the lake, all making harbors to leeward. The excursion steamer started for Toledo, but ran aground. On Oct. 18 another attempt was made, four yachts starting in an easterly wind of reefing strength with some sea. Fanchon won in 5.03.57, with Alice Enright 5.23.09. Scud and Sylvia withdrew. The course was 45 miles.

ACCIDENT TO THE SACHEM.—On Oct. 16 the schooner Sachem was in collision in Newport harbor with the coasting schooner John Randolph, Capt. Eldridge. Both boats were badly damaged.

THE SALE OF THE ATLANTIC—The late Pride of Bay Ridge will be sold at auction on Nov. 2, at 166 Wall street, by Mr. R. M. Montgomery.

YACHTS BOUGHT AND SOLD.—The Skylark, steam yacht, formerly owned by Mr. Alexander Taylor, Jr., and afterward by Lester Wallack, was sold at auction last week for $6,500 to Mr. E. E. Roberts, the steam yacht builder.... Southern Cross, schooner, has been sold to Mr. J. H. Honan.... Republic, schooner, has been sold to Mr. Chas. H. Watrous, N. Y. Y. C.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

C. W. D., Adirondacks, N. Y.—John D. Gifford, Tunis River, N. J., is the builder of the Barnegat sneakbox.

C. C. P.—A steam yacht must carry a licensed engineer and pilot according to law. The sailing boat can recover damages if she obeys the rules as to lights, etc., whether she has papers or not.

S. D. E.—1. There are special works on special branches of natural history; if you will tell us what branch you wish a book on we will advise you. 2. A trout may be bottled in alcohol and sent by express.

A. H., N. Y.—You cannot remove mildew entirely. Scrub the sail on both sides with water and brown soap, rub the latter well in and sprinkle whiting on both sides, allowing it to dry. See the FOREST AND STREAM of May 21, 1885, for other information.

BEAGLE.—You will not need a license in Ontario, but will need one in Quebec, New Brunswick or Nova Scotia. The injury to your beagle is of such long standing that a cure is doubtful; we could not tell without examining it. Consult a veterinary.

PLOVER.—At Atlantic City, N. J., in August a large fish was exhibited labeled in large capitals as an angel fish. It was an ocean sunfish (*Mola rotunda*). The man there said it weighed about 400lbs., and stated that it had been caught a short distance off the coast. Is not this an unusual locality for the sunfish? Ans. The ocean sunfish is found in summer on the Atlantic coast from the Banks of Newfoundland to Florida.

YAWL, Philadalphia.—You cannot make the alteration you propose in the design. The boat will not do without all or nearly all her ballast on keel. She will need no centerboard. If you will consult "Small Yachts," published at this office, you will find designs for all types of yachts, perhaps some that will suit you better than the one mentioned.

BEACH HAVEN.—In "Marsh Shooting in Cape Cod," issue of Oct. 7, 1886, p. 206, Boston refers to blackbreasts, summers and grassbirds as varieties of bay-snipe. Are not these names local? The same birds must pass along the New Jersey bays, but I do not know them by these names. Ans. The black-bellied plover (*Squatarola helvetica*) is called black-breast in some localities; and this name is also common for the red-backed sandpiper (*Tringa alpina*, var. *americana*), grassbirds are perhaps jack-snipe (*Tringa maculata*), they are in some localities so called; the summers are presumably summer yellow-legs (*Totanus flavipes*).

$343,000 was paid in 1884 for claims under the life policies of the Travelers, of Hartford, Conn., and $1,290,000 to life and accident claimants together.—*Adv.*

Price, $1.50.

"Highest Quality" Fish Hooks.

Anglers are so familiar with our name and Trade Mark and the quality of our goods, that we have no hesitation in calling them to witness to the excellence of all hooks made by us. Though our hooks have always been fully equal to any ever made, about seven years ago we came to the conclusion that anglers would welcome a very high grade of fish hooks—something far beyond what they had ever used. Consequently we perfected arrangements for the manufacture of what has become so widely and favorably known as "Abbey & Imbrie's Highest Quality" fish hooks. All boxes containing these hooks have our trade mark and the words "Abbey & Imbrie's Highest Quality," distinctly printed on the label. Also the name of the hook, viz.: "Sproat," "O'Shaughnessey," "Aberdeen," "Carlisle," "Sneck Kendall," or "American Trout." When "snelled" on silk worm gut or gimp the hooks are put up in packages containing one-half dozen of hooks. Each one-half dozen is labeled.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page folio illustrated catalogue.

ANSWERS TO CORRESPONDENTS.

SHORT LOBSTERS.

THE Massachusetts Fish and Game Protective Association, through the energy and self-sacrifice of one of its most active members, Deputy Fish Commissioner F. R. Shattuck, has certainly done a noble work in the way of protecting the lobster along the New England coast. In this direction aid of the right kind has been rendered by the Maine Fish Commission and through one of its officers for the protection of shore fish, Commissioner Counce, of Thomaston. Early in the season Mr. Counce succeeded in arresting one Trefethern, of Portland, for buying short lobsters and shipping them to Boston and New York. Trefethern was indicted before the Grand Jury in that State at two or three different times. He was tried and beaten before the lower court and appealed. He was beaten on both his appeals. During this time he was running short lobsters to Boston, but Mr. Shattuck proved too much for him, and he was arrested and twice indicted before the Grand Jury in Boston. But his experience in Maine served him a good turn. He went into court last week, pleaded guilty and paid his fines.

In the meantime Mr. Shattuck has not been idle in other directions. With the efficient aid of Captain Gould, of the Harbor Police, as true a sportsman as ever breathed, Commissioner Shattuck has arrested a number of fishermen and lobster dealers for having in possession and selling short lobsters. He has just finished trying the tenth and last case of this kind before the Municipal Court here, and he has beaten in every case but one. Counting the Trefethern cases before the upper court, the Fish and Game Protective Association can claim the honor of having beaten the short lobster offenders in eleven cases out of twelve. This is a good record, and it all comes of having energetic and sensible men to do the work. The lobster men are thoroughly frightened; some of them paid their fines, $125 and costs, and they promise to obey the law in future. Indeed, it would not be strange if sometime there might be lobsters of respectable size along the New England coast.

What is wanted is a uniform law that shall bring Rhode Island and Connecticut into the good work. As it now is, the Sound is stripped of everything in the shape of a lobster before it has time to grow to a size that a decent fisherman would not be ashamed of. It is worthy of note that all along the Maine and Massachusetts coasts, at least, the fishermen evince a willingness, and even a desire to see the short lobster law inforced. All they ask is that it be made general. They know that it is better to give the lobsters time to grow; but if undersized ones are to be caught, each fisherman feels as though it was a duty to his pocket that he get his share.

By the way, the FOREST AND STREAM has been taken into court in the short lobster case. And it came out with honors. It was brought in with the intention of showing that Mr. Shattuck desired to persecute the seller of illicit lobsters, and to bring him into disrepute by publishing articles against that class of persons. But the lawyer for the defense was a little too sharp, since Mr. Shattuck had no difficulty in showing that he did not write the article in question. The judge wound up the whole matter by remarking that he was a reader of the FOREST AND STREAM himself; as much as to say that the article was a good thing, and an honor to both the writer and the paper.

TINDER.

THE drought is widespread and serious. In the vicinity of New York City it has lasted since July 16, no heavy rain having fallen since that time. For the entire period of more than three months the precipitation here has been but 3.40 inches, or little more than one-fifth the average rainfall for the corresponding season during the past ten years. From the Atlantic coast to the great cattle plains of the West comes the same story of parched lands and withered vegetation. To the dried grass have now been added the fallen leaves of autumn; and field, brush, swamp and woodland are so much tinder, ready once the spark falls, to burst into conflagration.

Too often the spark is supplied by foolhardy, thoughtless persons in pursuit of game, who recklessly start a fire which they have absolutely no power to control. In the present inflammable condition of game covers, even ignited wads from a shotgun may start a flame in dry moss or leaves or grass. A destructive fire in Ohio last week was reported to have had such an origin. In the "Jenny Jump" range, in Warren county, New Jersey, last Saturday, a fire that burned over several hundred acres of fields and woodlands, was started by some boys who took advantage of their holiday to beleaguer a bee-tree and undertook to "smoke them out." The same day a thousand acres of timber and other lands in the towns of Keene, Chesterfield and Westmoreland, New Hampshire, were burned over, the fire having been kindled the night before by a party of coon hunters who attempted to smoke out the varmint from a hollow tree. It was a big price to pay for a coon. Whether they captured the prey or not is one of the interesting details on which all the press dispatches maintain distressing silence.

PROPOSED STATUE TO IZAAK WALTON.

AS has been noted in these columns, it is proposed to erect a statue to Izaak Walton in Winchester Cathedral, and anglers all the world over are asked to contribute to this object. No doubt those scholarly anglers who delight in the pages of Walton, with their wealth of pure English and their charm of simplicity, will respond to this appeal.

Mr. R. B. Marston, editor of the London *Fishing Gazette*, and Hon. Treasurer of the Fly-Fisher's Club, writes us under date of Oct. 11 as follows: "Many of your readers are anglers, and I venture to ask for a short space in your columns to inform you that the Dean of Winchester has promised to find a niche for a statue of Izaak Walton in the great screen of the cathedral, which is now being repaired, if anglers will provide the statue. American anglers will, I feel sure, desire to contribute to erect a statue in memory of the 'Father of Anglers.' I have opened a subscription list, and shall be glad to receive and acknowledge in the *Fishing Gazette*, any sums sent to me for 'the Izaak Walton Statue Fund.'"

In order to further this scheme to erect a statue to the memory of Izaak Walton, the Forest and Stream Publishing Company will receive and forward such amounts as anglers, or others, may contribute, and will make an acknowledgement of all such sums in the columns of FOREST AND STREAM.

"THE FOREST WATERS THE FARM."—The famous French book "Les Études de Maître Pierre sur L'Agriculture et les Fôrets," the Studies of Master Peter about Forests and Agriculture, which performed a valuable mission in creating public sentiment favorable to forestry reform in France, has been translated under the above title by the Rev. S. W. Powell and is published from this office. It is designed as a text-book of the first principles of common sense in relation to preserving woodlands as reservoirs to water the farm. It ought to be circulated by tens of thousands to land owners, agriculturists and all public-spirited and selfish citizens throughout the land, wherever the principles of woodland economy have been defied. The story of the work accomplished by the Studies of Master Peter was told in the FOREST AND STREAM a year or two ago in a description of torrent taming in France. On a scale large or small the destructive work of like torrents has been proceeding in all settled portions of the United States; and the sooner the people of this country set about the work of torrent taming the better for individual, State and National prosperity.

NATIONAL ROD AND REEL ASSOCIATION.—At a meeting last Tuesday the following officers were elected: President, Henry P. Wells; Vice-Presidents, Henry P. McGown, John A. Roosevelt, M. M. Backus, William Dunning, T. B. Stewart; Secretary, G. Poey; Treasurer, James L. Valottin. Upon the suggestion of Mr. Wells it was determined to hold the next tournament Wednesday and Thursday, May 25 and 26 next. The weather will at such a date more probably prove propitious than it has proved at the October meetings, anglers will not have left town, and, their angling being yet to come, they will be likely to take a more lively interest in the spring tournament than in a fall meeting.

THE VIRGINIA FIELD SPORTS ASSOCIATION was organized at Richmond, Oct. 21, the occasion being the gathering of sportsmen from different parts of the State at the Virginia Fair. The call, it will be remembered, was issued by Hon. John S. Wise, of Richmond, who was elected President. The membership is already nearly one hundred and fifty, and the promotors anticipate a rapid growth and strong support. A trap-shooting tournament was contested by the members. A bench show and a field trial will be given next year.

WILD RICE IN GREAT BRITAIN.—A correspondent writes from South Wales to Mr. Chas. Gilchrist, of Point Hope, Ontario, that he has thoroughly acclimated some wild rice, sent by that gentleman from Canada. The rice has been sown on a small scale, and the greatest difficulty in its culture in Wales appears to be a plague of rats which devour it before it has a chance to grow. The experiment, however, demonstrates clearly enough that the wild rice may be successfully cultivated in Great Britain

THE SUSQUEHANNA FISH PIRATES are just now receiving some attention from the officials charged with breaking up the villainous obstructions, snares and traps in that poacher-plagued river. An account of how the officers are doing their duty was given in our last number. The good work ought to go on, not only in the Susquehanna but in hundreds of other streams as well, which, if only decently cared for, would yield food fish in largely augmented supply.

THE CRITICS OF A CRITIC gives us some spicy reading. Each one of them is a master of the art of writing clear cut, vivid prose; and their views are worth something. The editorial acumen having been impeached, there was nothing to do but to select such a board of reference and lay the case before them. The views of others would have been invited had we not grown weary of trying to find some one to back up the opinions of the original self-constituted critic.

SAM LOVEL'S CAMP.—Now that the "camp squirrel has chattered his farewell" to the campers on the Slang, the readers of that charming series will be glad to know that they may, by and by, look for an account of Sam Lovel's autumn camps on the Slang.

THE FOREST AND STREAM goes to press one day earlier than usual this week, as Thursday will be the holiday set apart for dedicating the Bartholdi Statue of Liberty.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co.

A TRIP TO THE PARK.

AFTER completing our stay at Missoula we started for Livingston, intending to make a tour of the National Park. We arrived at Cinnabar late in the evening and concluded to rest here until the next day before attempting the long stage ride. Early in the morning I got out my fishing tackle and concluded to try the Yellowstone for trout; more for the sake of being able to say that I had fished in the Yellowstone than for any expectation of getting many fish. About 200yds. west of where our car stood was a ravine that led down by gentle gradation to the edge of the river. I selected my flies and began casting, moving down stream between the bluff and water's edge, as it was impossible to wade the Yellowstone at this place. When about opposite where the car stood I made a cast by the side of a large boulder and was rewarded by hooking a small fish, about 8in. long. This ending the morning's fish, and not caring to retrace my steps, I concluded to climb the hill which did not seem to be over 50ft. high and of about 60° angle. After laboring for some time and beginning to feel that I should entirely lose my breath, I could not see that I had materially shortened the distance, in fact the summit appeared nearer the clouds than at first.

Although the distance down to the water's edge seemed frightfully long, and the way entirely too precipitous to attempt a descent, I sat upon the edge of a rock, holding on to a small cedar bush, wondering what I should do. The idea of perishing so near my friends and they not able to help me, for they had no idea where I had gone, as I left them all sound asleep, and then no amount of yelling would do any good, for the deep roaring of the mighty torrent below me hushed every other voice. Besides, I had no wind to yell with, as it took about all I could command to enable me to breathe at all. After resting a while, I began my onward and upward journey by slow stages, zigzagging the mountain side and holding on to the little cedar bushes to prevent falling, when the gravel gave way under my feet. After quite a struggle I made the summit, where the sun was shining brightly and everything seemed lovely. I more than felt rejoiced that I was safe, and vowed that this would be the last time that I would be caught trying to pull 210lbs. of inexperienced adipose up a steep mountain side that was really four or five times higher than anticipated, and whose angle approximated, from above downward, a perpendicular.

When I reached the car I found breakfast waiting and all anxious to be off. I gave my little fish—for be it understood that I had heroically held on to the game instead of casting it overboard for the purpose of lightening the ship, as some less brave men have done—to our factotum, enjoining upon him to be a good boy and stay by the car during our absence. Breakfast being fairly over, the Concord coaches made their appearance and we were soon off for the Park Hotel. We had a fine coach and a double team of four excellent horses. I was very much surprised to see such fine, substantial outfits in this far away country. The driver told me that they were Oregon horses and were raised in and used to the mountains. I found that our driver was an old mountaineer and understood his business. There was no bluster about him, and very little talk; in fact, his mind was upon his business and he showed an intelligent care for our comfort in every way. These mountain men are not always the crude western characters that tourists often paint them. In fact, in all my traveling through the West I generally find a more intelligent class, in proportion, than one will begin to meet in the more populous throngs of the cultivated East. These Western men will read you in a few minutes, for there are no better judges of human character. You need not tell them that "this is our first trip West," and it would be just as gratuitous to attempt to palm yourself off for a "full blood," when "tenderfoot" is written all over you. I soon made up my mind that we had an intelligent, reliable man for our "Jehu."

We were soon at the Grand Hotel. But what is the use of going into ecstacy over the magnificent scenery that is around you everywhere. Nothing like it, probably in the world. Spreading out before you are the everlasting hills, completely encircling the white magnesian valley, where flow the Mammoth Hot Sulphur Springs. Dinner was not ready and we had some leisure to look around. The first thing to do was to see about our transportation, as we would require two covered coaches of four horses each to transport the party. After some dickering we concluded the bargain by agreeing to pay $100 for the teams for two days, being assured that this was the very best that we could do. It really seemed like an expensive luxury and would not have been incurred under other circumstances. But we felt that we were in for it and there was no chance to retreat. When dinner was announced we walked into the dining-room—and we had plenty of room—for our party constituted the guests *de facto* of the vast concern, which appeared to me to be about 120 by 90ft., and as dreary and uninviting as the adobe correllos of the Mexican greasers.

After dinner, and while waiting for the teams, we examined some of the curiosities in the hotel collection. Among other things we were shown a photograph of "a catch," and were informed "that these fish were taken by President Arthur and Senator Vest." Upon my asking which was the President's and which was Vest's, the dealer didn't know, and I at once took the hint that there was a kind of chivalric propriety in not knowing, and I was surprised and not a little abashed at having asked what, in legal parlance, might be considered "a leading question." But then I might plead extenuating circumstances, I did not know the President, but if he can excel the Senator in the artistic handling of either rod or gun, I should be most happy to make his acquaintance.

"Papa, what kind of steak was that we had for dinner?" was asked by my little daughter soon after we left the table. "That was elk steak," I replied, "why do you ask?" "O! it was perfectly awful," she replied, "I do not want any more elk steak." I told her that the elk had been fresh killed and the proprietor had served it, no doubt thinking it would be relished by "tenderfeet," that is, people who had never eaten any before or who were unacquainted with Western mountain life, but after a week, when the meat had dried out some it made excellent steak, as we attested before we left the Park.

The teams were now ready and sure enough here comes my former driver, who informed me that, at my request, the Superintendent had instructed him to accompany our party. All were soon aboard and taking up our line of march over the white magnesia deposit, we soon arrived at the timber and the first considerable rise of ground. We now have some seven or eight miles of continuous up hill. At short intervals we can have an ice cold drink from some of the many springs that line our pathway.

Nothing is more calculated to cause one's memory to run backward to the early days of our own State. Here are the still, still woods. Nothing to break the silence, save our horses' feet and the rattling of the harness. Occasionally a bird might be seen, usually one of prey or garbage gatherers, but generally the woods were silent as the grave. Not a moving wild animal did I see within the Park, save a little gray squirrel in the early morning. The bugle of the sandhill crane could be heard about sun up; that reminded me of the early days of Missouri, when every morning in the spring we could hear the wildfowl and cranes at their accustomed meals. Forty years ago it was no uncommon thing for the writer to be told to "hurry up and eat your breakfast and go and scare the geese off the wheat." So the voice of the old sandhill crane on that beautiful morning in August, 1884, reminded me of old times.

Some eight or nine miles from the hotel we came upon a more open and level country, and for some fifteen or twenty miles the drive was magnificent. Now and then we would meet returning tourists, and occasionally a friend. Upon a clean grassy plot of ground, near a sparkling stream of ice-cold water, we saw an encampment of men from Wisconsin, so our driver informed us. From the arrangement of their harness and equipments, and the manner of aligning wagons and teams, I took them for old soldiers on a regular camp. Everything about their quarters was scrupulously clean and in order. I did not learn their names. Further on is Beaver Lake. Here the colony of beavers are in active operations. Many new houses of recent build and a new dam zigzagging across the lake exhibit the wonderful skill of this animal. Along this route may be seen the mountain of obsidian glass—a marvelous formation when geologically considered. Then hill and dale, lake and stream, succeed each other in regular order, bordered on all sides by the evergreen pine, and in some places by the impenetrable forest where universal shadows abound. No doubt the poet had just such a place in mind when he sang—

> "O, for a lodge in some vast wilderness,
> Some boundless contiguity of shade."

Here it is in all its primal glory, undisturbed by any discordant sound, as depicted in the chaotic cosmos, "where no voice is heard." How very much attached you become to the present company; even the horses seem to have an unusual interest attaching to them, and the Concord coach becomes your familiar friend. Just to think of being deprived of this little company one hour—

> "O, solitude, where are thy charms
> Which sages have seen in thy face?
> I would rather dwell in the midst of alarms
> Than to reign in this horrible place."

But, then, with a pleasant company you really for a time enjoy these strange scenes. When we arrived at our first station, some twenty-four miles from the hotel, we were all very tired and hungry from the long ride. Here were two rows of hospital tents, set on parallel lines about 12ft. apart, which served as hotel. Supper was soon announced, and we all enjoyed the nice tender elk steak, which was not too fresh, and the cooking was far superior to that of the hotel. We had everything in abundance, especially all varieties of canned goods.

I was so unfortunate as to commit another impropriety here. I ate too much supper, and for an hour was very much annoyed with difficult breathing. Persons should not fail to remember when traveling in high altitudes, that moderate eating, as well as moderate exercise, should be the rule until the system becomes accustomed to the surroundings. The pine log fire was burning brightly outside, and as night set in we soon gathered close about it, and really did not feel comfortable when away from the effects of the glowing heat. Soon all the guests were seated around the warm fire, as the gathering shadows of night had brought a goodly company together. But now comes another painful episode in the life of the tourist. If we are only well and free from pain we are supposed to be in a condition to enjoy life. But then human nature is full of sympathy, and you have only to place it in a remote, unfrequented part of the earth when this refinement of our natures will quickly display itself. Among the company were some sufferers who had sought this far away place in the hope of being relieved from some distressing bodily malady. There comes the stately—I might almost say queenly—woman leaning on the arm of her husband. Her haggard and bleached countenance shows a great sufferer. An easy, well-blanketed chair is placed before the fire and the frail invalid is gently placed in this comfortable seat, the blankets are tucked snugly about her and she seems to be really enjoying the warm glow of the fire. And so it is, for I cannot resist the detire to know somewhat of our invalid friend. "Yes," says the husband, whose every demeanor showed the polished gentleman, "my wife has been an invalid for years, and when we left home she had to be borne upon a cot. We have been several weeks making the trip, but since we have reached this elevated pure atmosphere, the improvement has been beyond all expectation. She can now walk, as you see, supported by my arm, a thing she has not done for years. Her health and appetite are returning, and she is certainly looking and feeling like a new person." And so it was, after the morning toilet and the splendid breakfast you could not have picked out an invalid in the whole cantonment. This certainly speaks well for the country if nothing else can. Let us thank God for this boundless domain, and use every effort to prevent the vandalism of man from moving its beautiful hills and dales, pure air and waters, and the silent recesses of its shades.

After quite a sojourn in this far away region we returned to our car and soon to the busy civilization of today. But somehow or other a strong and almost irresistible desire comes over me at times to revisit these scenes. And I believe I will do it. OCCIDENT.

SEDALIA, Mo.

A CRITIC AND HIS CRITICS.

THE CRITIC.

Editor Forest and Stream:

The accounts of fishing and hunting trips are interesting and valuable. But why is it necessary that there be so much useless verbiage? Take the following from the last "Camps of the Kingfishers":

> I was out in the first gray of the morning to find the promise made good with a cloudless sky of spangled blue, paling at the approach of the glorious sun, who heralded his coming by a few faint streaks of light, diverging above the treetops across the lake, and soon a rim of fire peeped above the line of green, and as it mounted and showed full and clear and round above, hill and hollow, lake and woodland emerged refreshed and bright from the week of somber storm, each moisture-laden twig and leaf and blade of grass decked out in glittering jewels by the genial rays of the golden morning sun.
>
> I sat in front of the fly enjoying the scene, lost in a dreamy reverie, till aroused by the clear tremulo laugh of a loon away down the lake, rejoicing, I had a conceit, in the fullness of his heart, at the glorious morning following the change of weather and the loveliness of the placid lake with its background of green-clad hills.
>
> It was a rare picture, full of bright color and mellow tints laid on with nature's deftest touch; a picture to feel thankful for, and the loon and I had seemingly drifted into the same channel of thought and were rendering up our homage to the weather god, but each in a different way.
>
> But the others were missing all this fresh morning air and invigorating sunshine, and there was plenty for all.
>
> Rousing out the philosopher by pulling the blankets off him, we soon had fire going in the stoves and preparations for breakfast under way. Then old Dan and Ben were "pestered" till they agreed to get out as the least of two evils and by the harmless invention that breakfast was ready, and yanking the covers from Muller and Jim a couple of times and receiving as many blessings (?) in return, they were induced to get up, not, however, without sundry growls and snorts at being disturbed out of their morning nap.

Now this means in brief that the writer got up early and beheld beautiful scenery, as your readers have a thousand times done, and that some did not rise as early as others—that is all. Why will not correspondents leave out such long useless descriptions? Why must we go through so much mud to get a little coffee?

Why cannot these needless words, words, words, be left out and the description of actual fishing, etc., etc., begin at once and be briefly given?

It is an imposition on the reader to have to follow the tiresome yarn of so much nothingness in order to get at the practical or actual account of the narrative belonging to a journal like the FOREST AND STREAM.

F. D. FAYTHORN, JR.

HIS CRITICS.

Editor Forest and Stream:

It seems to me that the descriptions, which your correspondent objects to, bring the scenes more vividly before the reader, and give most readers more pleasure than bare statements of the number of fish caught or amount of game killed. A picture of a fish or beast or bird, however truthful in form and color, would have more value to most people if set in its proper natural surroundings than would the simple portrait of the trout, deer or game bird. After all it is a matter of individual taste. One man goes fishing only to fish, and hunting only to kill. Further than that the lake or stream is a likely bit of water for fish, or the woodland is good cover for game, he sees no beauty in them. Another gets quite as much enjoyment from the companionship of nature that his outing gives, as from the actual fishing and shooting. Each has a right to enjoy himself after his own fashion.

Probably the editor has far better opportunities of knowing what will suit a majority of his readers than any one reader has and to please the greater part is the best he can do; he cannot possibly please every one.

If Mr. F.'s idea was strictly carried out we should lose, besides "Kingfisher's" pleasant descriptions that bring pictures of camp and lake before us, all the quaint sayings of old Ben and the rest. Mr. F. can easily skip the passages that displease him and leave them for those to read who enjoy them.

Them's my sentiments, as nigh as I can state 'em.

AWAHSOOSE.

Editor Forest and Stream:

I don't think your fault-finding correspondent would care to read the "Kingfisher" articles if their author merely wrote: "Three or four other fellows and I went fishing at the —— lakes last summer; stayed —— days and caught —— bass." And yet that is just about what he demands when he asks for "the practical and actual account." If Mr. F. had gone for "Kingfisher" on another point I would have been heartily with him, and on second thought his fault-finding may have some reason, for I don't believe any man who takes a stove into camp with him can possess a genuine and absorbing interest in the beauties of nature. The wild woods and unsullied waters are incompatible with modern kitchen ranges, and a man who goes into the wilderness on a sort of a Dutch picnic may tell about catching fish if he likes, but he musn't pretend a sympathy with uncurbed nature that he doesn't feel.

Of course I'm a crank, you know, but that's how I look at the matter. SENECA.

Editor Forest and Stream:

To the uninitiated the description of one trout fishing trip must be a repetition of all others, but not so with the lover of nature. Even if he resorts to his old haunts he always sees new beauties in the forest, sky, air, birds and all nature; the foliage seems greener, the air purer, the springs gushing from the mountain side are cooler and sweeter, the colors of the trout deeper and richer than ever before. But never content under the fascination of the surroundings, he will generally wander deeper into the forest and explore new ponds and streams, ever and anon disturbing the noonday bath or evening repast of some "monarch of the glen," or surprising the ruffed grouse in charge of her newly-hatched brood, which she tries so artfully to defend from her supposed enemy. Amid such companionship no wonder that the hours and days pass by only too quickly, and the fatigue of the day is not regretted.

If these things add to our pleasure in the woods, they certainly cannot be omitted in acceptable literature of angling.

M.

Editor Forest and Stream:

I believe that if Mr. F.'s views should be adopted by the FOREST AND STREAM management and all descriptions of woods and waters—or, in a word, nature—be eliminated from correspondents' letters upon fishing and shooting, and only bald baskets and bags given, the paper would fall from its high estate as the American sportsman's journal. It would not become a mere statistical review of the fish and game supply, because the natural history, yachting and other departments would intervene to save it; but there would in "such a state of things" be more business in its columns than a searcher after recreation would actually sigh for.

A great proportion of the angling fraternity go on a fishing trip for something more than fish. Fish, big fish, many fish, are the important factors; but there are also important incidentals in connection therewith that would be sadly missed. The writer feels that he is far from being alone in thinking that some of the most entertaining letters written about fishing have been remarkably destitute of fish.

The Cape Ann *Advertiser* contains fish scores that go

> Straight to the question, with no figures of speech
> Save the ten Arab signs.

The fishermen's catch is given in terse language and with

marked absence of useless poetry or prose descriptive of the fishermen's surroundings. There is no "verbiage" about the *Advertiser's* fish stories, and possibly Mr. F. will find in that paper what he longs for; still there are fishermen whom the *Advertiser* does not wholly satisfy, excellent paper though it be.

I lately stood on a wharf in Boston watching the return of a fishing party, and I'll warrant that there was not one of the party but would have rated "Kingfisher's" most excellent letter a waste of ink. The scribe of the party stood by the hatch of the vessel with a board and piece of chalk, taking notes, and when the last fin had been thrown into a truck with a pitchfork, the scribe remarked: "—— pounds, three and one-half cents for the cod and no sale for the dabs. Blank my skin; it don't pay for the ice!" The report was concise without many unnecessary words; no attempt at oratory to describe the spangled blue or other sky; no reference to the glorious sun or silver moon; it was straight business without any frills. But most anglers would derive more satisfaction from one paragraph of "Kingfisher's" graphic letters which so truthfully portray the beauties and the varied changes of the woods and the waters, which never grow old and are part and parcel of an outing, than they would to have the whole fare of a "banker" dumped on their back porch. A. N. CHENEY.

Editor Forest and Stream:

I notice it. Must we have a streak of midsummer madness to disturb our souls? Here is a correspondent bent on guying the fraternity because, perhaps, he never goes a-fishing. Were he in earnest in his criticism he would be an object of commiseration. For, the root of the matter is one of literary taste. To clothe one's thoughts in proper garb is the aim of the orator, the historian and the poet. As is their success in this, so is the reputation which the world accords them.

Does Mr. F. prefer that instead of "Now fades the glimmering landscape on the sight," Gray should have said, "it was getting dark," or that "Now rose above the mountains the cold moon's silvery shield," should have been supplanted by "the moon came up," or does he ask the FOREST AND STREAM to publish a fish ledger?

If "Kingfisher" "got up early and beheld beautiful scenery," why should he not record the fact in fitting words? Must there be "no more cakes and ale" because some Illinois man is bilious? Brevity may be the soul of wit, but certainly it is not so of angling, camping and hunting descriptions. The more we have of the latter the better. We live over our outings in all their fullness when we know that the dew sparkled on the grass and the moonbeams shimmered on tents for other eyes as well as ours, that our ears were not the only ones that drank in the sad wail of the loon and the rustle of the night wind among the pines. To some a Sahara may be as beautiful as a Tempe, but they are not of our canny kin. Nature never grows old. Her lover sees no mark of years on her face, and he who traces her beauties on paper, though it be for the thousandth time, gives us of the outing craft something to admire and love.

"Kingfisher," here's my hand; put it there, old man.

WAWAYANDA.

Editor Forest and Stream:

Your critical correspondent ought to have had a chance at "Sunset" Cox years ago when he wrote that famous description of a sunset and printed it in the Columbus *Ohio Statesman*, of which he was at the time editor. I send you a copy of that "sunburst" taken from my scrap-book. Does not the sunrise description in the "Camps" entitle their author to be known as "Sunrise Kingfisher?" Here is the "Sunset" picture:

"What a peculiar sunset was that last night! How glorious the storm and how splendid the setting of the sun! We do not remember ever to have seen the like on our round globe. The scene opened in the west with a horizon full of golden, impenetrating lustre, which colored the foliage and brightened every object into its own dyes. The colors grow richer and deeper until the golden lustre is transfused into a storm cloud, full of the finest lightnings, which leaped into dazzling zigzags all over and around the city. The wind arose with fury, the slender shrubs and giant trees made obeisance to its majesty. Some even snapped before its force. The strawberry beds and grass plants 'turned up their whites' to see Zephyrus march by. As the rain came and the pools and gutters hurried away, thunder roared grandly, and the fire bells caught the excitement and rang with hearty chorus. The south and east received the copious showers, and the west all at once brightened up in a long, polished belt of azure worthy of a Sicilian sky.

"Presently a cloud appeared in the azure belt in the form of a castelated city. It became more vivid, revealing strange forms of peerless fanes and alabaster glories rare and grand in this mundane sphere. It reminded us of Wadsworth's splendid verse in his 'Excursion':

> The appearance instantaneously disclosed
> Was o' a mighty city, boldly say
> A wilderness of buildings, sinking far
> And self withdrawn into a wondrous depth
> Far sinking into splendor without end.

"But the city vanished only to give place to another isle, where the most beautiful forms of foliage appeared imaging a paradise in the distant and purified air.

"The sun, wearied by the elemental commotion, sank behind the green plains of the west. The 'great eye in heaven,' however, went down without a dark brow hanging over its departing light. The rich flush of unearthly light had passed and the rain had ceased, when the solemn church bells pealed; the laughter of children out and joyous after the storm is heard with the carol of birds, while the dark and purple weapon of the skies still darted illumination around the starling college, trying to rival its angels and leap into its dark window."

Or—as your critic would have put it tersely and better—there was right smart of a shower. MEAT-HAWK.

FLASH.—The writer of the following is known to us, and the incidents are vouched for; they were first printed in the Winthrop (Me.) *Budget:* Dr. C. A. Packard, of Bath, owns a fine pointer dog named Flash, who, though not having had a special training or attained high rank in any dog college, is remarkably intelligent. He has long been in the habit of accompanying the doctor on his professional visits, sometimes dashing through the streets crowded with carriages at great speed. One day his foot, or rather a toe of one foot was caught under a wheel, in consequence of which the claw commenced to grow out, and became exceedingly painful. The doctor examined the wound and remarked to him in a business way, "I think, Flash, you'll be obliged to have that claw cut off." The dog, who was lying on the floor, looked up knowingly and wagged his tail. A day or two after—the dog suffering a great deal, and lame—followed his master into the office, and deliberately placed the wounded toe upon the doctor's knee, and submitted to a very painful surgical operation without a twinge. Not long after this incident, one day Dr. P. was surprised to see Flash come into his office with a small black cur following him. To engage his master's attention he would rush up to him and look up into his face, then go toward the cur, rush back again and do the same thing over again, until the doctor examined the cur and found he had been wounded in some manner, and the wound was still bleeding. The fact was plain that Flash had induced his dog acquaintance by some means known only in dog language, to go with him to his master's office and have the wound promptly attended to, which the doctor did, and he left happy.

THE SPORT OF HAWKING.

II.—The Peregrine Falcon.—Concluded.

THE wild-caught hawk having now learned to sit quietly on the falconer's wrist and to know his voice and whistle, the next step in her training is to change the rufter hood for the hood proper. The latter differs from the taming hood in being made of rather stiff, strong calf skin, and is of a somewhat different shape from the rufter hood. Fig. 2 represents a serviceable field hood. The pattern is somewhat the same as that given for the rufter hood, or it may be made of three pieces, as indicated in the drawing. But the orifice for the beak is square instead of triangular; the sides of the cap well bulged out over the eyes of the hawk, and the V-shaped opening behind is much wider than in the rufter, so as to permit of the hood being easily slipped on and off. This piece of hawk harness is formed over a block cut to rudely represent the head of a falcon, but more prominent about the eyes; the leather is soaked in water after having been partly sewn together, and is then modeled over this "lay figure" to the proper shape. A loop of leather (see cut) should be sewn on the top of the hood to lift it by, or a plume of bright feathers may be substituted. The plume is generally used on hoods by European falconers, but the strap will be found much more handy and durable, if less ornamental than the feathers. The lacing is usually a strip of soft leather playing freely through four holes in the back of the hood, as shown in the illustration.

The hoods should be changed in a room made as dark as it is possible to see to work in, and if the hawk be very restless it is well to brail one of his wings, or even to soak

FIG. 1.—HEAD OF PEREGRINE FALCON.

the bird with water squeezed from a sponge held at a distance of a few feet above him, so as to add a slight shock to the wetting. The change should be made when the stomach of the falcon is empty, or he may be injured by his struggles. It is well to give only a slight feed in the morning, and to change the hoods in the afternoon. After the change the falcon is carried around as before, being frequently stroked with a feather, and fed through the hood. The next day feed the peregrine by dim candle light, and after he has begun to pull greedily through the cap, slip it off and allow him to continue his meal unhooded; slip the hood on again just before the meat is finished, allowing the hawk to complete eating it through the beak opening. The following day the hood may be removed twice in the above manner, a little more light being admitted; and so on until at the end of a week or so the falcon will feed in bright sunlight without the hood, and permit himself to be hooded and unhooded without opposition. The hawk is now said to be broken to the hood. The haggard must now be accustomed to

FIG. 2.—FIELD HOOD.

the presence of strangers, horses and dogs; this must be done gradually, and great care must be taken that he is not frightened or teased, or fed by any one but yourself and at regular hours.

The next lesson is to teach the falcon to jump to the wrist when called. All this while the whistle has been sounded, together with the shout you intend to use to call the hawk in the hunting field, at every meal, and the bird has been constantly fed from the hand. It is seldom difficult therefore to get the haggard to jump at first a foot or two from his perch to your wrist for a choice feed of meat held in your hand. Keep this up, gradually lengthening the distance until the hawk readily flies the length of the room to your fist when called.

The bird should now be carried into the open air by an assistant, a long light cord, called a creance, being tied to his leash. After unhooding the haggard go ten yards away and call him, displaying at the same time a tempting piece of meat; he will probably fly to you, the assistant, of course, keeping firm hold of the end of the creance for safety. If the hawk does not come to you, go nearer, and keep this up until the falcon comes readily 50yds. or more to your call.

It is now time to allow the haggard castings occasionally. A whole dead bird is given, and the hawk allowed to swallow as much bone and feather as he desires. These in the course of a few hours are cast up from the bird's crop in an oval mass. If the falcon is healthy they have no odor, and contain no half-digested food, as is often the case with badly conditioned birds. The peregrine is now kept on a block in a shed, but which, when the hawk is perfectly trained, is to be frequently carried out on to the lawn on bright days; it is generally several months, however, before wild-caught hawks can be trusted unhooded in the open air alone.

The block is a sugarloaf-shaped block of wood, somewhat flattened at the top, where it measures about 8in. across; the base should be broad so that it may stand firm. A ring is let in flush with the top for convenience in carriage, and another ring is screwed to the side, to which the leash of the falcon is tied when at rest. The block should be surrounded by a circle of fine sand several inches deep, which will be found very cleanly and convenient to clean. Hawks must be protected from cold, damp winds at all seasons, and in the winter are best kept in a darkened room. They bate much less in a dark apartment and do not injure their feathers by fluttering against the windows, etc. Of course light is freely admitted at feeding time and the birds fed from the hand. A plain rounded perch of the diameter of a man's wrist, supported at each end by strong uprights and padded with canvas, also makes an excellent but perhaps less convenient resting place than the block.

If you intend to use an artificial lure in the field, although it is far less satisfactory in use than a living or dead pigeon, now is the time to enter the falcon at it. The artificial lure consists of a fork of hard wood, too heavy for the hawk to carry, with half a dozen pigeon wings firmly fastened to it. Cords are passed through awl holes in the wood and a fresh piece of beefsteak tied thereto. A dead pigeon lure is much to be preferred with wild-caught falcons.

We will suppose the lure is a pigeon; carry the haggard into the open air, kneel with her on the wrist, unhood her and cast out the lure a few feet. When she jumps to it let her eat a portion from it, at the same time giving her choice morsels of beef from your hand. Before the lure is devoured decoy her to your wrist again by calling and presenting a tempting morsel, and rehood her. Continue this each day until the hawk feeds freely on the lure and is not disturbed by the presence of strangers or dogs. She is now trained to fly to the lure as well as to your wrist from the arm of an assistant. This practice is kept up daily, until the lately wild and savage falcon comes at once to your call when held more than 50yds. away from you. Leash and creance are now removed, the jesses and swivel alone remaining on the hawk's legs, together with the bells, and she is called and lured until she will dart to you or the lure from the wrist of an attendant 1,000yds. distant, always being rewarded with the most tempting piece of meat obtainable for her obedience. Do not compel the hawk to make more than three or four flights during a single meal, and when it is finished rehood and slip the leash on to the jesses.

The haggard is now taught to stoop at the lure and to "wait on." As she flies at the swinging lure snatch it away and immediately throw it out again, and allow her to seize it as she turns to look for it after its disappearance. At first this should be done only once, but later it may be kept up until the hawk will stoop backward and forward as often as desired.

Now tie the haggard by the usual long creance and offer her a living pigeon, one of whose wings has been brailed. It is highly probable that the fierce peregrine, who only a month before killed perhaps a dozen ducks in a day only for the sport of killing, may refuse it, and if so a string must be tied to the leg of the pigeon, and it must be pulled up by passing the cord through an eyed pin to within a foot of the hawk's block. If she still refuse it she must first be entered at some sparrows treated in the same manner as the pigeon, and the pigeon must be tried again after she has killed several sparrows.

Soon she may be allowed to take the brailed pigeons at liberty, all her harness being removed save the bewits and jesses, and finally she is flown at a strong, unbrailed pigeon, to whose leg is tied a strong light cord. When the hawk kills the pigeon run in and seize the trailing end of this line. The falcon is thus trained not to "carry" her quarry—a most tiresome habit in the field—as of course you have it fast. Keep at creanced birds for several weeks, in order that the hawk may be perfectly trained not to carry, a habit to which all falconers have found wild-caught hawks especially prone.

The hawk is now ready to be entered at her quarry proper, and haggards are best used for heavy game, too weighty for them to lift. Ducks, grouse, and shore birds, crows and herons are suitable game for an adult peregrine. A powerful female might even take geese, swans or wild turkeys. A few living birds of the species at which it is intended to first fly the falcon should be procured and turned out before her, the first from the hand of the falconer, with one of its wings securely brailed; and finally the falcon must kill a strong, unhampered bird. As soon as the first bird is killed—indeed it is well to begin this practice while flying at creanced pigeons—the falconer must approach and make much of the hawk while he allows her to feast on the first wild quarry, at the same time giving her choice pieces of beef from the hand. From her second and subsequent flights she must be lured, and then called to the roost and given some juicy mouthfuls. If she is not to be flown again that day she should be fed up or given as much tender beef as she cares to eat. The hawk is thus taught to believe that you take nothing from her, and also that she obtains from you much more savory food than she can kill for herself, all falcons preferring tender beef to the flesh of any bird. The haggard is now ready to be entered at wild game, the methods generally pursued by falconers will be fully described in a future paper.

When the peregrine is first flown, either at the lure or at pigeons, it is hardly necessary to say that she must be sharp set, *i. e.*, very hungry, or she will certainly indulge in the luxury of a sail before coming to you, and you may lose her altogether. If properly handled there is little or no danger of losing a hawk during its training, as it will assuredly come to you when hungry if properly trained.

While the haggard is flying at pigeons it will frequently happen that the quarry dashes into a clump of bushes or a hedge just in time to escape the stoop of the hawk. Make haste to serve the falcon, *i. e.*, to drive the pigeon out of cover, making a great noise and hullabaloo over it. Have a pigeon in a bag net at your belt, from one of whose wings three or four of the long feathers have been pulled ,

and if the one first flown is not at once flushed, release your lamed bird when the haggard is not observing you; this the falcon will kill with ease, and she will not fail to be impressed with the conviction that "waiting on" when men below are flushing game is a most profitable proceeding. Hawks of all species, but especially falcons, must never be teased, rated, struck or otherwise punished under any circumstances whatever; a moment's anger on the part of the falconer will spoil the work of months. Falcons are not in any way like dogs or horses; they never forget nor forgive an injury, and never again show any attachment or obedience toward those who have offended them. Neither must a hawk be starved in order to tame it, or the spirit and health of the bird will both be broken, and its plumage will show hunger marks, causing the feathers to break, spoiling both the appearance and the flight of the falcon.

All hawks require a bath at least every other day in warm weather. A good-sized tub some 8in. deep, sunk almost flush with the surface of the ground, makes an excellent bath. The block of the hawk should be set near it, and the bird given plenty of leash. After the hawk has been entered at living birds she should be given but one full meal a day, and that from your hand early in the morning. Saturday night should be "gorge night," and the hawk should then be allowed as much warm bird or good beefsteak as she will eat. Perfectly lean raw meat, preferably beef, pigeons, the necks and heads of game and poultry, and any small birds which have not been shot, should constitute the diet of the trained peregrine.

Fig. 1 represents the head of an adult female peregrine falcon, and shows well the powerful and strongly-toothed beak, and the general character of this magnificent bird, the type of warlike nobility and strength. The rearing and training of young hawks taken from the nest will be considered in my next paper. R. W. Seiss.

AN UNCOMFORTABLE PAIR.

A STRANGE pair of fish were seen to-day in Lake Ontario at Oswego Harbor.

Sunning itself near the top of the water, within oar's length of the writer's boat, was seen a pickerel of about two and one-half feet in length.

Lying close beside the pickerel was what appeared at first to be an eel a little over a foot long; but as the pickerel swam slowly away, his companion was seen to be a lamprey, whose suction head was fastened to the pickerel's side just back of his gills, and whose tail was waving alongside that of the pickerel, as the latter dragged its burden along.

The lampreys habit is to sponge its living out of the rest of the fish world, by attaching itself by suction to any fish that it can get in its power, permitting the continued life of its victim as long as possible while subsisting on its blood.

The writer saw, some years since, a 20-pound salmon taken from a gill net in Lake Ontario, and having a two inch hole in its side which had been made by a lamprey's suction.

The lamprey's spawn among the gravel at the mouths of streams emptying into the lake. The writer once crossed a gravel bar, whose surface was just awash, in which were many bowls worked out, each about the size of a hen's nest, and each containing one or more lampreys coiled around and apparently spawning. The lamprey and its victim which were seen this morning are probably joined together till death shall part them.

Leatherstocking.

Oswego, New York, Oct. 22.

Sunflowers and the Birds.—We had a few sunflowers in the garden the past summer, which were very prolific of blossoms and attracted much notice, but we little thought what pleasure the tall, rough stalks with the drooping flowers and dried dangling leaves would give to the birds later in the season. Before the seeds were fairly grown a family of goldfinches that had their home in a maple tree in front of the house took possession of the flowers, and from early morning until late in the afternoon they could be seen perched on the edge of the largest flowers, nearly doubled up in their efforts to secure the seeds. Then in September came a flock, a dozen or fifteen, purple finches, and later still came along an unbidden but a very welcome guest, a white-breasted nuthatch, and for nearly two weeks he made his regular daily visits, but unlike the goldfinch and purple finch, who would make their feast while sitting on the flower, he would come in his graceful, undulating motion, and alight on the under side of the flower, extract his single seed and then away he would go to a dead apple tree in my neighbor's garden, where I suppose he ate it; and the next moment back he would come to the same flower, secure another seed and go off to the dead apple tree again. One morning we missed our genial guest, and the next morning he was not among the finches, and we came to the conclusion that he had passed on with the vast migration army. The goldfinches and purple finches are still with us, but we expect that they also will soon take their departure, as the stock of sunflower seeds is getting low; but we shall see to it that there will be another stock next season for our feathered friends; and if the readers of Forest and Stream wish to attract and retain the birds late in the season, let them raise a few of the good old-fashioned sunflowers.—J. L. Davison (Lockport, N. Y.).

Maryland Bird Notes.—It may prove a matter of interest to record that on May 16 last I shot a Hudsonian godwit (*Limosa hudsonica*) at West River, Maryland, in a grass field adjoining the village of Halesville. This species must be a rare visitant in that locality, for none of the old water men or gunners knew the bird. I had the bird beautifully mounted by a very experienced taxidermist of Baltimore, who never knew of one being obtained in Maryland before. Dr. Coues states ("Birds of the Northwest," p. 494) that he never saw this godwit alive. A few days later I shot a rose-breasted grosbeak (*Goniaphea ludoviciana*) near the same place. This also is a species very rarely seen in that vicinity.—J. Murray Ellzey. (No. 1012 I street, N. W., Washington, D. C., Oct. 25.)

A Contrast.—A correspondent writes from Sharon, Pa.: "This locality twenty years ago had thousands of brown thrushes, catbirds, bobolinks, orioles, tomtits, woodpeckers, cranes, sand snipes, killdeers, chipping birds, etc., and you have no idea how scarce they are now. I have seen but one brown thrush in six years, and the orioles and tomtits are almost exterminated."

COOT SHOOTING ON THE MAINE COAST

"BIRDS isn't s' plenty ez they wuz down here twenty year ago," remarked an old fisherman, as he puffed away at his pipe in the village post office one evening. "Why, I remember," he continued, "how them black ducks used t' come up in that cove whar the dreen is, s' thick that they'd line both sides o' the dreen fur fifty yards. We boys used t' go down thar nights an' we used t' shoot a pooty good number of 'em sometimes. Abe Williams 'nd me went down thar one night 'nd we killed twenty-one of them birds! Yes, sir, twenty-one of them ducks. Naow, thet's what I call pooty good shootin'. But naowadays thar's more gunners than ther' is birds."

"But is there no shooting around here now?" I asked.

"O, yas, but you hev t' go 'round outside the Gunnin' Rocks and then a mile or two t' the east'ard before you can git any chance."

"Do you ever go gunning now?"

"Why, bless ye, no! I go out thar fishin'."

"Do you ever see any birds?"

"O, yas, thar's quite a number of 'em flies by ev'ry mornin'. I see some pooty good flocks of 'em this mornin'."

"Well, are you going out to-morrow?" I asked.

"Yas, if the weather's good."

"Do you think that if I went with you there'd be any show for me to shoot some birds?"

"O, yas; but ye've got t' get some tollers if ye want any shootin'."

"Where can I get any?" I asked.

"Wall, Em'ry M'loon's got some 'nd I guess he'd lend 'em to you if ye asked him. He lives in the house thut's sot back from the road just above here. I'll go with ye and ask him for 'em," said the old man, as he climbed down from his seat on a flour barrel, and after knocking the ashes out of his pipe and replenishing it, he struck a match, lit his dudeen, and, with a "good evenin'" to the postmaster, stepped out of the shop and I followed.

We reached Em'ry's house in a short time, and, after knocking at the door, we were admitted by his wife.

"Em'ry's out in the woodshed sawin'," she said, when old Yeaton (the fisherman) asked for him. "I'll call him," she continued, and going to the door, she spoke to him.

"I'm comin'," answered her husband, and we heard his footsteps as he walked from the shed to the house. The door opened and he came in.

"Em'ry, this is my friend, Mr. W.," said Yeaton, as Meloon stepped into the room.

"Happy t' see ye, sir—don't get up—set right down. Anything I can do for ye, Syl?" he continued to Yeaton.

"I want to know if you'll lend me your tollers for to-morrow. My friend here wants to do a little gunnin', and I tho't you'd be 'bout the best man to come to."

"Now, Syl, what on airth did ye come t' me for? Why didn't ye go right out to the shed and take 'em? Of course ye can hev 'em. The idee o' askin' sech a question!"

"Wal, I tho't—"

"No matter wot ye tho't. Now come right out, and we'll put 'em in the barrer, 'nd wheel 'em right down t' yer boat."

"You're very kind, sir," I said.

"Thet's nothin'," answered Meloon, "I only wish I could do somethin' more fur ye."

The decoys were thrown into Yeaton's boat, and after bidding the two men good night, I went home. Yeaton was to meet me at Cod Rock the next morning at 4 o'clock. Four o'clock came and found me ready and waiting on the Rock.

The wind was light, and as the tide was running in it took Yeaton longer than it would have otherwise to get there. At last he did, and we started for the "Gunnin' Rocks" and having passed them we headed to the eastward, and after going about two miles we anchored the decoys and rowed about a good gunshot to the westward, where we anchored.

The eastern horizon was just lighting up with the early rays of old Sol, and the cool sea breeze that blew gently from the south made black ripples here and there on the ocean's smooth surface. It was an ideal early autumn morning. As it grew lighter I could discern far off to the southeast the sails of the mackerel fleet which had gone out of the harbor the night before. The bell on Kit's Rock buoy rung at intervals as the slow swell rose and fell. I was admiring the scene when Yeaton suddenly said: "Get down, here comes some white wings!" I grasped my Parker, and crouching down watched intently for the birds. "They're goin' by to the south'ard of us," said Yeaton, as the birds swung off to the right, "never mind, there'll be plenty more."

I watched those fine fellows till they were out of sight, hoping against hope that they might change their minds and come back, but they didn't.

"Ye see, the biggest flocks always flies further out nor the smaller ones," said Yeaton.

Boom! Boom! came across the water from the eastward. "There's some fellers gunnin' at Sea Point and down by Braboat Harbor," said Yeaton, as he shaded his eyes with his hand, "look out, here comes a couple!" Nearer and nearer came the coots—they see the decoys—now they come—bang, bang.

"Look out, the other'll get away [bang], good one! Got 'em both. Jest cast loose that b'oy 'nd we'll row up and git 'em."

Taking the oars he rowed toward the decoys and picked up the birds. "Butterbill coots. Isn't that one a beauty? Jest look at his bill! but get down!" he continued, "here comes one o' them white wings, wait, now [bang]. One more before he dives [bang]. There's three birds; pooty good, pooty good," said Yeaton, as he rowed around and scooped up the dead beauty in his net. He now paddled back to the buoy, and we were again ready for the birds.

The coots continued to come in small bunches, and I shot quite a number, missing, of course, the easiest shots, and getting my birds on the hardest. "'Tis over thus." Twelve o'clock came, and with it the ninth coot. I decided not to wait for the afternoon flight, as it always came late, and I did not want to stay out there for three or four hours, with nothing to do, so I told Yeaton of my wish, and he immediately hoisted his killick, and, after taking in the decoys, we started homeward. We arrived there in an hour or so, and, as I got off, Yeaton said, "I hope you are satisfied, Mr. W.; I know I can't give ye sech shootin' ez they can daown on the Chissipeek Bay, but whenever ye want a day's cootin', jest come t' me, 'nd I'll do the best I can for ye."

I thanked the good-hearted old fellow, and, taking my game in my hand, jumped out upon the rock, and as Yeaton rowed away, I waved my hand to him. Now, who wants a better time than a day's shooting on the old New England coast? I don't, for one, even if the shooting is not as good as it is on the "Chissipeek Bay."

J. Wendell, Jr.

ON SHAVER'S FORK.

IKE K. was keen for a chase; he had talked about it on several occasions; so we made an appointment for the following morning. Ike met me at daylight. It was a cool, crisp, frosty morning in October. Ike and the writer were to take the stands on the Shaver's Fork of Cheat River, above the Fishing Hawk Falls. Will F. was to take my dog and make the drive. The locality here named is an exceptionally good one for a chase. Probably there is not within this State at least a place where one can make a deer drive with greater prospect of success and that quickly, too, without running the deer to death. The mountain on each side of the stream rises high, steep and precipitously, heavily timbered with hemlock and spruce, interspersed in some of the more open spots with maple, beech and birch; added to this along the stream on either side and in some places extending nearly to the crest of the mountain is a dense undergrowth of laurel, practically impenetrable to the hunter. Ike carried a .38-caliber Ballard, with which he purposed "settling the hash" of any deer that came to his stand. The writer contented himself with his "universal arm," a 10-bore doublebarrel, both shells loaded with a wire buckshot cartridge, backed with all of Dupont's No. 2 Duck they would hold.

We lost no time getting to the stands, the keen frosty air being favorable to active exercise. I placed Ike at the upper stand (the best), telling him I would hold the fort at the lower. We had scarcely been at our posts fifteen minutes, and I had just begun to shiver from quickly cooling off after the brisk exercise of getting there, having seated myself on a bare rock between two large boulders at the edge of the stream, when I heard the sharp shrill yelp of my dog, as the chase rapidly descended the declivity on the opposite side of the river. How well I knew that tongue. Scarcely a minute had elapsed when the sharp crack of Ike's rifle saluted my ears. I was on my feet in an instant, standing motionless between the boulders, but commanding a good lookout up stream and for some distance below. The report had scarcely died away when I could discover the head and upper part of the body of a doe, as with short, quick leaps she came down the rocky bed of the stream, at intervals throwing the spray in a shower above her. It was but a momentary glance, however, when, accompanied with the peculiar sharp whizz of a bullet, again that sharp report rang in my ears, as the leaden messenger sped its way along the fringing of timber and brush on the opposite side of the river. At that instant the doe turned her course square for the bank and quickly disappeared in the underbrush. I had raised and leveled my gun, but the distance being at least 150yds., if not greater, I concluded not to fire a hopeless shot.

Ike came down the rocky and treacherous edge of the river, floundering over the slippery rounded rocks, running as rapidly as he could make his way. When in hearing distance he shouted: "I say. I certainly hit that deer the first shot." "We will wade over and see," I replied. Selecting a place where we could pick our way over the submerged rocks and rushing water without overtopping our tall wading boots, a delicate operation at best, we crossed and carefully examined the trail, following several hundred yards through the timber and underbrush. The doe had evidently increased her pace after leaving the water, going at a full jump; not a drop of blood nor the least indication of her having been hit could be discovered. In the meantime my dog came trailing down the river bank, and would have taken the fresh trail where the doe left the water, and driven her again into the river below; but as it was a hopeless task to think of either of us getting there in time, I called the dog in, securing him by a leading strap.

Ike was a picture of despair at his ill luck, and I added to his discomfiture by twitting him on his bad shooting. He blamed it on that infernal patent gun: had he held a good old home rifle with double triggers he would have saved that deer sure. The upshot of the whole affair was that we agreed the next day to try it again.

On the following morning we met early and again wended our way to the stands. I suggested to Ike, however, that we make a slight change, as my being armed with a shotgun and he with a long-ranged rifle, I would take the upper and he the lower stand, as it commanded a longer range of the runway both above and below. We stationed ourselves and patiently waited about half an hour, listening to the ceaseless roar of the water as it tore along in its impetuous course over the rocky bed of the stream, glancing at the falling leaves, then adorned with the brightest of autumnal colors of crimson and gold, as momentarily a fitful breeze would send them in showers from the overhanging branches. A deer watcher should ever be on the alert. The bank of the stream opposite my stand consisted of sand and boulders overgrown with wild grasses, interspersed with a short stunted growth of water willow and mountain honeysuckle about ten yards in width; back of this was large timber with an undergrowth of the large and smaller laurel (rhododendrons). There was the snapping of a dry limb, a rustling of the crisp and frosty leaves, scarcely audible above the monotonous roar of the water, and a large doe instantly bounded from the opposite bank into an eddying pool immediately in front of me. She turned at once down stream and presented a broadside shot. Aiming immediately behind the foreshoulder I pressed the trigger. There was a reverberating roar as I stood with my gun lowered watching the quarry. She was down. A crimson coloring of the water about her foreparts quickly showed the fatal effect of the shot. A convulsive kick or two, and floating quietly down to the foot of the pool she lodged against some rocks close to the opposite bank. I walked down to the spot, which presented a pretty fair fording. Ike came up a few moments after and while we were in mid-stream, picking our way across, along down the bank came my dog; running out to the deer he lapped it with his tongue, evincing

as much satisfaction at the success of the chase as we did. This doe was a large one in prime condition. When we met around the dining table that day, many a tale of exciting chase and still-hunt passed round the board.

Some days after, Ben P. came out to take charge of some cattle ranging on the slopes of the mountain above. Ben is an ardent sportsman. A chase he must have, as he had but a day or two to spend. I arranged one that evening. I knew of a crossing place on a divide of the mountain streams making into the Glady Fork of Cheat River, that had frequently proved a sure thing with deer driven from above on the back prong of Glady. Ben was placed on this stand in the low gap of the divide. In case of a miss or failure there, Will F. was posted at the forks of the main stream, a great runway for all deer from that section.

I took my dog and made the start for the boys, going up the back prong of Glady about a mile and up a tributary run eastwardly about half a mile, into a succession of short foothills that pointed out into the streams. Some of these were covered with a dense growth of rhododendrons and heavy timber. On some of them the timber had been killed by what is known as a fire-break, with an undergrowth of briers and brush. Here deer sign was plenty. I loosed my dog on one of the freshest trails; he left me instantly and was soon out of sight, nor did I hear anything of him during the chase. I was to push up the mountain slopes to a low bench between two runs in order to command that point. I had scarcely reached the spot when I heard the report of a rifle thrice in succession; but the sound appeared to come from a quarter contrary to where I had posted the watchers.

From where I stood there was a winding ridge that made out to the low gap where I had stationed Ben. Following this, I hastened around to the gap and there struck a plain trail of deer, dog and huntsman; considerable fresh blood appeared in the trail where I struck it. I called for Ben, but got no reply; and, as the trail led in a contrary direction to mine, I concluded to push on to the Forks, where Will was posted. Arriving in sight of the meadows I saw Will and Ben entering the upper end of the clearing, Will with a deer on his back.

My dog had started a deer immediately on leaving me, and within a few minutes had pushed it through the low gap where Ben was posted. He opened up on it with his Winchester, missing the two first shots, the third shot taking off the left hindleg close to the ham. It was a very fine forked-horn buck. BACKWOODS.

RANDOLPH COUNTY, W. Va.

A CRUISE ON THE KISSIMMEE.

WE were returning from a short hunt outside the corporation limits of Kissimmee, Fla., and now but a few minutes before had stopped for a rest in the shade of a cluster of black-jack. Frank said, "What's the use of doing all this tramping around here when there is no game worth shooting?" "What do you call good game?" asked Ben. "Deer, or game in which there is some sport in getting something to give credit to one's skill as a hunter, but here you can go all day and unless on horseback, which is about as bad, for a fellow not used to finding these plagued holes suddenly gets his horse in one, and then good-by for a deer that day; he is lucky if he gets up without assistance or finds his horse has not broken his leg, which was my experience in hunting deer on horseback." "Boys," said I, "Frank is about right, and since we lost our dog there is not much use in staying here. I propose a course down the Kissimmee River." "I'm with you," exclaimed Ben, "and I am sure Dick will go, he likes fishing; and Cap Cruise told us only a few days ago that fishing was capital along the rivers." "Yes," answered Dick, speaking for the first time, "I will go. The only thing that bothers me is the boat. I do not remember any that would fill our requirements, as we would expect to sleep on board, besides having an oil stove to cook by in case of rain preventing a camp on shore." "Dick is about right. We will be so hard to suit that we had better bunch our heads and see if we can't draft one." "Are your drafting tools in your trunk, Ben." asked Frank, "that you talk of drawing a model?" "No," replied Ben, "but we will buy a two-foot rule and a lead pencil, and if the carpenter can't work from our design, we will make a box float down the river, and if it will not sail back, the walking is pretty good." "I move," said Ben, suiting the action to his words, "that we make a motion to go to our hotel. I've not eaten anything for the past six hours and am as hungry as a bear." The motion was carried without a dissenting voice.

Two hours later found us drafting the design of our new boat. We had decided to have it built, dimensions as follows: 26ft. keel, 8ft. beam, 2ft. 4in. high, decked fore and aft, with an awning to shed rain and give shade; for sail a lateen. In a little over three weeks we were ready to start. We took several weeks' provisions on board, for we were told if we did not take a pilot it would require but a few days to go, but when we wanted to come back we would be ready to swear that the river and canal had been filled up, that our compass would not work true, and a hundred and one other difficulties that we did not know anything about. Where ignorance is bliss 'tis folly to be wise, and we left all the volunteer pilots behind. What difference was it to us if we did not get back inside of eight weeks instead of four.

We stowed the provisions under the hatchway, and raised sail one pleasant afternoon. Lake Tohopekaliga, upon whose placid waters we were passing, is a pretty sheet of water, the name of Indian origin signifying "sleeping tiger;" and well it merits the name, for sometimes a squall will sweep down with a suddenness that will surprise even an old sailor accustomed to these Florida lakes. Like most of the lakes in the State, it is well supplied with islands, the largest of which is Paradise Island, well named until one lands. What with the snakes, bugs and other insects we found there we were only too glad to get back to our floating home, which we had christened—don't laugh—The Alligator. A stiff breeze was blowing, and as we careened to its force, Southport, a small settlement at the head of the canal, was rapidly approached and the canal entered. Two little boys stood on the pier, each having a string of fish almost as long as himself, suggestive of the sport in store for us. The canal is 40ft. wide at the entrance, but widens as we proceeded to 80ft. Even that width we found was narrow, as we ran into the bank several times, until luckily the wind changed from our bow to a gentle quarter and aft, and then everything was lovely. As we passed several rivulets flowing into the canal we could see the bass and fish of like character catching the minnows. We took several fine bass and several fish whose names I have forgotten. Lake Cypress was in one of its amiable moods when we passed through it, and did not show to us the savage character that we had been told it had. The dredge was at work in the canal between Cypress and Hatchencha lakes when we reached it, but they kindly assisted us past. It was an interesting sight to see the manner in which the mud and debris was lifted out from below the floating monster with its iron muscles which seemed to snort with pleasure as the work progressed. The men lived on board and only saw those who, like ourselves, go hunting and a few others coming from curiosity to see the magnitude of the work undertaken by the drainage company. The scenery along the canals consists of a wide level marsh, covered with tall reeds and saw grass and sometimes wild cotton is seen. Occasionally a group of palms or oaks break the monotony of the view, while a mile or two distant are forests of oak and cypress, and back of them are seen the darker pines. We had a field glass and it showed, to all appearance, a good country for game, but as we were not amphibious, we could not cross the intervening marsh. The view along the river is of greater variety; in many places tall willows shut out all view; that, together with its winding back and forth (for crooked does not express the many intricate turns and angles that it makes), gives all the variety that one could ask. Tall cranes, bitterns, herons, curlew and other birds rose long before we got within shooting distance of them, although we sent home a few plumes as mementoes of the trip. We were obliged to do considerable poling on the river to keep in the stream while making the bends. But it was getting late, and although we could see Lake Kissimmee from the masthead, the river was so crooked and had so many false channels that we tied up to the bank, which at this place is high and dry. Frank and Ben stepped ashore, while Dick and I prepared the supper.

A few minutes passed when the report of their guns told us there was game to be found. We waited impatiently, and at length they returned bringing a fine turkey with them. While eating supper Frank remarked that it was strange we had not been able to shoot a 'gator yet, much less get a shot at one. "Guess they have cut their wisdom teeth," said Dick. "Wait until we have supplied the inner man and put away the silverware, then we'll shine them," said Ben. "How is that done?" said Dick. "Why, take a light and hold it above you, when their eyes will shine like coals of fire, giving a fine opportunity to hit them in a tender spot; and, besides, being able to get very close to them by going very quietly." He went out on deck and came back immediately in great excitement, reporting that a big 'gator lay close beside the boat. He picked up his gun, we grabbed ours, and going on deck sure enough saw the creature less than a hundred feet away, in quiet repose, yet evidently watching us. Only a portion of his back and head was exposed. It was a fine evening, and a few light clouds were crossing the sky, which otherwise was clear. A few whispered words and Frank leveled his .44 repeating rifle, while we stood in readiness in the event of his shot not proving sufficient. The sharp crack of his gun produced but a slight movement. The next moment a storm of buckshot and bullets turned the water into foam. Not until we had emptied nearly a dozen charges did we discover that, in the starlight, we had mistaken a floating log for an alligator. We looked at each other, went into the tent and decided it was time to go to bed.

The next morning we continued our course down the river, soon entering Kissimmee Lake, a pretty sheet of water, with the usual quota of islands of which Brema, the largest, is noted for the number of rabbits to be found there; this is not the white or gray hare found in the North, but a plump red fellow, and as he goes through the dry brown grass and weeds he is hardly noticed until beyond reach in the brush and stubble that everywhere abounds. Ducks we found in great abundance, big black fellows, that, when fired at, and but while flying, afford great sport, unless one be struck by the falling game, as Dick was with one bird shot by Ben, and as he recovered himself, asked if a comet had hit him. Occasionally a fine canvasback was put on the fire to cook.

We had anchored by one of the islands, but as deer was the game we were in search of, we again raised sail for the other shore, where we could see the pine woods in the distance. A head wind was blowing and darkness set in before we reached shore, so when the water became shallow we dropped anchor. Supper disposed of, Ben drew a violin from his trunk in the hatchway, and forthwith the strains of "Down on the Suwanee River," and others, floated sweetly out on the gentle evening breeze, and it is hardly necessary to add that all joined in the chorus. But tired nature soon asserted herself, and drawing the tent spread our blankets and were soon in the land of dreams. We were up bright and early. There stood the pines, but they were a mile away, while between us and the wished for shore was a long strip of miserable marsh, with 2in. water and mud of unknown depth. In disgust we again hoisted sail and set off to the opposite side for a better landing. While crossing a squall came up, and the lake became quite rough, the waves running 6 and 8ft. high. Before we could enter a cove Ben and Frank retired on the sick list. In the afternoon we found a good landing, and then the prospects of a hunt aroused the flagging energies of our sick comrades. They did not want to be left behind, so we all went ashore. The hunt resulted in a brace of ducks, a coon and a few quail. We saw some deer signs but not a single deer. After eating a hearty supper, Frank and Ben, who use the weed, produced their pipes and drew long whiffs in great satisfaction. With stories and the violin the evening was passed.

The next morning we met an old cracker who told us that if we wanted deer we would find them in the sand hills, and he gave us directions how to get there. As Walk-in-the-Water Lake was in the vicinity, he told us that we could sail there via Tiger and Rosalie lakes and creeks. Had we followed his directions thoroughly it would have saved us much trouble. We went into the cove he described, but as we did not see any creek we concluded we were not in the right place; and to make a long story short, we sailed and explored those shores for fifty hours, then taking our map and compass determined where the creek must be and then pulled the boat through the bonnets (not the kind the ladies wear), grass and tussocks, when upon turning a clump of willows, the creek suddenly opened into sight with the noble width of 40ft. and 8ft. depth. The wind at that moment filling the sail we gave three hearty cheers, to the edification of the alligators and snakes that immediately left our neighborhood, and were off at last. Tiger Creek was a copy of the Kissimmee River. We did not stop in Tiger Lake, but profiting by our former lesson we had no difficulty in finding Rosalie Creek, up whose current we were obliged to pull the greater part of the way, the fish leaping out of the water ahead as well as behind us; in fact, we had our choice of fish. With the glass we saw the Indian camp on Lake Rosalie, but not understanding the Seminole language we did not stop. We spent the night at the entrance to Walk-in-the-Water Creek, a wide stream with gums, oaks, magnolias and sycamores, standing like tall sentinels keeping watch over the placid stream, whose gentle current flows smoothly by their feet, the delicate air plants just coming into bud, while here and there a cluster of flowers, the green foliage of the trees, and over all in graceful festoons that softly sway to the gentle breeze, is the lovely Spanish moss. It needs no other knowledge to tell us that we have reached another land, another clime; and our distant Northern home seems further off than ever. There is scarce an evidence to the Northern eye that the chilling breath of winter has swept over those scenes of tropic splendor; but we are told of flowers now dormant, that but for the frost would bloom in rank luxuriance. But I am wandering, and the voice of Frank recalls me to the stern realities. Our further progress is barred by a fallen tree 18in. in diameter; there is nothing else but it must be cut. The ax and saw (put on board for such need) are soon out, and active muscles are plying them, and in short order the severed logs sink beneath the surface. Several more are treated in the same way and we emerge in a cove on the lake. We had seen and killed several 'gators, but the sight that greeted us as we entered that cove surprised us all, every log, stump and root had its 'gator or snake. We gave them a genuine Yankee salute; and strange to say after that they were very cautious how they appeared in our presence. A strong gale was blowing out on the lake, so we anchored in the cove for the night.

The next day we crossed the lake, dropped anchor, and at last were in the deer country. Frank could hardly wait until Ben got his gun, and then they were off. Dick and I followed in about half an hour. The deer signs were plenty (some of them very old, however), and after walking for a couple of hours we decided to return. Taking a different route, we passed through a large section covered with clusters of saw palmetto, when suddenly, almost at our feet, a half-grown fawn sprang up from beneath the shelter of a palmetto. In our excitement we fired too high, and the next moment it was out of sight. Although two charges of buckshot tore the scrub at the spot where it disappeared, we could not start it up; in fact, we did not see any signs of it again. We returned to the boat in disgust, where we found the others had arrived before us and were having a jubilee over the saddle of a fine buck that Frank had shot with his rifle, the ball passing through the heart; it fell without a struggle, leaving nothing exciting to tell of its capture. We gave our experience, when Ben gravely remarked, "You were so close, boys, that those four charges of buckshot have not left anything to find." We spent several days enjoying the hunting and fishing and secured several turkeys. Deer we found difficult to approach within shooting distance, and accordingly we counted but three skins on deck when we returned. But our time was up and we must turn our faces homeward. Profiting by our first experience, we relied on our chart and compass, and in consequence met no delay; and soon our boat lay at anchor at Kissimmee City. Frank and Dick returned to their Northern home, leaving Ben and I to fight the red bug, sandfly and the gigantic "skeeter."

A WANDERER.

THE HUDSON'S BAY REGION.—Ottawa, Oct. 20.—Prof. Low, of the Geological Survey, returned to-day from an exploratory trip to Hudson's Bay. He left Ottawa on May 10, and started on his journey overland from Winnipeg. A great portion of the distance was accomplished in birch canoes paddled by Indian guides. Prof. Low says: "The country is the roughest and wildest I ever saw. In fact, it is one immense tract of rocks upon which little or no vegetation appears. Arriving at the source of Berens River, we struck the source of the Severn River, which runs east and empties into Hudson's Bay, and proceeded down it until we arrived at Fort Severn, on Hudson's Bay. The country, after we passed the height of land, became more fertile, and the scenery along the Severn was extremely beautiful. About 100 miles down this river from its source we came into four or five large lakes about 60 miles in width. The land within a radius of 80 or 100 miles of these lakes is fine farming land, and we found that the frost would not at all interfere with the growth of crops. The country, from the mouth of the Severn to the Berens River to Fort Trout, on the Swan River, has never been explored, and we found that the present maps of that country are astray, and they were only drawn by descriptions given by Indians. Why, there is a tract of country about 830 miles across from Lake Winnipeg to Hudson's Bay which no white man ever traversed. In this district there is any quantity of deer and caribou, but small game is very scarce. We staid at Fort Severn for a short time, then started along the coast of Hudson's Bay to York River, about 200 miles south. While at Fort York the Hudson's Bay Company steamers arrived with a report that two American whalers had been found in the ice off Marble Island. They were lost during last winter, and nothing has ever been heard of the crews. At Norway House, at the head of Lake Winnipeg, we met Col. Gilder and Mr. Griffith, the American explorers. They were recruiting men for their expedition when we saw them. They expect to get as far as Fort Churchill this winter by boat. From that place they will go north in dog sleighs, attended by a band of Esquimaux."

SOUTH BERWICK, Me., Oct. 17.—I have just returned from Well's Beach, four of us having been there for a week's shooting in the marshes. The birds did not fly well at any time while we were there, still we did fairly well and returned home more than satisfied with our week's outing. One of our party owns a shooting box on the beach, and we go there for our outing every year. We are so busy that we cannot make very extended trips, so we go our humble way and for the rest study the aromatic pages of FOREST AND STREAM.—SCATTER GUN.

NOTES FROM THE NATIONAL PARK.

NATIONAL PARK, Oct. 18.—*Editor Forest and Stream:* The Park has closed for this year with a record of at least 8,000 visitors. There were no serious accidents to any of the tourists, which is remarkable considering all the circumstances, the nature of the roads, means of transportation and number of people carried; nor were there any acts of lawlessness committed on the person or property of any visitor to the Park. All the hotels were closed on the 10th, except the Cottage Hotel, at the Mammoth Hot Springs. On the 23d Capt. Kingman will stop all work on the roads in the Park. He has two crews of about thirty men each on the road from Norris to the Yellowstone Falls, and about thirty-six on the road from Willow Park (past the Obsidian Cliffs) connecting with the new road from Green Creek to Norris Hotel. He has now as fine a road as there is in the West, where before there was only a rough narrow way, part of it a corduroy hemmed in by swamps, forests and cliffs dangerous to travel. The new road to the Falls and Grand Cañon is nearly finished. Leaving the Norris Hotel it follows the valley of the Gibbon River. About three miles out it enters a very interesting cañon, at the head of which is the finest cascade in the Park, if not in the whole West, it has been named the Virginia Cascade. It has a fall of about ninety-five feet, at an angle of 40°. At the top the stream is about twelve feet wide, gradually increasing as the water descends, until at the bottom the cascade is about sixty-five feet across. The rocks forming the fall are covered with a very dark green moss. The water descends in a thin stream with a wave motion, making a beautiful effect. Leaving the Cascade the road soon passes through an open valley for half a mile, then crosses the divide to the Yellowstone River, reaching the Grand Cañon near Lookout Point, where the Yellowstone Park Association are preparing to build a hotel the coming winter. On the 10th inst. there was a fall of 17in. of snow. This has hindered work on the roads, also making them very soft so that they are being cut up by the heavy freight wagons used in the Park. The snow drove the game from the mountains and high tablelands to the valleys and open country, where they usually winter. The game is much lower now than for several years past. It is gathering in the open country west of the Mammoth Hot Springs, Valley of the East Fork, Specimen Ridge and Black Tail country, where it must be protected. The country just out of the Park is full of hunters and trappers. One party camped on Slough Creek ventured across the line and were promptly arrested by the soldiers stationed at Soda Butte, as they had some beaver and martin pelts in their possession. They were taken to the headquarters at Mammoth Hot Springs. As there is no law to punish violations of the rules governing the Park, they were escorted over the line. The friends of the Cinnabar and Cooke City R. R. scheme seem to have abandoned the idea of a railroad through the Park and are concentrating their efforts to have the government build a first-class wagon road through that part of the Park where private enterprise cannot do so. Two or three years ago Capt. Kingman asked for an appropriation to build the road. The route would be up the Yellowstone to the East Fork, following up that stream to Soda Butte Creek and up its valley to the northern line of the Park. The road would open a very interesting country to travel, would be part of a system of roads required in the Park, and would let the miners of Cooke have a means of transporting their supplies in, and their ores out, about as cheaply as by rail. The wagon road scheme should have the support of all the members of Congress and Senators who have opposed the granting of railroad privileges in the Park. X.

SAM'S INITIATION.

TRUE it is that time flies. To mention Millbrae as a ducking ground would now no doubt raise a derisive smile on the face of the most youthful sportsman in San Francisco. But it seems as yesterday in recalling the events incidental to one of many trips to that once favorite hunting ground. It had always been our custom to reach our destination by land, but on this occasion Harry thought we could do as well with less trouble by making the trip by water in his little yacht, the Favorite, a yawl rig keel boat of 32ft. over all. Many and pleasant were the cruises we have had together in her, but like many another old friend she has passed away. She ended her career in Puget Sound, having at last stubbed her toe on a rock that proved stronger than her oak. I feel certain that there were none in the San Francisco Bay that could have done it, for she had tried about all of them and had come off each time with flying colors and generally with most of her keel.

We left the city one October afternoon with every sail drawing, a flood tide and a pleasing prospect of reaching our destination before dark. Our crew consisted of Harry, Sam, my dog Bob and myself. Harry was skipper and cook, while I filled the position of crew, and Sam acted as he always did in the capacity of "boss" while awake, which was but little of the time. This was the first and last hunting trip we were ever able to induce him to accompany us on. His arguments were unanswerable, for as he puts it, "there is no sense in wading around in the mud all day, alternately roasting with the heat or shivering with the cold, to get one poor duck that I can buy for a quarter in town and that costs five dollars and lots of hard work the way you get it. No sir, I'll stay home." But this time we had him and were determined he should become an enthusiastic convert to the wading process.

We were gliding smoothly along, and reaching a stretch opposite the gap, we caught a capful of wind that laid the little boat's lee rail under. This had the effect of raising Sam's spirits wonderfully, and he saluted us with his whole stock of nautical phrases, which consisted of "splicing the main brace." Soon, however, we lay becalmed off Hunter's Point and not another cat's paw did we see that day. The flood still holding, we drifted slowly onward, whistling and wishing for a wind. Dusk came on and found Hal and the crew working the sweeps with Sam on the house, giving important and general directions. We induced him to lend a hand in order to let the captain metamorphose into the cook. As soon, however, as supper was served Mr. Sam resigned his post at the sweep to assume one better adapted to his tastes, calling attention to the great distance traversed under his powerful manipulation. It was bright starlight when the table was cleared and Sam perched himself on the house with a pipe and beguiled the hours with songs and sage suggestions while the skipper and crew wielded the ash, forcing the yacht slowly against the now ebbing tide. By 10 o'clock we were off an abrupt promontory, which we took to be San Bruno, and Sam, together with the crew to do the rowing, entered the tender and turned toward the shore to endeavor to locate, if possible, our situation. The beauty of that night is long to be remembered, the almost awful quiet that reigned, broken only by the splash of the falling oars, leaving a stream of fire in our wake. Never before have I seen water so impregnated with phosphorescence as upon that occasion. We could see the yacht's light a mile away and we seemed no nearer to shore than when we started. I was meditating on Samuel's last observation that "it made a fellow feel rather shaky to think there was only a thin piece of board between him and so much water," when there was a frighful snort and splash just at my back that made my hat rise and momentary paralysis seize me, as the boat suddenly grounded on a shell bank and a large sea lion went flopping into deeper water. We were on the oyster bed off San Bruno and still five miles from our longed-for marsh. On reaching the yacht the practical Samuel, observing that "the laborer was worthy of his rest," turned in and was seen no more. Hal and I continued to sweep down until midnight, when, after arranging to be called when half the remaining distance was accomplished, the skipper dived below and left the ship in charge of the crew. Half an hour before daylight the crew had the yacht anchored off the grounds, and called the cook to get breakfast, while everything was being made snug on deck.

Breakfast ready and "the Boss" aroused by forcible arguments, we were soon ready to forget our past cares in the excitement of the early flight. The sun came up red and bright out of the waters in the east, but not a salute did he receive. The flight had not begun. It grew steadily warmer, and as no birds appeared, I suggested to Sam, who accompanied me, that we walk them up, since it was too still for them to fly. After fifteen minutes of tramping I heard an exclamation from Sam, and turning around beheld that worthy flat on his back in the wet weeds and mud, swearing he would not move another step, and he didn't, until on my return we started for the boat. By noon we were under way with a stiff breeze on the yacht's quarter and a bone in her mouth. In two hours and a half we were in the Oakland Creek, half a mile from her mooring, when the treacherous fall breeze left us idly drifting. We decided to anchor the yacht where she was and take to the small boat. The only landing place practicable being the railroad freight wharf, for which we headed with the little boat loaded within an inch of her gunwales. Half way there we espied the big transfer boat Thoroughfare coming up the creek, and we had to beat her to the piling or be swamped by her swell. We did beat her by a fraction and climbed 20ft. of the piling with our guns, traps and dog. How we did it I don't know, but I am certain that the race with the steamer was not the least exciting part of an uneventful trip.

The tangible results of the expedition were not very encouraging, consisting of one duck that fell to Harry's gun, (although Sam protests that it was a wounded one and captured with a club). It was a dismal failure in converting Sam into an enthusiastic sportsman. Upon separating for our respective homes Sam confidently said to me, "Oh yes, of course we had a good time, but the next time you get me on such an unmitigated fool trip you'll know it." PUENTE.

LOS ANGELES, California.

NOTES FROM CURRITUCK.

CURRITUCK, N. C., Oct. 20.—*Editor Forest and Stream:* Possibly some of your readers may be interested in a few items from the shooting grounds on Currituck Sound, which has from time immemorial been the great feeding ground and winter quarters for many of the choicest species of our wildfowl. The sound proper is a large sheet of water, commencing at the Virginia line and running southerly parallel with the North Carolina coast for a distance of forty miles, varying in width from six to eight miles. At the north and east extremities of the sound, skirting the mainland and beach, are extensive marshes covered with reeds and high grass, intersected with countless ponds, creeks and leads, filled with water from 6in. to 2ft. in depth. In these shallow and sheltered waters the ducks and geese find an abundance of food, and for many years this has been the best place for wild duck shooting known on our coast.

For the past twenty-one years I have spent each winter on these grounds, and have in that time become not only familiar with the grounds, but have almost a personal acquaintance with the fowl that flock there. The following game can be found here in greater or less qualities. Swan, geese, black ducks, widgeons, mallards, creek ducks or gadwalls, sprigtails, blue and green-winged teal, gray ducks and spoonbills. None of these dive for their food but obtain it by reaching down to the bottom and pulling up the roots and young grass. In addition to these we have the canvasback, the redhead and broadbill, these are diving fowl and frequent the more open waters, and are known here as raft ducks. They are shot in great numbers from batteries while others are shot from blinds constructed in the marsh. Besides these are other fowl of less account like the crow duck, booby, dipper, sawbill, coot and whistler. These are salt-water birds and are not found in great abundance here.

But, with all the natural advantages that Currituck possesses—its shoals and leads, its sheltered waters, its rich and abundant food—it is becoming less frequented by game, and must in a few years, at the present rate of decline, be comparatively worthless as a shooting ground. In the month of November, 1865, I visited Currituck for the first time. Then every creek and lead was filled with ducks and geese. In the sound and open waters were acres of canvasbacks, redheads and broadbills—the whole sound literally swarmed with fowl. There were no batteries or bush blinds there, and very few native gunners who shot for market. Now there are from fifty to sixty batteries and bush blinds in countless numbers, with from four to five hundred native gunners, who are not satisfied with day shooting, but, when practicable, shoot all night. This method is sure death to any shooting ground, and unless legislation steps in to prevent it, one of the richest shooting grounds in this country will be speedily destroyed. Perhaps at some future time I may give you some other items connected with my experience here.

WILLIAM S. FOSTER.

THE SEASON'S LAST GROUSE.

I STARTED for my last hunt of the season determined to bag a wary cock grouse which had succeeded in getting away from me no less than six times. He was as bad as Hammond's "One-Eyed Grouse of Maple Run." I knew just where to find him, and I set out with my dog Dick and two companions. As we approached the spot the hair on the dog's neck rose up and he looked at me as much as to say, I will do my part, see that you do yours; he seemed to realize it was our last day's hunt of the season. When 100yds. off from some small oak the dog got wind and went on cautiously to within 20ft. of a small oak cover with dead leaves. Here he stood on point with nose high in the air. I sent my two companions in to flush, one on each side of the dog, while I stood in the open about where the dog first got wind, for I knew the tricky old bird well, and when flushed he invariably went back instead of ahead or either side. One of my companions walked straight up to the dog, passed him, and went on cautiously under the oak. Just as he reached it the bird burst out of the tree about five feet from the ground. Frank fired both barrels and made a clean miss, excepting that he cut a lot of brush good for brooms. The other man "cut loose" with a clean miss, but his shot turned the bird in my direction. I gave him the right and turned him over, but he quickly recovered and was making off again when I cut in with the left, hitting him in the head, and down he came. For the next five minutes any one passing would have thought a political meeting was in progress. He measured 22in. long and weighed, three hours after, 2½lbs. I was proud of his capture and considered it a fitting ending of a glorious season.

We found within one square mile one hundred grouse on this same day, but sport was spoiled by our being joined by the father of my companions, the most excitable and pig-headed German I ever saw. When the dog pointed he would grasp his gun tightly in one hand and rush in ahead of dog, flush the bird, and then go tearing through the woods on a full run as if he expected to catch it with his disengaged hand, never thinking to shoot, but all the time yelling like a madman and flushing birds right and left. I soon tired of this and returned home well satisfied with my day's sport, knowing that next season we would have an abundance of these beautiful birds.

I owe Mr. S. T. Hammond many thanks for his little book, "Training vs. Breaking." It is common sense all through. My dog was made a present to me because he was no good and would not yield to the whip. I tried "Training vs. Breaking" on him with wonderful results. He is a wonder to all who see him hunt. I could write pages upon his remarkable intelligence and peculiar traits. No earthly power can make that dog charge. Mention the word and down drop tail and head and the most "dog-gonest" expression comes into his face you ever saw, and it takes some time for him to recover his natural spirits; but we understand each other well on all other points, and get along well enough without the command charge. Curiously enough he will come to charge of his own accord when occasion requires it. The secret of his dislike to the word is that it was the first lesson his former owner tried to whip into him, and the rock on which they split; neither would yield, so they parted. He is a two-year-old red Irish setter. W. N.

NOTES FROM IDAHO.

DETROIT, Mich., Oct. 23. *Editor Forest and Stream:* Thinking a few game notes from Idaho might prove acceptable, I send you extracts from a letter recently received from that Territory, written by an old timer, who, though he has spent years in the mountain and amid game of every description, is still an enthusiastic sportsman. He writes: "About a week since a party of eight, my wife and self included, started for Trinity Lakes on a camping trip for fun, fish and fur. We had about seventeen miles to ride, and made our own trail. The route lay directly through the mountains, and the scenery would have done your soul good to behold. I often remarked to Frank that I wished you could have been with us, you should see the Lakes to appreciate them; and I who have lived so near for these years regret that I have denied myself the pleasure of a visit before. The first day of our arrival the trout took the hook greedily and we feasted on them, with young grouse for a side dish—the latter are fine and I enjoyed eating them almost as well as shooting them with the new gun, Frank's gift, which is a 'dandy.' We all developed enormous appetites. Ida is becoming a great shot, she killed two grouse one day. The Lake country is full of game, more goats than I ever dreamed of. Joe and I ran on to a band of ten at long range, and Joe having his rifle tried expending all his ammunition, but only killed one and wounded another. I had to load the 'scatter gun' with buckshot and give the wounded one his quietus. One of the goats was a female and had a kid. The next day Frank ran on to the motherless bairn and took him in. It is too early in the season for their pelts to be at their best, as the hair is short. We enjoyed our trip hugely and all want to repeat the experiment, especially the girls.

"Game is plenty this fall. H. just came in with six deer and reports that a band of elk were seen on Cayuse Creek. There are also plenty of bears all round us. F. has taken two black bears into camp. Don't you wish you were with him this time? By the way, I must tell you about how Ida shot a hawk which came prowling around after her chickens. She spied him from the kitchen window and catching up my shotgun shot from the window and downed him. Our Idaho girls don't take any back seat when it comes to shooting, and I am afraid the old man must look out for his laurels. However, it is all in the family she says, so I must rest content. Grouse are plenty near us and Ida knows my weakness for young grouse broiled, so this afternoon she walked up the mountain and killed one for my breakfast. Wish you could share it with me.—W. H. McK." PRAIRIE DOG.

TARPON SPRINGS, Fla., Oct. 21.—The cool weather has come. The northern tourists are flocking to our shores. The season bids fair to be lively. Quail are fairly plenty; deer and turkey are met with now and then. Fishing is very good. The musquitoes have gone, and joy reigns in the heart of—TARPON.

SEIZURE OF GAME.—Kingston, Ont., Oct 21.—A large shipment of game en route to the United States was seized this morning, as game by Canadian law cannot be exported.

GAME PRESERVING IN BRITAIN.

IV.—THE GAME OF THE WOODS.—CONTINUED.

Woodcock.

IN the woodcock we have a game bird which American sportsmen are fortunate enough to number in their list of birds of sport and which no doubt they are able to appreciate as much as we do upon this side of the Atlantic. The woodcock (*Scolopax rusticola*) of Britain is also the woodcock of America and of almost every other country under the sun which does not rejoice in a tropical climate. In Europe it is met with from Norway to Italy, from Russia to Spain in more or less plentitude and at various seasons of the year, but as far as Britain is concerned, its status as a game bird puts it on a very different footing from those it holds in most other countries of this continent. Being so well known and so highly appreciated in America there is no necessity for me to go so closely into details of the bird's natural history as I have done in the cases of our partridge, pheasants, etc., so that I will content myself with a few notes upon some of the points in connection with the woodcock as a game bird in these islands.

As a rule woodcock do not breed with us, but the exceptions which prove this rule are so very numerous that we have every season a very large and, I am inclined to think, annually increasing head of birds which nest here. Upon one point there is no doubt, that point is that of late years, during the last twenty or thirty years, a much larger number of woodcock have nested here. Why this is would be difficult, if not impossible, to prove, we can only hold conjecture upon the subject. The only reason I can offer that might bear upon it is that nowadays the sporting instinct has so much pervaded the nations of the continent, that their woods and forests, erstwhile undisturbed, are now much less so. Moreover the numbers of British sportsmen who go upon the continent for sport have greatly increased, and what with the march of civilization and the aforesaid causes, the woodcock which nest here find instinctively that the closely preserved coverts and woods of Britain afford much more secure and quiet nurseries than many of the birds' previous continental haunts. It has also been mooted that the great increase of quiet, well-placed fir plantations much suited to woodcock tastes has also borne considerable influence in the direction suggested. Of course the number of these birds nesting here is at best small, still it is a factor of interest. Of course during such time they are strictly protected, both by our bird act and by the sporting fraternity.

Woodcock commence nesting very early with us, usually between the 15th of February and the 15th of March, and by the end of another month's time the process of incubation is generally well in hand, so that May witnesses the appearance of the young birds. Woodcock here nearly always hatch off a second brood in July and August; whether each pair of birds does so or not I am not prepared to say, anyhow, there is a nesting of woodcocks in the summer months named, and it is almost held to be the rule for each pair to produce a second brood. The position of the nest is invariably well chosen, the favorite haunts appearing to be new plantations of firs and larch, where the undergrowth is thick, the surface broken and the ground dry. It is entirely composed of dead leaves, and generally situated in some tuft of sedge grass or similar ground growth. The woodcock is monogamous, the young usually four in number, and the male parent attends assiduously during the three weeks required for incubation. After the young are born a very interesting natural trait is exhibited by the birds. Although the woodcock finds its food in mires and boggy ground, still its nest is always at some distance from such, consequently either Mahomet has to be brought to the mountain or *vice versa*. In this case it is practically the latter, for the parent birds carry their young to and from the feeding grounds. Anybody who thinks for a moment will recognize what a labor this must be to a bird of the woodcock's peculiar formation.

As soon as our home-reared birds are old enough and able they migrate to foreign climes, returning again possibly with the great bulk of our woodcock which comes to our shores later in the season, but upon this point it is very difficult to speak. The migrations of most birds of passage are always more or less of an enigma, but those of the woodcock appear particularly difficult of solution. All we seem able to learn concerning them is that they take place at certain periods. It is from the beginning of October to the end of November and beginning of December—speaking roughly—that we receive our chief immigrations of woodcock, and these, we know, come mostly if not entirely from Norway and Sweden, although, curiously enough, the birds seem to reach our southern, but more particularly our western shores first, the females invariably preceding the males in time of arrival. It is generally held that the phase of the moon bears great influence upon the time of arrival of the flights, but after careful observation I am fain to believe that the direction and force of wind exercises much more. Apropos of the arrival of the birds upon the western parts of these islands first, is it not probable that the tendency of the birds is to go to the westward and that the later arrivals are compelled to forego the choice of position already secured by their earlier arriving congeners?

Woodcock arriving here do not come in large flights like plover and I believe also, snipe, but drop in in two and threes, as if they were coming not in a collective mass but in a long, irregular line of birds, just as a defeated army might come straggling into a town. Immediately the woodcock arrive they exhibit a very poor condition, often a quite emaciated frame, full evidence of the severity of their journey and proof of their powers of endurance. Forty-eight hours, however, serve to "pull them together," in fact less. I have seen a flight of woodcock come in on Saturday evening, and shot among them on Monday without killing a single bird at all out of condition.

The haunts of the woodcock here are of very varied character, although always possessing certain distinctive features which appear to carry great influence with the birds in choice of station. It often happens, therefore, that you find woodcock in one particular covert, bearing to the uneducated eye identical aspect and merits with another in its close vicinity, which, on the other hand, never holds a bird. Woodcock evidently prefer thick, irregular coverts of young and various trees, rough of surface, closely but in broken fashion, overgrown with sedge, heather and other wild waste verdure, where the ground is wrinkled with the little water courses running from plentiful springs, and soaked and sodden where the water is held back by the natural formation of the ground. These are, speaking generally, the most noticeable features of what we regard as good "'cock ground" in Britain. Of course we get woodcock in widely different localities. We get them on any rough highland ground which can lay claim to be called a covert. We find them around the hedges and ditches of our well-wooded farm districts. We get them upon the hillside where oak-coppice holds its various aged sway, sometimes in the mires of our moors; in fact, anywhere which bears the least resemblance to the description of country just described. Holly, juniper, oak and fir appear to possess the chief charm for these long-billed gentry, and if a cock is to be found in a covert it will probably be not far from any existing specimen of the two first named trees or bushes. They are very fond, too, of affecting any patches of charred ground which may have been produced by heather-burning. No bird has such a name for fixing on and frequenting certain "favorite spots" in the woods or coverts. There are always a certain number of such likely places known upon every sporting estate, and where the cock come in. These spots are sure to hold a woodcock, and what is not altogether unworthy of note, if you kill the frequenter for the time being of one such spot, there is sure to be another bird which will have secured the favored corner by the next day. There used to be a hollow tree by the river in some coverts I used to shoot over some years ago which rarely, if ever, failed to supply its bird two or three days running while the flight was in.

Of course you must bear in mind that the amount of preservation to which we can submit woodcock in this country is of very limited nature. First of all, we only have them with us in any number for four months or so during the year, and during that time is our woodcock season. Moreover, as far as the merits of the case go, that period is the actual one when woodcock should be shot, if shot at all. We cannot breed these game birds as we would partridges or pheasants; all that we can do for them is to lend our best aid to the small percentage of woodcock nesting here, protect them from vermin and disturbance, and do the same for the large quantities which reach us in October and onward, except during such time as we are among them with gun, dog and beaters for sport.

Perhaps before closing this paper I may be allowed to make one or two observations concerning certain things which I read of in FOREST AND STREAM in connection with summer shooting of woodcock in America. Such practice appears to sportsmen here as being almost incredible. Surely at such season no true sportsman would kill woodcock, while from an economic point of view it looks to me a suicidal policy, as far as concerns woodcock shooting. There is no doubt that, if persevered in, it would eventually drive the woodcock from your Eastern shores.

MOORMAN.

ENGLAND, Oct. 8.

CLINTON, Mass., Oct. 21.—The Clinton Sportsmen's Club had their field day the first day of this week and this evening had their annual supper. The sides were marshaled by Henry A. Burdett and Charles E. Shaw. The game was counted as follows: Red squirrels 5, mink 50, wild ducks 25, gray squirrels 25, fox 100, partridges 25, muskrats 15, coons 100, crows 15, quail 25, gray rabbit 15, bluejays 5, hawks 15, white rabbit 35, woodcock 35, owl 15, wild pigeons 15, wood ducks 10, wild geese 75. The number of points each scored was as follows:

Capt H A Burdett	50	Capt C E Shaw	235
Chas H Lasele	280	Frank W Goss	40
Henry W Welch	125	Frank Hammond	100
Cunningham and Tufts	175	A G Larkin	240
J D Misseroon	25	Truell and Hartshorn	540
W W Cameron	105	W A Gibbs	135
Abijah Brown	150	Morse and Brown	220
E A Woodward	35	Chas A Kabley	5
Hamilton, Avery and Goss	100	Bailey and Elword	1430
G W Goss	375		
W P Bowers	195	Total	2995
Total	1780		

The game captured by each follows: Capt. Burdett's side—Coons 2, muskrats 6, gray rabbits 7, gray squirrels 27, red squirrels 45, bluejays 10, crows 2, partridges 11, wild pigeon 1, woodcock 3, duck 1. Capt. Shaw's side—Coons 3, partridges 16, red squirrels 46, gray squirrels 43, hawks 2, woodcock 2, gray rabbits 49, muskrats 4, bluejays 4, crows 5. It was understood that the hunt was to be a strictly honest one; that markets and professional sportsmen were not to be called upon to aid either side in getting game that the score might run up to a column of figures, but the result has occasioned not a little kicking on the part of the losing side, and intimations are not lacking to the effect that the winners depended upon other than their own skill for their game. This imputation is resented. A cut-eared coon, brought in by the winners, was declared by the losers to be questionable game, the slits in the ears demonstrating such to be the case. It was stated in explanation that in the vicinity where the coon was shot there were barbed wire fences, and that his coonship in trying to get away from the hunters got tangled up in that fence and that the barbs pierced the animal's ears. This explanation, while not wholly satisfactory, was received with cheers.

QUAIL IN A CITY.—Richmond, Ind., Oct. 20.—In last week's issue I see that a bevy of quail have taken up their abode in the streets of Hartford, Conn. We have a similar case in this city. They are about two squares from my house and are seen every day. They are quite tame. Game was never so plentiful in this section as it is this fall, squirrels especially. Quail are more plentiful than for years. One bag of seventeen woodcock is reported, but I think it was "stretched." And to quote from a daily, "All Richmond seems to be hunting or fishing."—PLOVER.

PULLING A GUN FROM A BOAT.—Plymouth, Mass., Oct. 16.—Geo. A. Chappen, of Boston, while pulling a gun from a boat at Manomet this morning, shot his arm off. The limb was amputated at the shoulder. The loss of blood is very great and fears are entertained for his life.

NEW JERSEY ROBIN SHOOTERS make big pot-shots at the flocks of robins which gather at some of the great vineyards to eat grapes.

CENTRAL LAKE, Mich., Oct. 17.—Wild geese moving south.—KELPIE.

WISCONSIN.—A hunting party consisting of G. B. Sacket and De Witt Palmeter of Berlin, and W. Pipher, T. Rumsey and Horace Silsby of Seneca Falls, N. Y., passed through Oshkosh recently on their way to Lake Poygan. They were on their pleasure yacht Laura May, owned by the two Berlin gentlemen, and supplied with full outfit for a month's cruise.

Camp-Fire Flickerings.

"That reminds me."

193.

WHILE in Mississippi many years ago and enjoying with all a sportsmans ardor the rich hunting afforded me in the dense canebrakes, I made this discovery in regard to the wild hog. Upon the whole front of an old boar and covering him from the head back to within three inches of his pipes, there grows a shield I will call it—a tough gristle just under the skin, resisting the knife and even large shot, evidently designed by nature as a defense and protection. If it were not for this, no two of these fierce fighters would ever meet without one or both being killed. It covers all the shoulders and sides—and just upon the shoulders and forelegs, even a common rifle ball cannot penetrate it. I would rather face the fiercest panther or wolf or bear than an old boar in his anger. He is the most dangerous animal in the Mississippi bottoms or swamps. A Mr.—, I do not now recall his name—a fool-hardy specimen of those always courageous hunters, rode into the cane to find a gang of hogs and hearing them coming turned and went out. But just as he cleared the swamp and was in the open wood, the boar that led the gang broke out of the cover, and before the man could turn his horse charged straight upon him, and with one thrust from his powerful head drove the sharp tusks full into his horse's belly, and with one jump the poor brute fell and died in a few minutes—completely disembowelled, the man himself with the boar close upon him, ran to a tree, but was so closely pressed he had no time to climb. He was only saved by his companions who came up just in time to shoot the monster by a well-directed aim square in his head. And now comes this curious thing about the shield mentioned above. It (the shield) remained just where the boar fell attached to the head with its gleaming white tusks—for over two years—not only undecayed but keeping its shape while all the rest of the animals was gone.

If not taking too much space I would like to tell an incident of another kind. A Missourian who lived upon the edge of a prairie—Andrew Roby by name, a tall, powerful man, discovered two large black wolves feeding upon a dead cow—and being well mounted concluded he would run one down. Riding up he separated them and taking after the largest he soon caught it, it being of full belly. Roby coolly dismounted and as the wolf tuckered out with his run lay down in the grass, he unloosed his stirrup, a large-three pound iron one, and winding the strap around his hand, walked slowly up to the snarling brute. Swinging the iron around and over his head, he made a leap and struck heavily with the stirrup, but not calculating upon the slippery grass, he fell full length directly upon the wolf which was as much astonished as he was. Considerably bitten but not hurt he gathered himself in a hurry, thinking he must have been lying on that wolf about an hour, but probably it was not quite so long, for when he did get up the grass was still falling in clouds that he had kicked up in his effort to get off the wolf. He soon recovered himself and by a well-directed blow broke the brute's hip and another swing of the heavy iron from his powerful arm finished it. H. B. S.

MARIETTA, O.

194.

Three of us set out for bass. Once in the boat we found ourselves upon a beautiful sheet of water, the most transparent I ever saw. There were three other boats, evidently occupied by farmers from the immediate vicinity, as we could see no camp of others. They were supplied with poles to which they tied long lines, using strips cut from a pickerel's belly for bait. They laughed at our "new fangled" way, as they termed it, but we told them that we would show them how to catch fish. We were shortly all at work, but not a strike did we get on flies or spoon, although we resorted to every device that we had ever heard of, but to no avail. At noon, as the others, who had been working around close to shore, ran past us on their way to dinner, they hailed us with the usual "What luck?" We did not give a very direct answer, and to tease us they held up a bass of about 2lbs., asking if we had got anything like it; and then one of 3lbs., and lastly a 4lbs. fish, accompanied with the same question. We gazed at the fish in perfect amazement; they looked like whales compared with the two puny things we had caught and thrown back. As we started for the shore I rose standing in the stern of the boat, telling the boys that I believed that we could catch them by skittering with a spoon. Will was seated in the bow looking into the water; all at once he exclaimed, "Great guns, see that bass!" at the same time pointing over the same side of the boat I was holding my rod. I leaned over as far as I could, and had just caught a glimpse of a large bass on the gravelly bottom working his fins, when there came a sudden jerk and a splash, and before I realized it I was going into the lake head first. I dropped my rod and caught the side of the boat and climbed in. Then I reeled in a beautiful 4¾lbs. bass. Before we had him fairly landed I told the boys it was my first bass. They said they guessed I "had the hang of the thing," and then they laughed about a little fish pulling me into the water. The next night Will and West set out with some farmers' boys to set a night outline. They said they thought I had better stay in camp, for some little fish might drag me into the lake. At ten o'clock I knew by their loud shouts that they were getting plenty of fish. Just as they were getting a large eel into the boat he escaped from the hook and glided around the boat at a great rate; the boys in trying to stamp him with their feet, knocked off one of the bottom boards. They shouted lustily for help and cried that they were drowning. I took a lantern, ran along the shore and found Will just dragging his drenched form up the bank, while West sat perched upon an old tree top about twenty feet from shore. I have never since heard anything about "having the hang o' the thing." H. W. B.

BINGHAMTON, N. B.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

LONG ISLAND SEA FISHING.

I HAVE been seeking for reliable information relative to the fishing interests, and send the following report, which I have chiefly gathered from Mr. H. Fordham, of Greenport.

I learn that while during the week ending Oct. 2 large quantities were caught, there seems a decrease in the catch during the week ending Oct. 16. The season is now drawing to a close and it is probable that most of the menhaden works will close in a week or two.

Large quantities of fish have been seen off the south side of Long Island bound south. It is stated that probably more fish have been in one school than have been rendered by all the works on our coast during the season. These fish were traveling south very fast, and some of the steamers were able to catch some of them, as the fish were going about as fast as the steamers could follow with their utmost speed.

The large numbers seen every fall off our coast prove beyond a doubt that the employment of steamers has little or nothing to do in decreasing the numbers of edible fish that visit the shore, as large numbers of them have been caught this season, notably among them sea bass, bluefish and porgies, many of which were shipped to New York markets.

Large quantities of skillet (mullet) were caught last week with shore seines, at Promised Land, near Montauk, where Messrs. Price, Tuthill and other enterprising men have established large factories and employ many steamers in the menhaden fishery.

The menhaden fishery this season has been pretty fair, but I have been unable to ascertain the numbers caught by the several factories. Many steamers are still pursuing the business, and I have to-day seen several of them patrolling this Sound shore. ISAAC MCLELLAN.

GREENPORT, Oct. 18.

HAY BAY AND BAY OF QUINTE.

BELLEVILLE, Ont., Oct. 18.—One good turn deserves another, and as the genial "Piseco" has given to your readers—among them myself—much amusement, edification and instruction in his valuable contributions to your columns, I propose to make a partial return for the same by giving him some information as to Hay Bay and other famous fishing resorts hereabouts.

First, however, I would disabuse him of the idea that our postal and express services are bad and unreliable. This first experience of them was no doubt unfortunate, but on further acquaintance with them he will find that he was mistaken.

Hay Bay, which is about thirty miles from Belleville, has from time immemorial been one of the favorite duck shooting resorts of this part of the country, and I have visited it several times, generally with a fair degree of success. The marsh is as "Piseco" states, preserved, but permits can be had at the rate of $1 for each shooting day. As a fishing ground for muskellunge it did not become known until about nine years ago, when it was found that by trolling with a large spoon, weighted so as to tow from three to six feet in depth, *Esox nobilior* could be caught quite readily. As an instance, the Rev. M. Chambers, of Napanee, whom I saw put off from the shore in 1879, returned in an hour and a half with five muskellunge which he had caught and one larger than any of the others he had lost by its jumping out of the boat immediately after the hook had been extracted. As is usual in such cases the fame of the fishing ground spread abroad and the result was such an invasion from your side of the lines, such an insatiable pursuit of the noble fish that they became scarce. Besides, several steam yachts visited the place with noisy fishing parties on Sundays and the Sabbath-loving people who live around the shores of the bay were justly incensed, and the Sabbath breakers were haled before magistrates and made to realize the authority of the law. Thus it is that the people did not take in the most kindly way to all strangers; for although the visitors from the States did not break the Sabbath, they fished too industriously to please the natives.

The muskellunge usually begin to run up Hay Bay about the first or second week in October and good fishing can be had for a month or six weeks.

As to reaching the bay, if you bring your own boat, go to Picton on the Hero, take the steamer Quinte, which leaves Picton early in the morning, and she will drop you at Thompson's Point, whence you will have a run of about eight miles to the best fishing ground, which begins just west of the ducking preserve and extends some three miles eastward, within the bounds of the preserve, but the Shooting Company have no jurisdiction except as to shooting. Or, you can go to Napanee on the Grand Trunk and a drive of seven miles from that town will land you near the eastern end of Hay Bay, on the north side; but the south side is best for the fisherman. Perhaps the best way of all is to run to Kellerville by Grand Trunk, hire boats and a steam yacht here, and in three hours and a half you can be landed on the ground at a very reasonable cost for a party.

There are other points where muskellunge are frequently taken, notably Carnahan's Bay, opposite Glenora, Nigger Island, (seven miles west of Belleville) and thence to the head of the Bay of Quinte, and at West Lake and Weller's Bay many fine ones have been taken.

As to bass fishing, it can be had to perfection on all the bars from Deseronto westward after the beginning of August. There are many splendid places within from half a mile to twelve miles of this city, and were so distinguished an angler as "Piseco" to visit us he would find no difficulty in acquiring information from local brothers of the angle. The bass of the Bay of Quinte are genuine small-mouth, and as gamy as the most ardent angler could desire. Many of those caught at West Lake are big-mouths. Within easy reach of the city, too, are Rice Lake (bass and muskellunge), Trent River ditto, Stone Lake ditto, also the Northern lakes, in which the great lake trout and salmon trout are found, and some streams well stocked with brook trout. But Belleville is the best place for bass fishing at the right season. On the whole, this part of the Dominion, if not exactly an "angler's paradise," is very favorably situated for the pursuit of the gentle art. Our bay has several summer resorts, which are gradually being added to, and ample accommodation can be had by those who, like "Piseco," "Kingfisher," "Wawayanda" and others, spend the greater part of their leisure hours in pursuit of the finny inhabitants of the waters. In saying thus I have nothing exaggerated, but rather understated, for there are many other noted fishing grounds within a few miles of the city which I have not mentioned because I have not personal or well-authenticated knowledge of them. I would, however, add that unless visitors can manage to secure accurate information as to the bars, they will get very few bass, except at certain times by trolling.

As to our piscatory nomenclature, it has at all events true merit of consistency, for a pike is with us a pike, be he big or little; a pike-perch is a pickerel and a muskellunge is a "masko." QUINTE.

MASKINONJE, MASCALLUNGE, ETC.

Editor Forest and Stream:

My article upon the derivation of the popular name of maskinonje, in your issue of March 18, has brought me many letters from persons interested in this matter, some of which I will quote from. Dr. Albert Günther, the distinguished ichthyologist of the British Museum, writes as follows: "I have to thank you for your article on the maskinonje. I have often been puzzled by the latter name, and 'mascalonge' brings to my mind the long faces of the gentlemen who have gone etymologically astray."

Prof. D. S. Jordan says, under date of March 30: "I have just returned from Florida, where I read in Stearns's office your note on the musc—onge. I think that we must accept *Esox masquinongy* as its specific name from Mitchell."

Gen. I. Gerrard, who has been making original investigations concerning an unspotted form of this fish found in the Mississippi region, and which he brings quite an amount of evidence to show is specifically different from *E. nobilior* and that it is the blue pike of Norris, for which Gen. Gerrard proposes the name of *E. immaculatus*, writes me several letters on the subject from which I quote: "I was much interested in your article in FOREST AND STREAM, on the etymology of maskinonje, mascalonge, etc., the former, I think, must be very nearly the right word. I am making inquiries through prominent citizens of St. Paul, formerly engaged in the Indian Chippewa trade on Lake Superior, as to what the Indian name was for this fish, and the meaning of the adjective 'mas,' which you do not translate.* I am also inquiring what distinction the Indians made between the blue-spotted pike, *E. nobilior*, found in the waters of the St. Lawrence system, and the one with solid color, found in the waters of the Mississippi system, from Chautauqua Lake at the head of the Alleghany to the Eagle waters, and the Thousand Lakes of the pineries at the heads of the Wisconsin, Chippewa, St. Croix, etc. These Indians lived on both waters, and it will be interesting to learn that the untutored savage did not call them both by one name, as modern scientists seem disposed to do. I object very decidedly to the vicious termology of 'Sub genus *muskellungus*' finding a place in piscatorial science. * * * I have received through the kind assistance of Hon. Edward Rice, Mayor of St. Paul, this information, received from his intelligent half-breed guide (French and Chippewa), Mr. John B. Cadotte, of Duluth. Mayor Rice took with him three photographs which I send you, one of *E. lucius*, one of *E. nobilior* and one of *E. immaculatus*. The names in the Chippewa tongue are as follows, in the same sequence as written by John B. Cadotte:

No. 1. Ge-da-ge-Genozhay; translated spotted pike, *E. lucius*.

No. 2. Mosh-Kenozhay; translated big or monster pike, *E. nobilior*.

No. 3. Osh-au-wash-ko-Genozhay; translated blue pike, *E. immaculatus*.

I also send the same Chippewa names as written by Col. C. H. Graves, of Duluth, as they sounded to his ear:

No. 1. Ki-ta-ge-Kinonje.

No. 2. Mas-Kinonje.

No. 3. Osha-wasko-Kenonje.

Cadotte translates Kenozhay, Kinonje, or Genozhay, as meaning "sharp," and it may refer to the long sharp build of the pike family or to the shape of the head. It is rather strange that the name "blue pike," used by the Chippewa, is one of the names given to the same fish by Norris, in his description of it as an Ohio River pike. You will observe that the word "Kenosha" is the same in all and is the generic name for the pike family, as stated by you. I will now prosecute my investigations to the further extent of getting descriptive translations of the adjectives designating the species, which have not been furnished, and will send you the information obtained."

I am inclined to think that Gen. Gerrard is correct in claiming the great unspotted pike to be an undescribed species, from the evidence which he has submitted to me, but this is a question irrelevant in the present article, but one which I will take up at some future time when I can learn more of the subject. I have so far in these articles confined myself to trying to find which of the various spellings of the popular names of *E. nobilior* was correct, and have succeeded in proving, to my own satisfaction at least, that "maskinonje" is the nearest to the Ojibwa, from which the name is derived, although the second "n" in that word is an interpolation, and that the French corrupted this into "mascalonge" and its various forms. As I have before said; my present knowledge of Ojibwa is exceedingly limited, but in my early days I spoke it to a limited extent, having passed between two and three years in hunting and trapping, and with surveying parties where I was constantly among the Ojibwas. In those days I paid but little attention to the name of this fish, further than to know what it was called by the Indians when I wanted to trade flour or bacon for it, or perhaps to exchange a few drops of Scutah-wabah† for a fair-sized specimen.

It is consoling to one who is working up any subject to find that he gets upon the right track, and therefore I have felt gratified to be sustained in these researches by such Ojibwa scholars as Len. Jewell, the famous Michigan guide, and Mr. Cadotte.

Mr. Roosevelt evidently inclines to receive the name which the Canadian Frenchman has given the fish, but as before stated the Canadian has twisted a native word into something more familiar to his ear and made "Masque allonge" from maskinonge or kinozhay, just as the English have twisted the French name of *ecrivisse* into cray fish, and as English sailors twist the name of the war ship Bellerophon into "Bully ruffian," and as peony is corrupted into piney, and the china astor into chiny oyster, in order to bring the new name into line with some familiar word. I must disagree with Mr. Roosevelt in his statement, in a private letter, that we shall never discover the derivation of the word, and that it makes little difference. For the derivation of any word is a matter of importance, and the derivation has been discovered in this case.

It is not to be expected that anglers will change the name which they have been accustomed to call a fish, when that change is but a slight one. If the change is radical it is not hard to make; for instance, it would not be difficult for a Pennsylvanian to acknowledge his past sins in calling a pike-perch a "salmon" and applying the true name to it when he learned that there never was a salmon in the rivers of the State of Pennsylvania. But it would be much more difficult to make a man from Iowa call a fish a crappie which he had from boyhood called "croppy." The change in one case is abrupt and radical; in the other, he might consider it as an affectation to change a letter in the name instead of an entire name, and, as anglers will continue to say mascalonge, muscalonge, etc., it is only to show them where the name came from that these articles have been written.

FRED MATHER.

*I would refer Gen. Gerrard to a communication signed "X.," in FOREST AND STREAM of Jan. 7, written by a gentleman of New York who has spent much time on Lake Superior, in which he gives the term "mas" as spotted.

†Here again I find my phonetic spelling at variance with the authorities. Longfellow gives "Iskoodah" as fire or a comet, while the word for water is spelled in various ways. I have seen the word spelled "scutawabo," but cannot recall any pronunciation of it which agrees with Longfellow's in beginning with the letter I. Whether it should be written scutah or skooda depends upon the ear that hears it.

HALCYON DAYS.—II.

IN the fall of each year, when the leaden sky and cold drizzling rains gave indication of approaching winter, it became the duty of every household to lay in a large supply of cordwood for the winter's use. This being hauled convenient to the woodshed, the sawyers, with their old one-horse tread-power machine, were engaged to cut it up into stovewood lengths.

Adjoining our house was a large wagonhouse, one end of which was partitioned off into a woodshed. The sawyers had arrived and departed, leaving a massive pile of chunks, and it devolved upon me to split and pile this up in long, narrow ranks, a good two weeks work for any man, but I had plenty of time and was not pressed with other work and needed not to over-exert myself.

The morning after the sawyers had left was dull and heavy. Great black clouds darkened the sky. The atmosphere was at first oppressively warm, then came a feeling of chilly dampness, expressive of what might be expected when the later fall rains came. I had taken down the axe from its accustomed hanging place and had fixed in position a suitable chopping block and was ready to begin my long task, but I hesitated, I did not feel like going to work. The axe did not seem to hang just right, some of those knotty, hard-splitting chunks seemed to be the first in the way, and a half dozen other petty excuses intervened to deter me from striking the first blow. Presently there came a gentle pat on the shingles overhead, then another, and still another, until they came faster and faster in a long steady pit-a-pat, and the rain was descending. As I listened to its musical patter on the roof my eyes glanced upward and on the rafters I saw written in chalk, the records of previous seasons' advancement or declination. "First snow Nov. —th 18—," "Last snow April —th 18—," and I feel an almost uncontrollable power to do something, I know not what, anything but commence that hard task before me. The rain settled into a steady drizzle and as it began to drip from the eaves, with a "pit, pat, pit-a-pat," it seemed to say, "Come, come, come away" so earnestly that the appeal was irresistible. Up there on that long narrow shelf nailed against the beam, with several cleats holding it straight, lays my fishing pole, a long slender peeled maple sapling, its line wound carefully from tip to butt around it, the sinker nicely adjusted and the ringed hook stuck carefully in its side. What had I to do but take it down, dig some worms and go a-fishing? And was there ever such another morning for fishing as this? Surely the fish would bite to-day if ever. And as the rain came steadily and lightly down in its long regular patter, and the dripping from the eaves grew thicker and louder, it explained to me the secret of my indolence. The disease was firmly imbedded and I "had it bad."

In after years it was so with me and is so yet. When it rains I feel an irresistible inclination to go fishing, and have done it many a time too, getting only a good wetting for my pains. And it mattered little as to the catch, for as I sat on the bank well protected by my rubber coat, a dry stone for a seat under some friendly trees for shelter, watching the pattering drops as they fell, occasionally reaching out to grasp my rod when I would get a nibble, I was enjoying that solid comfort that only an angler can appreciate, and the rain and dampness added zest to it.

Almost before I knew what I was doing that morning the axe was laid away, the rod taken down, and I was out behind the shed digging worms. The millpond was not far away. Choosing one of my favorite spots, I soon had my hook baited, and unmindful of the rain waited patiently for a bite, and I did not have long to wait either, for the day was all it promised to be, and as I half sat, half kneeled, my hands grasping the rod in eager expectancy, watching the floating cork, the light misty drops falling lightly around it, occassionally giving a little bob down and up, then moving slowly away propelled by some invisible power, then suddenly going down, down, until the line became taut, causing the rod to dip and quiver, I knew it was time to pull up, and as I landed some fair sized specimens, I felt that it was better to be there than at home splitting wood any day.

That was a long time ago and I do not remember all the incidents of the day's sport, nor how each particular fish was caught, nor that I had any fierce struggle in landing any of them, but I do remember that it was a day of particular enjoyment to me. When I returned home in the afternoon wet and hungry I had a fine string of fish, and I went to work with an energy that enabled me to make almost as fair a showing at the woodpile by supper time as I would had I staid at home. J. H. B.

MANSFIELD VALLEY, Pa.

A MODEST FISHERMAN.

IN the record of sport for the year now drawing to a close, it is doubtful if there is an event more interesting than the capture of the largest salmon ever caught by a fly-fisherman. In order that some permanent record of the achievement may be preserved, and the occasion fitly marked, the accompanying engraving has been prepared, and as Mr. Dun is himself too modest to boast to the public of his great good fortune in fishing, the undersigned, as his friend and partner, ventures to tell the story as gleaned from time to time from his own lips.

The size of the fish, as will be seen from the accompanying engraving, is unusual, but its shape and proportions were so perfect that its great weight and real magnitude were hardly at the moment appreciated. It was only by comparison with other fish, or with other objects, that its real extent could be estimated, and especially after its arrival in New York, when it was hung up, and in that position its length compared with the height of ordinary individuals, did the real size of this splendid specimen dawn upon the mind of the observer. With the object of conveying the impression thus made to the reader, the engraving furnishes objects by which a similar comparison can be instituted, and an idea formed of the real size of the fish. For, as Agassiz says, "comparison is at the bottom of all philosophy," and in the case of fish stories, somehow, one needs all the adventitious aids possible, not only to confirm one's veracity, but to make it clear that the fish referred to was the best and biggest fish ever caught. If one can't get the credit of telling the biggest and best fish story of the year, why what is the use of being a story teller at all?

The subject of this story, however, needs very little embellishment. He speaks for himself in the magnificent weight of 54lbs., and in proportions that need no enlargement. The catch was made under the following circumstances:

Mr. R. G. Dun, of New York, who is the well-known head of the great Mercantile Agency which bears his name, has been for years an ardent fisherman. Sharing as he does with Lord Lansdowne, the Governor-General of Canada, the lease of the Cascapedia River, in the Province of Quebec, and being also a member of the Restigouche Salmon Club, of Metapedia, he has had the best opportunities for pursuing the gentle art. Last June he had camped on the Grand Cascapedia with his good wife—as the only and best companion he cared to have—and amid many discouraging reports commenced to fish. His experience of the first week would have been sufficient to dishearten most men, for throughout the six days of constant and persistent whipping of the stream, not a single rise was vouchsafed. On the eighth day, however, he was rewarded by a 23-pounder, and the following three days had great good luck, securing five fish ranging from 25 to 34lbs., and on the last day the 54-pounder—the subject of this communication.

On the last day the morning was gloomy and the prospect seemed uncertain, for though casting his fly perhaps a thousand times without a rise, it began to look as if luck had departed, so that lunch time arrived and not a sign. Undiscouraged, however, in the late afternoon another effort was made. Commencing at the top of a large pool, he slowly fished its upper edge, when at a distance of 200 yards he saw a rise of a huge fish to a natural fly, which created a great commotion in the water. In a moment he and his guide felt that the opportunity had come, and if skill, good luck and good judgment availed, they would soon be made the happy possessors of a great catch. Marking the lines on either side of the river with the eye, they quietly floated down to the spot, in the meantime, however, much to their surprise, having a rise and capturing a 23-pounder. Approaching the spot where the big fish had risen, Mr. Dun very cautiously and warily threw out with a good long cast a silver-gray fly, and with breathless interest awaited the result. In almost an instant the huge fellow came up to it like a tiger, and with a lunge caught the hook and was off in a moment. Plenty of line was of course afforded him, but the anchor was ordered up and the boat put for the right hand shore, where there was some good eddy water. The great fish took a long run, most fortunately up stream, but up to this time had not shown himself. He was played hard, and brought up at one time almost within reach of the gaff, but with a sudden and noble effort for freedom he took another lunge, and with a leap out of the water in which he showed his whole proportions, he made up stream again with tremendous force, causing the reel to whiz, and taxing line and rod and single catgut to their utmost. Mr. Dun was, however, equal to the great occasion, and with a coolness and skill greatly to be admired, held his prize well in hand. The size of the fish, a seeming monster, he says, well nigh frightened him. He had heard of hunters being attacked with "buck fever" at sight of their first deer, and though he had caught hundreds of salmon, his feelings were akin to this sense of paralysis, for he never had had so large a fish, and his anxiety and desire to gaff him may well be imagined. He was as tender as an anxious mother to save her offspring, and yet as firm as a stern father determined to have his way. Gradually the line was reeled up, and the reluctant monster drew near the boat, where anxiety and nervousness were again extreme because of the inexperience and evident fright of the attendant. At the word of command, however, the green gaffer let drive, but in a most awkward manner. Fortunately the iron went deep and a firm hold was secured, and then came the tug of war, for it then became a struggle whether the fish was to come into the boat or the gaffer into the water. But after a few strong adjectives from the fortunate fisherman, and a threat that the gaffer would be killed if he failed, the great salmon was at length pulled to the side of the canoe and safely captured.

The time seemed long from the first rise, and the excitement and pleasure of the chase crowded into short space what seemed to be hours; but comparing notes it was found that barely half an hour had passed since the struggle began and victory had been achieved. The victory was a signal one, for the 54-pounder, lying in the bottom of the boat, was the largest salmon ever caught by a fly in these waters, famous for their great fish.

Mr. Dun had caught many big fish. True, as a fisher of men, who in their turn had caught fish, he had been successful. As his guest, his friend, ex-President Arthur, in the same river, had caught a 48-pounder, in those palmy days when the good General enjoyed perfect health, and when, among other good things, these two warm friends had the companionship of ex-Senator Conkling, a pleasure as rare and as enjoyable as it would be possible to have, in camp or out of it. But this was all past and gone. The sick General was languishing on the sea shore, and a great wall had grown up between him and the Senator, which rendered impossible such happy meetings in the camp of a friend on a salmon river. But Mr. Dun had got his fish, and would fain be consoled, and his consolation was found in one fact, and that was that though there were scales in the vicinity, there were none large enough to weigh his catch. The utmost that the weights would show was fifty pounds, and as the fish pulled them up to the beam, Mr. Dun modestly concluded that one pound more might, with propriety, be added. Hence, he telegraphed his friends that his salmon weighed fifty-one pounds. He might just as well have said sixty pounds, but he was sufficiently conscious of his great victory to stick to the safe side, as he invariably does in other matters, and the result was—as it usually is—all the more gratifying. For when the salmon reached New York, and was sent to the Merchants' Club, on Leonard street, it weighed fifty-four pounds, and Mr. Dun's modesty was praised equally with his thoughtful liberality in sending forward his fish so that his neighbors and friends might partake of it.

FIFTY-FOUR POUND SALMON.

Killed by Mr. R. G. Dun, of New York, on Cascapedia River, Canada, June, 1886. Drawing from a photograph.

The rod used on the occasion was a split bamboo, made by Leonard. Its length was 15½ft. The line was a No. 2 oiled silk, with a single gut. The great strength and reliability of this delicate outfit was clearly shown in the capture of a fish so weighty and powerful; and the wonder is that, with a single strand of catgut, he was not lost. But experience, coolness and skill were successful, with perfection in tackle. The fly used was a silver-gray No. 1, not unlike a silver-doctor.

And now, having told the story of my friend's achievement, it only remains for me to say that, as he is the champion fisher of salmon for 1886, he can claim as his partner the champion wolf-killer of Canada, the undersigned having, in October, 1873, shot in less than five minutes four huge wolves, entitling him to a bounty from the Canadian Government of $24. This amount his guide invested in a cooking stove that is doing good service to this day. So, having two partners in one firm who have thus distinguished themselves, must be the excuse for thus occupying so large a space in your most excellent paper.

ERASTUS WIMAN.

NEW YORK, October, 1886.

[Accurate measurements of the fish were as follows: Length, 4ft. 6in. Girth, 2ft. 4in. Width of tail, 14in. It was withal a perfect fish as to shape and condition.]

NESSMUK'S POEMS.—The blank form reprinted for the convenience of subscribers to the volume of "Nessmuk's" poems is given on another page. The subscriptions received to date insure the financial success of the publication; but we hope to do much more than make a bare success of it by the time the subscription list is closed. Several correspondents have suggested that the roll of subscribers should be so large as to reflect in some degree public appreciation of the place held by "Nessmuk" as a contributor to the literature of camp and cruise, and we know of no more fitting opportunity for such a testimonial than the present.

VERMONT BASS.—Fair Haven, Vt., Oct. 22.—I have spent a good many days with the rod and line on the waters of Lake Bomoseene, and have taken from its waters all the varieties of fish that live in it. The bass which are taken from those waters are the regular large-mouth black bass, but they are commonly known as "Sweego" bass. The "Jumbo bass" that has been spoken of in your paper was undoubtedly one of that species. The largest I ever took weighed 8lbs., but they have been taken as high as 15lbs.; but not often, the greater number running from ¾ to 3lbs. each. A small lake of 80 acres only about two miles from here was stocked with small-mouth black bass some eight years since, and there are now a great many fine bass in its waters; but they are hard to take, as there are myriads of small fish in it. This summer I had the pleasure of helping eat one that came from there and weighed 6½lbs. before it was dressed. I think if some good fly-fisher should come and try it, he might reap a good reward, as there has never been a fly upon the pond. I should take pleasure in going and showing him the spot. Will landlocked salmon and small-mouth black bass thrive together in the same water?—NED.

THE HEAVIEST TROUT YET.—*Editor Forest and Stream:* An English tourist, writing in the London *Times*, Oct. 1, from the north shore of Lake Superior, has the following: "We stopped at the little station and heard a fish story from one of the residents, who told how he had gone down to the shore, and, seeing the trout disporting, had taken a little butterfly to bait his hook, and with it caught three 20-pound speckled trout. They were of the finest quality, yet so numerous are they here that he had sold all three for one dollar." Your columns, I think, record a *S. fontinalis* of 17lbs. from Lake Nepigon, also one of 12lbs. from the Rangeley Lakes, and we hear of a 25-pound black bass from Lake Bomoseen; but these are trifles compared with the three taken by the veracious Canadian, whose tale, perhaps, should go to that department of your paper entitled "Camp-Fire Flickerings."—S. C. C.

A TROUT SCORE.—Henry S. Carpenter, of Osceola, claims to have caught 26,900 brook trout during the past 20 years. They were mostly taken from Salmon River. The largest weighed about 1¼lbs.—*Utica Herald.* [How much did the smallest weigh?]

BROOKVALE, N. Y.—The ninth semi-annual picnic of the Brookvale Angling Club was held at Brookvale Mills last Saturday.

FIXTURES.

DOG SHOWS.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 15 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Nov. 23.—Fifth Annual Field Trials of the Robins Island Club, Robins Island, L. I. Open to members only. L. Waterbury, Secretary.

Dec. 1.—First Annual Field Trials of the Irish Setter Club, at Salisbury, N. C. W. Dunphy, President, Peekskill, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4236.**

ST. JOHN DOG SHOW.

Editor Forest and Stream:

The show which closed last Friday night was the best ever held in St. John, both as regards quantity and quality of exhibits. The *Daily Sun* of Saturday said: "The dog and pony show, which has been an unprecedented success, closed last night. It has been very largely attended." Lansdowne Rink, where the exhibition was held, is admirably adapted for a dog show, and is capable of comfortably accommodating five hundred dogs. There were 205 entries against 143 last year, and Mr. Wilson informed me that the gate receipts were almost double those of last year. Much of this success was due to Mr. Wilson's own persistent labors, and the exhibitors, knowing this, presented him with a suitable testimonial emblematical of their appreciation of his unflinching energy and devotion. In eloquent terms Col. Blaine, the gallant president of the Club, eulogized Mr. Wilson's services, past and present, and that gentleman replied briefly but in well-chosen words.

The feeding was done by Spratt's Patent, and many exhibitors who had not seen the biscuits before spoke very favorably of them and stated their intention of using them in their kennels.

It has never fallen to my lot to come in contact with a better hearted or more hospitable set of people than I met in St. John, and I will avail myself of this opportunity and publicly express my gratitude through the widely-read columns of your valuable journal. It will be many a day before I forget the kindly words of welcome or the countless courtesies that were showered upon me during my visit to St. John.

MASTIFFS.

Mastiffs were first on the list and though Friday, to whom I awarded first prize, is a long way removed from first class form he showed just enough character to earn him a place in the category of dog show winners. He is a fairly well built dog so far as body goes, and his coat, color and condition and size are above the average. He does not stand quite straight on his fore pins and is not round and heavy enough from the elbows down. He lacks in volume of skull and is too long and narrow and shallow in muzzle, added to which defects he does not carry his ears *comme il faut.* The bitch class did not fill and Friday just described scored another win in the puppy class for dogs. In the corresponding bitch class Sylvia was alone and while she is not of correct type I gave her the prize. She is what one might properly term a Wade mastiff, a long-legged, light-boned, houndy-headed specimen, almost entirely devoid of true mastiff character. Some day she may carve her way to the front, a second Baby of the mastiff world. Pardon me for digressing just a moment to congratulate my esteemed Pittsburgh friend upon having put aside his pen. May he never resume it to discuss the mastiff question is the worst wish of myself and others who have listened to his many misleading statements. As a reformer of dog show abuses Mr. Wade has few equals in this country, and the motives which prompt him to write are of the purest kind. But his wholesale attacks upon dogs he has never seen, his altogether incorrect descriptions of prominent English winners, and his farcical comparisons will only tend to retard progress and mislead the credulous beginner.

ST. BERNARDS.

Celtic Rector was decidedly ahead of his three rough-coated competitors. He is an orange and white dog, and claims as his sire that characterless specimen Rector. His head, as might be expected, is very deficient, but it bears no resemblance to that of his giant sire. His dam, Countess IV., was by my Yorkshire friend's well-known Barry, and Celtic Rector has inherited the bad expression and faulty head of that dog. He is not a big dog, carries his tail too high, stands well on straight legs, might be better in markings and would be improved by more coat and bone. Celtic Ralman, second prize, lacks character in head and is too leggy and scanty of coat. Clyde has a small wolfish head and is not a show dog. Guess is a brindle mongrel, such as one often sees at a dog show. Celtic Sheba was my choice for first in the next class. She is not quite so good in head as the second prize winner, Celtic Lassie, but is of better size, has more bone and a better coat. Celtic Linda is on the small side and is deficient in muzzle and very light of limb. Celtic Mona is much above the average in head and strength and straightness of limbs, but her color, a sort of dirty lavender, is dead against her. Grant was alone in the class for smooth-coated champions. He is not one of my sort, has a very plain and expressionless head, is badly marked, faulty in loin and lacking in size. Lodi was the only entry in the open class and was points the best St. Bernard in the show. He has improved since I last saw him, and while he is not a crack he is a useful sort and will be heard from again. His very heavy ears are his worst fault.

NEWFOUNDLANDS.

I was rather disappointed in not finding a better lot of Newfoundlands, but Mr. Wilson assured me that he had never seen but one really good specimen in or near St. John, a dog owned by a sea captain. Dog and owner soon disappeared and have never returned. I awarded first prize to Starda, a dog of fair size and with a better coat than the average. His head is much too light and is not of correct formation; it is narrow and domed. His slack back would handicap him heavily if shown in good company. Captain, hc., is an undersized specimen, faulty in head and ears. I could not conscientiously have given him the second prize card. Mollie, winner in the bitch class, was all out of coat, but she is of better type than any of the others, and was only beaten for the special prize on the score of condition. Jumbo is a small, curly, weedy, poor-headed specimen. Darkie would have stood a better chance of winning in a class of brown, curly-coated retrievers—not a Newfoundland at all. Jessie, second prize, is too small, and is faulty in skull, muzzle and forelegs. The first prize dog puppy is much too curly in coat; his head is plain and his ears heavy. Nellie will not distinguish herself in good company at future shows.

POINTERS.

Sport scored an easy win in the dog class. He is very much like old Sensation, but is a better looking dog, better in shoulders, chest, back, loin, tail, muzzle and ears, but not quite so good in skull or in neck. He is not, I am told, a good field dog, and as he would be outclassed on the bench alongside the cracks of the present time, I would not advise any one to purchase him at the price ($50) asked for him. Pointer, placed second, is a white and lemon dog, not straight on the forelegs, or good in pasterns or feet. His head lacks character and his shoulders are heavy. Dash, unnoticed, is is very deficient in head (skull and muzzle shallow, no stop, ears set on high), a very plain looking animal. Nellie, a liver colored bitch of some quality, took first in the next class. She is not of the type I like—too round in barrel, not quite right in forelegs and too straight in stifles. She is best at the two extremities. Brownie, a bitch of the same type and color, was second. She is better in stifles than the winner, also in hocks, but is much too leggy and shallow. Queen, c., and entered as liver and white, is a white and lemon ticked bitch, fairly good in body, but weak in head and faulty in neck, legs, second thighs, tail and eyes. Express is very deficient in shoulders, legs, feet and back. Jersey, the winning puppy, will never be heard from in good company. He is deficient in head, ears, eyes, pasterns, feet and tail. Don does not possess a single show point, so that I was compelled to dismiss him without notice of any kind. Sport won the special easily.

SETTERS.

Of the four dogs shown Gun, who possessed far more true setter character than Rex, was given first. He has bad eyes, is faulty behind the back ribs and was not well shown. Rex, placed second, is the more truly-formed dog and was in better condition, but I could not get over his very plain head, which clearly denotes a bar sinister in his pedigree—if he has one. The other Rex, the unnoticed one, is much too leggy, shows little if any character, and is very faulty at both ends. Morning Star, a little bitch showing some quality and fairly good in head, scored an easy win over her kennel companion, Lady Bright. The latter has a rather nice head and shows some quality, but she is heavy in shoulders and slack behind them, does not stand straight on her forelegs and is undersized and a bit weedy. Fan is fairly good in head, but is too leggy and light of limb to suit me. Her tail is badly formed and badly carried and her color is washy. Daisy is heavy in shoulders and very faulty behind the back ribs. Jolly Jet, the winning puppy, has a fairly good body to recommend him, but he needs improvement at all other points. Old Argus, in blooming condition, was alone in the class for champion Gordons. He is getting to be rather light in the quarters, but with that exception was looking as well as I have ever seen him. Flora, first in the open bitch class, is light in color and too weedy all over to compete successfully in good company. She is also rather snipy and faulty in stop. Dash, the first prize puppy, is deficient in muzzle and in eyes; his ears are set on too high and he is not free of white.

The Irish setter dogs were a very useful lot of seven. The first prize winner might have been purchased for $4 a few days before the show, but all of a sudden the price jumped up to $50, and then got into the hundreds. Another Ilford Cromwell. He is a dog that can take a card in any company. True, he has not a head like Old Palmerston's or color like Chief's; but he is good in back, shoulders, chest, quarters and stern, stands on the very best of legs and feet, and carries himself very gaily. Elcho IV., another useful-looking one, took second, and had he been in better condition and carried his ears properly I would probably have placed him first. He is better in muzzle than the winner, but not so good in peak. He is also cleaner in the cheeks and of better color than the winner, but is not so good in legs, feet, back or stifles. Garryowen, vhc., is a dog of the Berkley type—too low on the legs, not rangy enough, a nice type, but not the right one. His coat is excellent, but his color, while very handsome, is too dark. He is flat over the loin, not long or clean enough in head and neck, stands too low at the shoulder and does not carry his tail properly. Dash, vhc., is not very bad at any point. The fault with him is that he is too big and heavy at all points. Rosy was in poor condition or she would have been noticed. His head is not quite right and his color is too light. The unnoticed Dash has a short stumpy head and is poor in color and straight behind. Hebe, the first prize bitch, is too weedy and shallow, besides being faulty in muzzle. She is quite young and will improve, but I do not think she will be heard from again in good company. Maudie, second prize, is sour in head, and the same may be said of Madge, who is faulty in shoulders, forelegs, pasterns and feet. In body and tail she will do. Tempo, the first prize dog puppy, is better in head, body, legs and feet than the average and may be heard from again, if not pitted against the cracks. Hebe, just described, was first in the class for bitch puppies and Molly, faulty in head and color, was second.

SPANIELS.

There were twenty-six entries in the spaniel classes, and the quality was better than I expected to find it, but there was nothing first-class, and a fairly good dog could easily beat the lot of them. My notes against Jack, winner in the class for field spaniel dogs, are as follows: Light eyes, not clean enough in head, stands too high, slabsided, tail not docked and badly carried." Black, second prize, was first in the puppy class last year. He is deficient in skull, muzzle, eyes and ears, stands too high on the legs and is light of bone. Rover, hc., is much too big, but being better in head, coat and ears than the balance of the class, I gave him the card. "Ben," says my note book, "is a light-boned specimen lacking in character." Spot, faulty in head, ears, eyes and coat, was the only bitch shown. I gave her second prize. Prince, with his yellow eyes and plain head, is much too shallow and leggy, but I gave him second prize in the puppy class nevertheless. Cocker dogs were a little better than their heavier brethren, and I awarded two first prizes, one to the black and white Sport and the other to Maxie, a black. Neither is first-class. Sport is too cheeky and is also faulty in muzzle and coat, his ears are placed too high, and he is light of limb. Maxie is too heavy in head; he is also rather flat-sided and light in eyes. Pomp, second prize, says my notebook, is "faulty in head, leggy, light of limb, shelly, not straight in front." My first prize bitch is far too much on the Sussex type, and is light of bone and short of coat and feather. She is a liver-colored bitch decidedly deficient in cocker attributes. The winner of second prize had previously tasted of the sweets of victory, but she won't do for me. She is faulty in head, body and limbs, and no fault could have been found had I withheld the prize. Two puppies were shown, and they were so near equal that I gave each a second prize.

GREYHOUNDS.

There was only one exhibit, a red and white dog of rather more than average quality. In head and neck he is fairly good, but his heavy shoulders, light limbs and pasterns, and faulty feet are hardly the proper things for the plains of Altcar.

DEERHOUNDS.

Mr. Thayer as usual had matters all his own way in these classes, there being nothing up to the form of his Bran, Lorna II., Highland Laddie, Duncan and Thora. Vaughn II., c., in the open dog class, is too small and is light of bone, weak in pasterns, open in feet and scanty in coat. Jess, second in the open bitch class, was in such poor condition that Thora had no trouble in beating her. The first prize puppy is of good type and fairly well formed all over, but she is too small ever to make a good one.

COLLIES.

There were seventeen entries in these classes and the quality of the exhibits was but little below the average. Olinthus scored rather an easy win in the dog class. His head is the worst part of him and will always keep him back in good company. Bruce, second prize, is rather a coarse dog, much too heavy in head and in ears, and lacking in top and under-coat. Don, hc., is very faulty in head and ears and his coat is too soft. Jerry, c., is much too small and weedy, but his head and ears being better than others in the class, I thought him worth a card. Barker, also c., is far from being perfect in the three more essential points, head, body and coat. Roy's head and ears won him the card: he is not a good one by any means, being very deficient in body, legs, feet, coat and tail. First in the bitch class went to Nellie Grey, a bitch above the average in body and coat but handicapped with a short, sour head and full eyes. I failed to find anything worth a second to her. Two fairly good puppies, by Ben Nevis from Nellie Grey, easily won the puppy class prizes. One of these, Ness, is rather a promising youngster, but she will never be quite first class. She won the special for best collie in the show, the runner-up being her brother Avon.

FOX-TERRIERS.

The fox-terrier men were demoralized at the sight of Mr. Thayer's strong team. They swept the boards. With the exception of Meersbrook Model II. all are well known to your readers. The new bitch scored a very easy win in the puppy class, although not a good one. She is too leggy, stands badly on her fore legs, is light of bone, and not right in feet. The owner and exhibitor of a cripple in one of these classes, not appreciating a rule I have of disqualifying the blind, the lame and halt, sought out Col. Blaine and informed that gentleman that the judge was a nailing good one except of fox-terriers. The Colonel, who had taken first in the bull-terrier dog class but only second in the bitch class, replied as follows: "Can't agree with you, sir, can't agree with you. Our judge doesn't know the first thing about bull-terrier bitches, but I tell you he's a splendid judge of bull-terrier dogs." The bit went home as did also the owner of the cripple. I gave the special for best fox-terrier to Richmond Olive, who also took that for best sporting dog.

BULLDOGS.

Mr. Mills had a couple of entries in these classes, but they did not show up, and Mr. Thayer had a walk over with Tippoo, Rhodora, Moses and Josephine, all well known to your readers. Tippoo, of course, won the special, and I thought him clearly entitled to the special for best non-sporting dog.

BULL-TERRIERS.

Crib, faulty in skull, muzzle and eyes, was the only decent specimen in the dog class, and Bones, full in eyes and faulty below them, was a very easy winner in the bitch class. She was shown too fat. Julia, second prize, has a brindle patch over one eye and is very faulty in muzzle, not quite straight on her legs, and not right either in shoulders or tail. Tatters, hc., is of the same pattern, but slightly underhung. The balance of the class were dogs of all colors and shapes—pit dogs.

OTHER TERRIERS.

I only awarded a second prize in the class for black and tan dogs and that to a dog out at the elbows and very deficient in head and eyes. Nell, the winning bitch is faulty in head, eyes and color; she shows age. Neither of the toys is good in head.

The first prize Skye terrier dog is fairly good in head, ears, body and tail, but he is short and soft in coat—serious defects. The second prize winner is not nearly so good in head and his coat is very scanty. Jessie, the winning bitch, is

above the average as exhibited in this country. She has fair length of body and a coat that nearer approaches the standard than others in the class. The second prize winner, Lady Kate, is not good in head or ears. Monkey has poor head and ears and is short of coat. Lou is altogether too soft in coat for a Skye and shows a Yorkshire cross.

Charlie, the champion Yorkshire, is deficient in color and quality of coat. The other Charlie, winner in the open class, has good quality of coat, but there is not enough of it. His back color is very good, but the tan is not dark enough. Tug, second prize, is too short and fluffy in coat, which is not of good color. Bradford Lill scored an easy win in the bitch class and was much the best Yorkshire in the show. Her back color is good, but the tan on head and legs is too light and she is rather short in coat. Biddy, second prize, has more coat than the winner, but is not so good in color. Mollie is short in coat and has a poor head.

I ordered the Irish terriers, or, rather, supposed Irish terriers, out of the ring and disqualified the lot of them. They were simply a lot of brindle, underhung mongrels. The unfortunate owners had been informed at previous shows that they owned really good dogs—dogs that could hold their own in any company. After they had procured the standard to satisfy themselves that they had been deceived, and that their exhibits were not eligible for competition at any show, they became loud in their denunciation of the parties who had thus misled them. Instead of wasting their time and money, how much better would it have been for the judges in question to have told these men that they undertook to judge anything and everything, but that they had never seen a good Irish terrier, and consequently could not tell them whether their dogs were good or bad. That would have been the straightforward course to pursue.

PUGS.

Young Toby and Thunder were the best of the entries in these classes. They are both of them well-known to most of your readers. I gave the special to Toby, who is better in mask than his kennel companion. The bitches and the puppies were a very poor lot and call for no comment.

AWARDS.

MASTIFFS.—*Dogs:* 1st, J. D. Smiley's Friday. *Bitches:* No entries. —PUPPIES—*Dogs:* 1st, J. D. Smiley's Friday. *Bitches:* 1st, W. Robinson, Jr.'s Sylvia.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st and 2d, Cromar & Brown's Celtic Rector & Celtic Ralman. *Bitches:* 1st, 2d, high com. and com., Cromar & Brown's Celtic Sheba, Celtic Lassie, Celtic Linda and Celtic Mona.—SMOOTH-COATED—CHAMPION—F. W. Daniel's Grant.—OPEN—*Dogs:* 1st, Chequasset Kennels' Lodi. *Bitches:* Absent.

NEWFOUNDLANDS.—*Dogs:* 1st, C. E. Reynold's Starda: 2d, withheld. High com., J. M. Paisley's Captain. *Bitches:* 1st, H. W. Wilson's Mollie; 2d, R. Blackall's Jessie.—PUPPIES—*Dogs:* 1st, H. W. Wilson's Jake. *Bitches:* 1st. W. Holman's Nellie.

POINTERS.—*Dogs:* 1st, R. Bustin's Sport; 2d, J. Stewart's Pointer. *Bitches:* 1st and 2d, J. Duffy's Nellie and Brownie. Com., R. Bustin's Queen.—PUPPIES—*Dogs:* 1st, W. Mellilday's Jerry. *Bitches:* Absent.

ENGLISH SETTERS.—*Dogs:* 1st, C. York's Gun; 2d, J. Fleming's Rex. *Bitches:* 1st and 2d, C. York's Morning Star and Lady Bright. High com., W. B. Carvill's Fan. Com., T. E. Henderson's Daisy. —PUPPIES—*Dogs:* No entries. *Bitches:* 1st, C. York's Jolly Jet.

GORDON SETTERS.—CHAMPION—*Dog:* J. E. Thayer's Argus.—OPEN—*Dogs:* No entries. *Bitches:* 1st, R. Bustin's Flora. *Puppies:* 1st, J. Daley's Dash.

IRISH SETTERS.—*Dogs:* 1st, J. O. Miller's Sport; 2d, F. B. Linton's Elcho IV. Very high com., R. Furlong's Garryowen and J. Leitch's Dash. *Bitches:* 1st, J. A. Harris's Hebe; 2d, R. Blackall's Maudie.—PUPPIES—*Dogs:* 1st, J. J. Joues's Tempo. Com., A. Anderson's Dick. *Bitches:* 1st, J. A. Harris's Hebe; 2d, W. Morrison's Molly.

FIELD SPANIELS.—*Dogs:* 1st, W. F. Danaher's Jack; 2d, J. H. Carnall's Black. High com., E. H. Park's Rover. *Bitches:* 1st, withheld; 2d, J. Dinsmore's Spot. *Puppies:* 1st, withheld; 2d, G. Barker's Prince.

COCKER SPANIELS.—*Dogs:* Equal 1st, C. D. Morrisey's Sport and R. McLeod's Maxie; 2d, E. H. Fairweather's Pomp. Com., J. Stewart's unnamed. *Bitches:* 1st, T. L. Dever's Dora; 2d and high com., J. McB. Morrison's Jet and Ink. *Puppies:* 1st, withheld; equal 2d, D. O'Connor's Frisk and E. H. Fairweather's Pomp.

CLUMBER SPANIELS.—1st, G. N. Brown's Spot.

GREYHOUNDS.—1st, A. M. K. Doull's Bran.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Bran. *Bitch:* J. E. Thayer's Lorna II.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Highland Laddie and Duncan. Com., Dr. D. E. Berryman's Vaughn II. *Bitches:* 1st, J. E. Thayer's Thora; 2d, A. M. & T. W. Magee's Jess. *Puppies:* 1st, A. M. & T. W. Magee's Bones.

BEAGLES.—*Dogs:* Absent. *Puppies:* Prizes withheld.

COLLIES.—*Dogs:* 1st, E. G. Kaye's Olinthus; 2d and com., A. M. & T. W. Magee's Bruce and Roy. High com., P. G. Cristie's Don. Com., H. M. Prentiss's Jerry and R. M. Magee's Barker. *Bitches:* 1st, F. W. Kaye's Nellie Grey; 2d withheld.—PUPPIES—*Dogs:* 1st, R. M. Magee's Avon. *Bitches:* 1st, F. W. Kaye's Ness.

FOX-TERRIERS.—CHAMPION—*Dog:* J. E. Thayer's Belgrave Primrose. *Bitch:* J. E. Thayer's Richmond Olive.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Raby Jack and Richmond Tyrant. *Bitches:* 1st, J. E. Thayer's Di; 2d, A. R. Campbell's Molly.—PUPPIES—*Dogs:* 1st, withheld; 2d, J. G. Jones's Nip. *Bitches:* 1st, J. E. Thayer's Meersbrook Model II.

BULL-TERRIERS.—*Dogs:* 1st, Col. A. Blaine's Crib; 2d, withheld. *Bitches:* 1st, W. A. Pattison's Bones; 2d and high com., Col. A. Blaine's Julia and Tatters.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, withheld; 2d, C. H. Ward's Shepard. *Bitches:* 1st. S. Armstrong's Nell. *Puppies:* 1st' withheld; 2d, J. Hazelhurst's Dido.

SKYE TERRIERS.—*Dogs:* 1st, B. A. Weston's Twister; 2d, A. Morrisey's Sandy. *Bitches:* 1st, S. Z. Dickson's Jessie; 2d, C. A. Shinn's Lady Kate.

YORKSHIRE TERRIERS.—CHAMPION—C. H. Bustin's Charlie. —OPEN—*Dogs:* 1st, W. J. Quigg's Charlie; 2d, P. H. Coombs's Tug. *Bitches:* 1st, P. H. Coombs's Bradford Lill; 2d, H. W. Wilson's Biddy.

IRISH TERRIERS.—Prizes withheld.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Tippoo. *Bitch:* J. E. Thayer's Rhodora.—OPEN—*Dogs:* 1st, J. E. Thayer's Moses. *Bitches:* 1st, J. E. Thayer's Josephine.

PUGS.—CHAMPION—Chequasset Kennels' Young Toby.—OPEN—*Dogs:* 1st, Chequasset Kennels' Thunder. *Bitches:* 1st, withheld; 2d, P. McCart's Juno.—PUPPIES—*Dogs:* Absent. *Bitches:* 1st and 2d, E. L. Jewett's unnamed.

TOY TERRIERS.—1st, S. Armstrong's unnamed; 2d, J. W. Corkery's unnamed.

MISCELLANEOUS.—1st, W. C. H. Grimmer's Muffett.

SPECIAL PRIZES.

Best mastiff, J. D. Smiley's Friday; St. Bernard, Chequasset Kennels' Lodi; Newfoundland, C. E. Reynold's Starda; greyhound, A. M. K. Doull's Bran; deerhound, J. E. Thayer's Highland Laddie; pointer, R. Bustin's Sport; English setter, C. York's Morning Star; Gordon setter, J. E. Thayer's Argus; Irish setter, J. O. Miller's Sport; Clumber spaniel, G. N. Brown's Spot; cocker, T. L. Dever's Dora; field spaniel, W. F. Danaher's Jack; collie, F. W. Kaye's Ness; fox-terrier, J. E. Thayer's Richmond Olive; bulldog, J. E. Thayer's Tippoo; bull-terrier, W. A. Pattison's Bones; Skye terrier, S. Z. Dickson's Jessie; pug, Chequasset Kennels' Young Toby; pug puppy, E. L. Jewett's unnamed; black and tan terrier, S. Armstrong's Nell; Yorkshire terrier, P. H. Coombs's Bradford Lill; toy terrier, S. Armstrong's unnamed; Japanese spaniel, W. C. H. Grimmer's Muffett; in miscellaneous class, W. C. H. Grimmer's Muffett; sporting dog, J. E. Thayer's Richmond Olive; non-sporting, J. E. Thayer's Tippoo; setter, J. E. Thayer's Argus; litter ewfoundlands, R. Blackall's Jessie.

C. H. MASON.

THE STAFFORD DOG SHOW.

[Special Report.]

THE third annual dog show of the Stafford Kennel Club was held Oct. 13 and 14, at Stafford Springs, Conn., in connection with the fair of the Stafford Agricultural Society. There were about 100 dogs shown, many of them from the best kennels in the country. The quality of the animals was much above the average of previous shows held by the club. The dogs were benched in a large tent and were well cared for by Mr. Tallman, who had charge of the feeding. There was no extra charge for admission and the tent was constantly thronged with visitors. The society will erect a suitable building for future shows and it is the intention of the club to give liberal prizes next year and place their show in the front rank. Mr. Wm. Tallman, of Tarrytown, N. Y., judged the sporting and Dr. George Walton, of Boston, the non-sporting classes. Below is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, E. H. Moore's Ilford Caution. *Bitches:* No entries.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, E. H. Moore's Merchant Prince. *Bitches:* No entries.—SMOOTH-COATED—*Dogs:* 1st, Chequasset Kennels' Lodi. *Bitches:* 1st, Chequasset Kennels' Marvel.

BERGHUNDE.—1st, E. C. Dennis's Lion.

NEWFOUNDLANDS.—1st, T. Cummings's Major; 2d, J. Converse's Major II.

DEERHOUNDS.—1st, 2d and very high com., J. E. Thayer's Highland Laddie, Highland Lassie and Thora.

POINTERS.—LARGE—*Dogs:* 1st, A. Collins's Captain Fred; 2d, C. A. Parker's William Tell. *Bitches:* 1st, C. A. Parker's Roxy Vera.—SMALL—*Dogs:* 1st, E. K. Sperry's Martin's Gem; 2d, G. W. Frammington's Click. Very high com., F. E. Stevens's Spot. *Puppies:* 1st, C. Eagar's Dash.

ENGLISH SETTERS.—*Dogs:* 1st, G. W. Neal's Pride of Orleans; 2d, F. J. Niles's Banjo. *Bitches:* 1st, G. W. Neal's Daisy Foreman; 2d, E. K. Sperry's Lanaman's Maud. *Puppies:* 1st and 2d, H. Sutcliffe's Lucy and Major.

BLACK AND TAN SETTERS.—CHAMPION—J. E. Thayer's Argus. *Puppies:* 1st, G. Chaffee's Dash.

IRISH SETTERS.—*Dogs:* 1st, T. Wilson's Dash; 2d, J. C. Lester's Dan. *Bitches:* 1st, J. C. Lester's Maud. *Puppies:* 1st, 2d, and very high com., J. C. Lester's Young Sarsfield, Ruby and Garryowen.

FIELD SPANIELS.—1st and 2d, W. Partridge's Critic and Bob.

COCKER SPANIELS.—CHAMPION—W. Partridge's Helen.—OPEN—*Dogs:* 1st, Fay and Baxter's Ned Obo. Very high com., A. Scrivener's ——. *Bitches:* 1st and 2d, Fay and Baxter's Yum Yum and Widow Cliquot. *Puppies:* 1st, Fay and Baxter's Yum Yum.

FOXHOUNDS.—1st, B. S. Root's Pete.

BEAGLES.—*Dogs:* 1st, Somerset Kennel's Jupiter; 2d, G. Laick's Goodwood Rattler. Very high com., Somerset Kennel's My Maryland. *Bitches:* 1st and 2d and very high com., Somerset Kennel's Jessie, Virginia and Nellie.

FOX-TERRIERS.—CHAMPION—J. E. Thayer's Belgrave Primrose.—OPEN—*Dogs:* 1st, Somerset Kennels' Somerset Mike; 2d, J. E. Thayer's Raby Tyrant II. Very high com., A. Belmont, Jr.'s Bacchanal. *Bitches:* 1st and very high com., J. E. Thayer's Di and Jaunty; 2d, A. Belmont, Jr.'s Safety. *Puppies:* 1st, J. E. Thayer's Meersbrook Model; 2d, A. Belmont, Jr.'s Dancer.

COLLIES.—1st and 2d, also 1st and 2d in puppy class, Hempstead Farm Co.'s Lowrie and Twilight. Very high com. and high com., E. O. Bradway's Pansy and Jack.

BULL-TERRIERS.—CHAMPION—A. H. Wakefield's Victoria.—OPEN—*Dogs:* 1st, R. S. Hick's Max. *Bitches:* 1st, W. F. Olds's Fanny. *Puppies:* 1st, G. H. Dorison's The Duchess; 2d, W. F. Olds's Sport.

ROUGH-HAIRED TERRIERS.—1st, J. Converse's Jack.

IRISH TERRIERS.—1st, P. Clancy's Nancy; 2d, Somerset Kennels' Ted.

SKYE-TERRIERS.—1st, C. A. Hines's Lady Kate.

PUGS.—CHAMPION—Chequasset Kennels' Young Toby.—OPEN—*Dogs:* 1st, Chequasset Kennels' Thunder. *Bitches:* 1st, Dr. Sumner's Dodo; 2d, J. A Collins's Lucy.

BULLDOGS.—1st, J. E. Thayer's Josephine; 2d, S. E. Parker's Caliban.

YORKSHIRE TERRIERS.—1st, J. P. Clancy's Star; 2d, F. Lucy's Star.

TOY TERRIERS.—1st and 2d, P. Clancy's Bill and Stray.

MISCELLANEOUS.—1st, C. H. Townsend's Dandy.

TRICK DOGS.—1st, J. Harden's Rover.

STAFFORD.

POINTS ON BREEDING.

THE characters of the parents at the time of conception are inherited by the offspring. The bones, the muscles, and the powers of endurance, the habits, the predispositions and temperaments, are all reproduced in the offspring, without essential change in their characteristics. While apparently there are exceptions to this law, a careful examination of the facts will show the transmission of every feature of the organization, and that the apparent exceptions are the result of the predominant influence of other laws, that obscure the hereditary tendencies for the time being, without wholly suppressing them.

In intelligent breeding we take advantage of the transmission of certain family peculiarities, by selecting animals possessing the slight variation we wish to perpetuate, and breeding them together. This systematic reproduction of desired "points" must be persistently continued until the improvement is considered permanent. Even then these artificial characteristics are difficult to retain, owing to the tendency to "throw back" or, as Mr. Darwin calls it, "reversion." He gives us an interesting example in "Animals and Plants under Domestication." "A pointer bitch produced seven puppies. Four were marked with blue and white, which is so unusual a color with pointers that she was thought to have played false with one of the greyhounds, and the whole litter was condemned, but the gamekeeper was permitted to keep one as a curiosity.

"Two years afterward a friend of the owner saw the young dog and declared that he was the image of his old pointer bitch, Sappho, the only blue-and-white pointer of pure descent which he had ever seen. This led to close inquiry, and it was proved that he was the great-great-grandson of Sappho, so that, according to the common expression, he had only one-sixth of her blood in his veins."

Many breeders will not understand that the greatest perfection in the individual will not compensate for ancestral defects. They must always have the most prominent prize winners to serve their bitches, regardless of the defects either or both animals possses. The sire should alway be selected to correct the defects in the bitch, and it is only after practicing this system of selection for years that prize winning dogs can be produced.

Owing to confinement and other causes the large majority of the mastiffs of to-day are weak in loins and legs, in fact are cripples. Light-boned, attenuated limbs are transmitted with as much certainty as a short nose or wrinkled forehead. Ribot on "Heredity" gives many examples which bear me out in this statement. He also furnishes examples of the hereditary transmission of muscular power, for example: "In ancient times there were families of athletes, and there have been families of prize-fighters. The recent researches of Galton as to wrestlers and oarsmen show that the victors generally belong to a small number of families among whom strength and skill are hereditary." On the authority of Darwin: "It is now generally understood that longevity depends far less on race, climate, profession, mode of life, or food, than on hereditary transmission." The tendency to lay on fat of certain meat-producing breeds of animals is hereditary. And so we could go on, taking up each characteristic and proving by examples it is invariably transmitted from parent to offspring.

I would like to ask why breeders of dogs ignore these first principles of breeding? Our breeders of live stock understand them, and have greatly profited thereby. The great desire to breed to bench show winners, and the constant demand for whelps by them, has a demoralizing effect upon canine breeders who are tempted to raise pups that meet the most ready sale; that they are good for nothing, weedy specimens matters not, the purchaser wants an animal with a fashionable pedigree, and his desire being supplied, he is satisfied.

Our clubs, devoted to particular breeds, will do a great deal of good by establishing produce stakes. They will encourage the conscientious breeder, and at the same time promote the interest of the various breeds of dogs that are fortunate enough to have a club attached to their welfare, and the time is approaching when each breed will have its club. The American Fox-Terrier Club is leading the way in handsome style, the American English Beagle Club has proven its earnestness by a great deal of hard work and with corresponding success, the Collie Club shows it means business by establishing a sweepstake as soon as it became a club. The American members of the Old English Mastiff Club will not be far behind; as soon as the rules of the parent organization are arranged to suit our requirements we will show that we have not organized to die of "dry rot." (Query—Where is the American Mastiff Club?)

It is a fact that we are learning fast, and I have no doubt we soon will be able to send to the other side world-beaters in certain breeds of dogs, and that too in a very few years.

VICTOR M. HALDEMAN.

FOX HUNTING AND FOX HUNTERS.

THERE seems to be a wide difference of opinion among the devotees of the chase as to what constitutes legitimate sport and as to the proper manner in which sly reynard should be hunted. Between the homespun-clad, quaint old "Leatherstocking," who, with old Brown Bess carelessly thrown over his shoulder, threads his way through the tangled forests or roams over the rough hills of New England, with his half hound, half something else, but all dog, for his sole companion, and the scarlet and gold-bedizened lord, who, astride his well-conditioned hunter, with a regiment of faultlessly gotten up companions, follows the blue-blooded Belvoir over the brown fallows and bright green-sward of old Leicestershire, there is a great and impassable gulf. For the former to follow the line across our rough country upon the best mount in all England would be as impossible as foolhardy. Were he, however, a native of the "bright little, tight little isle," the proprietor of a broad domain and with plenty of L. s. d., I will warrant that his bright scarlet coat would be seen at many a meet, and that his goodly hunter would often be found well up at the finish of heart-breaking burst. Not less surely would my noble lord be found roaming over our beautiful hills and through our dense forests, with old Brown Bess across his shoulder, his beloved dog his only companion, were he a dweller in the lowly cabin upon the hillside, with but few sterile acres for his portion. I am writing only of him who hath "music in his soul," to whose ears comes as sweetest melody faintest challenge of questing hound; to whose soul comes as most glorious music the eager cry of swift pursuit. It would, in truth, be an unpardonable crime were Leatherstocking to unlimber old Brown Bess at reynard in "Merrie England," and no one is more sensible of this than himself. Ever true to the instinct of a sportsman, he venerates and upholds the traditions of the fathers and can be safely trusted to violate none of the proprieties. In condemning the methods of "Leatherstocking," my lord, unwittingly, perhaps, does great injustice to a worthy brother sportsman. Amid the dense tangled thickets, impenetrable swamps and rough hillsides that surround his home, the truest, fleetest pack in all England could rarely sight and almost never run into their quarry even when jumped at close quarters, but a fair start, however, is not the rule. Sly reynard knows well the value of a good lead, and when he seeks his couch he craftily trots along, down wind, a suitable distance, and serenely confident, lies down to repose. Both ears are open, however, and at the first faint whimper of his dreaded foes, perhaps a good mile away, he shakes himself together and at his best speed makes for some rocky hillside or almost impenetrable swamp, where, with innumerable tricks and doublings, he puzzles his pursuers and more than holds his own. How long would the magnificent hounds, the pride of England, keep up to form with work like this? For how many generations would they cheer the heart of the hunter with their tuneful notes and indomitable pluck, without a single kill or taste of blood to reward and encourage them for gallant struggles through thorny thicket and painful steps over merciless flint? None know better than both my lord and "Leatherstocking" that such an encouragement is an indispensable factor in the education of their pets and both, although by different methods, accomplish the desired result. There should be, therefore, between the two, a sympathy of feeling, or at least a toleration of opinion that would lead each to regard the practices of the other as not entirely without the pale of ethics that should govern the actions of all worthy members of an ancient and honorable guild.

SHADOW.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Bud, Bloom and Berry. By Dr. F. B. Greenough, Boston, Mass., for black and white English setter dog and bitch and black, white and tan bitch, whelped Aug. 5, 1886, by Gus Bondhu (Dashing Bondhu—Norna) out of Briar (A.K.R. 101).

Spark and Rose E. By J. Glenn Cook, Arlington, Md., for fawn mastiff dog and bitch, whelped March 21, 1886, by King Olaf (A.K.R. 3738) out of June (A.K.R. 3737).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Hebe—Sir Obo. H. G. Charlesworth's (Toronto, Can.) black cocker spaniel bitch Hebe (A.K.R. 3383) to his Sir Obo (A.K.R. 3459), Oct. 19.

White Rose—Count. C. A. Stevens's (Hoboken, N. J.) bull-terrier bitch White Rose (A.K.R. 2906) to Frank F. Dole's Count (A.K.R. 3178), Oct. 11.

White Violet—Count. Frank F. Dole's (Philadelphia, Pa.) bull-terrier bitch White Violet (Dutch—White Rose) to his Count (A.K.R. 3178), Oct. 18.

Flirt—Count. J. H. Kramer's (Pittsburgh, Pa.) bull-terrier bitch Flirt (The Earl— ——) to Frank F. Dole's Count (A.K.R. 3178), Sept. 25.

Nellie II.—Foreman. C. Fred Crawford's (Pawtucket, R. I.) English setter bitch Nellie II. (Count Noble—Roseland) to Blackstone Kennels' Foreman (Dashing Monarch—Fairy II.), Sept. 3.

Bird—Fritz. Maple Kennels' (Patterson, N. Y.) pointer bitch Bird (A.K.R. 1658) to their Fritz (A.K.R. 268), Aug. 30.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Faun. F. M. Brasher's (Brooklyn, N. Y.) Irish setter bitch Faun (Elcho—Noreen), Oct. 16, fifteen (seven dogs), by Max Wenzel's Chief (A.K.R. 231).

June J. Glenn Cook's (Arlington, Md.) mastiff bitch June (A.K.R. 3737), Sept. 21, seven (six dogs), by R. J. Briggs's King Olaf (A.K.R. 3738).

Ailsa. Glencoe Collie Kennels' (East Bethlehem, Pa.) collie bitch Ailsa (A.K.K. 1217), Oct. 17, eleven (five dogs), by M. Harrison's Nullamore (A.K.R. 3717).

Maida. Coffin, Zimmer & Co.'s (Glens Falls, N. Y.) collie bitch Maida (Shep—imported Nancy), Aug. 9, seven bitches, by Dr. Draper's Mels (A.K.R. 4026).

Empress. Coffin, Zimmer & Co.'s (Glens Falls, N. Y.) St. Bernard bitch Empress (Tsar—Laone), Oct. 12, eight (four dogs), by their Noble II. (A.K.R. 3273).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Bob. Lemon and white pointer dog, whelped April 17, 1886, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658), by Maple Kennels, Patterson, N. Y., to T. F. Tinsley, Louisiana, Mo.

Fairy Queen. Liver and white pointer bitch, whelped April 17, 1886, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658), by Maple Kennels, Patterson, N. Y., to J. A. Garland, Jr., Elberon, N. J.

Cola. Liver and white pointer dog, whelped April 17, 1886, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658), by Maple Kennels, Patterson, N. Y., to J. M. Odiorne, Richmond, Me.

Neptune. Lemon and white pointer dog, whelped April 17, 1886, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658), by Maple Kennels, Patterson, N. Y., to F. C. Hand, Rome, Ga.

Flirtation. Lemon and white pointer bitch, whelped April 17, 1886, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658), by Maple Kennels, Patterson, N. Y., to H. M. Wilson, Baltimore, Md.

Lucy. White, black and tan beagle bitch, whelped May 27, 1884, by King out of Dot II., by Geo. L. Barnes, Tyringham, Mass., to Jos. W. Appleton, Ipswich, Mass.

Maud. White, black and tan beagle bitch, whelped Nov. 6, 1885, by Judge out of Lucy, by Geo. L. Barnes, Tyringham, Mass., to Thos. Parker, East Rochester, N. H.

Dandy. Blue, black and white Great Dane dog, whelped May, 1885, pedigree not given, by Coffin, Zimmer & Co., Glens Falls, N. Y., to Chas. Finch, same place.

Quida. Fawn, black points, mastiff bitch, whelped Aug. 8, 1886 (A.K.R. 4171), by Coffin, Zimmer & Co., Glens Falls, N. Y., to Walter Rogers, same place.

Noble II. Orange tawny and white St. Bernard dog, whelped Aug. 6, 1885 (A.K.R. 3273), by Coffin, Zimmer & Co., Glens Falls, N. Y., to Wm. M. Jones, Newark, O.

Jersey Star. Liver, white and ticked pointer dog, whelped Sept. 1, 1885, by Donald II. out of Gayley, by A. Fred Spoerri, Orange, N. J., to Dr. R. Grob, New York.

Lady Wallace. Sable and white collie bitch, whelped July 8, 1885 (A.K.R. 3515), by C. H. MacKubbins, Philadelphia, Pa., to W. Atlee Burpee & Co., same place, and resold by them to F. C. Watt, New York.

Natation. Black and white pointer bitch, whelped May 9, 1886, by Nick of Naso out of Temptation, by Geo. L. Wilms, Jersey City, N. J., to S. H. Ellery, Brimfield, Mass.

Bridget. White bull-terrier bitch, whelped Sept. 16, 1886, by Count out of Bertha, by Frank F. Dole, Philadelphia, Pa., to Thos. F. Harris, same place.

Fritz (A.K.R. 268)—Bird (A.K.R. 1568) whelp. Lemon and white pointer dog, whelped April 17, 1886, by Maple Kennels, Patterson, N. Y., to H. F. Ahrens, Jr., Closter, N. J.

Rifle and Trap Shooting.

RANGE AND GALLERY.

WILMINGTON, Del.,—Regular weekly shooting of the Wilmington Rifle Club, contest for a gold badge offered by the club to be shot for monthly. J. B. Bell broke the highest record of the club at 100yds. The weather conditions were very favorable. The 200yds. Massachusetts target was used at all of the matches. The following are the scores out of a possible 120 points:

Badge Match—200yds. Off-Hand.

J B Bell	10	11	11	8	9	11	9	11	9	12—101
C Heinel, Sr	9	11	12	10	9	7	8	11	10	10— 97
W F Seeds	8	12	8	10	10	10	9	9	10	11— 97
H Simpson	10	7	11	8	7	10	10	8	11	8— 87
H A Heinel	10	7	7	7	11	8	9	5	11	11— 86
C Carleton	9	8	11	10	10	5	7	3	8	2— 73
W A Bacon	4	6	6	9	10	3	4	2	12	2— 59

Second Match, 100yds.

J B Bell	11	11	11	11	12	9	12	10	11	11—109
H A Heinel	11	11	11	12	12	9	12	11	9	11—109
C Heinel, Sr	10	11	11	11	10	9	11	10	12	12—107
W F Seeds	11	10	12	9	11	10	11	11	11	11—107
H Simpson	11	11	9	11	11	11	10	10	12	10—106
C Carleton	11	10	11	11	10	12	11	10	10	9—105
W A Bacon	8	8	9	8	11	12	11	11	11	12—101

Third Match, 100yds.

J B Bell	12	11	11	12	11	11	12	12	11	11—114
C Heinel, Sr	10	12	11	10	11	12	12	11	12	8—109
W F Seeds	12	11	10	10	10	12	12	11	9	10—107
H A Heinel	9	11	11	11	10	11	12	12	11	9—107
C Carleton	11	11	6	10	11	11	11	9	10	10—100
H Simpson	10	11	9	10	9	8	11	11	10	10— 99
W A Bacon	10	5	6	11	11	11	11	8	10	8— 91

BOSTON, Oct. 23.—The third week of the all-comers' match at the Mammoth Gallery has shown the best shooting of the season. The competition is very strong, the position of the contestants changing daily. Mr. Charles's steady and brilliant shooting gives him first place, closely pressed by Mr. Bolles. The score is 10 rounds, possible 500:

H L Charles	48	46	46	46	46	46	45	45	45	44—457
S E Bolles	49	46	45	45	45	45	45	45	45	45—452
A B Loring	46	45	45	45	44	44	44	44	44	43—444
C H Eastman	45	45	45	44	44	44	44	44	44	44—443
A L Burt	46	45	44	44	44	44	44	44	43	43—441
W H Smith	45	45	44	44	44	44	43	43	43	43—438
H O Arnold	45	45	44	44	44	43	43	43	43	43—437
J A Gay	45	45	44	44	43	43	42	42	42	42—432
R R Mullen	43	43	42	42	42	42	42	42	42	41—421
G C Swan	33	42	42	42	42	42	41	40	39	38—411
W H Randall	41	40	40	38	37	37	36	36	34	33—372

BOSTON, Oct. 23.—The attendance at the range at Walnut Hill to-day was small and the riflemen present completed but few scores. Appendended are the results:

Decimal Match.

W Henry	8	10	7	7	6	8	8	4	9	5—72
B G Warren	8	10	7	9	6	2	7	4	6	8—67

MANCHESTER, N. H., Oct. 18.—In the series of matches which closed at the West Manchester Rifle Range on the 16th inst., the standing of the contestants will be found below: Match B, conditions: Gold medal to all competitors who score six 86s or better; silver medal to all competitors who score six 80s or better; bronze medal to all competitors who score six 75s of better; silver membership badge to all competitors who score six 70s or better:

C D Palmer..86 84 85 86 88 87—510 W Morris...73 75 77 78 80 74—457
C W Lyman..74 75 74 76 80 80—459 E Cole.....71 78 66 67 69 06—417

Match C, handicap prize match, with conditions same as in Match B, with exception that four cards constitute a score:

W Morris	73	77	79	81—309+68—377
N Johnson	75	73	72	78—298+34—332
C W Lyman	75	76	78	74—303+24—327
E J Knowlton	70	70	70	73—283+24—307
F J Drake	69	72	70	67—278+24—302
R Fullerton	71	67	70	67—275

Match D, rest match, conditions: Gold medal to all competitors making ten 98s; silver medal to all competitors making ten 95s; bronze medal to all competitors making ten 92s; silver membership badge to all competitors making ten 90s:

Palmer	98	97	99	97	97	97	97	96	96	96—969
Drake	98	95	98	96	07	96	95	94	94	94—957
Paul	93	93	92	92	93	95	95	94	95	95—937
Lyman	92	94	96	93	93	91	91	92	95	95—932
Morris	94	92	93	93	93	93	94	93	95	90—930
Knowlton	89	91	90	97	90	93	93	94	95	91—930
Hodge	84	89	83	89	90	85	81	79	77	77—833
Henry	88	83	83	80	90	84	78	78	78	87—829
Johnson	90	80	81	80	86	83	81	82	80	81—824

THE SANDY HOOK EXPLOSION.—On Thursday last the careless loading of a shell at the Sandy Hook proving ground caused the deaths of Lieut. Medcalfe and Private King. Supt. Sinclair, the father of our expert of the trajectory tests, was stunned but soon recovered.

MANCHESTER, Oct. 19.—The riflemen had the best possible weather for their team shoot this afternoon, and yet the total rolled up is not so large as was anticipated. But nine men took part, as some of the number selected failed to put in an appearance, and it will be necessary for another member to shoot before the close of the week in order to make the team complete. The tendency which the team shooting has to unnerve men was never more aptly illustrated than to-day. Mr. Paul finished an 81 card in the medal match and then immediately shot his team card, making but 53. Dr. Boothby's last 10 shots at practice netted him 74, and yet he could make but 63 in the team match. The strain upon a rifleman at such times is even painful as he nerves himself in an effort to do his best for his club and himself, and the strain is so great that he almost invariably falls below his average work. In the rest match Mr. Knowlton secured his tenth card above 90, which entitles him to a silver membership badge. A record of the shooting follows:

Practice Match, Rounds 7, Possible 35.

John A Barker.....4444445—29 John A Barker.....4545544—31

Handicap Prize Match, Rounds 10, Possible 100.

E I Partridge	7	7	8	10	5	9	7	5	6	5—69

Medal Match, Rounds 10, Possible 100.

E C Paul	7	8	7	9	6	10	9	7	8	10—81
G A Leighton	6	7	7	5	8	9	8	9	7	10—76

Rest Match, Rounds 10, Possible 100.

E J Knowlton	9	9	10	10	6	10	10	9	9	10—92

Team Match, Rounds 10, Possible 100.

C D Palmer	9	6	5	7	8	6	8	10	10	8—77
G A Leighton	8	5	10	5	10	6	10	7	10	6—77
A B Dodge	6	7	8	6	8	9	6	7	7	8—72
E J Knowlton	6	6	5	2	8	10	6	10	6	10—69
L W Colby	5	10	5	9	8	6	6	5	8	6—68

W M Boothby	4	7	5	6	0	5	4	8	10	5—53
E I Partridge	6	9	5	2	9	6	6	4	6	5—58
E C Paul	4	3	5	6	5	9	7	3	6	5—53
										605

This is an average of 67.2-9 per man, which is but a fraction less than the average made in the six-men team match last week and is better than the shooting in the first match two weeks since.

WILMINGTON, Oct. 21.—The following is the score in the first of the three matches to be shot for the championship between the local team and that of Westchester. The next match will take place after election. The teams of the series provides that the scores at the two ranges shall be counted together and the difference to make the result of the contest. The Massachusetts target was used at all of the matches. The scores are as follows out of individual possible 84 points, team possible 588, and double score 1,176:

Wilmington Team—200yds.

J B Bell	10	7	11	11	12	8	9—68

At the conclusion of the contest most of the West Chester team took an early train for home. This leaving was the cause of regret to the Wilmington Club, as their good marksmanship is fully equalled by their good fellowship. Those remaining joined with the home club in two prize matches. The following are the scores out of possible 120 and 60 points respectively at 200yds. distance:

First Match.

H B Seeds	9	9	12	11	8	12	10	2	11	9—99
G Williamson	8	10	10	10	10	13	10	9	12	6—98

J B Bell	8	12	8	11	6—45	J Ries	2	8	2	0 0—12
W F Seeds	10	11	10	4	10—45					

Prizes, first, H. A. Heinel; second, G. Williamson; third, H. B. Seeds, and fourth, T. Williamson.

CREEDMOOR, Oct. 23.—The 12th Qualification and Champion Marksman's Class Match was shot to-day. The attendance was the largest this season; weather pleasant, and the wind very tricky. Lieut. G. F. Hamlin, Company I, 23d Regiment, was the winner of the gold marksman's badge in this match. He is the tenth man to win it this season. Lieut. E. F. Young, Company C, 7th Regiment, is virtually the winner of the medal this season, he having won it 3 times. The election day match will open at 8 o'clock A. M.; enteries for this day's match can be had at the office of the National Rifle Association, room 55, Temple Court, New York. Private parties are notified that the association will make use of all targets on this day, and none will be hired. The winning scores on Saturday were:

Lieut G F Hamlin, Company I, 23d Regt	20	25—45	
Corpl W J Underwood, Company H, 7th Regt	20	25—45	
Sergt F Van Lennep, Company K, 7th Regt	21	20—41	
Corpl W C Holmes, Company B, 23d, Regt	21	19—40	
Pvt J N Wheeler, Company I, 23d Regt	17	22—39	
Sergt J McNevin, N C S, 13th Regt	20	19—39	
Lieut A F Schermerhorn, Staff, 12th Regt	21	18—39	
Pvt G L Stebbins, Company K, 7th Regt	17	21—38	

THE MASSACHUSETTS TEAM.—The prominent event in the coming week in military circles in Boston was the awarding of the prizes to the Creedmoor team of the Massachusetts Volunteer Militia, which took place at the Revere House, on Tuesday evening. Governor Robinson, with his staff, received the members of the team in full uniform at the Revere House at 5o'clock. First Lieutenant Edmund L. Zalinski, Fifth Artillery, U.S. A., as representative of the National Rifle Association, formally presented to the team the Hilton trophy, the Soldier of Marathon, and the individual medals. They were received by Colonel Horace T. Rockwell, Assistant Inspector General of the State and by him transferred to the Governor, who received the trophies on behalf of the Commonwealth, and turned them over to Adjutant General Dalton. The gold medals awarded by the State were presented to the individual members of the team, after which the team and invited guests were entertained in a manner for which the Revere House is noted. Later in the evening the team attended the performance of "Adonis" at the Hollis Street Theatre. A large picture of the team was made by Conly prior to the ceremonies at the Revere House. The invitations were limited to the members of the team and a few of the prominent officers of the organizations to which the victors belong, and the affair was carried out in a style in keeping with the honor reflected upon the Commonwealth by her little band of victorious marksmen.

GARDNER, Mass., Oct. 20.—To-day the Heywood Guards, Co. F., Second Regiment; M. V. M., had their annual field day. Their guests were the Orange Light Infantry, Co. E., Second Regiment. After the parade and dinner there was target shooting at the Hacmatac range of the Gardner Rifle Club. The conditions were a distance of 200yds., shooting off-hand, Creedmoor target and the Springfield military gun. The first match was between companies. The prize was a steel engraving framed. Each man had 5 shots with a possible 25. The totals of each were as follows:

Orange Light Infantry.		Heywood Guards.	
Sergt Barber	9	Priv Heurich	2
Sergt Giles	4	Priv Mosier	8
Sergt Bliss	9	Priv Houghton	10

	491

The match also was to determine the prize winners in the individual match and the Company F prizes, consequently the gold badge of the Company will be worn for the next year by Lieut. Chas. M. Edgell; the handsomely bound book, "Massacres of the Mountains," goes to Capt. Solon T. Chamberlain; the third prize, a set of silver nut picks, to Private George Bishop.

The friendly match between the Gardner Rifle Club and the Heywood Guards was next in order. Out of a possible 35 the result was as follows:

Rifle Club.		Heywood Guards.	
G F Ellsworth	33	Capt Chamberlin	28
Chester Hinds	31	Lieut Edgell	30
F E Nichols	31	Sergt Black	29
I N Dodge	29	Corp Thompson	22
Alvin Mathews	28	Sergt Knowlton	26
George Warfield	28	Priv Bishop	20
G C Goodale	20	Chas Hinds	31
	200		186

A team match resulted with a total of 189 for Company E and 175 for Company F. In the Honorary Members' match the first prize was won by Dr. W. A. Jewett, who made a total of 21, and the second by H. C. Knowlton, who had two less.

BOSTON, Oct. 18.—The Boston German Rifle Club this afternoon had a novel shooting contest at the Clarendon Hills range. Instead of practicing on a Massachusetts target they fired at glass balls, which were placed on the outer edge of a large wheel at a distance of 100yds. Most of the members found it rather difficult to hit so small an object with a rifle ball. Mr. W. R. Schaefer led with 21, F. Hubner 15, G. Krafft 14, J. Wirth 9, J. Kimmell 8, J. Wilfert 4, G. Klucken 4, R. Klucken 4, S. Gahm 1. The shooting created a good deal of sport. Mr. Schaefer exhibited a gun with three barrels, which excited much interest, and some remarkable shooting was done with it. The gun was fitted with two shot gun barrels and a 33-cal. rifle barrel beneath. Many tried it, and all united in the opinion that it is a model gun for any kind of game. On the way to the depot a quail started up and was brought down with this gun by Mr. Henry Wilfert. Next Thursday this club will enjoy its annual hunting excursion.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE INTERNATIONAL MATCH.

CINCINNATI, O., Oct. 23.—*Editor Forest and Stream:* In your issue of Sept. 17 you kindly published my challenge for an international contest at clay-pigeons at Boston, Mass., June 1 to 4, 1887, under the auspices of the National Gun Association. Said challenge is now being republished in the English press and apparently is awakening an earnest desire on the part of the British sportsmen to accept the same. It behooves us, therefore, to devise some plan looking toward the formation of the American team and also to forming a committee of reception, who will not only take due care of the foreign teams upon their arrival, but will also form a nucleus or head center duly authorized to receive such prizes and contributions as our public-spirited citizens may see fit to donate, not only as an additional incentive for the participants, but also as an index to the public at large of the universal interest such a contest will surely excite. The work of such a committee of reception can be most appropriately undertaken by the Executive Committee of the National Gun Association, appointed for the third international clay-pigeon tournament and of which Mr. C. M. Stark, of North Dunbarton, N. H., is chairman. I would, therefore, suggest that communications on the subject be addressed to the latter (as also to the press), and that Mr. Stark call a meeting of the Executive Committee for due action.

As to the committee to form the team I would suggest that a committee of one be recognized to prescribe the conditions for forming said team, with full power to select said team. Prompt action can thus be insured and the team selected on such a basis as will give all applicants an opportunity to apply privately, so that when the team is finally formed those rejected will not be in any manner prejudiced; said committee of one shall be captain of the team, but shall not be a contestant, merely a director. I would suggest as said Committee Col. L. C. Bruce, of New York City, and for various reasons; not only on account of his high standing among sportsmen for all the qualities deemed most manly, but also and primarily on account of his experience in a somewhat similar field, viz.: as a member of the American Rifle Team, which successfully met the British Rifle Team several years ago, not only in this country, but also upon the return contest in Great Britain. If he will accept this oncrous task I am confident it will be performed to the satisfaction of all concerned. His personal knowledge of both American and foreign sportsmen as well as of their local habits, will enable him to act promptly, judiciously and so as to preserve harmony under all the trying circumstances which are sure to arise in such cases.

We have now had as welcome visitors from Great Britain a rifle team, a cricket team and a yacht. We are all aware of the public interest excited by the same, the enthusiasm with which they were greeted not only by the few who met them personally, but by the millions who formed their acquaintanceship through the telegrams of the daily press, which heralded their every movement. If our American sportsmen lovers of the shotgun will now step to the front (as I feel confident they will do, at least we of the American Gun Association will so do), this enthusiasm will be more than duplicated, and we will have, to use a homely phrase, "a glorious time," besides showing to the American public something they have not yet realized, viz., that the shotgun wing-shooting sport numbers thousands of votaries in this country, and that it affords one of the most healthful out-door exercises especially adapted to relieve the severe mental strain under which most of us are now living and suffering.

J. E. BLOOM.

HUDSON TOURNAMENT.

HUDSON, Wis., Oct. 15.—The following scores were made at the second annual tournament of the Hudson Rod and Gun Club, Sept. 21, 22 and 23. The attendance was very light, but the shooting was up to the average.

Match at 15 single Peoria blackbirds, 18yds. rise, National rules:

Kopriva	111111111111115	Hosford	111101111101111—13
Wilcox	111101111101110—12	Bonte	111111111101111—14
Balsom	111111111111115	Carli	000001101011111— 8
Thomas	111101101101112	Baker	010111001110010— 9
McCune	110110111111110—12	Jones	111110010111112

Ties on 15 for first divided. Ties on 12 for fourth at 3 birds, 21yds.:

Wilcox	111—3	Thomas	111—3
McCune	000—0	Jones	111—3

Second tie:

Wilcox	110—2	Thomas	111—3

Match at Peoria blackbirds, 15yds.:

Jones	00 10 11 10 11—6	Balsom	11 11 10 11 11—9
Wilcox	11 10 01 11 10—7	McCune	10 11 10 11 00—6
Thomas	11 11 11 11 10—9	Hosford	10 11 00 11 00—5
Kopriva	10 11 11 11 10—8	Carli	10 01 10 10 10—5
Bonte	10 00 10 00 10—3	Baker	11 10 10 00 11—6

Ties on 6 at 18yds.: Won by Jones.

Match at 10 singles and 5 pairs Peoria blackbirds:

Wilcox	1111111111	11 11 10 11 11—19	
Balsom	1111111001	11 11 11 11 11—18	
Jones	0100011101	01 00 10 00 10— 5	
Thomas	1111011111	11 10 10 11 10—16	
Kopriva	0001111111	10 10 11 11 01—14	
Bonte	0001101110	00 01 10 10 00— 5	
McCune	1110111011	00 00 10 10 11—12	

Match at English sparrows, 26yds. rise, both barrels, National rules:

Wilcox	0011111101—7	Kopriva	1101111101—8
Balsom	0111100111—7	Bonte	1011111010—7
Thomas	1100111111—8	Jones	0110101011—6
McCune	1111011111—9		

Ties of 8 divided, ties of 7 won by Wilcox.

Second match at Peoria blackbirds, 15 singles, 18yds. rise:

Wilcox	001111111001—11	McCune	011011111111011—12
Balsom	111111111111115	Paul	111110111111101—13
Jones	110111111110111—13	Thomas	111111111131111—14

Ties on 12 divided.

For best average score in Events Nos. 1, 3 and 5 Balsom won first with a score of 48 out of 50, Thomas and Kopriva second with 43, Wilcox third with 42.

Match at Peoria blackbirds, 7 singles and 4 pairs:

Balsom	1111111	11 10 11 10—14	
Jones	1111111	11 11 11 11—15	
Wilcox	1111101	11 11 10 10—12	
Thomas	1111011	10 11 11 11—13	
Kopriva	1111110	10 11 11 11—13	
McCune	1110110	10 10 11 10—10	

Ties of 13 divided.

Match at live pigeons, 10 singles, 30yds. rise, both barrels:

Wilcox	1111111001—9	McCune	1111011110—8
Thomas	0111111111—9	Jones	1111110010—8
Paul	1011111111—9	Carli	1010110001—5
Balsom	1111111101—9	Long John	1110111111—9
Goss	0100110011—5	Willman	0101110111—7

Ties of 9 miss and out. Paul and Long John tied on 6 and divided. Ties of 5 won by Goss.

Match at 10 single English sparrows, 26yds. rise, both barrels:

Wilcox	1101101010—6	Jones	0011011001—5
Paul	1111011010—7	Hosford	1101111110—8
Thomas	1110111111—9	Carli	0101000000—2
Balsom	1111011111—9	McCune	1111110110—8
Willman	1001000100—3		

Ties on 9 and 8 divided.

Third Day—Team shoot at 10 singles and 5 pair Peoria blackbirds:

Hudson Gun Club.

Balsom	1111111101	11 11 11 10 11—18
Jones	1000111110	01 01 11 10 10—12—30

St. Paul Gun Club.

Wilcox	1111011001	11 11 11 10 10—15
M F Kennedy	1111111101	10 10 01 00 10—13—28

Stillwater Gun Club.

Harris	1111101011	01 11 11 11 01—16
McCune	1111111000	10 01 11 10 10—13—29

St. Paul Gun Club.

Thomas	1111111111	11 10 10 11 11—18
Kopriva	1111111111	11 10 10 10 10—16—34

St. Paul Gun Club.

Daly	1111111100	11 01 00 10 00—12
Spencer	1111111111	10 10 01 11 01—16—28

Ties on 18—For best individual score at 6 singles and 2 pairs birds:

Balsom	111111	11 11—10	Thomas 110111 11 11— 9

Match at Peoria blackbirds, 6 singles and 2 pairs:

Wilcox	111111	01 11— 7	Kennedy	101010	10 10—5
Daly	111011	11 11— 9	Harris	111111	11 01—9
Balsom	111111	11 11—10	McCune	111111	10 10—8
Kopriva	111101	11 11— 9	Thomas	110111	11 11—9
Jones	111011	10 10— 7	Spencer	111110	11 00—7

On shoot off for second, Wilcox and Thomas divided.

Match at live pigeons 8 singles, 30yds., both barrels:

Paul	01111111—7	Spencer	10111100—5
Thomas	10001111—5	Harris	11011101—6
Balsom	11111110—7	McCune	00101000—2
Wilcox	11100011—5	Goss	00110100—4
Kennedy	10011111—6	Jones	10111010—5
Daly	01111011—6		

Ties of 7 and 6 divided; ties of 5 divided on shoot off by Thomas and Jones.

Match at Peoria blackbirds, 10 singles:

Balsom	1011111011—8	Paul	1100111111—8
Kennedy	0310010111—5	Spencer	1111111101—9
Wilcox	0011101111—7	Goss	1000000100—2
Thomas	0111111111—9	Hosford	1000011101—5
McCune	1100111101—7	Harris	0110010111—6
Daly	1011111111—9	Jones	1111101101—8

Prize for best average (fine gold watch valued at $75), won by Jas. P. Balsom; second ($25), F. M. Pain; third (Dickerman hammerless shotgun), Chas. Paul; fourth ($15), Jas. L. Wilcox; fifth ($10), McCune; sixth (25lbs. Dupont powder), H. W. Jones.

BEAUTIFUL.

THE INTERNATIONAL MATCH.—William Ellicott, of Launceston, Cornwall, writes to the *Shooting Times*, London, Oct. 8: I notice with pleasure an international shooting challenge from J. E. Bloom, Esq., Cincinnati, O., published in your last issue. Undoubtedly this friendly invitation will be accepted by British sportsmen, and a representative team selected to test their skill against the Americans. I should like to ask through the medium of your interesting paper whether it is possible for any one who is not a member of any gun club to be chosen as one of the team, if his skill in shooting is proved to be one of the highest order? Whether the team would be chosen by a gun club committee, or whether there should be an open tournament and the best men selected, or at least placed on the list from which the team would eventually be selected? As it will be a great honor to be a representative, some method should be adopted to give every one a chance to prove their being eligible.—WILLIAM ELLICOTT.

NEW DORP, S. I., Oct. 21.—Emerald Gun Club, of New York city, regular shoot at live pigeons, ground traps, 21, 25 and 30yds. rise, 80yds. bound, club rules, four prizes:

T Oseikei, 21yds	0001000110— 3	S McMahon, 21	1011111110— 8
R Regan, 21	1111011111— 9	P J Murphy, 21	0010001111— 5
G V Hudson, 30	1111101111— 9	P J Keenan, 21	1000001010— 3
N Maesel, 30	1111011011— 8	H Rubino, 25	1100001100— 4
T Codey, 25	1111111111—10	P Butz, 25	1100111111— 8
C M Grainger, 25	1111111011— 9	J Glaccum, 30	0101101011— 6
M Cherry, 21	0101010011— 5	J Mackin, 21	1111001101— 7
J Maesel, 25	1101111111— 9	A McHale, 21	1001101001— 4
J K Voss, 25	1001111111— 8	G Rensen, 25	1100101101— 6
F Schrader	1100110111— 7	J W. Godfrey, 25	0111111110— 8

Thos. Codey won first prize. Ties, miss and out for second, 25 and 30yds., C. M. Grainger won; ties, miss and out for third, 25 and 30yds., N. Maesel won. Ties, miss and out, for Oseikei Trophy, 21yds., F. Schrader won.—THOMAS CODEY.

NEWTON, N. Y., Oct. 12.—North Side Gun Club of L. I., first shoot on new club grounds, Train's Meadows, house warming new club house. Match at 7 pigeons, 5 ground traps, handicap, 80yds. bound, club rules, badge and one money prize:

Siems	1010111—5	Kroger	1001011—4
Manning	1111101—6	Dr Franz	0111101—5
Winholz	1111000—4	Mercken	1110101—5
Barlow	1111011—6	Rohmke	1100010—3
Lyon	1111000—4	Biglow	1011101—5
Duryea	1101101—5	Stocky	0110110—4
Wahlen	1010100—3	Smith	1110011—5
Terrett	1111101—6	Grau	0001011—3
Riker	1011111—6		

Ties for first, miss and out: Manning 2, Barlow 3, Terrett 1, Riker 1.

ST. LOUIS, Oct. 17.—The members of the Western Gun Club closed their season to-day on their grounds at the foot of President street. As is the custom on their breaking up days a large crowd of their friends was on hand and the hospitality of the old standby was well taxed. The affair was one of the pleasantest of the season, over four-fifths of the members participating and everybody being well pleased. There were many ladies among the visitors on the grounds. The shoot was at 10 Peoria blackbirds and 10 Ligowsky clay-pigeons, screened traps, 18yds. rise, ties at 21 and 24yds. rise at Peorias, miss and out; no handicap:

BROOKLYN, Oct. 20.—The annual shoot and dinner of the Coney Island Rod and Gun Club were held this afternoon at Van Siclen's Hotel, Coney Island, and proved to be a great success. The members went down by coach from the Fountain Gun Club House. Only three traps were placed on the salt meadow on the other side of Coney Island Creek, and 22 members shot, all from the 25yd. mark. The first prize was divided, 11 divided the second. The score is as follows:

McLaughlin	0111110—5	Hagan	1111111—7
Lanzer	1111101—6	Weber	0111111—6
Wingate	1110011—5	Post	1100111—5

Greenman	0011111—5	Furey	1111011—6

LONG BRANCH, N. J., Oct. 15.—At the regular bi-weekly contest of the Atlantic Gun Club, of North Long Branch, to-day, the following score was made out of a possible 10 glass balls: G. West 10, Wm. Barber 10, J. W. Albertson 9, E. W. Reid 9, C. B. Reid 9, Geo. Hovt 9, John Holman 8, A Tice 7, J. Q. Smythe 6.

Yachting.

YACHT RACE EXTRA.

THE Yacht Race Extra published by the FOREST AND STREAM is on sale at all news stands, or may be ordered direct from this office. It is a 16-page review of international yacht racing up to the last races. Has many illustrations, the lines of Galatea, Madge, America, Schemer, plans of Genesta, chart of course, etc Handsomely printed on fine quality paper. Price 10 cents.

"CLOSED AND GIVEN TO THE JURY."

Editor Forest and Stream:

Your issue of the 14th contains an article by Mr. Kunhardt purporting to give complete records for the season of Bedouin, Shona, Clara, Ulidia and Galatea.

He makes quite a pretty argument in a very simple way, viz: omitting many facts that go directly against his theories and misstating other facts. This is no new course of argument for the FOREST AND STREAM but when carried to such lengths is likely to grow somewhat tiresome.

It is plain he knew when writing that the Eastern Y. C. sailed a race June 29 and what boats sailed in it, because he makes a great fuss over Clara's beating Active, and Bedouin beating Thetis; but when we get down to Ulidia's record he omits any mention of the race; the fact being that Active beat her although handicapped by losing her topmast.

It is not true that Shona frightened all other sloops out of Eastern Y. C. race, neither was there a slashing sea that day. Shadow was the only other boat in the club which ever races in that class, and her owner and skipper were both aboard Puritan; had it not been for this Shadow would have won to a certainty as Shona lost bowsprit.

Mr. K. omits all reference to the Newport race. It did not amount to much, but his record is not complete without it.

He says he concedes that "a tolerably good sloop can spoil some kind of a plug called a cutter," and for that reason he confines his list to the four cracks named above.

Did it ever occur to him as just possible that very few of the sloops he mentions as being beaten are cracks; that many of them would be called "plugs" by any sloop man, and that the only two sloops on his list are Shadow and Cinderella?

So much for his facts. Now for his conclusions, in which, to a certain point, I agree with him; that is, I think Bedouin, Clara or Ulidia can beat any old-fashioned sloop of their class. But it is not proved they can beat a modern crack sloop equally well handled.

Bedouin is to-day the best boat afloat in her class, but what else is there? All her competitors are old-fashioned boats except Thetis, and Mr. K. admits she is outclassed.

Clara, admittedly the best cutter ever built of her size, and certainly the best handled cutter ever seen in America, has met a lot of the same old boats and beaten them time and again, as she can certainly do; but she has also met one good boat, Cinderella, in her first season, badly rigged for racing and not sailed anything like as well as Clara. She has beaten her, but by steadily diminishing margins. Had Cinderella had a crew like Clara's, I think the record would be different.

Ulidia's record, as stated above, omits her defeat in E. Y. C. race; there is, however, no sloop of the modern type in her class.

Shona is a good boat and was beautifully sailed in her only real race, Sept. 4, where she distanced a lot of boats that certainly are not "cracks" and beat Shadow 3 to 4 minutes. Mr. K., however, says nothing of the fact that the day was made to order for her; heavy sea, moderate wind, and about the whole course to windward or running before the wind; he forgets also that Shadow was at once anxious for a match.

After watching the races closely all the season I feel confident for one that a good modern sloop of their own length can beat either Bedouin, Clara or Ulidia, and I think Shona also, especially if it blows.

I had intended to point out some errors in Stranger and Thetis records, but I see "Sloop Crank" is ahead of me. FAIR PLAY.

BOSTON, Oct. 22.

A NEW KEEL BOAT FOR THE EAST RIVER.—A keel yacht will be built this winter for racing and cruising, by Com. M. J. Chard, East River Yacht Club. She will be 36ft. over all, 30ft. l. w. l., 10ft. beam and 5ft. of draft, with 3 tons of ballast inside and 1½ tons on keel. She will be built by Mr. Samuel Ayers, at Bay Ridge, and will be named Sea Gull.

A MEDAL FOR CAPTAIN GULLY.—Capt. John Gully, of the tug B. T. Haviland, has been presented with a gold medal by the President of the New York Life Saving Benevolent Association for his gallant service in rescuing the seven survivors of the schooner Sarah Craig, which capsized off Sandy Hook on July 30 last.

THE SEASON'S RECORD.

IF I break my resolution to belay on the cutter-sloop question and reply to the strictures of "Sloop Crank" in your last issue, it is only with the object of setting the matter straight before the public. Personally I do not deem the hairsplitting of "Sloop Crank" worthy of notice.

He intimates that sloops were not afraid to enter against Shona in the Eastern Y. C. But as they failed to do so I have the advantage. As for Shadow, the only sloop for which your correspondent can really speak with authority, she saved herself a good thrashing in the light of the later Beverly open match. I am then told that Bedouin did not win in the New York Y. C. second class, but Thetis. In the reckless language of your correspondent I might reply, "This is untrue." Bedouin has been denied the prize in the first class, which was awarded to Priscilla. But if Bedouin be finally decided to have won in the first class, it is a great deal more honor to the cutter to win from the Big Four than from a second rate racer like Thetis, and the latter is welcome to the barren honor of winning in the second class because lucky enough to find no cutters opposing her. Thetis has been beaten time and again by Bedouin anyway.

In the Fourth of July race, in Boston, I am told that Syren was entered "merely to oblige," etc. Of course. But it does not in the least detract from Stranger's victory, and besides where were the sloop men this time again? Where have they been all this season? Why do they not race instead of taking it out in bluster? I did not forget the Newport race at all, but purposely omitted such a fiasco, not wishing to count in the victory of the cutter Clara gained under such irrelevant conditions, and in my review explained the object sufficiently for any person who permits his understanding to work and does not allow spleen to crowd it out. As for Stranger and Thetis, I did not "as usual" shirk the performance from Newport to Marblehead, but distinctly stated that as neither of these yachts is a recognized crack racer, their doings were beside the scope of my review. I also distinctly declined to be responsible for everything and anything going by the name of cutter, and admitted that there are all grades of cutters as regards speed just as well as there are sloops, from the fastest to the slowest, and that it is the most natural thing in the world that a sloop should beat a cutter whenever the former happens to be the smarter boat of the pair. Indeed the occasional defeats of some cutters are absolutely necessary to establish the position I have taken on the question of type. Hence, the defeat of the Stranger —presuming it to have been brought about on the merits of the boats, which I very much question—is not the bitter gall to me your correspondent presumes.

On the other hand it is really "Sloop Crank" who "as usual" shirks the real issue set forth in my review. It is simply this. During last season the recognized racing cutters won twenty-one races hand running against two for the racing sloops, as near as the data were obtainable. That record bears out most fully my modest claim, that with such preponderance, the cutter has earned her title to rank at least equally with the sloop in point of speed. This truth will be admitted by all persons open to reason, but hardly by your correspondent, who, with singular perspicuity, signs himself a "crank." C. P. KUNHARDT.

BRITISH RACING SKIPPERS.

THERE are two classes of yachting commanders in Great Britain. First there is the ordinary cruising skipper, who is a good, steady all-round man for coasting work and can race his vessel well in the local matches, where his knowledge of tides and off shore breezes which blow out of particular glens is of much value. Then there is the racing skipper, who is supposed to be a master of the art of yacht sailing, and as much superior in his way to the cruising skipper as the professional jockey is to the lad who rides the thoroughbred regularly at work at Newmarket. To describe fully the development of the British racing skipper would be to give in detail the history of British yacht racing. "Old White," who was the captain of Sir Robert Gore Booth's big cutter the Adelaide, was possibly the first of the genus, and a first-rate man he was, either in steering big or little boats. That was thirty-five years ago, or shortly after the America, schooner, came over and shattered all our notions as to the advantages of bellying mainsails with flowing "after leaches." The advent of the Fiona brought to the front John Houston, of Largs, who at the tiller of the "Old Fawn," as she was familiarly termed in her best days, proved invincible. Captain Houston had a weakness for tight lacing his craft possibly, and his "wee bit pu's" at tack, halliards or purchase proved very sore on the spars, hence his craft was sometimes known as the "timber-breaker." Tim Walker was a contemporary skipper who had also a great reputation, and in the Mosquito, and latterly in the Cythera, he proved himself a very able steersman, but he never liked to be at the tiller when the winds blew so "verry paltry." Lennon Cranfield, in the Neva, and latterly in the Prince of Wales's yacht the Formosa, did much to develop the fine art of racing a British cutter, and could hold his own with all men at a schooner race, as evidenced by the successes of the Miranda, but schooner racing has gone out of fashion, unfortunately for the best interest of the sport. The race of yachting jockeys which succeeded those mentioned is headed by O'Neil, of the Irex, who is undoubtedly at present the Fred Archer of the fleet. He made his reputation in the forty-tonner Myosotis, added to it in the Cuckoo, in his matches against the Vanduara and the Samoena, and then in the flying Annasona raced to windward of all engaged in this particular calling. Tom Diaper, his opponent in the matches against the latter sailed the Maryina of Allan's Sleuthhound to perfection, but he had always under his charge the worst boat of the two, which were twins from the stocks of Fife of Fairie. Diaper made his reputation in Major Ewing's famous forty-ton cutter, Norman, the "green with gold ball" racing flag of which will long be remembered. As to Ben Harris, his opponent in many a tough match when the latter had charge of the Bloodhound, he has long been under hatches. He was like White, one of the very old school, and had won many matches in the Solent. Rather a good forecastle yarn is still told of him at the time he was in command of a yacht belonging to an eccentric nobleman, now deceased, who, whether in dressing himself, his hunt servants (for he was a M. F. H.) or his sailors, was rather parsimonious. One day the members of the Royal Yacht Squadron at the club windows at the castle observing Ben hoist a strange signal—a very strange signal—in the rigging, and after they in vain tried to make out by telescope and binocular, hailed the old skipper, asking him what signal it was. "Signal be blowed!" shouted Ben across the water, "it's the governor's No. 3 pair of breeches which I have been a washing of."

Harry Thompson, of Vanguard fame, could take all out of a "flying sixty" that a man could; but since he sailed the Samoena in her first season ill health has not allowed him to play a leading part in the past time. Mackie, who steered the celebrated steel cutter Vanduara during her first season, was as good a man at the tiller as one would have when there was enough of movement in the atmosphere to keep all day drawing a balloon topsail, but had no patience in light airs. He was the first English yachting skipper who sailed his vessel with all cabin fittings in their proper places, refusing, unless hard pressed, to allow of their removal to suit the trim of the boat. He has now resigned the tiller altogether, and is engaged in the wintering and putting into commission of yachts at Rothesay, in the Island of Bute, where it is needless to say his vast experience and his knowledge of the shipwright trade, to which he was trained, served him well. Woods, of the Egeria, was famous in his day, and was most successful with Mr. Mulholland's old "County Down Girl," as his charge was termed, more especially in Channel matches. Duncan, of the Marjorie, won his spurs on the Clyde ten-tonner Lancer; but it was not till Mr. Coats's ten-tonner Madge was delivered from Watson's hands that he attained to the front rank among yachting jockeys. The way he handled this little vessel, first in British waters and then in American waters, won for him the admiration of all true judges of boat sailing. In the contests between his yacht, the Marjorie, and the Irex this season, he has divided fairly the spoil; and if he lacks the dash of O'Neil at starts and mark boats he makes up for it with shrewd Scotch "canniness" on a reach, and sails his own boat—that is, minds not the misleading manœuvres of yachts ahead or astern. John Barr, who is one of the skippers paid to go out and race a yacht in America, is simply invincible in ten-ton yachts, as has been well proved in the cutter Neptune. He was the first yachting jockey who ever received a special retaining fee to give up the comforts of larger craft and race a smaller boat. The above are among the most successful of British yachting skippers past and present, though no doubt old names, such as Archie Blair, and "Rad" McKirdy, of Largs, and "Bauldy" Wright and Jameson of modern days, will crop up in conversation over bygone days, as well as will those of possible greater fame at Cowes and Kingstown. In regard to the ordinary seamen, no yacht was thought a few years ago to have a chance unless she had a crew composed of Colchester oyster-fishers; but Itchen Ferry and Southamptom now give as good material as is wanted for southern boats, and Mackie and Duncan have drilled Clyde crews to a high state of perfection, and Scottish-built boats no longer require English crews to sail them, as they did ten years ago.—*Pall Mall Gazette.*

CRUISE OF THE COOT.

XXVII.

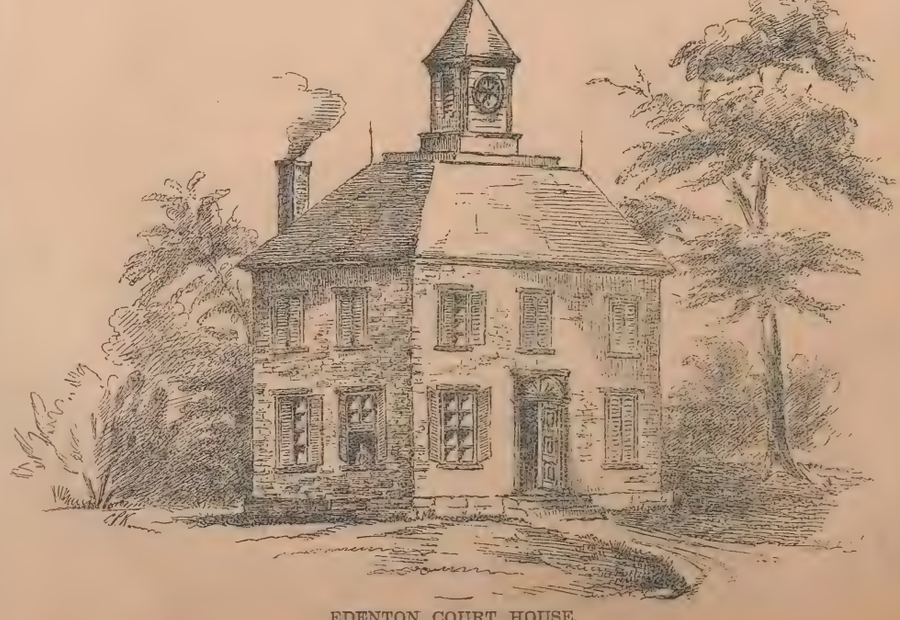
EDENTON is a pretty, shady, comfortable little town, which, in its broad avenues, great elm trees and finished air, resembles a well-to-do New England village. It has a history full of great memories and is crowded with relics of opulent and influential colonial days. Once upon a time Edenton was a metropolis in the South as Newport was in the North. To this day the better class of inhabitants trace their family trees back to the aristocracy of the first settlers, adventurous "gentlemen" who invested largely in lands and improved their fortunes by a thriving trade with the West Indies and the rising ports along the Atlantic coast. Albemarle Sound derives its name from General Monck, Duke of Albemarle, who figured conspicuously in the restoration of King Charles II. Back in the seventeenth century there were several large and deep inlets breaking the sandy banks which now close the sound to the ocean. The water was salty up to the mouth of the Roanoke and Chowan rivers, and Edenton was practically a seaport. It was founded as Roanoke and named subsequently after a great landed proprietor, Eden, who also became Governor of the settlement and ruled with so much foresight that to this day his intelligent direction is to be detected in the clever way the town has been laid out with its broad roads, many of them being park-like and planted with four rows of elms. These have grown with time, until their intertwining branches form arches, protecting the streets from the summer sun. Edenton is in consequence one of the coolest and most delightful places of residence in the South. Unfortunately no rose is without its thorns, and the closing of the Atlantic inlets allow the vast volumes of fresh water pouring down the adjacent big rivers to freshen the headwaters of the sound so much that malarial fevers prevail to some extent. Though not at all serious, and wholly absent in winter, strangers are apt to leave the place during the warm months for hotter and less agreeable abodes. Edenton has its Coney Island, some seventy miles distant on "the banks" at Nag's Head. Large hotels have been erected on the sandy dunes and hillocks, and the natives along the sound frequently resort to the sea bathing. The wealthy travel in steamers to this local Mecca and the poor cruise to the banks in their "runners," taking the whole establishment along, baby and all. Fishing, boating and bathing are the great amusements, and the natives take naturally to all things aquatic.

Edenton is not what it used to be. In olden times, when vessels were small and did not draw much water, the town sent a fleet of traders to sea. There were shipyards and marine railways, and a busy mercantile community. Then followed the plantation era while slavery was in force and cotton became the great staple. Since the war the clearings have grown over, the fences are down, forest and brush have obscured all traces of the vast tracts once cultivated. Here and there are patches of ground tilled by the free negroes, and occasionally one meets an imposing mansion, more or less dilapidated, in a yard sorely lacking thrift and attention, with the people moving about in a listless, dejected sort of way. The war fell heavily upon the community and left the people poor and helpless without slave labor. But within the last few years the locality has awakened to the new order of things and is fast adapting itself to circumstances which promise a bright future in due course of time. Agriculture, especially mixed crops, is again taken up with vigor by the new generation. Farms, evincing care and skill, are once more encroaching upon the timber line. Great fields of corn, gardens of truck, herds of sleek cattle and acres of cotton attest the fresh energy of the inhabitants. I talked with many of the cultivators of the soil. All agreed that, economically speaking, they were really better prepared than in the days of slavery, and that contrary to expectations the negroes have shown themselves manageable and respectful, mindful of their own affairs and reliable in their contracts. Sawmills have been erected, much timber is being cut into marketable shape and manufactories are contemplated, so that ere long Edenton will follow in the wake set by enterprising and modern Elizabeth City. The hotels are good and living cheap. The stores are keeping better stock, the Norfolk Southern R. R. has come in and put the country in direct connection with all trade centers, and propellers ply in all directions. Meanwhile, the mainstay of the city is in the rich fisheries during early spring and in the crops of the fall. The largest dwelling is owned by "our biggest fisherman," and the smallest cottages by the darkies who go "shadding" on their own account.

A new crop this year will be tobacco, the soil and climate having been pronounced well adapted, but whether the seductive leaf can be raised and cured to compete with the foothills of the Alleghanies remains to be seen. The soil is certainly virgin and not exhausted as in the regular tobacco belt. This will demand less fertilizing and produce a rich and strong variety of the weed. Relic hunters of the East would discover a rich mine in Edenton and like Southern cities. They are full of antique furniture, clocks and such things. Many houses are wainscoated in the beautiful and lasting carpentery of the first settlers' time. At this day the colonial buildings, constructed of large-size brick imported from England, are the stateliest and best preserved in the city. St. Paul's church was founded in 1700 and rebuilt in 1845. The vestry of the parish drew up the first Declaration of Independence, prior to a like step in the town of Mecklenburg. There is still an old house standing, in which the ladies of Edenton met during the Stamp Act and resolved not to drink tea. This from ladies was an abnegation which testifies the intense popular feeling then prevailing. The present County Court House was the Colonial Capitol. It is still one of the best structures in town, despite two centuries of existence. A royal prince, heir to the British throne, was entertained with a grand ball during his visit on a royal cruiser. Pembroke, a short distance up the Chowan River, was the baronial homestead of the Marquis Stephen Cabarrus, whose name is perpetuated by one of the central counties of the Old North State. Other homesteads of former great families line the banks of the Chowan. During the Revolution all rope for the young U. S. Government was made in the rope walks of Edenton's ship yards. The first cotton raised in the U. S. came from land two miles beyond the city limits.

ROANOKE PACKET.

I spent four agreeable days in harbor, took some residents for a sail and made agreeable friends with some of the townspeople. Then hove up and drifted out of port with a light northerly wind, bound for the Roanoke. Slowly the Coot crossed the mouth of the Chowan, whose high banks, densely wooded, faded away in the bluish tint of distance. The inclination to sail up this noble river on a voyage of exploration had to be resisted, as time was passing and the Coot had still some 200 miles to traverse before reaching Beaufort, at the foot of Core Sound, which was planned to be the destination.



The mouth of the Roanoke is perfectly obscured and hard to make out but for the lighthouse at the entrance. The river pours forth its volume of mud-stained fluid through a delta of small canals penetrating the swamps which fill the lower corner of Albemarle Sound. All are narrow but very deep with about 18ft. on the bar. The main channel turns sharp around the ligathouse. After entering the river you can hug either shore as they are very bold, until the first great bend to the westward is met, which is about two miles up. The low marshy point on starboard hand must be given a berth. After turning give the northern bank preference, until past a tributary flowing in from the east a quarter mile further up. Beyond this both banks are bold with 20 to 30ft. of water, but a bar of mud has formed across the mouth with a crooked channel marked by dubious stakes. If entering with more than 3ft. draft a boat should be sent ahead to find the best water. As there is no tide to lift you off, care must be taken not to ground.

The current out of Roanoke varies with the rainfall, snow and season of the year. In latter part of April I found it about half a knot strong. The lighthouse is pursued by ill-fate. A year ago it burned down and last winter the drift ice carried a brand new structure nearly off the iron piles. As I passed in the beacon was struggling to exist until Congress should have made a new appropriation. The regular lense had been removed and a lamp hung in its place. The keeper was engaged in hanging on and living an up-hill life. A long point juts out from the mainland with the appearance of a sunken poquosin. It is covered with a multitude of stumps and wrecked giants of the forest. Occasionally these stumps work loose and go floating promiscuously about the sound. I mistook them for buoys at a distance and sometimes took the buoys to be stumps. One would suppose that in a narrow river, bordered by thick forest, very little wind is to be expected. But there is usually a nice draft up or down and large schooners manage to beat up against the current. The passage out is always assured by simple drifting. In the mouth of the river the Coot encountered two large lumber-laden schooners and a frisky towboat trying to wind them into line for a tow up to Norfolk. One schooner was foul of the trees and had passed a line across to a little half submerged island going by the delectable cognomen of Louse. I did not see the line, but heard the skipper hailing when it was too late. The Coot had just enough way to lift up and over, the centerboard closing up with a bang like a knife in its casing. We sailed and drifted along to the first elbow, and when spying the tributary from the east, hauled up for a quiet harbor for the night out of the line of traffic. After grounding twice on the soft mud bar, the Coot got safely over and came to anchor for the night, the wind having fallen away entirely.

MOUTH OF ROANOKE RIVER.

A deathlike stillness pervaded nature as the shades of evening fell. On both sides of the Coot rose towering trees with dense foliage, festooned with climbing vines and pendent mosses. The light and dark greens of varied foliage alternated, relieved by the contrast of penetrating trunks and branches, and fringed by golden reeds along their dark shadows in the placid waters. Overhead the sky was a deep blue with silvery stars merrily twinkling at their reflections in the river. The Coot's crew seemed to be the only living being for miles around. I felt as though a waste of wilderness separated me from the rest of human kind, and sought company in the glow of my pipe. Suddenly there was a shout, then a melodious incantation broke through the reign of silence. Reflections were driven away in face of the realistic present. Soon the dusky forms of a band of toiling darkies were revealed, and a clumsy scow was made out poking its square nose round the reeds at a bend in the little river. They were a gang of lumbermen collecting timber from above and working it down river in small lots by a method peculiar to the region. They were singing while they plied heavy sweeps in time with the strains of their music. The scow was pulled ahead as far as a long line attached to a raft of tree trunks would permit. Then the scow was made fast to the bank and the dusky hands manned a crude windlass in the stern and wound up the raft after them. The reason thereof was plain. The raft could not have been rowed around the bend by rowing in the scow, for it was continually chafing and catching in the reeds. But with the scow fast and the windlass at work something had to come. Thus in short fleets the logs were got down to the main river, where they were moored until enough had been collected to make up a raft fit for a tow by a steam tug. The darky's placid temperament eminently fits him for this labor, which requires the patience of Job and the staying qualities of a mule. The crowd were in pleasant humor and considerately worked their raft to the other side of the

EDENTON COURT HOUSE.

river when they spied the Coot's bright light and I hailed them to beware. Two of them came over in a skiff and professionally indorsed the Coot as a "mighty fine little boat," for which they got some tobacco.

The next forenoon a light wind wafted the yacht up to the city of Plymouth, a distance of seven miles from the mouth of the Roanoke. The town is located on some bluffs of easy slope, about the first high land met with on the river. The sail up was not devoid of interest, the river being picturesque and invested with the peculiar mystic charm experienced by a rambler penetrating dark and unknown forest growth. In the Roanoke bottoms you feel yourself among strange people in a strange country, so different are the surroundings from those encountered on the northern shores of the Albemarle water. Before Plymouth is opened, the Roanoke can easily be imagined a river in semi-tropical Africa. The swamps, the parasitic vegetation, the tall fringes of reeds, broken only to reveal some primitive little cabin or hut with dusky-skinned urchins frolicking about; and the long, snaky canoes, manned by stalwart Africans swinging the aboriginal paddle and hailing in curious jargon, all combine to maintain the deception. Certainly my first introduction to the Roanoke was a forcible reminder of an ascent of a river in Senegambia made many years ago. But with Plymouth's white steeples, buzzing saw mills and steamboat wharves in sight, the illusion speedily vanished. The navigation of the river is carried on by steam propeller, flat boats pulled by long sweeps, and the log canoe. The latter is an appendage to every household. The Roanoke is the northern limit of the genuine "dugout." Above that latitude the skiff and frame boat of greater artifice have displaced the primitive but effective river hack of the South. For some years I had not been in a land of dugouts, so when the Coot fell in with the Roanoke canoes a familiar feeling of old acquaintance stole over the crew.

C. P. K.

JAMAICA BAY SECOND RACE.—On Oct. 24 eleven yachts started in the second race at Jamaica Bay for the Smith prizes, over a course from off Ruffle Bar Hotel around buoy off Barren Island; thence around yacht Annie, anchored three-quarters of a mile north of the hotel, and return, ten miles. There was a reefing breeze from S.E. all day. The corrected times were:

CLASS I.

Amphion	1 26 15	Ida K.	1 30 02
Aurora	1 28 00	Blonde	1 28 20
Gypsy Baron	1 28 40	Gracie	Did not finish.
Julita	1 23 43		

CLASS II.

Reeta	1 36 30	Kate	1 29 59
Ethel	1 33 00	Florence	Dismasted.

Kate having won the first race and second, takes the prize in her class. The judges were Commodore J. S. Roake, C. E. Stafford, J. M. Wilson and John Ives.

TORONTO SKIFF SAILING CLUB.—The final races of the season were sailed on Oct. 16, the first class, special class and club handicap being sailed together. As the weather was extremely cold that day only two entries were made, Vice-Commodore Kilgour's Barb and Capt. Bath's Gladys. These are the two principal boats of our club and are models of the very best skiffs used on Toronto Bay, both being within 18ft. 6in. in length, the Barb being sloop rigged and the Gladys a lugger. The start was made at 3 P. M., the Gladys getting a slight advantage of about 50 seconds, but by the time the boats were around the course once the Barb was about 25 seconds ahead. The Gladys sailed faster off the wind but the Barb was quicker by the wind and maintained the lead until crossing the last buoy, thus winning two cups and a silk ensign. The Gladys made a great mistake in taking a long leg inshore hoping to get the wind down the streets instead of keeping well out. The course of 8 miles was sailed in the following time: Barb 1h. 53m. 35s., and the Gladys 1h. 56m. 8s. Barb thus won by 2m. 33s. actual time, but as she allowed the Gladys 48s. on the course the corrected time would place her 1m. 45s. ahead. The wind was N. W., and was just the tail end of Thursday's storm. The club is now closed for the season, the bay beginning to look deserted, only a few small boats crossing to the island, taking the one or two who are living over there all winter.

THE PROPOSED CHANGE IN THE Y. R. A. RULE.—On Oct. 12 a meeting of the Council of the Y. R. A. was held at the Larghour Hotel, London, for which the present rules and the propriety of changing them were discussed. On motion of Sir William B. Forwood the following resolution was passed: "That a committee be appointed to report upon the working of the two measurement rules which are now in force, and to suggest any alteration to the same which may appear likely to have an advantageous effect on yacht building and yacht racing; and, further, to report upon the present classifications of yachts by tonnage and sail area, and to suggest such alterations or new rules of measurement and classifications as may seem desirable, and that a sum not exceeding £100 be placed at the disposal of the committee to defray any of the expenses incidental to the inquiry." The committee appointed included Sir W. B. Forwood, Mr. G. B. Thompson, Mr. Henry Crawford, Mr. W. Baden-Powell, Mr. Frank Willan, Colonel Leach, Mr. A. Manning, Mr. Francis Taylor, Mr. W. G. Jameson, Mr. John Scott and Mr. E. R. Tatchell. The first meeting of the committee will be held this week and they will report by Dec. 1.

A CHANCE FOR THE PACIFIC YACHTS.—The following invitation has been received by Com. Cadue, of the Pacific Y. C., San Francisco,—IOLANI PALACE, Sept. 25, 1886.—*To the Commodore of the Pacific Yacht Club, San Francisco:* Sir—His Majesty the King of Hawaii, desiring to show his appreciation of the friendly feelings which have always been shown him by the officers and members of the Pacific Yacht Club, has commanded me to extend an invitation to your club to be present at the festivities to be held at Iolani Palace, in Honolulu, on the occasion of his Majesty's 50th birthday, the 16th day of November next. His Majesty desires me further to add that by way of inducing the owners of yachts to visit the island he will offer prizes for an ocean race from San Francisco to Honolulu, said race to take place so as to admit of the yachts arriving here on or about the 16th of November next, or a few days later. The first prize will be a trophy valued at $1,000; the second, valued at $500, and the third, a cup to be presented by the Hawaiian Boating Association. The race to be under the Auspices of the Pacific Yacht Club. I will also beg leave to add that a residence will be placed at the disposal of the officers and guests coming with any of the yachts under this invitation. With the assurance of my highest regard and esteem, I have the honor to be, sir, your very obedient servant.—CURTIS P. JAUKEA, His Majesty's Chamberlain and Private Secretary.

SOME OTHER MAN is always the one you think will get hurt by accident, and the "other man" thinks it will be you. If he is right, you will be sorry you didn't insure in the Travelers of Hartford—or your family will.—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

HEAVY VS. LIGHT CANOES.

THE following frank and manly letter from Mr. E. B. Tredwen, long known as one of the very first of English canoeists, will in all probability mark a very important turning in British canoeing, as Mr. Tredwen has been the most earnest advocate of the heavy canoes, as well as their most successful designer and handler. While admitting fully the extra speed of the light canoes, we believe that Mr. Tredwen still underestimates their good cruising qualities, both as to speed and safety under cruising rigs, stowage space and portability, which latter must go far to offset any additional comfort derived from the lying down position with its unhandy deck flaps. The records here tend to show that capsizes when cruising, or even among fairly expert men when racing, are very few in proportion to the great distances sailed, and certainly do not warrant the inference that the deck position is unsafe. We notice that in the last race sailed Mr. Tredwen sat on deck.

"I have read with much interest your article in issue of Oct. 2, on the recent canoe race in America, and having very carefully followed all the full accounts of those matches, published in FOREST AND STREAM, the *American Canoeist* and the American daily papers, and having discussed the matter with Mr. W. Stewart, who sailed the 1886 Pearl, I have regretfully come to the conclusion that this type of canoe was even more thoroughly beaten than your article would lead us to suppose. It is as well that we should accept the verdict and look facts fairly in the face, so as to be prepared to defend our own challenge cup against the contestants that America will doubtless send next season.

"Mr. Stewart tells me that although the Pearl leaked badly, he was able to keep the water under by bailing, without spoiling the sailing of the canoe, and that if she had not leaked, she would perhaps have been placed sixth or seventh, instead of ninth at the finish, which is but poor comfort.

"The excessive number of contestants and the attendant 'blankétings' were all in favor of the two English canoes, as they went off with the lead and rounded the turning buoy for the beat home first and third respectively. Mr. Stewart sailed the Pearl in American fashion, sitting out to windward to get every advantage that the Americans had from the 'deck position.'

"The winning canoes were the old much heavier than their English opponents, and this upsets all our time allowance theories, as, under any time scale that has yet been applied to canoe sailing, the American canoes would have had a heavy allowance to receive from the English.

"The wider canoes were beaten on the windward work and in strong winds, but held their own better in the running and in light winds, which is the reverse of what we expected. The fuller lines of Nautilus and Pearl caused them to 'slam,' and stop as they fell into the trough of each sea, while the sharper, finer lines of the American canoes, with their rising floors, caused them to be easier in their motions and to hold their way better.

"The two types of canoes are the reverse of each other, and are the natural outcome of the two opposite modes of sailing, the American type of long, narrow, light displacement boats being best suited for the attainment of speed while the canoeist sits outside, but the English model would win if the deck position were not adopted.

"It seems we must be stirred up from our comfortable recumbent position, and train ourselves for acrobatic feats in order to sail the 'plank on edge,' without the lead keel to keep it steady. There is only one consolation in this—it opens up a bright prospect for the younger members, whose superior activity should enable them to beat the 'seniors,' and in future the 'senior' flags may all be won by the juniors; the small light canoes will allow time to the wide heavy ones; the unballasted canoe will allow time to the 'lead mine;' the second class will consist of canoes weighing not less than 200lbs., and the definition of a canoe will be that of a vessel 'to carry one man outside, looking sideways.'

"The committee of the R. C. C., foreseeing the crop of amendments to be proposed at the coming autumn meeting, have taken a room at Anderton's Hotel, and arranged for a steak supper instead of the usual dinner, and the meeting is to follow instead of preceding the refreshments, evidently with a view to an all-night sitting.

"It is only right that I should exonerate Mr. Turk, the builder of Pearl, from any blame for turning out a leaky boat. The very thin oak plank—far too thin for the work—was put in on my responsibility, contrary to his advice. In aiming at getting a very light boat I have overstepped the mark and sacrificed efficiency, and the thin plank will have to be replaced by stronger material.

E. B. TREDWEN."

THE A. C. A. AND THE CLUBS.

Editor Forest and Stream:

Since the formation of the A. C. A. in 1880 more than one thousand canoeists have been enrolled as members, and yet we must conclude from the report of the Treasurer that scarcely one-third of these are paid up members at the present time. We must confess that two-thirds of our old members have left the A. C. A. Have these two-thirds given up canoeing? Impossible! Once a canoeist always a canoeist. Then why do we lose our old members? Is it through their fault or ours? If the former, we can't help it; if the latter, we must help it if the Association is to embrace every amateur canoeist on the continent. I believe it is chiefly because they are unable to attend the annual meet, the natural time and place for the payment of dues, and the only time in the year when they can come in contact with the A. C. A. and its officials. If I am right in this, it follows that the formation of divisions with their yearly meets will increase our active membership by making it possible for a far greater number to attend some meet. It will increase, too, the attendance at the annual A. C. A. general meet, for the successful racers at the division meets will aspire to higher honors. Nor will racers be the only ones attracted to the general meet through the pleasures experienced at the division meet. Instead, then, of opposing the subdivision of the A. C. A. into various branches, every facility should be afforded for the formation of new divisions. Here in the North we might have two divisions, with meets say at Stony Lake and on the St. Lawrence. Seven or eight divisions or even more might be formed with advantage.

But even with division meets fully established there will always be a large number of canoeists unable to attend any meet. To bring these into the Association and to keep them in it seems to me we might utilize our club organizations with advantage both to the Association and to the clubs themselves. Let the clubs be affiliated to the Association, in other words make each club a branch of the Association, so that a canoeist by joining an affiliated club becomes a member of the A. C. A. and pays his A. C. A. fees and club dues in one sum to the secretary of his club.

For example, the annual dues of the Q. C. C. are now $8; upon uniting it increases its dues to $10 and the secretary collects that amount from each member and on May 1, say, sends a list of all the members of his club with $2 for each member to the purser of his division. On May 15, say, the division purser sends a list of all the clubs and members in his division and $1 for each member to the secretary of the A. C. A. Early in June the A. C. A. Book might be ready with a full list of divisions, of clubs, of paid up members, and with full information regarding the general meet and the meets of the different divisions.

It seems to me that such an arrangement would be of great advantage to the A. C. A. I know of one club with 33 members only 7 of whom belong to the A. C. A.; another with 18 and another with 12 having one member each, and still another with 15 members none of whom belong to the Association. With these clubs affiliated we should have 78 instead of 9 members. Should some of the clubs not wish to be affiliated, any of their members could still join the Association as at present, but of course these clubs would not then have the right to separate representatives on the nominating and advisory committees of the A. C. A. or any of its divisions. It would be so manifestly to their interest, however, to have their club affiliate, that union would be sure to follow in a short time. Many canoeists who are quite unable to attend a meet and yet take little personal interest in the A. C. A., are yet anxious that their club shall be represented and that it shall receive proper recognition, and they are very jealous of its honor. Of course those who go to a meet will be desirous of going as the accredited members of a club of standing, and they would, therefore, do their utmost to have their club join.

Instead of 300 to 400 paid up members, we might then have 2,000 or more. As this number would yield a yearly revenue much larger than necessary, it might be well to reduce the fee to $1 a year, half to go to the division.

It appears to me that this arrangement would be equally advantageous to the clubs. The fact that by joining a club a canoeist would become a member of a large organization like the A. C. A. and also of a local division, with all the privileges implied, would attract rather than doter canoeists from joining the clubs, while the slightly increased dues would keep no one out.

In some localities where there are a number of canoeists with no club organization it would be an incentive to the formation of a club, a procedure advantageous to the canoeists themselves, to the local division, to the A. C. A. and to canoeing in general. There are at least five towns and villages within fifty miles of Peterboro which have a number of canoeists but no club, nor a single member of the A. C. A. With local divisions formed in the north a few canoeists might be enlisted from each of these places, and with these as recruiting officers a club would soon be formed in each place.

The plan here roughly outlined is one method of localizing the Association. If it be objected that it is an attempt to induce all canoeists to contribute to the support of the Association for the benefit of those who attend the meet, it ought to be borne in mind that while these certainly derive the most benefit, yet every canoeist must be benefited to a considerable extent by the improvements in rig and model which result from the meeting of canoeists from all quarters at the annual meets. Every canoeist, therefore, in America should be a member of the A. C. A.

I should like, Mr. Editor, to see in your columns the views of other canoeists on this subject. Let it be sifted before the next meeting of the executive committee. If it blows hard I'll take in a reef or two, or I may drop my sails altogether and paddle ashore.

COLIN FRASER.

UNIVERSITY COLLEGE, Toronto.

[We have not the full report of the Secretary at hand, but the membership is now much larger than Mr. Fraser's figures indicate. The fact remains, however, that the A. C. A. is yet far from reaching its limit, and there is a very large field ahead for recruiting. The experiment of joining the clubs to the Association was tried in 1880, but was abandoned soon as impracticable at that stage of canoeing. Now, however, the circumstances have changed greatly, and it may be that Mr. Fraser's plan would operate successfully. At any rate, it is worthy of a careful consideration and discussion at once, as little time remains in which to bring it before the Executive Committee. There is no doubt but that all canoe clubs should belong to the A. C. A., as the objects of both clubs and Association are identical, and it is equally certain that the clubs can materially advance the interests of the Association with direct benefit to themselves; the only question being one of detail—how the union can best be made. There are many clubs in the country composed of active and energetic canoeists, who do not number an A. C. A. man among their members and who have never attended an A. C. A. meet. Were they once joined to the A. C. A. they would readily fall into accord with its work and see the many mutual advantages involved; but keeping out of the circle and maintaining a complete isolation they have little conception of the Association and its workings.

If all the canoeists in the country were members of the A. C. A. its effectiveness would, of course, be greatly increased while the expenses would be lessened. Incidentally it is worth noticing that, on the mere suspicion of the entrance of a racing machine into the A. C. A., all the racing men are at once in arms to guard the interests of cruising boats; a fact which disposes of the objection which many make to joining an association which encourages racing. Let us hear more from those interested, and especially from some of the unattached canoeists.]

AN ENGLISH VIEW OF AMERICAN CANOEING.

THE following letter from Mr. Baden-Powell lately appeared in the London *Field*, and is interesting as showing a stranger's opinion of American canoeing. We have omitted the account of the races as differing little from those already published:

Twenty years ago in England canoeing was "boomed up," and sprang quickly from an obscure and (then thought) eccentric pastime to a popular sport. The stages through which the canoe was transformed, from a simple river paddling canoe to the cruising and racing canoe of to-day, are too well known to canoeists to render their recapitulation here advisable; and for those who are not so well posted in the development of the canoe, an easy mition is at hand in such books as Kemp's "Yacht and Boat Sailing," Baden-Powell's "Canoe Traveling," and Stephens's (New York) "Canoe Building." Our object here, however, is to chronicle the progressed nature of canoeing and the form of the canoe in the twentieth year of its public life, as exhibited at the first international meet of canoeists in America, held in the latter part of this August. Leaving aside all questions of what is and what is not a canoe, and also the vexed question as to when, where, and by whom the canoe of the Red Indian, the Esquimaux, or the South Sea Islander was turned to use for the recreation and sport of the white man, we will simply take things as they are, and note the sport as it stands in 1886. Though comparisons, according to Mrs. Brown, are "odorous," they cannot well be avoided, if lessons of value are to be extracted from the results of different systems worked out in foreign countries and congregated at an international meet. The popularity of canoeing—sailing and cruising—in America and Canada, is simply wonderful when compared with the state of the sport in England; but the fact must not be lost sight of, that the opportunities for enjoying the sport are totally different on the east and west of the Atlantic. In America and Canada the chief cities are almost "water borne," and lakes and rivers abound within easy reach of thousands of towns. Steamer communication everywhere on water exists, and railroads and canals intersect the remaining country. Hence it is that canoe clubs in America spring up, like oaks in the Sussex forests of the old country, and toughen as time rolls on. Inter-club meets on convenient waters create a healthy rivalry, whether in club turnout, racing competition or camp equipment; and finally the association, embracing both American and Canadian clubs and unattached canoeists, cements the whole body canoeing in its annual meets. There is, however, a further element, which probably is to be credited with an equal share in the creation of this success, and that is the dominating type of canoe. Nearly 90 per cent. of the canoes present at the American Association meet this year were, in a general sense, identical; though, of course, different in details of model, rig and internal fitments, they were closely allied as regards leading features of design. Speaking generally at present, and leaving details to be considered hereafter, the canoes from both America and Canada are "cruising canoes," in the manipulation of which paddling and sailing take about equal share; the boat, being light in build and fittings, and of fine lines, is easily paddleable, and being fitted with a centerplate and (mostly) a drop rudder, and spreading a large area of sail, is made to sail rather effectively, with little or no ballast, by her owner sitting out on the weather side of the deck, keeping her keel downward by means of balancing the sail pressure by his own weight in any required direction. Such boats are effective both as cruisers and racers, are easily handled at the home, boathouse, or for steamer or railroad traveling; they have comparatively few and simple fittings, and are, or ought to be, moderate as to cost and expense of working. The canoes which fringe these cruising canoes on either side, and leaving out purely paddling canoes, are, on the smaller side, the nondescript class of canoe hailing from the early ages of the sport, or the product of the inexperienced amateur (and often professional) brain and hand; and, on the larger side, the canoe more generally designed for and used in sailing on open waters and sea cruising.

As mentioned above, a rough or general sifting of the canoes present at the meet gives three general classes, apart from paddling canoes. The first division takes in a crowd of craft old and new —good, serviceable boats, no doubt, and of use and pleasure to their owners, but of no special or individual merit; in short, canoes in which faults in model, construction, fitting, rig, and performance are glaringly evident. The second division takes in the majority of the canoes present, viz., rigged cruising canoes; and the third division embraces canoes equally perfect in model, fitting and rig, but designed for other purposes and for manipulation of a different nature. In the first division will be found some canoes constructed on the old models of fifteen years back, the model, and indeed the boat, good enough to perform well in to-day's races, but utterly wanting in the modernized fittings of rudder, centerplate and rig. Others again, little sharp-pointed canoes, of little beam and less floor, built under the mistaken notion that a small, narrow, sharp-floored canoe is the only one for river work, and that to enjoy such work occasionally, sailing and carrying capacity must be relinquished; whereas, as a fact, many of the fully-rigged centerplate canoes, in which sailing, racing and camping can be enjoyed to the full, are far better performers at river and "rapid running" work (when put in order for such work) than these specially designed little craft.

Take two canoes for a week's river cruise, one the special river craft, narrow and crank, but light to paddle, and the other comparatively bulky and with ability to be rigged for longer and more open cruises, and to carry stores, etc. The special river canoe will at best not exceed the other in speed by more than a quarter mile per hour, and will tire, wet and cramp her owner far sooner than the more roomy, floaty craft. It is this imperfect class of canoe which is responsible for choking off many a hopeful recruit to canoeing. She is the "lag behind" on the club cruise; she fails conspicuously at sailing, owing to being inefficiently rigged and of faulty balance, as between sails and hull. Ten to one her centerboard, if she has one, is in the wrong place, and her masts too far aft. Her rig is generally small and heavy, and it is thought quite a feat if she is got to "stay" without the use of the paddle. Her best virtue is that she can be used for rough work or traveling, with the pleasant feeling that strained, holed or even completely smashed up, the owner loses little, and the canoeing world is rid of a "bad egg." The second division—roughly nondescript for the purposes of comparison—as a matter of fact, include practically the whole of American effective canoes; and though this division is capable itself of a sub-division and must be sub-divided for purposes of comparison, it has some very marked peculiarities, common throughout, which give it character over and above what has gone before and existed in other countries. It is common to the whole of this class of American cruising canoes that to obtain the best sailing results, the principal balancing for sail carrying purposes, is obtained by the man sitting on deck and leaning out to windward. Next we see a general feature that all are comparatively fully rigged; moderate as compared with English racing canoes, heavily as compared with English cruising canoes, and that the sail plans as a whole run much of a muchness as to area, and in practice it is by no means common for the largest areas to win. All these canoes are fitted with centerplates of one form or another; and nearly all have drop plate rudders, steered by hand tiller on deck. Over and above these the differences between boat and boat are slight; models of considerable name, appear, when critically examined, to hold but a distinction with each other without a difference. Leading dimensions vary through the whole fleet, say a hundred, by no more than a range of some 8in. or so of length, or 3in. of beam, and depth within 2in. to 3in. at the outside, except, of course, one or two extreme specimens. In regard to ballast, however, a difference amounting almost to a classification does exist. There are the flat-floored models carrying no ballast beyond a light centerboard; then the deep rising floor models with some 70 or 100lbs. of ballast and moderate weight of boards; and, finally, the "heavy weights," carrying a substantial amount of ballast and board. Long before this reaches the *Field*, the results of the various races will have been published. It may therefore be as well to review the races right here, and then proceed to discuss the various models and their behavior; and when races are sailed day by day and away from the reach of the builder of the boat, it is no easy matter to rectify accidents or to discover hidden leaks; and such matters need time to carry out, if not skilled workmanship also. The

strong probability, however, is that, had the Pearl and Nautilus been in best form they would have been close up to the front; that on a reaching wind, with a lumpy sea, the long and hollow-bowed American canoes, with owner outboard, would have won; that in a light wind, beating and running, the English boats would have won, and possibly also in a heavy sea and wind. The lessons learned in the racing will assist in criticising the models, especially taking in the New York races, where Nautilus, at any rate, was sailing up to or near her proper form, having been fitted with an ample and strong drop rudder.

On both sides of the water it was anticipated that the races sailed at the A. C. A. meet on the St. Lawrence this autumn would furnish valuable data, on which theories of the past and present would be upheld or exploded, and possibly the "perfect" canoe be pointed out. As far as the "perfect" canoe is concerned, nothing of the kind has come to light; indeed, a careful and unbiased analysis of results throws the definition of the "perfect" canoe further into the mysterious future than before. The sailing races, so far as they went, proved that, in the circumstances under which they were held, canoes with comparatively small sails, little or no ballast, small centerplates, but with the man sitting outside of the gunwale, were able to beat the English canoes which sailed with large sails, heavy ballast and heavy centerplates, and with the owner lying down or sitting on the floor of the canoe. The beatings were fair and square, as they stood, and remained so even after deducting allowances, which should in fairness be mentioned in connection with the English canoes. The race course as laid out is an equilateral triangle of half-mile sides. The windward buoy, as it happened in two out of the three races, including the cup race, lay pretty close to and nearly to leeward of a small, rocky island, which rendered the wind at that buoy very shifty and uncertain in strength. The strength of the current also varied considerably, probably being affected by winds away on Lake Erie. However, the two facts in relation to Pearl and Nautilus, the English canoes, and which were very fairly acknowledged on all hands, were, that Pearl during the whole of the races leaked so badly as to be sailing almost waterlogged; and as to Nautilus (quoting from the official report), "Previous to the race Nautilus had her brass drop rudder badly damaged by a canoe striking it and bending it out of shape; though repaired, it was still in bad condition, and steered the boat unevenly on different tacks;" indeed, it was rather more than this, as when the canoe was on starboard tack it was of no effect at all, and the mizzen sail had to be hauled up and down to try to steer the boat. This drop rudder had a drop of over 12in., and a jury rudder of wood which was afterward fitted had only a drop of some 3in., and was found almost useless in a boat so "rockered" up as is Nautilus; especially in rough water. In these circumstances the English boats were at an unusual disadvantage in races so crowded with competitors and with so short a length of course, viz., three miles, in half-mile lengths.

In passing, as it is not intended here to record all the racing which took place, but only to chronicle the important sailing, it may be well to note that out of six paddling races (single), three were for canoes loaded so that canoe and load should weigh (*a*) 200lbs., (*b*) 160lbs., (*c*) 120lbs. These races are of great importance in favor of the general cruising canoe, in that a racing canoe loaded down to, say, a total of 160lbs. has little if any advantage over a cruising canoe of that weight naturally. It would be an extremely good rule, whatever clubs may choose to do, if an association such as the A. C. A. should for the benefit of all-round canoeing, require that in every race, whether paddling or sailing, competing canoes should be bound to carry load within the canoe —say 60lbs., 80lbs., or 100lbs.—fairly representing the weight of stuff usually carried on a cruise. A monstrosity created solely for racing would hardly succeed under such restriction, and a good all-round boat would only be fairly ballasted thereby.

Take, for instance, an ordinary outfit of clothes—tent, bed, cooking gear and stores—fit for a week's cruise; it will not be much under 60lbs., however sparingly formed up, and most likely over 80lbs. No boat cruises empty, why should she race empty? The true test to be aimed at is the craft which carries its load fastest and in the most seaworthy manner, not the craft that only sails fastest as an empty shell, skimming the surface of the water, kept from capsizing and swamping only by the superior acrobatic powers of her owner.

Looking carefully at the Pecowsic and her performance, one can safely predict that Pecowsic loaded would not have the speed or the success she has as an "empty;" indeed, if a load had to be carried, no one would build a V-floored, hollow-lined Pecowsic. On the other hand, Vesper (second to Pecowsic in the other races and winner of the cup race), a flat-floored canoe with good freeboard, would she have performed equally well with a load on board? Her owner says certainly not, she is doing her best when perfectly empty, if slower when loaded, there is a fault somewhere in her design.

Who would suffer by having to carry a reasonable amount of weight in a race? Only the owners of racing machines. Whether the canoe and her fittings should be included with a reasonable "load" to form a certain class weight is a question for further consideration, but a racing shell ballasted by her owner sitting far outside her, is quite as much, if not more, a racing machine than is the deep canoe ballasted with lead and heavy plate.

THE MEET OF 1886.

SAILS AND RIGGING.

THE various rigs present at the meet were never of so varied a character before, nor were there ever present such excellent examples of the various types. The Mohicans had several very good suits of their peculiar sail, besides some good rigs from other clubs. Pecowsic set a good example of simplicity and efficiency, while the balance lugs were certainly represented as they never before have been, by the neat and elegant rigs of Pearl and Nautilus. Never before has such an opportunity been given to compare the rigs, and never before has the sail question been brought so prominently forward. One point at least was settled, the absence of any serious tendency toward over canvasing, and no further rules are at present necessary to prevent such an evil, as the fastest canoes were only moderately served out with muslin.

The American and English rigs were brought into direct competition, with the result that the former won. They were also by no means inferior in quality and make of sails, but markedly so in neatness and finish of spars and rigging.

The success of Mr. Barney's three-masted schooner, although she used only two sails at the meet, has occasioned much surprise and set many to work at asking questions. The following letter condenses some pretty difficult questions into little space, and though the answers are hard to find, we are expected at least to point out a way to them. Perhaps the writer is a little hard on the poor editor, but we will let that go at present and leave it to the future to show whether the Snake is able to get and keep to windward of an ink bottle. His letter reads as follows:

Editor Forest and Stream:

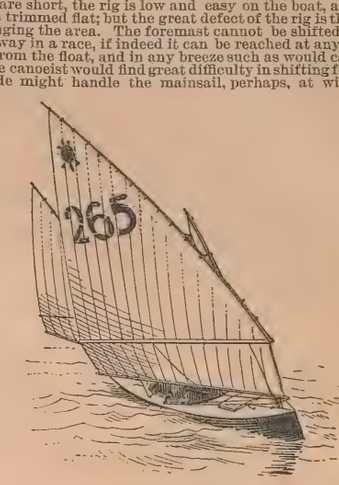
If you please, Mr. Editor, will you tell me what makes the Pecowsic go so fast. And while you are about it, kindly state which is the best model for a canoe and which is the fastest rig. I want to know what to get for next year, and a friend of mine told me that this year's meet would settle all the questions and conundrums, and that the New York Club would publish a complete set of answers in one of their newspapers and magazines. Of course, we other A. C. A. sailors have some answers of our own, but as every one knows, sailors are better at asking questions and literary men at answering them, or at any rate, at getting their answers published. That old riddle of the rig now. Was I not prepared even to contradict an editor? and did I not go so far as to offer to the vacillating world a final complete and perfect solution of that perplexing problem. And now here is a man who apparently has not availed himself of the advantages placed at his disposal by the literary fellows, yet in spite of this benighted isolation (perhaps, also, because of it) he startles us with another addition to the volume of new answers to old riddles, and "gets there" with it more than once. It is very provoking; but if a rival will not go as slow as we do, we must try to even up by going as fast as he does. We don't want to hold him back. That isn't the way at all, even if he brings out a craft which we fear will drown him; that is his affair, provided he or his imitators do not monopolize the attentions of the life-saving service. Then the dreaded degeneration of the fleet of fast cruisers into a small squadron of racing machines is a bogey not worth scaring about or declaiming against, not yet. If ever it becomes so the A. C. A. will see to it. The legislation on this question is already good, but its chief value lies in the indication it affords of the spirit of the Association. Those who framed the rules against machines will frame more when necessary. But an experiment by one man, whether successful or otherwise, does not necessarily produce a host of imitators, and, therefore, does not require rules to regulate it. Let us see. Legislation should be deliberate. It may become necessary to forbid sails that cannot be set and lowered from the cockpit and deck seats which extend beyond the beam of the boat; but let those few who propose such remedies wait until we know whether we have any need of them. Most evils will correct themselves in a little while. Meantime we must get to work again to find out what of good is in these little surprises and why it is good. What makes Pecowic go so fast? That's what I want. I don't want Pecowsic. The tenth commandment shall be kept. But I would give my garboard streak to be able to get to windward of her. So would some others. So let us lay our heads together and worry through the conundrum once more. And then let some other fellows try. First, a few facts to give a foundation for the pile of propositions. Pecowsic is fast. How fast? Under limited sail she was nearly 7min. in 70 faster than the second (Venture). In the unlimited race she was nearly 2min. in 45 faster than the second (Vesper). In the A. C. A. Challenge Cup she was second 8sec. in about 99min. behind Vesper. In the consolation cup race she was a little over 1min. in 115 faster than Vesper.

The first two races were crowded to such a degree as to lessen the value of the figures, as there was much of luck and accident in position until the first buoy was turned. In the limited sail there was a squall and then a calm which favored some more than others. Pecowsic's long lead in this was more than her average. In the other three races she was not so far ahead or behind her closest competitor. The two cup races gave the best opportunities for comparison, being sailed in fair winds and without crowding. In the A. C. A. cup race she sailed the whole time in close company with the Vesper, on the reach the two were as nearly even as possible, Pecowsic gaining a trifle if the wind shifted ahead and Vesper when it came more free. Then on the windward leg of the course came Pecowsic's greatest performance. She would glide up on the weather quarter of her rival, turn a beam, then ahead almost as easily as it is to write it and nothing would avail. Then she made an awkward turn and then began the run home more together again. In this she was visibly uncomfortable, carrying her sail with less ease than Vesper yet losing distance. This race was one with a good deal of maneuvering at which Pecowsic was weak and Vesper strong, so the next one (the consolation cup) was interesting again. It was a long run and a longer beat back, a thrash against a considerable current in a strong wind with only one turn to make. At the start Pecowsic and Vesper were very even, at about a mile Pecowsic led, at 1½ miles Vesper led, at the turn Pecowsic was well ahead, Vesper having made an ill-judged change of trim and lost position badly. Still the finish was close. This brief resumé shows that Pecowsic, while fast every way, is not phenomenal in running or reaching; but can be rivaled by canoes of the cruising type. Her superiority is in windward work, and this is what we must study. In moderate winds with nearly smooth water she is a wonder, but on the long beat in rough water she only held the distance lost by Vesper, if, indeed, the latter did not reduce it, showing that Pecowsic was (as many expected) a less able boat in hard work than in easy. We have then three victories for "the wonder," in which, on her windward work, she was astonishing, and on other courses fleeter than old champions and about equal with the new. To what was this superiority due? Not entirely to her lines, else she would have sailed free as well as she did close-hauled. Nor to her handiness or stability, else she would not have lessened her windward power in heavy weather. Nor was it due to the manner of sailing her; this was as is customary. It was due chiefly to the rig. Now, in what was this peculiar? The three masts occasionally carried need not be discussed, she was sailed oftener with only two. The sails were "leg o' mutton" or trysail shape, laced to masts of admirable lightness and grace, tapering to delicate tips, beginning, in fact, like masts and ending like the light yards of Mohicans. There was no yard off to one side to sail worse on one tack than the other and make with the mast a bad windage. Everything smooth and slippery, no cordage of reef lines or even halliards, just a surface of muslin alike on both tacks. And then see how it trimmed. Look at Stoddard's photograph of the Pecowsic. The booms are sheeted in almost flat fore and aft, sheets rove through a ring on deck amidships. There is the secret then. If the Vesper pointed up on the same course her peak would flap, and on one tack at least the mast would throw a lot of wind out of the luff. But Pecowsic sails that way best. Of course she must carry this rig very nicely balanced on her board (the latter was moved recently) and very probably the proportions of her main and mizzen (more nearly equal than usual) help her steadiness in flaws. But the main points are the absence of spars and cordage usually considered indispensable and consequent ability to trim in sheets much closer. It is probable that an equally light boat of another model would do very similarly with that rig, and on the other hand, that Pecowsic if rigged with balance lugs or Mohicans would not be extraordinary. But this is a gain of speed at the expense of mechanism necessary for safety. The problem, then, is not only to build and rig to rival the Pecowsic, but to do so without discarding the halliard and reef line, and *pro bono publico* any one who can should send an answer to this conundrum and help us keep comparative safety in the excitement of our canoe races and beat the so-called racing machine with fair, comfortable cruising craft, and if possible without additional legislation.

R. W. G.

[Our correspondent has answered his own questions as far as it is possible to do so in general terms. As soon as we can publish the lines and sail plan of Pecowsic, canoeists can study the peculiarities of the rig, and perhaps some one may devise the improvements suggested above.]

As far as Pecowsic's success is concerned the major cause is not difficult to find, and Mr. Gibson answers it plainly above. It has been no secret to canoeists for years that a simple leg of mutton sail with the center of effort and center of gravity of rig kept very low, the sail trimming flat, and with little gear, is a most effective sail. No other can equal it in two great points, simplicity and propelling power to windward with a minimum of heeling power, and if this were all, the question of rig would never have been unsettled as it was six years since by the balance lug, a sail generally objected to on its first appearance, driving out the leg of mutton sail then in general use about New York. There are, however, other considerations of no less importance in a canoe rig, for instance the question of spreading a sufficient area, and that of equal importance, of a rig that can be readily set, stowed, reefed and handled. Perfect as it is in some respects it is on these latter points that it was long since condemned and abandoned, to be recuscitated to such good effect in the Pecowsic. Before going further it is necessary to examine the sails of Pecowsic as shown in the following cut.



CANOE PECOWSIC.

The sails are as follows:

	Hoist. Ft. In.	Foot. Ft. In.	Area	No. of Battens.
No. 1.	8	5 10	22	1
2.	10	5 10	28	2
3.	10	5 10	33	2
4.	10	5 10	38	2
5.	11 8	5 10	42	3

The sails shown in the sketch are Nos. 5, 42ft.; 1, 22ft.; a total of 82sq. ft., the greatest spread ever used being 105ft. The sails used in the meet races, the winds being moderate to strong, were limited area, 2 and 5, 70ft.; unlimited, 3 and 5, 75ft.; trophy race, limited area, 2 and 5, 70ft.; International, 2 and 4, 66ft. To remove the first objection 2 and 5; International, 2 and 4, 66ft. To remove the first objection to the leg of mutton sail, a lack of area, Mr. Barney has resorted to the expedient of putting the area in three sails instead of two, the three mast tubes being the same size and all masts interchangeable. He has also added battens, thus increasing somewhat the area for a given length of boom, of necessity limited in this case, but the sails may still be classed as leg of mutton. The other objection, as to facility of handling, he has not dealt with except in so far that we believe he claims that any sail may be readily shifted and stowed below, another being set in its place if desired. Pecowsic, a long and narrow canoe without weight, requires only limited sail area, and is of a form readily driven by small narrow sails, in fact her greatest spread was 75ft., while she sailed with as little as 66ft., less than the mainsails alone of the other canoes.

With such a model a small, low rig, while a necessity, is also an advantage; but is the same applicable to a canoe which carries 85ft. or over in light winds? The sail spread can be had in good shape for speed in racing, but three masts would be necessary, and this involves a rig that few canoeists, we think, would fancy. The booms are short, the rig is low and easy on the boat, and the sails may be trimmed flat; but the great defect of the rig is the difficulty of changing the area. The foremast cannot be shifted when once under way in a race, if indeed it can be reached at any time when away from the float, and in any breeze such as would cause him to reef the canoeist would find great difficulty in shifting for a smaller sail. He might handle the mainsail, perhaps, at will, setting a

CANOE VESPER.

larger or smaller one, and possibly reach the mizzen; but if afloat with large foresail set he must hang to it until land is reached, or if No. 3, for instance, is set forward and the wind falls, there is no chance to shift to No. 5. In short, it would seem impracticable to so canvas the canoe at all times as to have her near her best, while the entire rig is lacking in adaptability to the changes of weather and courses. The foresail may be brailed up, but it cannot be stowed or reset at will.

CANOE LASSIE.

With the lugsail of any form as now rigged such a change can be easily made, even from the deck seat, within large limits. The mainsail of 70 or 75ft. can be reduced quickly to say 50 or 35ft., with the mizzen of 25ft. shortened to 15 or stowed at will to be easily hoisted again, the boards and drop rudder aiding to maintain the balance. Of course the large mainmast is immovable in the bows, but the sail and spars can be at once dropped on deck. Of course there is the disadvantage mentioned by Mr. Gibson, of a heavy spar that sags to leeward and is faulty on one tack in particular,

CANOE NAUTILUS.

but this is inevitable to a certain extent. If it is to be improved it must be in the direction of a short stiff yard, so hung as to fall off as little as possible. The Mohican rig, with its many good points, has this drawback, a long, poorly supported yard, which must act as stated.

We should like to see the principles of the Pecowsic rig fully worked out and tried on other canoes, as will probably be done this winter. In the meantime there is a large field for improvement in the more common rigs, the Mohican and ordinary balance lug. The rig of the Nautilus was a lesson in itself, and the best specimen of the kind by a long way that was ever seen in this country. The sails were of fine stuff no better than our muslin, and instead of narrow bights they had only a double row of stitches from foot to head at intervals to stiffen the fabric and prevent stretch. The edges were taped as ours are, and there was little difference throughout in quality. In the spars, however, a marked difference was visible; the material was all grown spruce, the sticks of the requisite size with only a shaving taken off beside the bark, instead of being sawn from large plank as is the custom here. The result was that they were light, stiff and reliable, while they had a shape to them which shamed the work of most of our builders which resembles either a broom stick or a baseball bat, according to the taste of the rigger. The masts were specially fine, being cut square below deck to fit a wooden tube (a thin one of sheet brass would be lighter and better), then worked to a round just above deck. The mizzen mast was the smaller, but a square wooden block was fitted to drop into the fore tube and make a step for it if the mizzen was to be set in place of the mainsail. The spars were very light, but all were strengthened by fish battens, light strips of strong wood lashed firmly to them. The blocks and gear gave evidence of the deep-water training of the crew, in neat servings, lashings and splices, the rig as a whole being

very perfect. Each sail was quickly set or stowed by the owner, a strong bag covering it and the mast when not in use. Pearl was rigged in a similar manner, but used bamboo spars instead of spruce.

In nearly all American canoes there is room for improvement in the details of rig; materials and proportions of spars, lead of lines, lashing and splicing, and in other similar points. There are too many sharp corners, too many knots, too much flimsy work. In plan the rigs are much better than in detail, but still some good boats were woefully hindered by outrageous rigs. Experiment is all very well, we cannot have too much of it; but when a man who has done little sailing comes to rig a canoe, his best plan is to follow exactly the rig of one of the acknowledged leaders. He will thus be sure of having a fairly good rig, and when once proficient in its use he can proceed to better it in his own way. Unfortunately, this plan is not always followed, as was seen in several cases at the meet. Sooner or latter the rash experimenter is apt to fall into line after a season or two has been wasted.

For use of the cuts in this article we are indebted to the courtesy of the *American Canoeist.*

ROYAL C. C.

ON Saturday, Oct. 9, with a down-stream wind, a match was sailed in Teddington Beach, open to all classes of canoes, for a prize value £3 3s., presented by Mr. E. B. Tredwen. The entries were: Sunbeam, Mr. B. Rhodes; Foamfleck, Mr. A. B. Ingram; Sabrina, Mr. Rede Turner, and Pearl, Mr. E. B. Tredwen. Mr. George Herbert officiated as officer of the day. The canoes sailed under time allowance, as per sealed handicap, Pearl scratch, the others receiving a percentage of the time occupied by the first canoe in completing the course. Sunbeam received 60 per cent., Foamfleck 50 per cent., Sabrina 45 per cent. The start was at 4:05 P. M., when Pearl crossed with a good lead, followed by the others close together; three rounds were sailed. In the second round Foamfleck, in bearing away to avoid collision with a skiff, was thrown on her beam ends and shipped a lot of water, and Sabrina, sailed without ballast, capsized, Pearl was sailed without ballast, crew on deck; the crew of Foamfleck alone adhering to the recumbent position. The rounds were completed:

	1st Round.	2d Round.	3d Round.	Elapsed
Pearl	4 28 20	4 41 00	4 55 00	50
Sabrina	4 35 00	Capsized.		
Sunbeam	4 36 00	4 56 30	5 17 00	72
Foamfleck	4 37 00	5 00 45	5 20 00	75

Sunbeam won by eight minutes, Foamfleck and Pearl dead heat for second place.

On Wednesday, the 13th, another sealed handicap for a similar prize was sailed with an unsteady N.W. wind, the contestants being: Akaroa, Mr. A. B. Ingram; Sabrina, Mr. R. Turner; Foamfleck, Mr. W. H. Roberts; Spindrift, Mr. H. Roberts. The start was effected at 4:05, and Foamfleck led to the lower buoy, followed by Spindrift, Sabrina and Akaroa, the last-named making a bad start. Spindrift was very unfortunate in getting becalmed, and Sabrina lost a great deal in the last run by setting a spinnaker with a wind nearly abeam. Akaroa, very well sailed throughout, came in an easy winner. Times:

	1st Round.	2d Round.	3d Round.	Finish.
Akaroa	4 23 00	4 41 30	4 59 40	5 19 00
Sabrina	4 20 00	4 39 00	4 58 00	5 23 30
Spindrift	4 24 00	4 49 00	5 12 00	not timed.
Foamfleck	4 21 00	4 41 30	5 05 00	not timed.

It is proposed to hold in Teddington Reach, to-day, at 4 P. M., a scratch race under sealed handicap, for a sweepstakes; entries on the spot.—*The Field, Oct. 16.*

PHOTOGRAPHS OF THE MEET.—Mr. S. R. Stoddard, of Glens Falls, N. Y., has sent us some very fine photos of the last meet, both views of the camp and of the leading boats. We commend the latter to all who wish to study carefully the boats and races, as the rigs are very clearly shown and much may be learned by a careful study of them, as the sails are shown with absolute accuracy.

PHOTOS TO EXCHANGE.—We have received from Mr. Geo. F. Holmes some photos of his canoe yawl Cassy for exchange for American canoe photos and will forward a copy in return for any sent us.

The Forest and Stream Fables are for sale by all newsdealers.

MRS. CHARLOTTE LISLE, Chicago, ascribes the cure of a dangerous cough, accompanied by bleeding at the lungs, to Hale's Honey of Horehound and Tar. "My cough," she says, "threatened to suffocate me * * * * but this remedy has removed it." PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. A. M., Hanover, Pa.—See Pennsylvania deer law as given in our last issue.

C. H. C., Hartford, Conn.—Please tell me how to ascertain the age of a young dog puppy. At 4 months old should the puppy teeth have been shed and replaced by permanent teeth? Do dogs ever have a full set of their permanent teeth at this age? 2. Do full blooded bloodhounds ever have white on the hind feet, tip of tail and a little on throat and chest? Is it a fault if the ears are erected slightly when excited? Ans. 1. There is no way of telling the age of a dog by appearance of teeth. Four months is very early to shed primary teeth, although at this age the incisors show and often the permanent teeth make their appearance. 2. Stonehenge says, "There should be little or no white." He also says the ears "should hang very forward and close to the cheeks, never showing the slightest tendency to prick."

A FISHWAY FIEND.—Fort Wayne, Ind., Oct. 19.—*Editor Forest and Stream:* The fine fish ladders placed in the dams near Defiance, O., on the Maumee River, were destroyed by some dynamite fiend last Tuesday night. The ladders were constructed at an expense of several hundred dollars, and will, in compliance with the law, have to be rebuilt. The officers there have been notified of the outrage, and the scoundrel, we hope, will soon be placed where he belongs—behind the bars.—J. P. H.

"Highest Quality" Fish Hooks.

Anglers are so familiar with our name and Trade Mark and the quality of our goods, that we have no hesitation in calling them to witness to the excellence of all hooks made by us. Though our hooks have always been fully equal to any ever made, about seven years ago we came to the conclusion that anglers would welcome a very high grade of fish hooks—something far beyond what they had ever used. Consequently we perfected arrangements for the manufacture of what has become so widely and favorably known as "Abbey & Imbrie's Highest Quality" fish hooks. All boxes containing these hooks have our trade mark and the words "Abbey & Imbrie's Highest Quality," distinctly printed on the label. Also the name of the hook, viz.: "Sproat," "O'Shaughnessey," "Aberdeen," "Carlisle," "Sneck Kendall," or "American Trout." When "snelled" on silk worm gut or gimp the hooks are put up in packages containing one-half dozen of hooks. Each one-half dozen is labeled.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page folio illustrated catalogue.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

ANSWERS TO CORRESPONDENTS.

SNIPE DECORATION.

WOMEN are bedecking their headgear with birds' plumage this fall, but according to the testimony of one of the dealers in feathers the fashion has been modified. It was once the rage to wear dead songsters and other non-edible birds of plume. The style now affected calls for snipe and other game birds.

This may be accepted as the direct result of the labors of the AUDUBON movement. The efforts of the SOCIETY have been specifically devoted to suppressing the destruction of "wild birds not used for food." While feathers have not been discarded, it is nevertheless true that the particular plumes against which the SOCIETY has waged war are being put aside, and the plumage of edible or game birds is taking their place. In this the AUDUBON SOCIETY may see an intimation of its success and the beginning of the end.

While on many grounds the employment of game birds' plumage for bonnet decoration may be as censurable as the use of defunct song birds, it will perhaps be more difficult to discourage. The dealers who employ gangs of gunners to shoot snipe and other migratory game for the milliners contend that the law permits killing these species, and that it is as legitimate to destroy them for their feathers as for their flesh. The only opposition, it is said, comes from sportsmen who grumble because the birds are killed by professionals, and because they have to pay increased wages to baymen. So far the millinery men have on their side law and the logic of dollars and cents. It is quite true that those who object most strenuously to the wholesale destruction of game birds for hat adornments are the sportmen. It is also true that visitors to the beaches this year have found that the baymen, usually glad enough to guide a gunner for the wages paid, have been disinclined to waste their time with sportsmen when they could make better wages shooting for the feather dealers.

How this new phase of the bird wearing craze is to be met and overcome is a problem demanding for its solution tact and judgment equal to those which have characterized the efforts of the AUDUBON SOCIETY in its song bird work.

"NESSMUK'S" POEMS.

SEVERAL correspondents have asked whether "Nessmuk's" poems have already appeared in print. Some have. "John o' the Smithy" was originally published in the *Atlantic Monthly* for March, 1868. It attracted much attention and provoked much comment, Greeley devoting half a column *Tribune* editorial to it. The poem was widely copied, and has taken its place among those which are resurrected again and again and go the rounds of the newspapers, more often without the authors' names or with wrong credit given; "John o' the Smithy" has been thus erroneously credited to the "Corn Law Rhymer." The poem "Our Camping Ground" was published long ago in *Putnam's Magazine;* and another, "Watching the River," had been accepted by *Putnam's*, but a friend to whom "Nessmuk" had sent a manuscript copy took it upon himself to put it into print in a Cincinnati paper before it had time to appear in the magazine. "May" was printed in *Lippincott's Magazine.* "October," "My Neighbor Over the Way" and some others were printed in the *Aldine.*

Many of the poems were written in camp, often on birch bark, and "Nessmuk" tells us that a number of others so written proved undecipherable because obliterated by water, or were found mutilated past recognition when sorted out from the rest of the duffle. They deserved a kinder fate.

PET BEARS.

FOR two or three years a Cleveland, O., saloon keeper has maintained a pet bear in the back yard as an attraction to his customers. The yard was also used by the dwellers in the adjoining tenement. Last week bruin varied the monotony of his captivity by killing and partially eating a little girl. At Newark, O., the day before this, another pet bear succeeded in capturing and mangling a young woman who had been watching his antics.

The average chained pet bear is just so much latent brutish ferocity, liable at any moment, when occasion offers, to develop its bear nature. The only possible use of such a creature is that, when the inevitable climax comes, the newspapers have a spicy item of news. There should be stringent statutes forbidding the harboring or maintaining of these so-called pets—with a suitable exemption, as a matter of course, for such sweet-tempered brutes as the Missouri Bicycle Club's Bike, whose capture and winning ways have been described in our columns.

The FOREST AND STREAM'S grizzlies in the Central Park bear pits might also claim exemption from the rule. They are well behaved and amiable creatures. But they are securely hedged about by strong iron bars. This is not so much to protect the public from the bears as to protect the bears from the public. Shortly after the bears were received at the park, a New York physician intimated an inclination to try his hand in a wrestle with them. His ardor was cooled when he found out that five months before he ever saw the bears three men had found it no easy task to handle a single one of the cubs.

FISH AND GAME RESORTS.

ONE important service performed by the FOREST AND STREAM is directing its readers to desirable fish and game resorts. This is a practical service, which, we have reason to know, is highly valued. Sportsmen who discover a new El Dorado owe it to the craft to make known their good fortune, always provided there be in the discovered fortunate realm room for all who may come. The FOREST AND STREAM is read in every near and distant region of the United States and British Dominion, and readers in the North are looking for game grounds in the South, readers in the East are watching for reports from the West, and in turn the Southern and Western readers are seeking like information. We invite correspondence concerning game countries, routes and accommodations, such particulars, in short, as are most likely to be of practical help to the army of outers.

THE WEATHER AND THE BIRDS.—The heavy rain of last week made a great change in the shooting. Covers which were before too dry to be worked with pleasure or profit have yielded fair returns, and a considerable number out of the hundreds of gunners who went out on election day came home with something to show for the tramp. The storm brought on the woodcock in Massachusetts, and many flight birds have been taken there.

WHAT UTTER RUBBISH the petty local game constableship business often is. Next to the stupidest specimen of a white man we ever saw was a game constable who once came into this office for instruction about the law and his own duties. In nine cases out of ten the game constable has no notion of the provisions of the statute he is charged with enforcing. Here, for example, is a request for light; it comes addressed to the FOREST AND STREAM: "———, Oct. 27th.—friend sportsman will you Please send me the game law of 1886 as I. am game Constable and I. have a Chance to enforce it send it as soon as Posiable and Oblige ———." One would naturally suppose that the first thing for a newly appointed game constable to do would be to find out the terms of the law; but in practice such a supposition would often prove erroneous. Some game constableships are very small bits of the long tails of the political kites; men appointed to such offices go in because they have been good gin-mill heelers, or can work "the boys." They are the infinitesimal political fleas that feed on the fleas next above them in the order of political parasites.

NITROGEN.—Mr. Chas. F. Amery's discussion of the rice bird question will have for most readers at least the merit of novelty. Ordinary argument about the usefulness or harm of any species of birds has been based upon how many insects, or cherries or berries, or how much rice it destroyed. That the feathered tribes have had anything to do with preparing the earth for plant life and with maintaining the fertility of cultivated fields has been overlooked. As Mr. Amery puts it, the argument in favor of the rice bird is this: Without nitrogen, which is a necessary constituent of plant life, there could be no rice. Nitrogen is supplied by the birds. Without the rice bird the nitrogen could be maintained only by use of fertilizers. The direct value of the birds as agents to fertilize the soil offsets whatever loss is sustained by their consumption of grain. The figures used are those published as given by the Bureau of Economic Ornithology at Washington. Whether or not they are absolutely correct is not essential to the argument; with the figures changed the same relative proportions would hold good.

THE COURSING MEETING.—Our detailed report of the meeting of the American Coursing Club, at Great Bend, Kansas, offers evidence of the popularity this practice has already attained in the West, and gives assurance of its growth. The scene of the meet was admirably adapted to the purpose, the gentlemen on whose lands the courses were run were more than obliging, and the nimble game was found in good supply. A notable feature of the occasion was the number of spectators, which was largely in excess of any number that ever attended a field trial. This would be expected, for coursing is more spectacular than field dog handling. At one time and another the introduction of jack rabbits to Eastern grounds has been broached, but so far nothing has been done, and it is probable that great coursing meetings will be confined to the West, where all the conditions are favorable.

THE LAW ON LOBSTERS, regulating the length of those caught, ought to be uniform in all the States where this valuable food is found, that is to say in Maine, Massachusetts, Rhode Island, Connecticut and New York. Without such uniformity the laws of one State cannot be altogether effective. Rhode Island lobster fishermen take short lobsters in Massachusetts waters and find markets for them in Rhode Island and Connecticut. Now that Mr. Shattuck has done such good work for the Massachusetts lobster supply, literally saving it from extermination, the Legislatures of Rhode Island and Connecticut should supplement the movement by needed statutes. The lobster is of too great value to be sacrificed to makeshift greed.

PRAIRIE CHICKENS are a very scarce article in the St. Louis game market this year. St. Louis is the great game mart of the West and Southwest, and abundance or scarcity of any given game there may be taken as indicative of the season's supply on the shooting grounds. The grouse are reported to be abundant in the Indian Territory, but owing to new regulations the game cannot there be killed for market.

THE AMERICAN ORNITHOLOGISTS' UNION Committee on Protection of Birds have ready for publication their second bulletin. It will be published in the FOREST AND STREAM next week.

The Sportsman Tourist.

COAST FISHING IN SUPERIOR.—I.

IT is not often one sees of late years in the FOREST AND STREAM any accounts of trout angling in Lake Superior. It may be that the tribe of Lake Superior fishermen does not increase. To those, few though they be, who know the waters and the shores of that great lake, no word of appreciation is needed. Apart from the salmon, the quest of which has not yet fallen to my lot, and after some experience with the bluefish, the striped bass, the black bass, and some others of the game fishes of this continent, I feel confident in calling trout the game fish of them all. Of course I cannot include the fingerlings of NewEngland and most Middle States brooks in this description. I never found pleasure in taking such small fry beyond the mere outing.

Probably Superior fishing is known only to the few. Even the wonderful Nepigon with its glorious trout and its magnificent scenery shows upon its portage trails the tread of less than half a hundred anglers annually—this year but few over twenty-five fishermen having visited that river. And one can coast the entire north shore of the great lake and much of the south shore, and camp each night in places yet untrodden by the fisherman. And, unless he stops at some of the few towns or settlements on the north coast, he can go from Duluth to Sault Ste. Marie without seeing a white man. Several times have I coasted over four hundred miles of that coast in the angling season and seen no brother of the gentle craft other than my own companions. Can it be that anglers have not heard of Superior waters?

When my first trip to the lake was made I had never cast a fly. My trout had been taken in boyhood days with angleworm or grasshopper for bait, when and where reels and jointed rods were unknown. Later black bass fishing had been with live bait or minnows, and I had prided myself upon inventing the overhand cast in that pursuit, until I found others who had been wise longer than myself. So it happened that my first Superior fishing was done with a bass rod and medium sized Frankfort reel, and a fly that somehow I couldn't put where it ought to be. In fact, that trout could be taken anywhere but in brooks or small rivers was not part of what I considered my reliable information. My first fishing which was about Bayfield was perhaps better rewarded than its skill deserved. One or two trout in three or four days' fishing weighing a pound or so each, caught in lake waters, made a revelation. There were trout then, but ways and means were inadequate, and their habits and habitat were as yet a closed book.

After all these years, however, I dare not say the book has been widely opened—at least to me. I have indulged in numerous theories, each of which was brought, by force of circumstances, to some rude if not untimely end. My first trout was taken in the lake near the shore, where a pebbly bottom led up to a sandy beach at the foot of a low cliff. Since then they have taken the fly off sandy bars at the mouth of some small brook; in water of unknown depth off bold, rocky shores, miles from any stream; on bottoms strewed with giant boulders, near softly sloping shores; on paving stone bottoms; on fairly smooth rock bottoms; at points where single rocks jutted out of the water a mile or two from island or mainland, and in sandy basins or pockets, surrounded by rocky shores. And there have been many melancholy failures in just such places; indeed, it may be said in the same places at other times. In fact, other than that there are some places along the coast where trout cannot be found, one can be sure of nothing in coast fishing. Possibly others of wider experience may have better theories and better judgment. Mine are not satisfactory.

The first real surprise was just outside of Black Bay. We had coasted slowly along between the islands, stopping occasionally to try a promising point, but getting no rise. A lake trout or two had fallen to the lot of the troller, while I was trying a few casts from the bow for practice as we were making slow time under a light breeze on a line with an island shore and about 100ft. away. Suddenly there was a flashing in the air, followed by a rousing splash and a failure to hook the fish. Another cast was more successful with a smaller trout. Turning a point into a sheltered cove we made camp, determined to try the near waters. While our voyagers predicted failure, it was failure only in fishing from the shore. From the boat we took a number of fine fish—the largest 3lbs. and none less than 1lb. The average was nearly 2¼lbs. Here the shore was high, smooth, wave-washed rocks with little narrow tongues of pebbly beach.

Further along to the northeast, a few miles distant, we found a little brook coming down from the heights of Isle St. Ignace, with gently sloping shores. From a pool just above the mouth a fine lot of trout were taken, weighing from ¾ to 1¼lbs. each. Outside on the sloping bar where the water in reach of a cast from the shore was nowhere over 3 or 4ft. deep, we took a number of fine fish, none going larger than the smaller ones caught in the pool not 20ft. from the edge of the lake.

I do not know of any one fishing the south shore of St. Ignace. My little experience at the southwest point of the island, or rather of one of the islands connected with it bordering on Nepigon Strait, leads me to believe the unexplored region (if it is unexplored by fishermen) very promising. But as my theories have all come to naught I ought not to confess having any belief about it. I hope to try it some day.

Nepigon Bay has not proved good trout water. It is unpromising, slightly clouded from shallowness, but many streams coming in from the north have good fish. But some of the streams are warm and are the homes of pike (wall-eyed) and pickerel, of which there is abundance. Nor does every clear and cold stream along the lake have trout, while there are cool red ones which have abundance of small fish. I have found no large trout in red streams, but I have tried no stream above the shore falls, or further than a mile or two inland, excepting the Nepigon and one or two smaller ones.

One of the finest of the many fine fishing localities is in the neighborhood of Pic Island. Camping one or two nights near the point west of the island in a sheltered bay, I took my rod and a single fly about sunset one evening and strolled along the rocks until near the point marking the entrance to the little bay. A trout of 2lbs. rewarded the first cast, not a dozen yards from where the boat was lying in the water. But the place was promising. A few other small ones fell to our lot in the few minutes fishing.

Right along the main land north of Pic Island is a stretch of boulder-covered bottom reaching up to a stony and pebbly beach, similar to that along Corbier (called Kirby in the vernacular) Point at the mouth of Bachewanung (or Bachewana) Bay. The land for some distance back from the lake up to the foot of the mountain seems to be of alluvial formation, through which runs a small brook, the mouth of which is hardly seen from the passing boats. The ground at the brook mouth is frequently used for camping, and I have spent many pleasant days on it. There are large trout along this shore to the west, but none have been taken to my knowledge directly to the east, for at least a mile. Indeed faithful fishing for several seasons along this shore east and west achieved nothing, and not even a rise rewarded my exertions, whatever may have been the results to others at other times. But one day in coasting, when there was quite a heavy swell coming in from the southeast and we were making from the bay around the point toward the camping ground, I thought I would try once more for luck. So taking a stand on the bow with one arm around the foremast of the Mackinaw boat, I cast the fly toward the rocks on which the swell was breaking. A huge trout rose and was hooked in plain view, and carried away the frayed leader which had done service along the coast and in numerous rivers for the last hundred miles. There were other trout in company, and a landing was soon made for shore fishing. Several trout were taken ranging from two and a half to four and a half pounds, and all within an hour. Further east along the main land and from numerous island points we had good success both in fishing from the shore and from the boat. H.

AN OCTOBER DAY.

BY THE OLD MAN OF THE HILL.

"AN October day," repeats the Cynic, and there are little quotation marks in his accent, implying sarcasm. "'An October Day!' have we not had enough of 'October Days?' Are we not subjected to an avalanche of variegated rhetoric on the recurrence of every 'October Day?' Can we not have a rest?"

We have to smile a little and remark that an October day is one of those rare things that may become trite but never grows stale, and admonish him that he should have a little patience while others are prating over their foibles, and then presently when he shall become enthusiastic over his plethoric bags of game or his fabulous draughts of fishes, we will be magnanimous, too, and deal no severer criticism than an eloquent silence or at most a surreptitious gape.

It is not, however, of some vague, abstract October day we would speak, but of this particularly beautiful one that lies spread below us from the summit of the hill. We are brought to pause at once, for there are no adequate words near us. The poor adjectives of our acquaintance are threadbare from being bandied back and forth, preaching their mercenary commendations of every cheap occasion. They have no eloquence for such a matter as this. We never so coveted the poet's gift. The atmosphere is clear, mellow, fruity, with a sparkling bead. Could you stand here now inviting it to the innermost recesses, to displace every atom of dust-laden, city-tainted breath you would feel your lungs expanding by inches and such a mental and physical inflation as would set you to seeking some Herculean task to test your new-found strength.

The sun lies yellow on all the hillsides, in such warm contrast to the last few cold, colorless days that the flocking robins are persuaded to postpone their southern departure, while here and there a family of grouse that some days since had thought to resign themselves to winter quarters are peering up through the withered leaves, their little prognostications all gone astray.

The upper slopes are quite faded out, the barren waste of stalks all drooping and lifeless, no sign of animation excepting here and there a feathery pollen drifting aimlessly about, accompanied by a belated butterfly. The distant acres are populous with well-favored yellow sheaves distributed about in all sorts of whimsical attitudes; some gathered in sympathetic companies, each anxious to lend his neighbor a willing shoulder; others braced at reeling angles against the group, or prostrate where they sank in disjointed heaps, and all evincing a deplorable inability to stand alone.

Here and there among the trees we catch a glimpse of the country road, a mere cart road that seems to saunter along with its straggling stone walls and antiquated zigzag fences crumbling among the tangled vines. A group of barberries with beauty carefully preserved at this age of the season, are flaunting their gay pendants over more soberly bedecked neighbors. An occasional wild cherry or chestnut sapling is standing sentinel beside the bars which now are down, for the aftermath is gathering and all the trees are redolent with sweet-smelling wisps snatched from the loaded wain.

The sun is half sunk now and peering horizontally across the horizon, while all the trees are matching skill in casting shadows at the distant mountain. A chilling wind has just aroused and comes moaning down the valley, starting the leaves in clouds before it, that all day long have been fluttering down to loiter awhile near the parent stem and then go eddying off to congregate in rustling heaps in all the hollow places. Now they are hurrying away to join the rushing throng, soaring awhile in great commotion among the bending trees, then gradually falling, bedraggled in the muddy road or scurrying across the pasture where every clump of bushes intercepts a few, and finally settling down in the lea of some sheltering wall, where a few days later the first fall of snow blots them out, the last vestiges of this October Day.

IT WAS OUR FIRST NIGHT OUT, and L. and I had pitched our tent on the shores of as pretty a lake as the State of Maine can boast of; the camp-fire was lending its cheerful influence to the scene, and the box of good things from home had been well sampled. But it was unanimously agreed that something hot ought to be cooked to finish off with; "but," says L., "you will have to do it, for I couldn't cook a green snake so that it would taste decent."—BLACK SPOT.

"NESSMUK'S" POEMS.

Editor Forest and Stream:

I inclose your order with pleasure. Of course, we all wish to secure a copy of "Nessmuk's" poems; by all, I mean the readers of FOREST AND STREAM who have so long been charmed with his writings. We have studied with infinite pleasure his prose pen pictures of the fair scenes of Nature; scenes of forest and bay shore and prairie, valley and mountain and woodland camp; entering with him into the sportsman's paradise, so very dear to hunter, fowler, angler, trapper and tourist. And now we are to admire his pen pictures in verse, reproducing in measured line and musical rhyme the scenes we loved to contemplate, presented in the more attractive form of verse. ISAAC MCLELLAN.

"Nessmuk's" manuscript volume of poems is to be put into book form by the Forest and Stream Publishing Co. The book will be of about 120 pages, with a portrait and autobiographical sketch. The poems cover a wide range of subjects; their titles have been printed in previous notices, and some of the poems themselves were published in these pages two weeks ago. The price of the book, to advance subscribers, will be $1. Subscriptions at that rate will be received until Nov. 14, after that date the publishers reserve the right to advance the price. Subscription blanks will be furnished on application, or the form printed elsewhere may be used. As already intimated, we should like to see the publication of the poems made a more than usually successful literary undertaking. "Piseco" forwards a subscription for five copies conditioned upon our receipt of nineteen other subscriptions of five each. We should be happy to record the rounded twenty.

Natural History.

THE SPORT OF HAWKING.

III.—The Gyrfalcon.

THE three great Northern falcons (*Hierofalco*)—the gyrfalcon, the Icelander and the Greenlander—approach very closely to one another in form, coloration and habits. The three kinds are now generally considered to be but local races, or at most mere varieties of one species, and as such they will be here considered. The gyrfalcon (*Falco sacer*, Forster; *Falco gyrfalco*, Linnæus) which specific name also includes the Iceland, Greenland and Labrador falcons, is by far the largest of the true falcons, the female measuring 24in. or more in length, the male about 2½in. less. The wing is 10in. long from carpal joint to tip of longest feather. A fine female of this species will weigh nearly 4lbs. The tarsus is feathered half way down, there being only a bare strip on the posterior surface of the leg. The color varies considerably from almost pure white, barred with faint plumbeous markings, to a dark brownish lead color, marked with darker tranverse bars. This species has the peculiarity common to all the true falcons, of having the bands on its plumage longitudinal up to the first moult and transverse thereafter. In the character of the beak, feet and wings the gyrfalcon closely resembles the peregrine, being a true "long-winged," "dark-eyed" hawk.

The flight of the northern falcon, although perhaps less rapid than that of the peregrine, is grand and majestic in the extreme. Its power of foot is terrible, and the force of its stoop often sufficient to kill a heron at a single blow. It is by far the best "footer"—*i. e.*, game killer—of all the falcons, surpassing even the royal eagles in this respect. It preys mainly upon seagulls, waterfowl and ptarmigans, and is fearfully destructive to the latter species. As regards man it is a bolder bird than the peregrine, often being seen in the immediate neighborhood of the smaller settlements of British America. It is almost as difficult to stalk and shoot, however, as the wary peregrine himself. The nest of this species is built upon naked and inaccessible cliffs, or occasionally in the tops of the highest pine trees. The parent birds are ferocious and reckless in the defense of their nest, and are able to beat off most intruders. The nest itself is a rough affair, much like that of the peregrine. The eggs are laid in early May, often while the rivers are yet frozen and the ground covered with snow. The ground color of the eggs is yellowish brown, which is almost concealed, however, by the numerous blotches of deep reddish brown upon it. They measure about 2⅜ inches from pole to pole. The gyrfalcon is found throughout the northern region of both continents, and is seldom found south of the 50th parallel of latitude. These birds have, however, bred in Vermont, and are not exceedingly rare in the northern New England States during cold winters.

When the sport and art of falconry were at their height the gyrfalcon was considered a royal bird, thought fit only for scions of reigning houses to own and carry. Enormous sums were paid for the falcons, and they played an important part in the royal pageantry. They were flown at kites, herons and sometimes at lesser game, though strong enough to take hares, ducks, geese and even more powerful quarry. Kite hawking was for centuries a favorite sport.

The capture, taming and training of the adult northern falcon in no way differ in method from that advised for the haggard peregrine, except that the royal bird is more savage and untamable than his wandering relative, and therefore requires even more care, patience and gentleness. It is even doubtfully safe to have an unhooded gyrfalcon on its block where young children are about, the proud bird fiercely resenting any familiarities from those to whom it is not accustomed. The rule never to tease or irritate any hawk applies more strongly to the gyrfalcon than to any other species; it is seldom that anything can be done with a bird which has once been made the victim of a practical joke or the like.

Because of the intractable temper of this species it is better to train the *eyas*, or nesting falcon, than the haggard or wild-caught adult bird. It will probably be generally found necessary to be lowered by a rope from above in order to reach the eyrie. The young birds are put into a covered basket well lined with hay, and are then pulled up by the assistants above before their captor, who will probably have enough to do to fight off the parent birds. In this basket, which should be darkened by being covered with dark cloth of some kind, the eyases are carried to their destination, being fed three or four times a day with small pieces of perfectly lean beef, pigeon, rabbit or the flesh of any small bird.

Arriving at their future home the young birds should be placed in a roomy box or basket nailed against the inside wall of an outhouse at about the height of a man's breast from the floor. A broad shelf must be added to

the floor of the hamper, projecting a couple of feet beyond it. This box is comfortably filled with straw, and the home of the young hawks is complete. Bewits, bells and jesses, the latter made of somewhat lighter leather than those used for an adult peregrine falcon and perfectly soft and well oiled, are now placed upon the legs

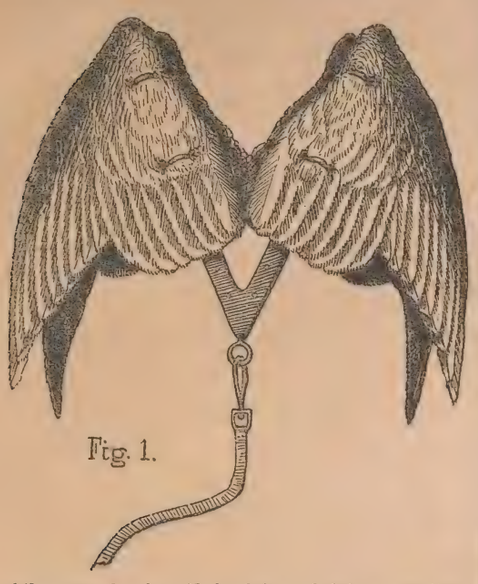

Fig. 1.

of the young hawks. No leash is needed, however, it not being necessary or advisable to tie fast the nestlings. Feed your charges thrice daily, as above directed, and at each meal blow loudly on a whistle as directed in a previous paper as a part of the training of the haggard. In the course of three or four days you will probably find your birds waiting for you on the top of the hamper when you appear at feeding hours.

It is now time to introduce the eyases to the lure. The lure proper for hawks brought up from the nest (Fig. 1) is made of a fork of hard wood, weighing from 2½ to 3lbs., each arm of the fork being about 6in. long. It is covered tightly with strong scarlet cloth, and to either fork are firmly and neatly lashed the wings of a pigeon. The arms of the lure are pierced with convenient holes, through which pass strong cords with which to tie meat to the appliance. A ring is inserted at the apex of the fork and a swivel and strap attached thereto as a handle. This instrument, with a tender beefsteak attached by the cords is placed among the hungry young birds at feeding time, and they are all allowed to feed from it, at the same time giving them a few choice mouthfuls from the hand, whistling shrilly the while. At your fourth or fifth visit after the eyases have grown accustomed to the lure, swing it round your head by the strap and shout your field call as you enter the room; they will soon learn that such demonstrations herald for them a full meal, and will welcome you accordingly. Now have a lure for each bird, and when the hawks begin to fly to the lures be sure to have each garnished with particularly fresh and juicy pieces of meat, but later, when the falcons fly eagerly to them as a matter of course, place tough and gristly pieces upon them, and when each bird is tugging at his lure kneel among them, and, shouting your call, give some juicy and tender pieces to each eyas. They will thus soon learn that you give them more savory morsels than they can obtain for themselves by the hardest pulling. Which valuable lesson—to you—they will not fail to remember and profit by.

The eyases are now fed abundantly twice daily from the lures, always receiving tender bits from your hand at the same time. Though they will now fly far from home (having from the first been given perfect liberty, the door of the out-house being always open, except at night, before the nestlings can fly), and will have altogether deserted their hamper, they will seldom fail to come to your whistle call and the swinging lure at every meal. They must, of course, be fed at regular hours, morning and evening. After the birds become strong and powerful in flight it is well to attach light leaden balls (½oz. in weight for a gyrfalcon) to their bewits, to prevent their preying for themselves, which they only too soon learn to do. The jesses and bells are of course worn all the while the falcon is at liberty.

The young birds are now said to be "flying at hack," an especially important era in their training, as it teaches them judgment, power of wing, and to know their home; they also become more accustomed to strange scenes and localities. "Hack" is usually kept up for about a month, at the end of which time, or a little earlier or later, one or more of the falcons will begin to come home irregularly, showing that he has learned to kill game for himself, and is no longer entirely dependent on your bounty. It is now necessary to "take up" the "hack hawk." Throughout the taming of the eyases they have been accustomed to the presence of dogs, horses and men, especially at feeding time; with yourself they are perfectly familiar, and taking up should not be a very difficult matter.

Take up the wildest of the birds first, by gently approaching him while feeding on the lure and slipping a spiny swivel with leash attached to the ring of his jesses. If he be very wild the low net, already described, baited with the lure, may have to be used to capture him. In either case the hawk must not be permitted to eat a full meal before being taken up, as "baiting on a full crop is bad." Carry him, if possible, on the lure, into a darkened outhouse, and there place as best you can a well-fitting hood proper on his head. Immediately allow him to eat a full meal through the hood if he does not decline to do so, as he very probably will. The taking up should be done in the late afternoon; carry him until dark on the wrist. Unhood by candle light, and feed the falcon, allowing him to finish his meal through the hood. After this carry him to the outhouse and tie him to a block for the night. Unhood the hawk and make the room perfectly dark, so that no light will enter in the morning. The next morning hood up, and again carry the hawk as before; feed through the hood out of doors, and while the hawk is eating remove the cap, and again replace it before the meal is finished. This treatment is continued in the same manner as was directed for the haggard peregrine, until the eyas are perfectly "broken to the hood."

The treatment of the young gyrfalcon should now be exactly the same as we recommended as proper for the adult peregrine after breaking him to hood, whistle and lure. Of course, if you have several eyases, each is taken up from hack in turn, as soon as it shows any irregularity in returning for food.

The eyas is trained to fly first to the wrist, and then to both lure and wrist from increasing distances, until a distance of a thousand yards or more is reached, the hawk coming eagerly to your call from the wrist of an assistant almost as far as he can hear your voice. The falcon is now given its first lessons in "waiting on" by means of the lure, in precisely the same way as the wild-caught hawk was taught, but the gyrfalcon cannot be trained to wait on well in the field, and is generally "flown out of the hood" at game.

When the above lessons are well learned, and the bird no longer has any fear of strangers or animals, give the falcon a brailed live pigeon at his block, and allow him to eat it when killed. Next the eyas may be flown at a couple of free pigeons, a few of whose primary wing feathers have been pulled out, allowing him to eat them when caught; and finally the eyas is flown at strong pigeons every other day for a couple of weeks before being entered at wild game. When the falcon brings down his first pigeon killed in a fair flight go gently but confidently up to him, whistling your call the while. Slip the leash onto his jesses, peg him down by the former to an iron pin, and allow the bird to "take his pleasure" on his first "game." On subsequent occasions approach at once, and lift the quarry to which the hawk will cling tightly, place the hawk on your wrist and feed him from the body of the pigeon. This if it is not desired to fly the falcon a second time that day, but if it is intended to again use him cut off the head and neck of the pigeon, dropping the body into a pocket, and feed the hawk from the brain and neck meat. As the slight meal is finished hood him, and he is ready after a short rest for a second or even a third flight. It is even more important to skilfully and rapidly "serve" an eyas than it is in the case of the adult caught bird. When a pigeon dashes into cover the greatest haste must be made to flush it, shouting to encourage the falcon at the same time, and a live pigeon should always be carried to be substituted for the real quarry should it be impossible to flush the latter. The pigeon substituted may have a few long feathers pulled from one wing, so as to make its capture more easy, in order to encourage the falcon to "wait on" in future.

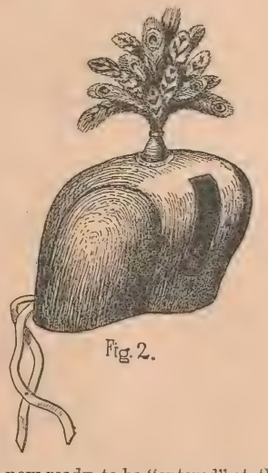

Fig. 2.

The eyas is now ready to be "entered" at the game he is intended to be first flown at, in the same way as the haggard peregrine. The northern and common American hares, the ptarmigan, pinnated grouse, cranes, herons and water fowl, are suitable game for a gyrtiercel. Probably a powerful female would take turkeys, swans, geese and other strong quarry well. As already stated they have been trained to hunt other and far weaker hawks, as well as vultures.

The daily management of gyrfalcons, or eyases of any species, does not differ from that already suggested as the best for adult caught peregrines. The bath, shelter and food should be precisely the same. The nobler falcon is, however, more delicate than the dashing peregrinus, and requires rather more careful sheltering and attention. Hawks should never be flown after they have been allowed to eat any "castings" (*i. e.*, bones or feathers), until they have "cast," or injury to the falcon may result. Saturday night eyases, like haggards, must be allowed to gorge themselves on as much warm bird as they will eat. On days that they are not flown hawks must be given a full meal in the morning, but only a few mouthfuls in the evening: they will then be "sharp set" for hunting the next morning. But if it is not proposed to use them until afternoon the falcons may have two or three small and perfectly lean pieces of beef early in the morning. Of course the birds are always plentifully "fed up" after having been flown for the last time in the afternoon, preferably from the body of their last quarry, but beefsteak may be carried along for this purpose if preferred.

Falcons, if properly hunted, trained, fed and cared for, are very hardy and long-lived; both peregrines and gyrfalcons have been frequently known to live for from fifteen to twenty years in captivity, and to be always in good condition for hunting (except when moulting) throughout that time, barring accidents. Their time of usefulness is thus nearly twice as long as that of the dog, and a powerful and well trained gyrfalcon will support a family in a good game region. Some further points in regard to the qualities and the care of falcons will be discussed in a future paper.

Fig. 2 illustrates a hood proper, already described, in profile, with the addition of the feather plume generally used by European falconers. The plume may be substituted for the leather strap if desired; the feathers are held in position by a hollow cone of leather sewn firmly round the base of the quills and to the top of the hood. As before mentioned they are of course less durable than the strap, but decidedly more ornamental.

Fig. 3.

Fig. 3 shows the foot and tarsus of a gyrfalcon, showing the partly feathered legs and the great power of talon of this species. R. W. SEISS.

THAT THIEVING RICE BIRD.

Editor Forest and Stream:

The labors of the specialists of the Agricultural Department at Washington, who have undertaken to investigate the extent of the depredations committed by birds, and the value of the services rendered by them as an offset to such depredations, promise to be of important scientific and economic interest.

From such notices of their labors as have been allowed to appear in the daily press their investigations into the life habits of the predatory birds will go far to redeem this class from the odium popularly attached to them.

As regards the crow, the commission is represented as suspending judgment pending further investigation, but with a professed leaning to the belief that the balance of account will be found in his favor.

But as regards the whole family of hawks, they appear to have secured ample evidence of such service to man in checking the undue increase of mice and other small rodents—as well as of snakes and insects—that their occasional depredations in the poultry yard are of insignificant account in comparison.

But as the labors of the Commission were not undertaken in support of any preconceived theory of the importance of birds generally in the economy of nature, but simply to ascertain facts as far as they came under their observation, it will not be surprising if, in estimating the depredations of some other class or classes of birds, they should be at a loss to discover such compensating services as will enable them to strike a balance in their favor.

It is reported to have been brought to the notice of the Commissioners that the melodious bobolink of the North, in his character of the rice bird of the South, lays heavy tribute upon the rice fields, devouring the young grain to the estimated value of three or four million dollars annually.

So grave and well substantiated a charge cannot be brought against any other American bird, and in advocating the standpoint of the AUDUBON SOCIETY, that birds generally play an important part in furthering our material progress, no exception can be taken to our making the bobolink a test case, and carefully estimating the services which he renders as a set off to these depredations.

These Southern rice fields are redeemed swamps, rich in organic remains, with a liberal percentage of nitrogenous matter, rendering them highly fertile. This fertility is due entirely to animal remains, in the formation of which birds and insects are the prime factors. Turning to the uncleared reed swamps in Georgia and other States of the South, we find the rice fields of the future in course of formation. There, too, we find the bobolink in his third character of the reed bird, feeding alike on seed and insects, and converting all into a richly nitrogenous manure which mingles with the decomposing vegetable matter into a rich fertile soil, destined to the support of millions of our race in the future.

No grain of rice or other cereal can be produced without nitrogenous plant food, and all nitrogenous plant food, whether in the soil, or as ammonia in the air, is the product of the decomposition of animal remains. Every grain of rice or wheat is but a rearrangement of the atoms which previously existed in some form of animal life or animal droppings, nitrogenized in the process of digestion.

Every plant draws its support partly from the air, and if having run its course it is buried in the soil, it returns to it, not only all it took from it, but fresh organic compounds derived from the air. Land under vegetation which is not removed by man is consequently always improving in fertility. This is so only to a very small extent, if decomposition takes place in free dry air. In this case the substance derived from the atmosphere is decomposed into its elements and returns to it, as when wood is burned in an open fire. But if decaying vegetation falls into wet mud and lies buried in it a large portion of its substance in the slow process of combustion is converted into organic soil constituents, with humic acid.

If vegetable matter passes through the stomachs of insects it is converted into a higher class of manure, but the richest and most highly nitrogenized manure is contributed by birds. All the larger animals contribute in life and death to the richness of the soil they derive their support from. Every creature returns daily more to the soil than it takes from it, but surprising as it may appear the larger animals contribute little in comparison with birds and insects.

I have estimated that the progeny of a pair of butter-

flies, if allowed to increase unchecked for ten years, would add more organic matter to the soil of the earth than the progeny of a pair of elephants would in a thousand years. The same area will support a greater weight of insects than of elephants, and the former die and are renewed daily.

Birds maintain the balance of life by imposing checks on the undue increase of insects, and in the exercise of this function and in the free enjoyment of nature's gifts have been the prime instruments in building up the soil on which man is dependent for his existence.

But even the rich soils of our Southern rice fields are not inexhaustible. Northern fields, which yielded thirty or forty bushels to the acre fifty years ago, now average twelve or fourteen bushels. The rich cotton and tobacco lands of the South have been equally exhausted by constant cropping. Every crop withdraws a portion of the nitrogenous and phosphatic substances due to animal remains, and, left to themselves, the rice fields of the South would soon show signs of exhaustion. Every planter knows that if nothing is returned to the soil the present rich crops cannot be yielded permanently.

The bobolink or rice bird is estimated to devour three to four million bushels annually at the home valuation of one dollar a bushel for paddy. This is not converted into air, but into sixty or eighty thousand tons of manure, equal to guano. This contribution to the soil of the rice fields is sufficient to maintain the fertility of the soil in perpetuity. Given a newly-cleared rice field, and the soil needing no stimulus, the bobolinks' ravages are a loss on the first year's operations, but in a settled country, in which the surplus richness of the soil is exhausted, birds may eat ten per cent. of the crop in the ear and still be debitable with no more than their actual contribution to the yield during the period of their depredations.

In the case of the bobolinks this period is confined to three weeks, but they are performing the same useful functions throughout the whole year, arresting the spread of weeds and insects, and giving to both a high economic value by converting them into plant food. If it be asserted that the services they render to the rice planter are an inadequate set off to their depredations, it must still be borne in mind that the value of the plant food returned to the soil of the country at large is sixteen times as much as is returned to the rice fields during the three weeks of their depredations.

The teeming millions of India exist on a soil which has been three thousand years under cultivation. The fields are for the most part unmanured, but under the Hindoo régime no hand was ever raised against the birds, and while the grain is ripening the air is filled with the din of shouting, while pellet bows are being discharged at the marauding birds from dawn till dusk. And yet India exports her surplus wheat to Europe and is able to devote a large part of her area to the culture of dyes, fibers, oil seeds, etc., for export as well as for home consumption.

Excepting Egypt and India, in which birds have been allowed to multiply unchecked from time memorial, there is no old settled country the soil of which is capable of supporting its population without a liberal dressing from year to year. The natural fertility of the soil of Europe and Asia is exhausted. Crops can no longer be grown without artificial stimulants. The plant food abstracted by the crop must be returned to the soil.

It must not be supposed that birds continue to increase in numbers in India. The rapid increase of their numbers, which presumably followed the spread of settlement of the early Aryans, was met by natural checks. The small hawks increased in corresponding numbers, and the balance, once established, has been permanently preserved.

Nor must it be inferred that in a newly settled country birds tend to increase in the ratio of spread of cultivation. Limitations to increase in the case of all small birds are imposed not by the measure of grain supply during the few weeks in which the grain is in the ear, but by the limit of food supply available at all seasons, and primarily by the available supply of insect food while the young are in the nest. The laws of nature consequently render it impossible for small birds to increase beyond the measure of their usefulness to man, as measured by the checks they impose on the undue increase of insects.

These are novel views, suggesting a new line of inquiry and one which the specialists of the Agricultural Department are competent to investigate with profit. The calculation, based on the estimated depredation of the bobolink during his three weeks, is, that this insignificant little songster contributes annually to the soil of the country, a million tons of plant food equal to guano. This million tons of bird droppings contains the nitrogenous and phosphatic elements necessary to the production of three million tons, or say one hundred million bushels of grain; and in a wholly settled country with the whole soil in course of exhaustion of its accumulated plant food, no portion of these droppings would be wasted; but being distributed over the land free of cost would increase the average annual crops by the amount indicated, an amount equal to the support of a population of ten or twelve millions, while the tax levied by the bobolinks is only three per cent., the balance of the material for the creation of this annual supply of plant food being drawn from weed seeds and insects, which, but for the bobolink, would increase and prey on our crops instead of providing plant food for them.

The foregoing estimates suggest the possibility that man may err in his attempts to remodel creation if he enter on the task without a moderate measure of insight and a careful consideration of all the facts. There may be some small mistakes in creation, but I do not think the bobolink is one of them. CHAS. F. AMERY.

OFFICE OF THE AUDUBON SOCIETY, New York, October, 1886.

MORE FAMILIAR BIRDS.—Warner, Ill.—Close to my office window as I write this I see a wren's nest. Three years since I drove some nails in a sheltered corner. A pair of wrens built there nest there, and each year they have raised a family their. The old birds often come into my office and sing. One of them has repeatedly alighted on my desk as I have been writing, saying plainly by his actions: "You won't hurt me. We are friends." A few years since in a knothole in a dead tree near a path from my office to my house a family of wrens lived with whom I formed a very intimate acquaintance. One day as I was passing in a hurry I heard the two old birds uttering cries of fear and anger, and as I got past the tree one of the wrens followed me and by its peculiar motions and cries induced me to turn back. I examined the nest and found the young birds all right; looked in the tree's branches, but saw no enemies there and started away. Both birds then followed me with renewed cries and when I was a few yards away they flew in front of me, fluttered a moment, then darted back to the tree. Then one one of them came back near to me fluttering and crying, then darted from me near to the ground under the tree. I looked and there laid a rattlesnake, coiled ready to strike. I secured a stick and killed him, the wrens looking on from the tree, and the moment I did so they changed their song to a lively happy one, seeming to say "Thank you," in every note.—W. W. W.

THE NATIONAL PARK BUFFALO.—United States National Museum, Washington, Nov. 1, 1886.—*Editor Forest and Stream:* In your issue of Oct. 14) p. 221, editorial), you quote a Montana newspaper as authority for the statement that W. F. Hornaby, Esq., Chief Taxidermist of the Museum, has gone into the National Park to hunt bison. Will you kindly allow me to say that Mr. Hornaby did not go into the National Park, and that he had no correspondence with the Secretary of the Interior relative to a permit forhunting in that reservation? FREDERICK W. TRUE (Curator of the Department of Mammals).

AN ALBINO SQUIRREL.—In answer to F.E.S., of Halstead, Pa., referring to a white squirrel in your last issue, I would say that three years ago, in 1883, I had the good luck to secure one of these rarities alive, though not until he had received the entire load of No. 8 shot, while shooting in Livingston county, this State. It was shot in one of the highest trees, after seeking shelter in an old deserted crow's nest, which probably saved its life. After caring for it and nursing it for nearly two weeks it gradually recovered until entirely well. I have seen them gray and white many times, but never have seen them the color he speaks of.—TOM DRAW.

THE OTTER IN NEW ENGLAND.—Agawam, Mass., Oct 28.—A fine otter was captured near the upper reservoir, Goshen, Mass., on the evening of Oct. 21, reports the Northampton *Gazette* of Oct. 26.—PINE TREE.

Game Bag and Gun.

HALCYON DAYS.—III.

THROUGH our little village there ran an old canal feeder, heading at a point on Chemung River, from which it received its supply a few miles above, and descending in a stiff current to the main canal fifteen miles below. In its construction a natural water course had been taken advantage of. and in many places the overflow extended far out over the lowlands, forming eddies and bayous of shallow depth, through which the growth of small water timber and bushes made excellent cover and a good home for numerous small fur-bearing animals that abounded. The water was as clear as the river from which it came, and the eelgrass-covered bottom could be seen as plainly as through a glass. Altogether it was a very pretty channel and afforded good fishing and trapping.

Prominent among the "solid men" of the town was the postmaster, a tall, lanky specimen of the Down East Yankee, who, from an incessant habit of chewing gum had acquired the appellation of "Waxy." In connection with his official duties he kept a little store of general merchandise, wherein the good people of the town and surrounding country were wont to take their produce and sell for whatever Waxy was pleased to allow them in cash or "dicker." There being no competition Waxy made his own prices, and they were seldom disputed, for, visiting the city regularly once a month to dispose of his accumulated country produce and lay in a fresh supply of "store goods," he kept posted on the market quotations, and was therefore considered authority. Whatever fluctuation there might be in the mean time did not count, but Waxy was supposed to be always on the safe side. Any advance on the one side or depreciation on the other went to his credit, consequently his business flourished and his old leather pocketbook waxed fat in proportion. The store, like all other country stores, was a general loafing place, and in the evening, when the usual motley crowd had gathered to discuss the day's doings and talk politics, the characters were as varied as the number could make them, and the subjects as mysteriously interesting to the several youths who helped to make up the assemblage as they could possibly be. Chip Mason was a regular attendant at these nightly meetings, and generally chose his seat beside me on one end of the long pine bench that stood beneath the counter, and while the older members of the party were eloquently debating the political situation, or discussing the corn and wheat crop, if we conversed at all it was in timid whispers lest we should disturb the harmony of the meeting and bring upon our heads the righteous wrath and indignation of our superiors. Indistinctly through the thick veil of tobacco smoke could be seen the tall form of Waxy Latin, as he rocked to and fro with his hands beneath his thighs while sitting on the edge of the counter, his jaws industriously working in unison with the motions of his body, and as the debate grew more heated his nasal voice could frequently be heard above the din of the others, always preceded by "Naow look a here," and he was as often cut short by the stentorian howl of some lusty woodchopper, whose arguments were given greater force by the loudness of his voice.

One night late in the fall a cold, drizzling rain was descending, and the wind, blowing in fitful gusts, beat the rain drops angrily against the window panes, and one more violent than any that preceded it caused Waxy to chew his cud more vigorously and turn his eyes anxiously toward a little stream that trickled from the threshold across the floor. The big square box stove had been set up in the middle of a large shallow box of sand, that served equally well for a spittoon, as a protection to the floor from the heat of the stove. A goodly supply of beech and maple chunks lay piled up in the wood box, and a cheerful fire was burning brightly. Four or five of the usual crowd had assembled, and Waxy had taken his accustomed place and position on the counter. Hank Bender, who had just entered, remarked as he shook the water from his hat, "By gol, this's a bad night to be aout." Timothy Conner pressed the ashes of his pipe down more firmly with his finger and said, "Be gob, Oi wudn't loike sthayin' out mesel, so Oi wudn't;" and Waxy ventured, "There won't be much of a crowd to-night, I reck'n." For want of a subject, or a leader to press it, the conversation was broken and dragged monotonously along and the prospect was not very good for anything like a regular meeting, Chip's eyes began to grow heavy and he was mentally debating whether to remain longer or go home, when the door opened and there entered a man of low stature, whose stooped, broad shoulders, covered by the long gray locks of his head, showed the burden of many years. As he took off his black slouch hat and shook the water from it the dim light of the thin bracket lamp that hung on a post behind the stove disclosed a face covered with a long gray beard and shaggy eyebrows, from beneath which, in spite of his age, there peeped a pair of handsome bright eyes, and from his toothless mouth there protruded a short, black clay pipe, whose inverted bowl had long since been smoked out. Replacing his hat and approaching nearer the stove to dry and warm himself, he was greeted by Waxy, who had got down from the counter and grasped his hand, "Old Shack, by gum! Haow d'y'e du, old man?" and Chip, now fully awake, exclaimed aloud, while his eyes sparkled with pleasure, "By gosh! its Ole Shack," and as each one present took the old man's hand, he replied, "How be ye, boys? I'm toler'ble, 'n' I'm glad to see ye all, I be. I jist tied up the old scow 'n' come up fer some tobacker. I ain't smoked sence I left Jackson's Lock, 'n' thet's three mile 'r more back, I reckon." "Four on 'em," broke in Hank Bender. "Mebbe 'tis; seemed like fifty tho', 'n' the mud's 's slip'ry 's snow, 'n' bout 's deep, tu. Tell ye it's purty hard pullin' up agin the current. Waxy ef ye'll gi me some tobacker I'll smoke while yer duin up some other things 't I want," and having received it he filled his pipe, and taking a splinter from the wood box, lit it at the stove door, and cocking his head aside to avoid burning his nose, puffed vigorously until the tobacco was well alight and waited for his order to be filled.

"Be ye goin' tu stay long?" inquired Hank. "Wal, I'll stay 'round here a spell, mebbe all winter. It's a leetle tu airly er trappin', but I want tu get settled down 'n' ef sign's good I'll stay till spring. I'm goin' up tu the big eddy 'n the morn'n'. Thet used tu be a good place 'n' I hed a nice shanty there last year, 'n' ef I can fix it up comf'ble I d'no but it's 'bout 's good a place tu put in the winter 's any." By this time Waxy had finished putting up the few articles, consisting of coffee, a piece of salt pork and more tobacco, and Old Shack, having warmed himself and partially dried his clothes, said he would "Go back tu the scow," and departed.

Old Shack was a trapper, whose business brought him on his annual visit to the village, where he would generally spend a month or two in the spring, trapping in the adjacent swamps and bayous. This time his arrival was earlier than usual and unexpected, but no less pleasing to Chip and myself, for he was our particular friend, in whose society we had passed many happy hours, and his coming was always looked forward to with especial interest. Wherever old Shack went he took his house with him. This was an old scow or jo-boat, provided with a comfortable cabin, partitioned off into a sleeping apartment and a general storeroom, where he kept his traps and stored his dried pelts. Its whole exterior was painted black and it bore the somewhat suggestive name The Dark Angel. By means of a small tow-line and a setting pole he was able to transport it from place to place, and it made him a very comfortable habitation. When he stayed long in a place he would build a shanty of brush or bark, thus providing an additional means of comfort.

That night, when Chip left me at the corner on our way home, we determined to visit Old Shack as early as possible in the morning, Chip promising to call for me on the way. When morning arrived it was still cloudy, but the rain had ceased and there was every appearance of "a clearing up," and soon after I had finished my chores Chip made his appearance and together we went down to the canal, where, lying against the bank, we saw the familiar old craft, and stepping aboard found the grizzled old man deep in the musky odor of his little den, busily engaged assorting his steel traps preparatory to getting them ready for the winter's use. As we entered we were pleasantly greeted and informed "ef ye'd bin a little later ye wouldn't ha' found me. I'm goin' up tu the big eddy purty soon. Hev ye bin up there lately?" "Me and Snap was up there huntin' woodchucks last Sunday," replied Chip. "Sho! you shouldn't run 'round huntin' on Sunday. No good'll come out'n it. Did you see any signs?" "I seed the gol dangdest biggest black mink yer ever seed. It was as long as yer arm. I most hit 'im with a stone an' Snap most ketched 'im. Did yer ever ketch a black mink? I never seed one afore."

The old man's eyes began to snap, but he volunteered no information, and only said, "Did ye, tho'? Mebbe there's more on 'em. I'd like tu git two or three o' them chaps, 'n' ef I du I'll show ye suthin' worth trappin' fer." By this time Old Shack had finished assorting his traps, and reaching up he took from a small shelf his old black pipe, and as the fragrant fumes of the tobacco pervaded the musky atmosphere, announced: "Ef ye want ter go 'long, boys, ye kin, 'n' ye c'n help me pull the old scow up tu." We gladly accepted. Getting out his tow-line and throwing it over his shoulder he bent forward his body, and with Chip and myself following suit closely in the rear we made good progress, and soon covered the distance of a mile to where the water began to spread out. This was at the end of what was termed the big eddy, but which in reality was a large swamp a quarter of a mile wide and a mile or more in length. Thousands of tussocks and miniature islands from which grew high bushes and small trees were scattered over its entire surface. Old stumps and decayed fallen trees were everywhere, and between them all there were wide and narrow channels sufficient to float the old scow. Through these we began to work our way, pushing and pulling, sometimes getting stuck on some sunken log or submerged stump, or entangling the roof of the cabin in the overhanging branches until we came to quite a large open space of clear, deep water extending to the shore, where, between two large maple trees, we found the shanty of brush, bark and small logs. It was somewhat dilapidated by wind and storm, but a few repairs would make it comfortable, and after

tying up the old scow we went to work carrying poles and bark with which to repair it, and soon had it in such shape that it needed but little touching up to make it as cozy as possible. Directly in front a space of open water reached out and was met by a fringe of alder and water maple. In the rear, the ground, perfectly free from underbrush, was covered with a soft carpet of leaves and grass and extended with a gentle slope of clear open woods backward some two or three hundred yards, where it ended abruptly in an old stumpy wheat field enclosed by a rail fence and noted as a favorite woodchuck ground. A few feet distant a small stream trickled down the hillside and passing over a large flat rock dropped with a sudden plunge into the main body. On the roof of the cabin, bottom up, Old Shack kept a light skiff which he used for exploring and setting out and taking up his traps. After helping him down with this we cut fishpoles, and Chip having dug some worms, the old man entertained us with stories of his adventures while we fished and caught enough to do for several meals. Then as the day had well advanced, we decided to go home, promising to come around the next day. As the old man thanked us with a friendly, "Be ye goin'? Wal, boys, ye'v bin a big help tu me 'n' I'm much obliged. Come 'round whenever ye kin. I'll be glad to hev ye," and bade us goodby we felt that there were many good things in store for us during Old Shack's stay. J. H. B.

THE BROOKLYN GUN CLUB.

THE Brooklyn Gun Club was organized July 24, 1872, as a trap-shooting club; reorganized July 31, 1887, and Jan. 8, 1884, and incorporated May 15, 1885. As a pigeon-shooting society it was well known to all trap shooters. In 1880 the pigeon shooting feature was done away with, and the club membership has since then been composed of sportsmen interested in game and fish. The preserves consist of 700 acres in the towns of Huntington and Smithtown, Suffolk county, Long Island, the club having rented from the landowners exclusive shooting and fishing privileges on this tract. The game is quail and grouse; 250 dozen of the former, brought from Tennessee, have been at different times put out. A pond of 28 acres affords excellent trout fishing. A special game protector, employed by the club, and having appointment as game constable, looks out for trespassers and poachers. The farmers who rent shooting privileges to the club, appreciating that it is for their interest to look out for the club's interest, render efficient aid in detection and punishment of lawless gunners. One farmer, for instance, drove several miles the other day to give notice of some gunners shooting over a portion of the club preserve. The constable responded promptly, caught the fellows and took them before the Justice at Smithtown. They had seven robins, one quail and $40. The Justice took $38 and let them go.

The Brooklyn Gun Club has demonstrated to its own satisfaction the possibility of keeping up the game supply and maintaining for the members, within ready access from a large city, good shooting and fishing. The members are representative men; the legal profession appear to hold the balance of power in the membership of forty. The members are:

Aten, H. F., M. D.	Lamarche, JohnV.
Blankley, Thomas S.	Lamarche, Henry J.
Breese, Wm. L.	Monroe, Dr. I. C.
Bloomfield, James M.	McEwan, John E.
Creed, George H.	McDermott, P. J.
Crane, J. S. N.	Post, George W.
Cole, Edward H.	Pratt, Hon. Calvin E.
Dotter, Charles T.	Peckham, Alfred.

Leggat, Richard J.	Wheeler, W. B.

We give the following as forms which may be copied by other clubs:

CERTIFICATE OF INCORPORATION.

We, the undersigned, Henry F. Aten, John L. Hill, Gustave Walter, John W. Douglas, P. J. McDermott, I. C. Monroe, John E. McEwan, George J. Seabury and John L. Logan, all of full age and all citizens of the State of New York, do hereby certify:

That we desire to form a club or society for the purposes hereinafter mentioned, in pursuance of the provisions of an act of the Legislature of the State of New York, entitled "An Act for the incorporation of Societies and Clubs for certain lawful purposes," passed May 12, 1875, and the amendment thereto, and do hereby declare:

First—That the name or title by which such society or club shall be known in law is the "Brooklyn Gun Club."

Second—That the particular nature and objects of such club are the enforcement of the game and fish laws, the propagation of game and fish, and the hiring and leasing of lands and waters for shooting, fishing and hunting purposes.

Third—That the number of trustees, directors or managers to manage the society or club shall be nine, and the names of such trustees, directors or managers shall be as follows for the first year: Henry F. Aten, John L. Hill, Gustave Walter, John W. Douglas, P. J. McDermott, I. C. Monroe, John E. McEwan, George J. Seabury and John L. Logan.

Fourth—That the principal office and place of meeting of said society or club shall be in the city of Brooklyn, county of Kings, and State of New York.

Fifth—That the duration of said society or club shall be for the term of twenty years.

In witness whereof we hereunto set our hands and seals this fifteenth day of May, in the year one thousand eight hundred and eighty-five. Henry F. Aten, John L. Hill, Gustave Walter, John W. Douglas, P. J. McDermott, I. C. Monroe, John E. McEwan, George J. Seabury, John L. Logan.

CONSTITUTION.

ARTICLE I.—Sec. 1. This association shall be known as the Brooklyn Gun Club. Sec. 2. The objects of this Club are the enforcement of the game and fish laws, the propagation of game and fish, and the leasing and hiring of lands and waters for shooting, fishing and hunting purposes.

ART. II.—Sec. 1. The membership of this Club is limited to forty members. Sec. 2. Candidates may be proposed and voted for at any meeting of the Club, as provided for in the By-Laws.

ART. III.—Sec. 1. The officers of the Club shall consist of a President, Vice-President, Treasurer and Secretary, and also three Directors, which Directors shall constitute an Executive Board for the management of the affairs of the Club. Sec. 2. There shall be also nine Trustees, seven of whom must be officers of the Club. Sec. 3. All Officers and Trustees shall be elected at the annual meeting by a vote of the members of the Club, and shall hold office for one year or until their successors are elected.

ART. IV. The annual meeting of the Club for the election of officers shall be held on the second Tuesday in January of each year, due notice of which shall be sent by the Secretary to each member. The regular meetings of the Club shall be held on the second Tuesday in January, March, May, July, September and November, for social purposes and for receiving reports from the Officers and Board of Directors. Special meetings may be held at the call of the President or Executive Committee, or by the Secretary, at the written request of three members of the Club.

ART. V. At any meeting of the Club seven members shall constitute a quorum.

ART. VI. In case a vacancy occurs in any office the same shall be filled by a vote of the members of the Club, at any meeting of the Club.

ART. VII. The Club shall have the power to establish By-Laws and Rules and Regulations for shooting, hunting and fishing, which may be altered at any annual meeting. They may also be altered at any regular meeting or at any special meeting called for that purpose, notice of such intended alteration having been given at least thirty days before such regular or special meeting.

ART. VIII. This Constitution shall be changed only at an annual meeting, notice of the intended change having been given in writing at a previous regular meeting.

ART. IX. At any annual meeting of the Club at which Officers and Trustees are elected members may be represented by proxy and vote as if present, said proxy being given especially for that meeting and filed with the Secretary before the meeting is called to order.

ART. X. A meeting of the Board of Officers may be called at any time by the President or a majority of the members of the Executive Board.

BY-LAWS.

ARTICLE I. At the meetings of the Club the order of business shall be as follows: 1. Roll call. 2. Minutes of last regular and subsequent special meetings shall be read and approved. 3. Members proposed and voted for. 4. Reports of Committee. 5. Unfinished business. 6. New business. 7. Bills examined and passed. 8. At annual meeting election of officers. 9. Adjournment.

ARTICLE II.

Section 1. President.—The President shall preside at all meetings of the Club.

Sec. 2. Vice-President.—In the absence of the President the Vice-President shall preside, and shonld both be absent those present shall choose one of their number to act as Chairman, who shall perform all duties for the time being.

Sec. 3. SECRETARY.—The Secretary shall keep a record of the transactions of the Club, and pay to the Treasurer all moneys as soon as received, keep accurate accounts with its members, draw all orders for the payment of bills as ordered by the Club, give notice to the members in arrears for fines or otherwise, attend to all correspondence, and transact such other duties as may be directed by the Club.

Sec. 4. TREASURER.—The Treasurer shall receive and pay out all moneys of the Club on the order of the Secretary, countersigned by the Chairman or members of the Executive Board, and keep a book showing the same, and shall report to the Board of Directors at each regular meeting. The Treasurer shall receive all the funds through the Secretary, and shall keep a true account of all moneys received and paid out by him. He shall deposit the moneys received in the name of the Club in a bank designated by the officers thereof.

Sec. 5. THE EXECUTIVE BOARD.—The Executive Board shall, before the annual meeting, take a correct inventory of the property and effects of the Club, and place the same in the hands of the Secretary, and it shall be recorded in the minutes of the Club at the annual meeting thereof. They shall examine the books of the Secretary and Treasurer and report the same to the Club at the annual meeting.

ARTICLE III.

Section 1. The initiation fee of a member shall be —— dollars, and the annual dues —— dollars. Candidates can be proposed and voted for at any meeting of the Club. The annual dues to the Club are payable on or before March 1. Sec. 2. In electing members all present shall vote, and the vote must be by ballot and unanimous to elect. All candidates for membership shall be proposed in writing by a regular member, and shall be indorsed by two other members, said proposition to be sent to the Secretary, who shall keep a record of the same as received, and on voting said candidates shall be taken up in the order as received by the Secretary. Sec. 3. An assessment, not to exceed ten dollars per year, may be made upon all the members of the Club at any regular meeting by a two-third vote. Sec. 4. Any member who is in arrears for dues, fines or assessments, and shall neglect to pay the same for thirty days after receiving notice of his indebtedness from the Secretary, may be dropped from the roll and from membership by a vote of the Club.

ART. IV. Any member can resign his membership by giving notice in writing to the President or Secretary, but no resignation shall be accepted if the member be in arrears for assessments or otherwise.

ART. V. Any member guilty of ungentlemanly conduct or violation of the By-Laws may be fined, suspended or expelled by a two-thirds vote at a regular meeting, but no action shall be taken unless the member be present or shall have been duly notified by the Secretary of the charges made against him.

ART. VI. The privileges of the Club may be extended to such parties as the Board of Officers may determine for one year.

[ART. VII. provides for transfer of certificates of membership.]

RULES FOR GAME SHOOTING.

I. No member of this Club shall kill more than twenty-five birds (quail or partridge) on the Club ground in any week during the season. Weeks to commence on Monday and end on Saturday evening.

II. No member of this Club shall shoot or hunt on the Club grounds more than four days in any week, and no two days consecutively over the same ground.

III. No more than eight members shall shoot or hunt on the Club grounds on the same day, and should more than eight members be on the grounds the privilege to shoot shall be designated by lot.

IV. Each member shall register in the Club's registry on arrival, and also register in his own handwriting the number of birds killed by him and the place where such birds were killed, said registry to be made on the evening after the hunt.

V. Any active member of this Club shall have the privilege of taking with him a friend to shoot or hunt on the Club grounds after November 15, providing, however, the said friend does not belong to any other Kings county shooting or hunting club, or has not belonged to any other Kings county shooting or hunting club within twelve months prior to January 1, 1885. All birds killed by said friend to be scored against said active member.

VI. No member shall have the privilege of taking more than one friend at one time, and shall not take more than two friends during the shooting season to shoot on the Club grounds.

VII. Any member or members may have the privilege of taking a guide for shooting on the Club grounds, but all birds killed by said guide are to be scored against said party or parties. The guides to be G. Herbert Newton and William E. Newton, and a third, to be named by parties present, if necessary.

VIII. Any member or members violating any of the above rules may be suspended as a member of the Club by a board consisting of the President. Vice-President, Treasurer, Secretary and the members of the Executive Committee; said board to be convened by a call of the President or Chairman of the Executive Committee, or any other two members of the board. A quorum of said board to consist of not less than three members. The Secretary to notify such member at once of his suspension.

IX. Any member having been suspended may be reinstated at any regular meeting of the Club, or at a special meeting called for that purpose by a majority of the members then present.

X. The President or Executive Committee, at the request in writing by a suspended member, shall call a special meeting of the Club to act on his case, said call to be made within one week after receiving such request.

RULES FOR FISHING.

I. No member of the Club shall fish in Club waters to exceed three days in any one week, or kill more than sixty trout in any week or thirty in one day.

II. Trout of less than six inches in length shall be returned to the water as soon as taken. If such trout dies it shall be scored against the person killing the same and he may reclaim it.

III. Each active member may take a friend with him to fish, not to exceed twice in the season, provided, however, that said friend does not belong to any other Kings county shooting, hunting or fishing club, or had not belonged to any other Kings county shooting, hunting or fishing club within twelve months prior to Jan. 1, 1885. But this rule shall not prevent active members from taking members of their families to fish. All fish taken by such friend or members of families to be scored against such member. Ladies' and children's visiting days shall be, prior to June 1, Mondays, Tuesdays and Wednesdays.

IV. If on any day the number of members desiring to fish shall exceed the number of boats belonging to the Club then the boats shall be apportioned among such members, not to exceed three members to each boat; but if the number of members exceeds three for each boat then the privilege to fish shall be decided by lot, unless such members otherwise agree.

V. Members shall be responsible for all damages done to boats while being used by them, and shall see that the boats are cleaned and properly housed as soon as brought to land.

VI. Each member may take a guide at his own expense, provided there are sufficient boats for other members, their friends and families, all fish killed by such guide to be scored against such member.

VII. Any member who violates either of the above rules may be suspended from membership by a board consisting of the President, Vice-President, Treasurer, Secretary and the members of the Executive Committee. Said board shall be convened at the call of the President or Chairman of the Executive Committee, or any two members of the board. Three members of said board shall constitute a quorum, and three votes shall be necessary for such suspension.

VIII. Any suspended member may be reinstated in the manner provided for the reinstatement of suspended members in subdivisions IX. and X. of Rules for Game Shooting of the Club.

A DOUBLE DISASTER.

THE morning sun of the glorious 4th and no less glorious 5th of July warmed the backs of a couple of young men, accompanied by a borrowed pointer of the female kind, who were eagerly beating the hazel bushes and low ground in the rear of Fort Howard, opposite Green Bay, Wis. We were having good sport and enjoying ourselves, as youth with gun and dog only can, when a fine bird rose from a little thicket, and as my gun came into line and the discharge followed, to my dismay through the smoke I saw the form of the dog high in the air, as she leapt for the tempting game, forgetful of her training, if she ever had any. Too late! Down went bird and dog together! When we reached the spot there was the game, sure enough, and the dog had evidently been impartially served with the same sauce. Sorrowfully we bent over the dying animal, but could do nothing to relieve her, and as her pantings grew feebler and almost ceased, we left the spot, for the strange thing we call life seemed to have departed. Of course our day was clouded, but as the animal was entirely at fault, we made the most of an unlucky time, and betook ourselves to another part of the field where, having secured a few more birds, we made our way homeward, where the sad story was related to her master, who of course prized her highly, and now that she was gone, her virtues were all remembered and her faults forgotten. The next morning, to our great astonishment, we learned that she was at home. She had found the way to the ferry during the night, crossed on the boat, no one knew how, and reached her home, where she finally recovered. We had hardly time to congratulate ourselves on this fortunate result when were served with summons to appear and answer to a charge of shooting woodcock out of season. This was a scheme for revenge devised by the officers of the fort for having trespassed on what they had come to consider their own ground, simply because in their vicinity. We proposed to test the matter, and had the satisfaction of seeing them "hoist with their own petard," for the case went against them, their claim that the 5th and not the 4th was the day intended by the law when shooting should commence not being tenable, and they had the costs to pay. C. J. T.

UNCLE LEACH, who used to live down on S. River in Maine, was sadly given to drawing a long bow. One evening in the village grocery he was entertaining a small audience with tales of hunting and fishing, when he was asked if he ever had any luck shooting wild geese. "Any luck shootin' geese," repeated the old man. "Wall, I should say so. Why, 'twas only this blessed mornin' that I see a flock flying over and blazed into 'em with my old gun, and, gentlemen, I hope to die if I didn't bring down six and a raccoon..—BLACK SPOT.

THE KANKAKEE MARSHES.—Indianapolis, Ind., Oct. 26. —I spent last week on the Kankakee marshes, near English Lake. There was quite a flight of ducks on Monday, but it will need freezing weather to bring in any great quantities. Snipe are abundant in their favorite feeding grounds. Wild geese are going south in great numbers, but few stop.—H. C. H.

NEW ENGLAND GAME.

BOSTON, Nov. 1.—Reports up to date agree with my own experience—that in most places on Cape Cod the quail are found in less numbers than for many years past. We think the extreme dry weather of September and October has forced the birds deeper in the woods for food, for I am at a loss to account for anything in the mild winter and conditions of the hatching season to prevent the many birds which were left over last fall from rearing broods this year. But the ruffed grouse is in good numbers in Massachusetts and New Hampshire, and flight woodcock are just beginning to drop in and promise fair sport for November.—M.

Vermont grouse are rather plenty, but are shy, and hunting with a dog that trees the game and barks causes most of the deaths. Gray squirrels are all over, and good bags could be made. Coons are shot in numbers, and are, of course, fat and good eating. In spite of settlements, more mink were caught than I had heard of in some years, and mephitic visitations were frequent, as shown by the odor left. Snow and cold have shut up most of the game except on warm days, for that it was cold up there any one would attest.—NESHOBEE (Philadelphia).

BOSTON, Oct. 26.—The gunners are a little dissatisfied, so far as this section of the country is concerned. As to ruffed grouse, the man who has shot one this season in this part of Massachusetts, is rather proud of his luck, and the other boys think that he has a reason to be. By the way, there are yet few or none in the market, showing plainly that the birds are scarce. From all over northern New England the report is the same. Partridges are very scarce. Still in the remote sections some sport may be had. The early shore bird shooting was very good indeed all along the coast, but the late birds, duck and coot, have not yet begun to fly freely. The theory is that they stay on their more northern feeding grounds till driven southward by bad weather, and this bad weather we have not yet had. There are a number of Boston's noted gunners waiting for a bad storm, when they will hie themselves away to Annisquam and the Essex River, for coot shooting. Mr. G. T. Freeman has made one trip to that celebrated cooting ground, and was rewarded with a string of some thirty birds, not a bad score for a day and a half. Another Boston merchant—he is not willing that his name shall be mentioned, not even in his favorite paper, the FOREST AND STREAM—went down to "Squam" the other day, and with shooting seventy-five shells he got ten birds. He says that either he is a poor shot or a coot is a hard bird to kill.—SPECIAL.

THE CALIFORNIA QUAIL.

TWO correspondents within the last few months have written on this subject, but as my experience with the lively little bird under consideration has been related by neither of them I also speak up. It is *the* game in this part of the State. We hardly have any other, except a few ducks in the winter and an occasional worthless jack rabbit. This is a fruit-growing section, devoted especially to grapes. In the vineyards along the valleys and hillsides, skirting small streams below and often dense thickets above, the valley quail, as the smaller variety is usually called, finds his favorite resort. Here, too, the lover of the gun finds sport fit for a king.

Perhaps enough has been said of the appearance and habits of the California quail by my predecessors; I must remark, however, that his activity, speed of wing, and cuteness are a constant source of astonishment to one who has hunted poor, simple Bob-White, with his one device of hiding till it took a microscope to find him and staying there till kicked out. This little pert, crested, wide-awake son of the west is equal to Bret Harte's Heathen Chinee.

"For ways that are dark and tricks that are vain."

He will first astonish you by taking a tree. There he will get on the top of a big limb or in an impenetrable bunch of moss, or as I have caught one or two doing, hide next the trunk and creep around as you walk. If you pound the tree with sticks and stones, he will wait till you almost strike him and then he will come down out of that tree with the velocity of a cannon ball, and on a downward curve which will betray the gun of the very elect. Then he goes into the thicket, flying always on exactly the opposite side from the shooter. If there is only one bush about he will fly with an accuracy of calculation that would do credit to a chief of ordnance on exactly the opposite side from the gun. If he flies up by a fence or hedge, his first move is over it or through, never along it, after the style of his Eastern cousin. If taken in open ground he will scuttle along the earth, or go roaring over your head, or, more likely still, go off boring a spiral hole into blank space, through the center of which he persuades you to shoot while he keeps himself carefully to the circumference.

For the benefit of the average tenderfoot, supposing him to be as ignorant as I was two years ago, I must say a word about the California vineyard. The vines are planted in rows, from six to ten feet apart each way. Each year they are pruned to within about eighteen inches of the ground. This stock left each year soon becomes thick and strong, supporting the yearly growth of twigs on which is found the fruit. Under the broad leaves of these spreading branches, long enough usually to extend from one row to another, the quail finds pleasant shelter, while the heavy branches of fruit furnish him dainty fare. Here the hunter is in his glory. The vines average a little less than waist high, giving good use of eyes and gun and an almost certain shot at every quail that flies. My young friend M. and I hunt together a good deal. Our plan—for we have no dog except my setter puppy Bob, who, thanks to his master's ignorance and press of work, is growing up with but little training—is to hunt a vineyard just as if we were working it. We start in at one side abreast, two rows apart, and tramp back and forth till we have gone over it all.

The quails are not so much in flocks as in the East and usually not more than three or four get up at once, frequently only one. They sometimes keep cover quite persistently and a favorite trick is to wait till you have passed them a step or two and then come up with a whirr that brings you around for a snap shot about as soon as nerves and muscle can do their work. But even under circumstances so favorable to the shooter it is surprising how many escape. Several will rise at once, or one will break cover at your approach and run along the ground, rising swiftly some 40 or 50yds. from you, giving you but a slender showing, even with a fine, gun to cut him down; or still another will fly, darting between the vines close to the ground. I never knew one to fly along the same row in which I was standing. Our summers here are very dry, and good shooting may be often had early in the season along the streams where the birds congregate for water. It is quick work taking them as they dart among the willows or along the bed of the stream, but good bags are often made. As my work is in the schoolroom, Saturday is my rest day. On the first Saturday of the open season (Oct. 2) my young friend and I, between us, bagged sixty-one. John is a good shot and beat me a little, making in one round the rather neat score of fourteen out of fifteen. G. B. W.

SANTA ROSA, Cal.

NORTH CAROLINA GROUSE.

BELVIDERE, N. C., Oct. 26.—Our open season for quail began on the 15th inst., but it is now so disagreeably warm and dry nothing has been done in the way of shooting. Dogs cannot smell, and they suffer intensely for want of water. The ditches and runs are, with very few exceptions, as dry as last year's birds' nests. I have been out in the fields near by only once; found the birds plentiful, but late and small, except a few fine coveys of full-grown spring birds. I was hunting over a young half-English and half-native setter, never shot over before (just a year old on the 8th inst.), and seeing him come to a beautiful stand, with nose straight out and tail rigid, I walked up, and after admiring and encouraging him for a few seconds, walked into the birds, and as they came up gave them both barrels, securing two fine full-grown birds. Without following the birds I went on and found several other coveys, some too small to interfere with, others very nice birds. After making the circuit of the fields, myself and my pup Dan reached home with eleven birds for my twelve shots. I do not know whether I killed the twelfth bird or missed it, for it was in the woods near the fence, and the dog failed to bring when sent to look for it. I was well satisfied with the working of the pup, as he was very staunch and showed a great deal of nose, but it was too dry to test that point. I think he will make a good one. I am satisfied that there are plenty of birds, but many of the coveys will be too young to afford good shooting earlier than the 15th of November. It would be wise legislation, no doubt, to extend the close season to Nov. 1, instead of Oct. 15, as it now stands.

As fishing for bass and jack is now good, I think I shall let the birds rest for a season and give them a chance to grow larger as well as wilder.

Our party have only succeeded in killing two deer this fall, both very fine bucks, however. One weighed 204lbs. and the other 185lbs., down weight, and they had the finest antlers I ever saw on Virginia deer.

Bears have about "played out;" it seems that they have gone to water, as the swamp is very dry; probably they have taken to the neighborhood of Lake Drummond.

A. F. R.

MY FIRST DUCK.

ONE cold and windy day in October Charlie and I were fishing around the head of one of the most beautiful of central New York lakes. Our success did not equal our expectations, as a lonely perch and a couple of small pickerel were all that graced the bottom of the boat. As we were about to go ashore disgusted, Charlie saw a small flock of ducks fly up the lake, and after circling two or three times, drop into the marsh. "Let's give them a try, if we can't fool the fish." The boat was headed for the place where the ducks had lit, while Charlie shoved the shells into the gun, which we usually carried for such emergencies. He always did the shooting, having had a long experience in the field, while I had never shot at a bird on the wing. As we neared the rushes he rose carefully in the stern, while I backed water as silently and rapidly as possible. The moment the boat touched the dry reeds there was a whir, two explosions, a few feathers drifted slowly down to leeward, and we saw a duck drop. We had no dog, so I endeavored to retrieve, but failed ignominiously after fifteen minutes of wading in the cold water. Then we went ashore and got a dog, and found the game very quickly. Returning we rounded a little point, and there, within easy gunshot, were three teal in a little bay in the rushes. I grasped the gun and took deliberate aim, but just as I pulled the dog saw the game, made a sudden turn, and the shot went harmlessly over their heads, while he, eager to retrieve, jumped, struck on the gunwale, and over we went, men, gun, boat cushions, oars, dead fish, etc., into about three feet of water. The pointer was first to reach what answered for terra firma, a huge stump, where he sat shivering and licking himself, regarding me with the benign expression of his race, while we, after a hearty laugh, gathered together our floating duffle, and waded ashore. A few minutes put us to rights, and fifteen more landed us at the cottage, where we dried our clothes, and I told Charlie that I would shoot a duck if it took all winter.

The next day was Sunday. Early Monday morning I donned rubber boots, got the gun and shells, and just as the east was red with the rising sun, the narrow skiff shot out from the western shore on to the quiet lake. Ten minutes rowing brought me where something might rise, and the gun having been placed where most handy, the boat was backed slowly and carefully along the edge of the marsh. A mud-hen scurried out three or four rods away, but before the gun could be brought to bear, dove and made for deep water. A little further along another tried the same tactics but was not quite quick enough, and received a charge of shot, while at the report three woodduck rose, one of which fell to the left barrel. I think that I was much more surprised than the birds at the success of those two shots, and felt a great deal happier about it. Some minutes more of patient work and a mallard rose way out of range, circled and lit. I tried to back up to him, but the treacherous dry reeds rustled a warning, and though the gun spoke twice, he flew away unharmed. On again, around the head to the opposite side, and out to the little bay where the teal left us. That seemed to be more accessible from the shore, so I landed and walked out on the sandy point. Up from the rushes rose a teal, but fell back stone dead, making my last bird for that morning, as there was little good ground left, and I saw nothing more. Returning to the cottage to breakfast I received the hearty congratulations of Charlie on my success, and so ended a never-to-be-forgotten episode in my outdoor pleasures. PERCH.

A MISSISSIPPI CAT.

THIS paragraph, which is clipped from the New Orleans *Times-Democrat*, of Oct. 29, may read curiously to Northern sportsmen: "Panthers are very troublesome to the farmers around Letherton, Miss. Mr. T. J. Matthews recently had fifty hogs killed by them. Hunters have been after them, and succeeded in killing a number."

The region mentioned has always been a famous one for the largest American cat.

Nine years ago three others and I were hunting in that region. We had had great success, killing thirteen deer in three days. One morning, a heavy cloudy one for the month, November, we went out for a deer drive, but the hounds struck the trail of two panthers and put one up a tree. I got to the dogs first, and seeing only the head of the beast in a fork half hidden in a heavy growth of moss, I thought it was a coon and hesitated about wasting my charge of buckshot on such small game. I had that day a 10-bore, 11lbs. double gun, made many years ago for deer hunting, by N. N. Wilmot, of St. Louis, a famous gunmaker from 1850 to 1861.

Muzzleloader though it be, it will make a better pattern with "blue whistlers"—as the heavy buckshot are called in the far south—than any breechloader I ever saw, though I have had two made especially for deer in the past eight years; one by Lang, the other by Tolley, both good weapons. Walking about the tree to get a better view of whatever might be in it, for I did not believe old Muse, our best hound, would run a coon to tree when she knew we were after deer. I got a look at the ears and knew what it was. Calling the dogs behind me so that they might not be killed if I only crippled the beast, I fired. "Old Wilmot" was true to its traditions and made no mistakes, with 5¼ drams of coarse Curtis & Hall powder behind 9 blue whistlers in each barrel. With the explosion the head dropped back, the great hands relaxed their hold, the body hung by one claw, seventy feet in the air, and then the mighty cat fell—dead. Four of the shot entered the head and could have been covered by a 3in. circle. Five of them went clear through the skull and all. The beast was 9ft. 2¾in. from tip to tip, a large male.

MISSISSIPPI LOWLANDS.

WOODCOCK AND GROUSE.

WARREN, Pa., Oct. 24.—I see a woodcock query asked by your Connecticut correspondent, "Flin." He had tramped all day for this gamiest bird that flies "in all those moist, black-earthed spots so dear to them; yes, and so frequented by them but a year ago," and found only one cripple. And he wants the other fellows to tell him something. Out here we have the same experience of old haunts forsaken, probably because the birds have been all killed. But we don't give it up, we "hie on" till we find them. The woodcock is a queer bird, and a study for the naturalist and the shooter as well. His habits and haunts vary like the leaves of autumn. You may find him in the moist, swampy places, and you may flush him on the hillside where the ground is dry as dust. How he bores there for worms I don't know. That's his business.

I know the old theory of the books is that as the dry weather comes they come down from their hillside breeding places to the alder swamp and the willow copse to stay till the frosts drive them south. But all theories are sometimes upset. Only yesterday a friend and myself went out for woodcock and grouse. It was a glorious October day and we had rare sport. We hunted the usual places through without a feather. Then we ran the dog through thick willows lately grown on a bar in the Allegheny River, on which alluvial soil is accumulating year by year. And behold out came numerous "russet denizens of the bosky dell," but strangely enough they were a good way from the "dell." Still the soft earth and the food for these long bills were there; so the theory was all right.

These mottled beauties safely in bag we went to a dry, stony sidehill for grouse; and forthwith up went several woodcock with that welcome whistle. We bagged the bunch, all the time wondering at their strange choice of location, on a dry, stony hillside, where not a pint of water has run for two months. Yet the birds were strong and fat and glossy, as all October birds are. The broad river, with its swale and willow copse and lowland is only half a mile away and in sight. Yet these birds were evidently bred there and would have remained there till the frosts come. Had we stuck to their usual haunts perhaps we too should be asking, "where are the woodcock?" Possibly your nutmeg correspondent may find them as we found them if he will go among the scrub oaks and young pines. We have found them there this and other years just as plenty as in the "moist, black-earthed spots," where they are supposed to make their only home. And they stay there not simply in nesting and hatching time, but the season through, in many cases, if not disturbed by the dog and gun.

The folly of trying to domesticate ruffed grouse was demonstrated again here last spring. Mr. Cousins has an artificial hen hatchery on a large scale. Some one in his family found the nest of a grouse and took all the eggs, a dozen or more, and placed them in his hatchery. In due time the young grouse appeared, but lived only two or three days. If left to the mother grouse we might have lost some powder in taming them in the only practicable way.

The woods in this section are still full of squirrel hunters, who pot a grouse when they can. Few seasons have been better for game, and guns and gunners are busy. Since September 1 our gunsmith, Mr. Cone, has sold over 1,200lbs. of shot and powder and shells in proportion, with divers guns, mainly of the cheaper grade. The single semi-hammerless of the American Arms Co. has a large sale.

Deer hunting has hardly commenced in this neck of timber. Hounding used to be frequent, notwithstanding the law was against it, and many deer were killed in the river. But the practice is growing less common year by year. Still-hunting is very little practiced till the snow comes. Then we have venison in the market and many saddles are shipped out of the State. PENN.

OHIO.—Jules Vautrot, Jr., Game Warden for Trumbull county, has, under the law passed last winter, appointed game policemen as follows: E. L. Eggleston and James M. Hull, Warren; J. L. Kennedy, Howland, and A. C. Fauss, Mesopotamia. It is the duty of these officials to see to the strict enforcement of the law. Game Warden Vautrot insists upon this.

ADIRONDACK DEER.

Editor Forest and Stream:

The open season for deer shooting in this State, which closed yesterday, has been, taken all in all, a fairly successful one for hunters. Thanks to the section in the revised game laws which provides that only three deer can be killed in a season by one hunter, and prohibits the transportation of more than one deer belonging to the same person, the despicable practice of slaughtering deer for the market and for money has received an effectual damper, and the chief incentive being removed, the destruction of the animals has, in a measure, been checked. Certainly the slaughter has not been as great as when the use of hounds was permitted during the entire open season. The present law regulating hunting deer with dogs is the result of a compromise between the advocates and opponents of the practice, and most sportsmen in this section think it is open to criticism in many respects. In the first place the better class of sportsmen in Central New York are unconditionally opposed to hounding deer. Secondly, the opening of the season for hounding as early as Sept. 1 is objected to on the grounds that the deer, the does more especially, are not in a fit condition to run, and it is cruel to force them to do so in hot weather. Thirdly, the hounding season closes Oct. 5, just at the time when the deer are becoming fit for venison, they are not, as a general thing, in their prime until a little later in the season than that even.

But in spite of its faults the new law has operated better and given better satisfaction than many of us feared it would. One of the good results has been to distribute the deer killed more equally among the many parties visiting the Wilderness, and it is safe to say that more amateur hunters have had shots at deer this year than in any season previous. The numerous pot-hunters who with their packs of hounds scoured the woods and slaughtered hundreds of deer for the markets two and three years ago, have not appeared. The members of the Bixby Club have killed twenty deer this fall, and about the same number have been taken at and near Jock's Lake. A party of seven hunters from New Haven, Conn., killed ten deer on Fourth Lake of the Fulton Chain. As far as can be ascertained about thirty have been killed on North and South Lakes and Black River and probably fifty or more in the Moose River region. Reports from the northern part of the Wilderness state that the hunting there has also been good. PORTSA.

UTICA, N. Y., Nov. 1.

Editor Forest and Stream:

Up to Sept. 15 I think the dogs were kept pretty securely fastened. As soon as that date arrived all hands, dogs and men, were off for a hunt. The first day resulted in the killing of two deer, one said to be a yearling, the other a very small spotted fawn which, from all accounts, was of the size of a hare. It fell before the rifle of a gentleman from New York. He was very much elated, but a friend in the hunt advised him to get the skin out of sight as soon as possible, as it might be troublesome evidence. I think quite a number of fawns were killed about here. Soon after the above hunt three or four parties, numbering in all twenty or more, with half as many dogs, were in camp at the Upper Ausable Lake two weeks (some three), and secured three deer, I think. They report deer more plenty than ever before; but that talk is only to keep their courage up and make themselves and others believe that it is the result of hounding. I have been in the woods a good deal of late, and I know I never saw so few deer tracks as this year. Since the 5th of October I think but one dog of this place has been fastened. I know of one deer they ran down and killed and ate. One party has been twice in the woods "still-hunting" with dogs, and killed three deer, perhaps more. They are cautious about telling how many they kill, lest some one should know when they reach the limit of three deer. A party was out Friday last but got nothing. Out yesterday, killed one. Reported on their return that they were out partridge hunting and came across the deer. But the story is "too thin to wash" with people who know them. Not a day passes that I do not hear the hounds after deer, some days two or three races are in hearing at the same time. These are facts, and Dr. Ward and his friends should spend a few weeks here at this time. They would never wonder at the difficulty they might have in starting a deer in season. AMRACH.

KEENE VALLEY, Oct. 21.

SHORE BIRD NOMENCLATURE.

Editor Forest and Stream:

Will you kindly allow me to answer the questions of your correspondent, "Beach Haven," in your issue of Oct. 21, a little more positively, and—permit me to say—a little more accurately than you have done in the same issue? I have had plenty of experience in shooting on Cape Cod, and am professionally well acquainted with our shore birds.

The "black-breast" is one of the names for the golden plover (*Claradims dominicus*), not for the black-bellied plover (*C. squatarolo*) which, as far as I know, is universally known as "beetlehead" from Cape Cod northward. The "grass bird" is the "jacksnipe," "kicker," or pectoral sandpiper (*Trirga maculata*), though the name is also applied to one or two other less common species of small waders, among them the white-rumped sandpiper (*T. fuscicollis*) and the buff-breasted sandpiper (*Tryrgites subruficollis*). The "summers" are, of course, the smaller or "summer" yellowlegs (*Totarus flavipes*). These names are not universally employed on Cape Cod, and in fact the whole nomenclature of the article in which they occur struck me as being that used by the shooters of Boston and vicinity rather than that of the native "Cape Codders." For instance, a thoroughbred Cape Cod gunner from Orleans or Chatham calls the golden plover a "toadhead," and seldom speaks of a "summer yellowleg," much less a "summer," *tout court*.

The immense variety of local names that migratory birds like our waders receive in passing along the coast is a very interesting study. Much curious and interesting information is to be obtained from the study of such names as these, and I should be glad to see the subject taken up systematically.

In the mean time I should be glad to hear, through your columns, from any one who can tell me how far the use extends of the local name "fall snipe," as applied to the swarms of young red-backed sandpipers (*Tringa alpina pacifica*) that come upon the New England coast late in the autumn. I have heard the name used in the neighborhood of Portland, Me. On Cape Cod, I believe, they are called "winter oxeyes." JOHN MURDOCK.

U. S. NATIONAL MUSEUM, Washington, D. C.

[In stating that the "black heart" was a name for the blackbellied plover (*C. Squatarola*) we gave the name as we have heard it applied. The name, however, it appears from the above communication is, like many other such appellations, in different localities applied to different birds. There is no keeping up with the vagaries of ornithological nomenclature in use by gunners and residents in different localities. Like the names of fishes and snakes one individual may change its name as often as a confidence swindler, and travel about under as many aliases as a post office fraud. We understand that the editors of a new dictionary, after considering the advisability of attempting to define all the local terms applied to birds, beasts, fishes, reptiles and insects, gave up the appalling task; and so we may not look for any help from that source.]

NEW JERSEY COAST RESORTS.

Editor Forest and Stream:

One of the best resorts for fishing and gunning has just been completed by Mr. Humphrey Martin of Manahawken, N. J. The Pennsylvania Railroad Company has within the past year built a road from Manahawken across the bay to the sea shore running to Barnegat lighthouse, north, and Beach Haven, south, and Mr. Martin, who is one of the best known gunners on the bay, has erected a house of one story and 20x40, with bunks for twelve persons and divided off into sleeping room, eating room and kitchen. The house is located across the bay and within ten minutes row of all the best gunning points. The fishing at the location selected is the best in the bay, the waters in front of the building abounding in season with sea bass, weakfish, sheepshead and striped bass. The writer of this two weeks ago took a striped bass not 50ft. from the house weighing 5½lbs. Oysters, clams, hard and soft crabs and terrapin are to be taken in abundance. Arrangements have been made with the Pennsylvania Railroad by which their trains stop directly in front of the house, and connect with trains leaving New York and Philadelphia on Mondays, Wednesdays and Fridays, so as to arrive at about seven in the evening. Leave New York by Central New Jersey Railroad at 1 P. M.

Formerly one was obliged to put up at Manahawken and starting out at three in the morning row three miles across the bay and the same on returning at night. The building of the road has not disturbed the birds, and broadbills, sprigtails, baldpates, mallards, brant, black ducks and geese are plenty.

There is no place where better sport can be had, and at a reasonable expense, guides, sneakboats and decoys are provided. CENTRAL.

These addresses of equipped gunners of the New Jersey coast, with the shooting points at their command and their rates, are given by the *Coast Pilot* of Cape May: *Cape May City*—Eighty miles from Philadelphia, by West Jersey Railroad, via Market street wharf. Aaron Schellinger, Jerry B. Schellinger, Charles Schellinger, Joseph Hand, D. W. Pearson, James Clark, E. O. Taylor, F. Sidney Townsend, Col. J. L. Lansing, Clark Brothers. Equipped gunners. Rates, $2.50 per day and board. *Cape May Court House*—Sixty-nine miles from Philadelphia, via West Jersey Railroad. Chas. E. Foster, Wm. H. Foster, E. C. Wheaton, S. F. Hewitt. Equipped gunners. Rates, $2 per day and board. *Mayville*—One mile from Cape May Court House. Lewis Ludlam, Benjamin Hawkins. Equipped gunners. Rates, $2 per day and board. *Dennisville*—Four miles from Seaville on West Jersey Railroad. Rates, $2 per day and board. *Townsend's Inlet*—Via Seaville. Rates, $2 per day and board. *Tuckahoe*—Six miles off Woodbine station on West Jersey Railroad, total distance sixty-two miles. Rates, $2.50 per day and board. *Beesley's Point*—Reached via Pleasantville, West Jersey and Atlantic Railroad, total distance sixty-seven miles. Rates, $2.50 per day and board. Gunning resorts in Cape May county are in and about the various sounds and thoroughfares, as Cape Island Sounds, Grassy Sounds, Jarvey Sounds, Cresse's Thoroughfare, Great Sounds, are well-known and available gunning points in this county. *Burlington county*—Available gunning points in Little Egg Harbor Bay, accessible from Tuckerton: Gaunt's Point, Gaunt's Cove, Jerimey's Point, Jerimey's Cove, Rose's Point, Rose's Cove, Hester Sedge, East Sedge, West Sedge, Johney Sedge, Good Luck Sedge, Shelter Island, Parker's Island, Middle Island, Storrey's Island, Hester Island, Bunches Island, Big Bunches, Barrel Island, Goose Bar, Bunton Sedge, Little Island. *Toms River*—Equipped sportsmen with yachts. Rates, $5 per day and board, boats and equipments.

SNARED GROUSE ON THE ERIE ROAD.—Following is copy of a letter addressed to the Rockland County Game Protector: "NEW YORK, Oct. 2.—Mr. Joseph H. Godwin, game protector, Kings Bridge, N. Y.: Dear Sir—You will please to remember that last year, and the year previous, I drew your attention to the fact that the trapping of partridges was carried on very extensively in Rockland and Orange counties, this State. This year it is done as extensively, if not more than before, but the trappers have moved their shipping station. Having hunted last week in both the above named counties in company with Judge ——, of Brooklyn, we were told that these trappers had made Greenwood their shipping point, Greenwood being a small station on the Erie Railroad, about four miles this side of Turners. We were also informed by one of the baggagemen on the Erie Railroad that regularly, if not every morning at least every other morning, these trappers shipped one box of trapped birds from the above named station. I have promised Judge ——, who is a thorough and enthusiastic sportsman, to write you at once, and endeavor to stop this outrageous traffic. Shall be pleased to hear from you in regard to this matter. Truly yours, B. G. C."

GUN TINKERING IN THE SWAMP.—The day was fine, the sky almost cloudless, the air balmy for October, and with just breeze enough to make walking pleasant. I shouldered my gun about 2 o'clock and set out for a ramble. I was entirely alone, I did not have even a dog to keep me company. I hunted up the road that led to the island and walked on briskly, too fast, in fact, for I started several partridges from the road that I might have got a shot at if I had been more on the lookout. You remember, perhaps, that when you and I were on that same road, just before we got to the clearing in the woods your dog started one that we did not get. Well, I raised him again right there, and followed him in the same direction, with the same success. However, a little piece further on, just as I crossed the brush fence one ran across the road and he was soon placed in the other pocket. Now came the turn of luck. I had in my mind to cross that swamp that you and I tackled late one afternoon, where we nearly got lost. I had heard of an old road leading through the woods, coming out at "Scrabbles," but when I came to load I found I had dropped the plunger (which, by the way, is a home-made affair), and I spent over half an hour looking for it in vain. Here I was in the midst of a laurel woods, three miles from home four cartridges in my pocket, and a useless gun. I had not the courage to face the swamp and the bears in that style, so I had nothing to do but retrace my steps. I took an inventory of my pockets to see if there was anything that would do for a plunger, and to my great joy found a rusty crooked nail, but in straightening it it broke, and neither piece was long enough. I had gone ahead two hundred yards, when I saw six partridges sitting in a birch tree eating buds. Imagine my feelings. I got excited and resolved to make that nail work or know the reason why. I broke it again, put one piece in, turned the head of the nail in upon that, and to my joy found that the gun would shoot as well as ever. But the partridges, oh, where were they? It was now 4 o'clock, and I know if I was much longer there would be an old horn tooting in the neighborhood. So I kept the road. As I was coming along to the brook, right by the mill another bird crossed the road. My combination exploded the charge and another bird was added to the two already bagged. I had seen twenty partridges, and brought home one in each pocket and one in my hand.—B. E. L.

THE LOWELL (MASS.) ROD AND GUN CLUB went on the annual side-hunt Oct. 21 and 22. Capt. Bates's team scored 30,250 points; Capt. Knowles's team 16,685. On Oct. 26 the dinner followed. The members assembled at the American House. The post-prandial exercises were introduced by President E. W. Lovejoy, who presented Hon. George A. Marden as chairman of the evening. The latter accepted the post with brief remarks, and called upon Mr. Knowles, captain of the losing side in the hunt. Mr. Knowles said that luck had been against his side. In behalf of his men he challenged the winning side to a clay-pigeon shoot for an oyster supper. Captain Bates made a ready response, accepting the challenge. The chairman expressed himself as pleased to have the challenge accepted, and suggested that clay-pigeons would be likely to form a part of the bill of fare for the supper. A humorous description of a fox hunt was given by Mr. John Faulkner. There was some rallying about the Fort Hill Park fund at the expense of E. A. Smith, who was also eulogized as the coon hunter by Thomas R. Garity. Wm. S. Greene responded to a call for remarks upon the "didactic and moral aspect of hunting." The good results to be derived by the city from such an organization as the Rod and Gun Club were dwelt upon by George H. Stevens. The chairman thought there was not much need of anxiety in regard to the useless slaughter of game by the club. They were not so much nimrods as middlemen. Hon. Charles H. Allen told a number of stories of the far West. He remarked that he had been out there as a committee to see if any of the Indians had got away since the visit of the last committee. The lying of hunters, he said, was as nothing compared to lying in the boundless West, where the liar was found in all his native luxuriance. This was illustrated by a number of yarns. Hon. Jeremiah Crowley expressed regret that he had been introduced as a politician, for he was not after office now. It was a gathering of hunters. Marden, Allen and Haggett were hunters, and the speaker didn't know how soon he might be. W. A. Lang and A. A. Haggett made remarks, and Joseph Smith, of the *Citizen*, responded for the press. A vote of thanks was passed to Albert Wheeler & Co. for donations received, Jeremiah Crowley sang a song, and the company dispersed.

FIRE HUNTERS' LUCK.—Antimony City, Ark.—Two hunters had quite an odd experience a few nights ago while fire-hunting near this place. They were looking for deer with their fire pan blazing with fat pine, when suddenly they were startled by a peculiar whirring sound above their heads which lasted for several seconds, and then, as they were looking upward, a bird of apparently large proportions came within the circle of their light and settled on the ground, four or five yards in front of them. They thought it not worth a rifle ball and threw a stone which barely missed the bird. It immediately took wing and flew some 25yds. and lit again and the same performance of the hunters throwing at it and the bird flying a few yards and lighting was kept up for a dozen times, when a lucky throw killed it and on their picking up their game it proved to be nothing more nor less than a hen mallard.—W. F. M.

For several years it has been known to the sportsmen of the vicinity that a monster moose has been roaming about the Rangeley Lake region. It has been the ambition of all the hunters to shoot this monarch of the forest, which has been distinguished of late years by the name of Jumbo. Several hunters have succeeded in getting sight of the moose, and he has many times been fired at. Some of the backwoodsmen asserted that the old fellow must carry pounds of lead in his body, but that he had a charmed life and could not be killed. A gentleman who has just returned from the Rangeley region told a representative of the *Press* last evening that the old moose has at last met his end. He was shot by Elmer Thomas, a noted guide and captain of a steamer on Kennebago Lake. The great moose stands 18½ hands high and weighs from 800 to 1,000lbs. His antlers are said to be immense, and Mr. Thomas has been offered $75 for them and the head. The moose must have been many years old, and is probably the largest ever shot in Maine.—*Portland Press.*

DON'T SUFFER COLD TO ACCUMULATE on cold until your throat and lungs are in a state of chronic inflammation. Attack the first symptoms of pulmonary irritation with Hale's Honey of Horehound and Tar, and achieve an easy victory. PIKE'S TOOTHACHE DROPS cure in 1 minute.—*Adv.*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

IN NORTHERN MICHIGAN.

A JOLLY party of four left a town of Central Ohio on July 2, 1882, for a month's trip to the lakes and woods of Northern Michigan. At Grand Rapids we added another member to our party, and reached Elk Rapids in the evening of July 3, stopping at the Lake View Hotel, which is close to the bay, and affords a beautiful view of the water. Here we were told there was good bass fishing within 200 yards of the house and trout fishing within easy reach. There are plenty of rowboats and sailboats to be had at reasonable rates and good guides to the fishing grounds. On the Fourth some of our party went over to Old Mission, across the bay on the peninsula, between East and West Traverse bays. The next morning was beautiful to behold, and we lost no time in getting our traps on board the Queen of the Lakes.

And now, as we are standing on the cabin deck watching the boat get under way, I will describe our party. First, there was Jack, the originator and leader of the expedition, and the only one who had ever spent a summer among the black bass and speckled beauties of Northern Michigan's lakes and streams; a whole-souled, generous good fellow, and a natural-born fisherman. Next came Paul, the sanguine, who was always just going to catch a big one, but seldom did. Frank was the lone fisherman, who always wanted to go it alone and who seldom came back to camp empty-handed. Bob was the ladies' man, with an extra curl in his blonde moustache and his white, soft fisherman's hat set jauntily on one side. Lastly, your humble servant.

We moved up through Elk River into Elk Lake, a beautiful sheet of water and affording good fishing. Through Elk Lake into Round Lake, separated from Elk Lake by a long sandy point, which is a favorite camping place for parties from Elk Rapids. From Round Lake we entered Torch River, and there we acted like boys demented. It was the effect of something we had never seen the like of, and we could only express our emotions by singing, dancing and "monkey shines." The river is five miles long and from seven to fifteen feet deep, and the water is so clear that you can see every foot of the bottom. It is narrow, only sixty feet wide, and the bottom is of beautiful white sand. We could see perch, bass, sunfish and great pickerel darting around through the translucent depths, and we were all nearly wild with excitement. We expressed our feelings in such exclamations as: "There he goes! just look at 'im!" "Ain't he a daisy!" "Oh, here's one, here's one!" "Oh, Frank, shoot that big pickerel!" "There he is, just behind that big log!" At the same time we were running from one side to the other of the boat, fearful lest we miss something. The captain was a jolly old tar, and nearly split his sides laughing at our antics; he said we made more noise than a party of girls on a lark.

From Torch River we steamed into Torch Lake, the queen of the chain and the most beautiful inland lake in Michigan. The water is a beautiful shade of green, growing darker in color as the water becomes deeper. It is so very clear that you can see the bottom quite plainly at a depth of twenty feet, and our captain said he had experimented with a white plate and line, and had seen the plate at a depth of forty feet. Torch Lake is eighteen miles long and from one to three miles wide, and is celebrated for kicking up a heavy sea on short notice. Its greatest depth, so far as known from the captain's soundings every winter through the ice, is 296 feet. At Clam River Landing, six miles from the foot of the lake, we disembarked, and the steamer went on her way toward the head of the lake.

Then came our first piece of bad luck. We had expected to connect with a small propeller for the thirteen miles between us and Grass Lake, our destination. But the boat would not be back before evening, so we decided to leave heavy baggage for the tug, and taking our tents and what we would need to make camp with we embarked in our two clinker boats, brought from Elk Rapids, and started up the river.

Our plan was to row up to Grass Lake, select a camping place and get fixed up before night should overtake us. We rowed up through the river, which is only half a mile long, into Clam Lake, and soon espied Thayer's Landing, where we decided that Bob should go up and see about dinner, while the rest should try the fish. So Bob put on his most bewitching smile, and giving his hat a tilt and pulling up the tops of his hip boots started up the path toward the cottage on the hill. Jack, Paul, Frank and I were hastily jointing our rods and getting our lines in shape, each inwardly determined to capture the first fish, yet all trying to appear supremely indifferent. Jack went off along shore hunting for crayfish or clams for bait, while Paul jumped into one of the boats to try his luck trolling. Frank and I, seeing a woodpecker on a tree near by, grasped our revolvers and commenced shooting at him. He was a very accommodating bird, for he remained stationary until four shots had been fired at him. At the second round we fired simultaneously, our pistols making but one report, and Mr. Woodpecker came tumbling to the ground. We did not dispute as to whose shot took effect, but hastily dissecting the bird, we placed portions on our hooks, and standing on a log near shore, cast our lines as far out as we could. Frank's hooks had hardly touched the water when a pickerel nabbed it, fought for a minute, and was reeled in, to the delight of the luckiest man in the party. We all stopped fishing then, and standing around our first fish, hefted him and guessed on his weight. He was at least a 4-pounder then, but when Frank held it up on his pocket scale it registered 3lbs. light. Just then Bob came rushing down to us puffing like a locomotive and declaring that he had just met the prettiest girl in all Michigan. We were rather skeptical, and Paul, calling Bob's attention to Frank's fish, remarked, "that it was prettier, in his eyes, than all the girls in Michigan." We then walked up to the house and were quite taken aback by Bob's beauty, who was indeed very pretty, and as fresh, in her white dress with flowers at her throat, as a May morning. Very soon we were invited to partake of as charming a dinner as I ever sat down to. The boys afterward never grew tired of talking of "those lovely strawberries," "that broiled chicken and cream gravy," "beautiful bread, honey and cream," and, above all, the charming young hostess who waited on us. After dinner we ran shouting and frolicking down to our boats, and, I suspect, quite shocked the young lady. When we reached the landing we observed that the wind was blowing in our favor, so we cut brush for sails, and embarking were soon speeding up the lake.

We soon traversed the fifteen miles that lay between us and the head of the lake, and then we were in a quandary; we couldn't find the river leading to the next lake. Clam Lake had rushes and grass growing in the water for a distance of a quarter of a mile from shore, and the whole upper end of the lake was boggy and covered with grass, but with frequent openings, which looked as though they might be the river, but on entering each and exploring a little, we would be forced to back out and try another. We explored for two hours, often finding the channel, which always proved to be the one we didn't want. It began to grow rather interesting to us about that time, as the wind kept increasing in force and the waves splashed into our overladen boats a little too frequently to be pleasant. We had about come to the conclusion that our map was a fraud and that there was no channel between Clam and Grass lakes, when what should gladden our eyes but a tug a half mile to our left, steaming down the channel we were seeking. We fairly shouted for joy and lost no time in directing our bows thither. The channel, Grass River, as it is called, is only about twenty-five or thirty feet wide and runs quite rapidly. It took a deal of hard pulling before we emerged from it into Grass Lake, the haven of rest that we had been so long seeking. But there was no rest for the weary, for as soon as we got into the open lake we found a much heavier sea running than we wished to encounter; but as it was now getting late in the afternoon we decided to make the tug landing, which was an old scow with a shanty on it, two miles up the lake on the east side. It was make the scow or turn back to the river, for the water was shallow for a hundred yards from shore and the heavy groundswell would have filled our boats in short order had we attempted to land.

We finally made the scow, but our tent and other traps were well soaked. As Paul, who was not much of a boatman, set his foot on the deck of the scow, he heaved a sigh of relief, and remarked, "Well, boys! they can all talk about life on the ocean wave, and all that sort of thing, but I've had as much as I want! I know when I get enough! Land's good enough for me!" Of course we all laughed at him, but I think we were all quite well satisfied to be on the dock. It was now after 6 o'clock, and while we were debating whether to pitch our tent on shore near the landing or to occupy the shanty the tug hove in sight. We found all our traps aboard, and after consulting with the captain we took passage to our proposed camping ground. The sandy beach shoaled out so far that we could not get our loaded boats within ten feet of shore. After all our traps were safely landed the captain and crew bade us "good luck." Jack and Paul went to work putting up the tents, and Bob and Frank were detailed to cut hemlock and cedar boughs for beds. I soon had hot coffee and a lunch of bread and butter, cheese, cold corned beef, chowchow and canned fruit, and ranging ourselves around the cloth, seated on chunks or on the ground, as suited our fancy, each with his tin cup and spoon, tin plate and knife and fork, we partook of our first meal in camp. "Here we are," said Jack, "on the shores of Grass Lake, in the wilds of Michigan; the very spot we have been thinking and talking about for the last six months," and, raising his coffee cup, continued, "I drink to the health, happiness and good luck of this party and this camp, and suggest that we call it— Confound those bloody mosquitoes! Jeeminy Christmas! Goodness gracious! Who-o-pe-e! Boys, I can't stand this," and jumping up he executed a war dance and his arms flew about his head like a windmill. We were disposed to make merry at Jack's flow of eloquence thus cut short, but soon had to turn all our attention to the unbidden guests; and swinging a branch of cedar around our heads with one hand we hastily dispatched our evening meal. We never found out what Jack had intended to suggest as a name for our camp, as he said the name he had been thinking of "completely vanished under cover of the attack by mosquitoes;" so we decided to call it Mosquito Camp.

We had an 8x10 wall tent to sleep in, and an A tent for stores. Both tents up and boughs enough cut to make a very comfortable bed, we spread blankets for one broad bed, and, this finished, had leisure to talk business. A rousing big fire was built, the night being chilly, though the 5th of July, and filling our pipes, we thought to smoke the mosquitoes away. But alas! we "reckoned without our host," as the "skeeters" seemed to enjoy tobacco smoke as well as we did, and would alight on our very pipes and amid a cloud of tobacco smoke sing more cheerily than ever. We tied handkerchiefs over heads, pulled up coat collars, got out pennyroyal and peppermint, but it was no go; we couldn't drive them away. Finally we crawled into our tents, and pulling the covers over our heads, tried to sleep, but our rest was much broken and the first peep of day found us very willing to crawl out. Bob, Jack and Paul went out to catch some fish for breakfast, and Frank and I went to work getting things in shape for the reception of their catch. About the time we had a good fire and had washed up our dishes left from the night before, got our coffee ground, our breakfast bacon and canned baked beans ready to cook, the boys came in. They were much disappointed at not getting any black bass, but had several large pickerel, which we proceeded to clean and fry for breakfast.

Our faces, necks and hands showed the effects of the onslaught of the mosquitoes, and Jack's face was so badly swollen that we were all more or less frightened. His throat, just under the jaw, was puffed out as large as my fist, and his eyes were swollen nearly shut. He tried ammonia and camphor without much benefit, and then prepared a solution of soda and kept cloths wet with it on his face and neck, and in a few hours was considerably better. He was more susceptible to the poison from bites than the rest of us, although we were all more or less swollen and each bite itched so that we would continually scratch, even in our sleep. After breakfast we all went fishing for black bass, Bob and Frank in one boat and Jack, Paul and I in the other. We went up to the mouth of Intermediate River, which we had been informed was a splendid place for bass, and anchoring commenced casting. We tried frogs, minnows and pieces of meat for bait, but didn't get a strike. So we pulled up anchor and started up the north arm of the lake, I rowing, Jack casting from the bow and Paul trolling from the stern. Suddenly Paul exclaimed "I've got 'im! I've got 'im!" and commenced pulling in his troll as fast as he could, at the same time flopping around so as to nearly capsize us. "Steady! steady!" said Jack, but he might as well have talked to the winds, as Paul was so excited he wouldn't have heard a cannon shot, and kept on hauling in as for dear life. When within about five feet of his fish, he jumped up, and giving a jerk landed a bunch of weeds together with a small pickerel about a foot long in the bottom of the boat. Paul was completely disgusted, and said: "Grass Lake may be all right if you are fishing for grass, but if we came here after fish I think we have come to the wrong market."

We trolled on up to the head of the arm without getting anything better than weeds, and there found Frank and Bob catching sunfish and ring perch. They were baiting with worms, and already had thirty nice fish in their boat, having thrown all the small ones back into the lake.

By this time it was nearly noon, and we all started back toward camp, trolling in deep water for lake trout; we soon gave that up, however, as the wind was rising and we wished to get to camp as soon as possible. When we got into the open lake we found the wind had kicked up a rather heavy sea, and was blowing directly against us, which made hard work getting back to camp, and again nearly frightened Paul out of his wits. We dined on sunfish that day and liked them better than pickerel.

About 3 o'clock we again tried the fish and returned at 7 with only two bass, but half a dozen good-sized pickerel. During supper we reviewed the situation and came to the conclusion that we had not struck nearly so big a bonanza as we had anticipated, but that we would give it another trial before passing judgment.

Jack then said that he and Bob wanted to go up the Cedar River next day after trout. Frank said he wanted to explore a little and Paul remarked that he had seen an elegant place for bass down below, and if Dick would go with him he knew he could catch some. I agreed to the proposal, and so, everything being settled for the morrow, we went to work to make our tent proof against mosquitoes. We made no large fire that night, as we thought the bright light the evening before had drawn the pests from other points. We fastened the tent down as close to the ground as possible and then piled sand all around the edges; after getting that done to our satisfaction we drove the mosquitoes out of the tent the best we could, and then having fastened the flap down tight managed to pass a tolerably comfortable night. Next morning Jack and Bob each took a small lunch, and getting into one of the boats were soon on their way to Cedar River, which empties into Intermediate River, about three miles above Grass Lake. Frank took the other boat and started off on his expedition, promising to be back by noon, and Paul and I cleaned up the kitchen and set things to rights generally.

About 9 o'clock a native came into camp, and after the usual salutations and weather talk told us about a bear that had been seen that morning about a mile from our camp. It seems that a farmer had started out quite early that morning to his work, and, walking along absent-mindedly, almost before he was aware of it stood face to face with a nearly grown bear. He was unarmed, and thinking to frighten the bear away, he gave a sudden yell and swinging his hat, made a jump toward the bear; but the bear, instead of being frightened, met him half way, and administering a blow with his paw that knocked the farmer nearly senseless, turned and walked off into the woods. A neighbor happened along just in time to see the grand finale, so I think it will be many a day before the victim hears the last of his trying to scare a black bear.

About 11 o'clock Frank returned with a fine string of sunfish, great large fellows that would weigh three-quarters of a pound apiece, and reported having found a new trout stream down the lake. He had no trout to show for it, but said the mosquitoes were so numerous he couldn't fish it. When we spoke of the gun shots we had heard he said that he had been trying to kill a loon, but had come to the conclusion that loons were not made to be killed with a shotgun.

After dinner Paul and I went to his "elegant bass hole," and to a good many other "elegant holes," but not a bass did we catch; and after I got tired rowing him around (he said he couldn't row) we went back to camp. Jack and Bob got back about 6 o'clock with thirty-five nice trout. Frank and I had never eaten any fresh brook trout before. At supper the boys gave us an account of their trip.

We all decided to go trouting next day, Frank and Jack to the stream Frank had found that day. Paul, Bob and I rowed up to the tug landing and went up to a barn that was near to dig some bait. We had brought a cigar box full of worms from Elk Rapids, but they were almost gone. Well, we commenced digging, and dug and dug, but got no worms; we thought it strange we did not find any, for it appeared to be just the place for them, but we still kept digging, not giving up until we had dug nearly all over the whole clearing in spots. Disgusted we returned to the boat, intending to send to Elk Rapids by the tug for more worms. We had been told that there were no worms in Northern Michigan, but we considered it a yarn; but the captain told us that morning there were some worms, but only where they had been planted by some one. We heard a shout, and, looking in its direction, saw a boat emerge from Intermediate River and come toward us; and on its closer approach we recognized a gentleman who had come up on the Queen the same day we did, and had gone on up Torch Lake on her. He told us that he had gone up to the head of Torch and then crossed over to Central Lake, procured a boat and guide there and had been fishing Central Lake for two days, catching all the black bass they wanted; had caught nearly a boat-load Thursday, frequently taking two at one cast. The guide corroborated all the gentleman said and added that there was a splendid camping place on an island about a mile from the foot of Central Lake, and on this island there were fish worms. We concluded we would not go after trout, but turned back and were soon at camp. Frank and Jack came in about noon, and when we had acquainted them with what we had heard it was unanimously decided to go to Central Lake. Bob and I went to Bellaire, three miles up the river, to engage a team to haul our stuff up opposite the island where we intended camping. When we arrived at Bellaire we learned that all the teams in town (there were only three) were teaming between Bellaire and Mancelona, making daily trips, and could not be procured for an outside job unless it was on

Sunday. As all the teams were then on their way from Mancelona, and would not be back until dark, we had nothing to do but await their arrival, which we did, and after much persuasion succeeded in getting one of the drivers to promise to be on hand next morning and haul our goods.

We returned to camp, and telling the boys of our arrangements turned in for the last night in "Mosquito Camp." DICK.

BLACK BASS IN THE JUNIATA.

THOMPSONTOWN, Juniata County, Oct. 26.—The small-mouthed bass were planted in this river less than ten years ago, and it was certainly a dark day for the so-called common fish, viz., suckers, mullets, catfish, etc.

As an instance of the bass's rapacity, as well as capacity, I saw, during the past summer, a 20in. bass with a 10in. mullet which it had gorged half way down its gullet, and which was so firmly lodged that the bass was held up in air by the tail of mullet, and the latter failed to give way. This bass had bitten off "more than it could chew," and in this dilemma was captured. The less ferocious fish in the river do not stand much chance of surviving, and have consequently decreased.

I think the principal enemy of the bass in this river is the outliner, whose work of slaughter goes on night and day. Another great evil in the Juniata is the common fish-basket, of which there are great numbers scattered along its course. How have the State authorities provided for their removal, or have they not moved in the matter? Are they dead to their duty or only slumbering?

In the line of minnows, we find the best bait for bass to be a small fish called shiner, they are named appropiately, and can easily be seen by the bass. Frogs, helgramites, mussels and crabs are also used with success.

Bass are caught here weighing from 6oz. to 5lbs., and rarely exceeding the latter weight. The manner in which a bass grasps a baited minnow is not generally known. If the bass is somewhat suspicious, it will first nose the bait, then quickly grasp it by the middle and deftly turn the minnow's head toward that awful chasm, its mouth, and proceed to gorge it. It is noticed that bass seem to have an "on" and an "off" day, as the fishermen say; one day they will be ravenous and take the bait greedily, and another day they seem to be fasting and keep their distance from the hook. It seems to me that I have always hit the "off" day when I have tried my skill.

Unless deep holes can be found near shore our bass fishermen prefer to go out in a boat and anchor in deep water, although at either end of a hole where the water begins to get shallow is generally an excellent place to cast.

Bass fishing is about over with us, and turtle hunting has superseded it. The bass will now have time to recuperate in numbers, and the fisherman will have time to tell his stories of those "whoppers" which snapped his line and hook and sped away. ONOJUTTA.

THE WHITE PERCH.

WHEN one has made a discovery there are often two queries which he propounds; one is, "I wonder how many others know this?" and, "Why didn't I know of it before?" I have just experienced the game qualities of half and three-quarter pound white perch and am surprised. Therefore these few lines, "hoping they will find you the same."

A month ago if asked what I knew of the white perch, the answer would have run about this way: A small fish which is a native of the brackish waters of the coast but lives as well in fresh waters, grows to a weight of 2lbs. occasionally, used as a pan-fish and is found in the markets from 4 to 6oz. in weight, good table fish; naturalists have given it many generic names, as *Perca Labrax, Morone*, etc., but they have agreed on *Americanus* as the specific one; Jordan calls it *Roccus americanus;* used to take them when a boy with a float and sinker. This would have summed it up except that American angling authors mention it in a perfunctory sort of way either to pad out the volume or as a concession to boyish readers, and therefore I have been more interested in the fish as a naturalist and an amateur epicure than as an angler. Its structural resemblances to the great striped bass and its difference from that splendid fish, which are not necessary to particularize here, are of interest to those who like that sort of thing, while a fried white perch on a hot breakfast plate instantly commands the attention of those who are fond of another form of pleasure. I will now add that the same fish, of fair weight, on a light fly-rod, gives satisfaction to a third class, and I belong to them all and so get a three-fold pleasure from one little white perch; catch him first, diagnose him, and then interview him after the cook has put on the finishing touches.

Last month a neighbor kindly allowed me to put a minnow seine in his millpond in order to take a few small white perch to send to my friend Count von dem Borne, the famous German fishculturist, and late in the day I saw some good fish rising to the fly and was told that they were larger specimens of the fish in question. A cloud of dust on the road, the barking of dogs and a fugitive coat tail going round a corner was all that a boy saw to base a rumor on that he saw a cashier on his way to join the American colony in Montreal. The boy was wrong, I was simply hieing homeward for my lightest rod and the corresponding tackle, and the speed was not as great as it would have been forty years ago, before age had improved my architecture by the addition of what is a central dome, when I lie on my back watching the stars wink through a bark shanty, but let us say there was a moderate degree of haste.

Four casts with a red-ibis and a gray-drake, when something struck the ibis, tail fly, and as the line came in easily another something struck the gray-drake, and then the reel sang. Confound a fish that will strike when you are reeling in another; one at a time is enough. Two little fish strain a leader more than one of three times their united weight. They gave some anxiety, but proved to be a sunfish on the tail fly and a white perch on the other, each the size of a lady's hand. More casts and a perch of three-quarters of a pound rose, was struck, and again the reel sang lively. Three times this fish leaped clear of the water and took line from the reel before it came to the boat's side and could be landed. This was repeated eleven times before the idea occurred that in fishing a private pond by permission a dozen fish was ample and more would be an abuse of hospitality.

A friend asked if they were gamy, and was told that I was surprised at their game and should henceforth rank them next to black bass of the same size. "Never mistrusted such a thing," said he. "Neither did I," was my reply, "but they are good fighters, better than the yellow perch by far, and are a new revelation to me as a game fish." My friend will soon try this pond to see for himself, and perhaps will tell us how they acted when on his rod. I felt that I had never been fairly introduced to this fish through the medium of fine tackle, memory only recalling an alder pole, a coarse line, a float and an ounce sinker, the ordinary tackle of boyhood. The white perch is game. FRED MATHER.

KEEPING MINNOWS IN AIR-TIGHT JAR.—Last Thursday (21st) to try how long minnows would live in a tight jar, I tried this experiment. Having a lot left over, I took two glass fruit preserving jars, capacity one pint, filled both two-thirds full of water, put in each two lively creek minnows, and stood the jars side by side on a shelf in the barn, one jar with no cover, the other with top screwed down on rubber washer and presumed to be air tight. My idea was to see in which jar they would live longer and how much longer. Well, nine days "done gone" and I've learned nothing. In both jars the minnows are in perfect order. If one set ever does die ahead of the other I'll report.—PISECO. Oct. 30.—The sequel put in its appearance just three hours after my posting to you. Word came in from the barn that the two minnows in the closed up jar were on their backs, and an hour after that both were dead. Those in the open jar are still all right. The length of time those in the closed jar lived was 8 days 6 hours. Having been confined to my room several days by illness, I have not been able to note more particularly. —PISECO.

SENSIBILITY OF FISHES TO PAIN.—Raleigh, N. C., Oct. 23. —In a recent issue I see an article on "The sensibility of fishes to pain." A friend suggested that it was possible that the salmon caught might have been bitten by an otter or other animal after being hooked. This is sometimes the case. We have known a Spanish mackerel cut in two by a larger fish while being hauled in, in trolling. However, we refer to a more remarkable case. Dr. M. M. Marshall, pastor of Christ Church in this city, states that while fishing Richland Creek, in the mountainous portion of this State, last summer, he caught a small black bass, and cutting off a piece of its flesh just above the caudal fin down to the back bone, about the size of an inch square for bait, he very soon thereafter caught the same fish on the hook just baited. The fish after the cutting had been thrown back immediately into the stream.—B. F. M.

THE BIG VERMONT BASS.—Philadelphia.—I have just returned from Vermont, where I looked up the story of the large-mouthed bass. Found many who agreed as to size and weight as published. The day I arrived one was caught in Lake Bomoseen on a trolling line weighing over 8lbs.; and just before a pike (or pickerel as they call them) weighing 17½lbs. Some pike of 24lbs. have been caught through the ice, but this is the best for a troll. These large fish show the results of Albert Smith's efforts to prevent spearing and net fishing. More and larger fish have been caught than ever before, and that is a wonder in these times. From 50lbs. to 60lbs. as a day's sport for two in a boat was a frequent haul.—NESHOBEE.

CAPE MAY, N. J., Oct. 30.—Roger McCavet and M. C. Berrell, while fishing near Cape May Point yesterday, were caught in the Rips, where currents from the ocean and Delaware Bay meet. The boat capsized. They clung to the bottom for nearly four hours and were rescued late last night by Messrs. Lee and Edmunds, who at great risk sailed a yacht among the treacherous breakers and after several attempts pulled the men aboard. Both were in an unconscious condition. Berrell has not yet recovered and his death is expected.

ALLEGHENY BASS.—Warren, Pa., Oct. 24.—The water in the Allegheny River is still unusually low. One consequence is that black bass fishing has seldom been as good. They congregate in the deep holes and are taken in large numbers by those who like the sport. At Corydon, near the New York line, is a high dam. The fish can't go up over it and so stay in the deep water below, where hundreds are hooked every day. Of course the fall rains will come soon and spoil the fun.—PENN.

BASS AMD BLUEFISH.—It is reported that large numbers of striped bass and bluefish have been taken on the south side of Long Island, east of the Great South Bay. They were taken in the surf at West Hampton by the fishing companies which have pound-nets there. On Friday last Mr. Robinson is said to have caught a striped bass in the surf at Moriches which weighed 80lbs., besides some two hundred large bluefish.

BASS IN THE HUDSON.—A couple of New Yorkers went to Tarrytown yesterday, and taking a boat, anchored a little off the lighthouse and began to fish, using sand worms for bait. When they came ashore they astonished local fishermen by displaying between 40 and 50lbs. of the finest bass ever seen about there.—*Times, Oct. 30.*

Address all communications to the Forest and Stream Pub. Co

NEW HAMPSHIRE.—During the recent visit of Governor Currier, a portion of his council and Major Thompson, secretary of state, to the state hatching house at Plymouth they found between 10,000 and 11,000 breeding trout in very fine condition in the ponds, and on the day of the visit Commissioner Hodge took over 100,000 trout spawn which he placed upon the hatching trays. This is the largest amount taken at one time since the establishment of the house. Over 300,000 brook trout have been taken from less than one-half of the trout, and it is confidently believed by the fish commissioners that as many as 600,000 will be taken the present season. In one of the ponds the California or rainbow trout were seen. There were some 2,000 of them weighing from one-fourth to one-half pound each, which were raised from eggs donated by Professor Baird in 1884. They are described as very gamy and spring spawners. It will be remembered that some three years since the fish and game commissioners established a small hatching house on Pike Brook, near the borders of Lake Sunapee and in the town of New London, leasing the site for the same at a nominal rental of $1 per year for a term of ten years. The cost of the hatching house erected was about $200. The first year the lake was very low, so much so that the trout could not ascend into the brook, but despite this drawback some 15 spawners were caught from the lake and placed in the tank, and from 11 of them some 25,000 eggs were hatched and placed in the lake. In 1885 the commissioners in the face of many obstacles succeeded in taking speckled brook trout enough from the lake to secure nearly 100,000 spawn. Later in the fall a new spawning bed was discovered, upon which were seen large quantities of trout which were pronounced to be a gigantic type of the oquassa species. Many people became interested in the discovery of this species of trout, and many inquiring letters and requests for specimens have been received from all parts of the country. Sixty specimens were taken last fall, from which some 100,000 eggs were hatched and returned with the fish to the lake. At the present time the commissioners, with the assistance of A. H. Powers, a veteran fisherman, are doing all in their power to secure trout from the lake. The speckled or brook trout cannot run up the brooks to spawn unless there comes a rain shortly to raise the streams, and to help the breeding the commissioners have taken fifty very fine specimens of brook trout from near the shore of the lake with the net in the night time, some of the number weighing from three to four pounds each. By this stroke of enterprise 50,000 spawn have already been taken from thirteen trout, some of the specimens yielding from 3,000 to 5,000 each, and there are trout remaining which will yield 100,000 more. At the Plymouth hatchery the largest yield which has been attained is between 1,000 and 1,200 from a single trout. Within the last few days arrangements have been made to secure the oquassa species in large numbers by netting them from their spawning beds, and last week while prosecuting investigations the commissioners found in water from three to four feet deep hundreds of these fish measuring 18 to 30 inches in length and weighing from two to seven pounds apiece. Their nets were not strong enough to hold them, but by using a small hook, spoon and fly rod, 65, weighing from two to six pounds, were fished out which had been placed in the tank. They will not be ready to cast their eggs until late in November. On Wednesday of last week Commissioners Riddle and Hodge, accompanied by Mr. Powers, proceeded to the spawning beds and were gratified with the sight of hundreds of these monster trout. In three hours' time they secured 27 specimens weighing 75lbs., and landed them safely in the tanks at the hatching house. The commissioners believe they have secured a bonanza for the State, and Messrs. Hodge and Powers, who have fished in many of the waters of the Rangely and Canadian lakes, affirm that they never saw so many and so fine a lot of trout and declared their equals are not to be found in this country. In addition to the trout six landlocked salmon have been taken weighing from 10 to 12 pounds each.—*Manchester (N. Y.) Union, Oct. 25.*

OYSTER CULTURE IN PECONIC BAY.—The muddy bottom of Peconic Bay, at the eastern end of Long Island, has never been an oyster ground because whatever spat may have been brought in with the tides was sure to die for want of something to adhere to. In 1880 Mr. J. H. Jenkins, of Riverhead, and others, began to see good results from some experiments in planting oysters in these waters and formed the Peconic Bay Oyster Association. But little was done in the following years except to plant a few and watch their growth in order to ascertain if there were no unusual obstacles to steady growth such as a succession of bad years caused by local influences. The results have been satisfactory and have proved that oysters can be grown successfully on the muddy bottom where no natural bed could ever exist. Last May 2,800 bushels of seed oysters were planted and at a recent meeting of the association it was proved that the business would be profitable. The 2,800 bushels have grown to be 5,600 bushels of a size suitable for the English market, which demands a small oyster, and these will soon be shipped to Liverpool. It will be seen that the oysters have doubled their size since last May and this is a fair growth. The association decided to engage in oyster planting more extensively and to engage in the business of shipping them to Europe.

THE FIEND EXORCISED.—Fort Wayne, Ind., Oct. 22. —I wrote you a few days ago that the fish ladders constructed in the dams on the Maumee River, in Ohio, were destroyed by the use of dynamite, but have since been advised that the ladders are all right and in good condition.—J. P. H.

THE FOREST WATERS THE FARM; OR, THE VALUE OF WOODLANDS AS RESERVOIRS. Being Les Études de Maître Pierre sur L'Agriculture et les Fôrets, Par M. Antonin Rousset. Translated by the Rev. S. W. Powell. Forest and Stream Publishing Co.

This is a translation of the famous French book, "Les Études de Maître Pierre sur L'Agriculture et les Fôrets" (The Studies of Master Peter about Forests and Agriculture). It consists of a series of conversations between a village schoolmaster and a peasant, Master Peter. They discuss the scheme proposed by the Government to put an end to the devastation wrought by the freshets. The proposal is to replant the hills with trees, and for this it is necessary to assume temporary possession of the pasture lands and remove the herds from them. This means—for the time being—loss to the peasants who own the herds. They are not willing to submit. They do not see ahead; they have regard only to to-day; the morrow may look out for itself. Master Peter represents this class. He makes a stubborn stand for the temporizing policy. The schoolmaster takes the other side. His argument is to ask questions. Master Peter is hard put to it to reply to them. The questions set him to thinking. When he finds the answers to them he meets conviction as well. In the end he actually argues himself around to the schoolmaster's way of looking at the subject.

It is a pretty duel of words. As an example of the art of convincing by asking questions, it is a masterpiece. One follows the argument as he watches the evolution of a plot.

But there is more to it than that. This subject of forestry, discussed by a peasant and a pedagogue in France, is of present and very great moment to us here in America. The schoolmaster's questions are as pertinent and suggestive here and now as they were then. They are questions of national importance. As a nation we shall have to answer them. The forests which protect the headwaters of the Hudson and the Missouri are, according to the most trustworthy accounts, seriously in danger. It is to be hoped that such a public sentiment may be awakened that we may, as a people, soon take up in earnest the work of forest preservation and restoration.

The book has a lesson for individuals as well. It gives an admirable exposition of the dependence of agriculture upon woodlands; and sets forth the intimate relations between forests as nature's great water reservoirs and the fertility of the fields. A blind ignorance of these principles has cost the farmers of America many millions of dollars. It is hoped that the Studies of Master Peter may prove of use in stirring up and giving direction to public interest in this very important matter.

FIXTURES.

DOG SHOWS.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 15 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

April 12, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Nov. 23.—Fifth Annual Field Trials of the Robins Island Club, Robins Island, L. I. Open to members only. V. Watcroury, Secretary.

Dec. 1.—First Annual Field Trials of the Irish Setter Club, at Salisbury, N. C. W. Dunphy, President, Peckskill, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4236.**

THE AMERICAN COURSING CLUB.

[From a Special Correspondent.]

GREAT BEND, Kansas, Oct. 22.—The meeting of the American Coursing Club, which began Oct. 19, closed yesterday. On Monday, Oct. 18, most of the dogs were at Great Bend, and a great many visitors were already on hand. The drawing was held open until Monday night, pending the arrival of Dr. Van Hummel, of Denver, who had announced that he would be present with a number of dogs. A telegram from him, however, brought word that he was detained by sickness of his wife, and would, therefore, not be at the meet. The drawing was then completed.

The grounds selected by the managers are on the Cheyenne Flats, seven miles north of Great Bend, and are comprised within the limits of the Uhl and Carney ranch, which consists of seventeen square miles, mostly under fence. The club could not have found better grounds, for the flats, lying in a vast natural amphitheatre, are specially adapted to coursing purposes, besides being, as the event showed, wonderfully well supplied with jack rabbits. It should be said also for Messrs. Uhl & Carney, that no other men could have been so courteous, patient and obliging as they were throughout the entire meet. They suffered their fences to be gaped in dozens of places, their young winter crops to be trampled, their barn room to be monopolized, and their corn to be consumed, all with the most perfect good humor. They gain nothing and lose much by the meet, and the club owes them an unpaid debt. The club house and kennels are situated about four hundred yards from the ranch house, upon a commanding knoll, whence a view can be had over the flats for two or three miles. Had they been erected half a mile further north a yet better site for them would have been obtained. In the matter of putting up these buildings and in divers other items of expense the citizens of Great Bend have assisted largely. It is probable that no better location than Great Bend could be found by the club. It is to be regretted that the hotels of that place are altogether inadequate in every way to the demands of the visitors.

FIRST DAY.

The weather was fine and clear on Tuesday morning, and by noon probably five or six hundred persons were on the grounds, a number which was very flattering for the first day of a quite untried and not very largely advertised event. Managers and spectators seemed cheerful when, at 11 A. M., the first start was made.

RAVEN AND NEEDLE.

The running in the Sapling Stakes was first taken up, and Mr. D. C. Luse's black dog Raven and Dr. G. J. Royce's mouse and white bitch Needle were the first brace in the slips, both Kansas dogs. This course belonged to Needle all the way, Raven scoring but two points. Needle got a go-by and a turn, and then wrenched the hare until the kill, which was hardly two hundred yards from the start.

LEAD AND BELLE P.

Mr. B. M. Mutersbaugh's dark brown dog Lead and Mr. C. G. Page's brindle bitch Belle P. were led up next, and soon started on a hare which made a strong run toward the west. Both dogs appeared confused, and Belle P. was unsighted at the fence. The hare, possibly frightened by the spectators, swerved to the right. Belle sighted, drew ahead and got all the points in a long course over grass, green rye and corn, though losing the hare in a prairie dog hole. Belle P. won.

MIDNIGHT AND SISTER IN BLACK.

Col. David Taylor's black dog Midnight and Mr. Chas. D. Webber's black bitch Sister in Black went down next. The former dog is a chance pick-up, whose pedigree and record are not yet known by his nominator. The latter is by champion Memnon out of champion Mother Demdike, and she was sent from Newark, N. J., in care of the managers of the meet. After an undecided course at a diseased hare, which was killed within sixty yards of the start, both dogs got off well on a strong runner. Sister in Black was first off and ran in at once to the hare, wrenching handsomely. It was said that this was the first hare that she had ever seen; if so her performance was a wonderful one. However, she was not in good enough condition, having had no exercise and could not stay. Midnight drew ahead, wrenched repeatedly, and killed after a course of three-quarters of a mile, winning easily.

KANSAS CHIEF AND FLEET ALEEN.

Mr. J. H. Jones's red fawn dog Kansas Chief and Mr. D. C. Luse's black dog Fleet Aleen were started on a hare which made a long run over grass. Fleet Aleen at first drew ahead, but going down a road Kansas Chief got a go-by and showed all its speed, turning the hare. Fleet Aleen killed. Kansas Chief won.

MIKE G. AND TIPPERARY.

Running was now begun in the All-Age Stake, and the first brace were Mr. M. E. Allison's mouse color dog Mike G. and Mr. Jas. Roetzel's red fawn dog Tipperary. These dogs fought in the slips and had to be led separately. They were well sighted and loosed on a hare which apparently squatted in a patch of grass. Tipperary sprang upon the hare and killed within fifty yards of the start. The course was rightly held undecided.

The same dogs were again tried in the slips and again fought, each being left to a handler. A hare was started, but it being uncertain that both dogs were sighted, the word was not given. Mike tore away from his handler, as the latter claimed, and coursed the hare alone. Tipperary was held. Mike's owner claiming that this left his dog unfitted for the next course. Tipperary was run a bye with another dog that evening, and had fully as hard a course as Mike had run alone. There was no necessity for this. If Mike's handler loosed him without the word he should have suffered the consequences without detriment to the dog, which was properly handled. This closed the running for the day.

SECOND DAY.

The morning of the 20th was cold and chilly with a keen wind from the north, nevertheless a goodly crowd had faced the seven miles ride and gathered at the club house by 9 o'clock, at which time the clouds broke and the sun shone warmly. There were vexatious delays in the starting, and it was well on toward 11 o'clock before the first brace were actually in the field. Probably two hundred horsemen and as many more persons in vehicles moved out into the flats at the signal to advance.

TRUST AND RAVEN.

Col. Taylor's black and white dog Trust having the bye in the Sapling Stakes, was put down to run with Mr. D. C. Luse's black dog Raven. Both dogs seemed inexperienced and worked badly in the slips. The first hare was seen sitting in form, and the dogs got in close, but at the word they went away still coupled, the cord having broken in the slip and pulled quite loose in the slipper's hand. The dogs thus hampered soon stopped and were at once put down again. Another hare was found in less than five minutes, but got away without being seen by the dogs. Yet another hare was seen in form, but again they failed to sight their game. The spectators were now growing discontented and there was some confusion, but soon a fourth hare was started, which was driven directly to the dogs and on which a good start was had. The running was due north along an old fence line, but within a half mile a cur dog, which broke away from a wagon, ran in and threw the dogs out badly, the hare escaping. The course was therefore judged undecided.

FLEET ALEEN AND SANDY JIM.

Running was now resumed in the All-Aged Stake. Mr. D. C. Luse's black dog Fleet Aleen going into the slips with Mr. M. E. Allison's red fawn dog Sandy Jim, the former being a Great Bend dog and the latter from Hutchinson. In this course Jim did all the work, and killed handily, after an excellent course, which was worked by numerous wrenches. A lady, perhaps in violation of the rules, which require spectators to stay back from the course, was in at the death on this course.

MIKE G. AND TIPPERARY.

Mike G. and Tipperary were now again matched in the All-Aged. Each dog had had a trying run on the night before, and both were looking a little out of form. Mike was also suffering from injuries received before the meet, and had a bad hurt on his loin, besides having his tail torn nearly off. His appearance was against him. This sturdy old veteran has a reputation all over Kansas as being the best game dog in the State. As on the night before, these dogs fought in the slips and had to be started separate from each other; nevertheless, they got a good start at the word. This hare stopped in front of the dogs and they ran up within twenty yards of it, whereupon it loosened itself out and made a grand run. Mike at once drew ahead, scoring a clean go-by, and led all the time in a run which lasted over a mile, on grass, plowed ground and hard road. The hare was lost in a cornfield, but Mike was awarded the course. This closed the sport of the morning.

There were by this time probably eight hundred people on the grounds and the scene most animated, the bluffs being covered as far as the eye could reach.

JANUARY AND NANNIE BLACK.

The jack-rabbits appeared singularly obliging, and directly after dinner another was started within a short distance from the grand stand. Indeed, there was hardly a course in which the hare was not found within three-quarters of a mile from the stand. The dogs in this course were Mr. Amos Johnson's black and tan dog January and Mr. C. G. Page's black bitch Nannie Black. This was a fairly good run. January scored a clever wrench or two, but Nannie Black out-scored, killed and won. The run was over grass and hard road, and the kill was made in the road, where the hare would naturally have all advantage.

FANNY AND ROWDY BOY.

Mr. R. S. Salisbury's mouse bitch Fanny and Mr. B. M. Mutersbough's fawn and white dog Rowdy Boy now went into the slips and in less than ten minutes were started on a hare which the beaters drove almost upon them. The run was across a soft plowed field of new wheat and into a field of low green corn. The red and white dog drew ahead at once, and after two trips killed in less than two hundred yards from its start. Fanny did well and might have done better had the run been of longer duration. Rowdy Boy is known as a quick killer.

BELLE R. AND FLINK.

After such quick work every one felt good-humored, and the beaters started off in great shape to beat this same corn field down to the next brace, which were Col. David Taylor's white fawn bitch Belle R. and Mr. Peter Doherty's black dog Flink. The bitch was by long odds the favorite for this course, being known as a good one and credited as the fleetest of the Allison dogs, but she was not in the race at all. She was timid and the crowd frightened her; evidently she was not running at all. Flink won by every point and killed in the corn after a long run across grass, soft ground, road, dog town and corn.

CLUMSY JACK AND PIPER HEIDSIECK.

Mr. B. M. Mutersbough's brindle dog Clumsy Jack and Mr. W. J. Dixon's fawn and white dog Piper Heidsieck were now coupled, and after a very considerable delay and much trouble from the growing unruliness of the crowd, which now was grown very large, and contained vehicles of all descriptions, a start was at last made, two hares being sprung at once, though both dogs sighted the same one. Piper Heidsieck ran ahead for a good half mile amid great cheering but could not stay, and after two clever wrenches fell back for the big brindle, who with a great go-by led the way for over a mile of fine grass country, wrenching the hare—which was an uncommonly good one—several times. The judge had much trouble to stay with the dogs on this course, as the turns and wrenches were very numerous, in and out of a barbed wire fence, across a soft field, and over a large dog town, where the red danger flags waved prominently. This was the best course of the meet up to that time and lasted good two miles, Clumsy Jack killing in the corn after a grand run.

TOM MOONLIGHT AND TERRY.

Col. David Taylor's red fawn dog Tom Moonlight and Mr. J. H. Price's red fawn dog Terry now went to the slips. The former dog was owned by a colored man who handled him and who got Mr. Taylor to enter him. It is not known where the colored gentleman got his dog, but he got a good one. Both dogs were in good form and were large, noble fellows, to our mind the finest looking brace yet started. A cur dog came chasing a hare in front of the crowd, and in the midst of much shouting and confusion the dogs were at last got off. Both seemed to lose sight of the hare for an instant and Tom Moonlight swung too far off to the left, but soon sighted and came across the grass in grand style but with plenty of room between him and Terry. The latter scored a turn and Tom Moonlight closed in and got a wrench, the hare then taking the road. Terry now accomplished the rare feat of crowding the hare out of the road and on to the grass, and scored turn after turn, Tom Moonlight running so close that the three animals might have been covered with a table cloth. Terry scored most points, making fully a dozen wrenches and turns and was given the course, though Tom Moonlight killed. The negro did not know that his dog killed the hare, but was loud in his assertions that the course should be run over again as his dog had not had a fair chance. This was a swift and savage course of over a mile in length. The hare was a large black-tail jack and a rare good one.

EMPORIA BELL AND SPORT.

Mr. R. D. Salisbury's black bitch Emporia Bell being a bye in the All-Aged by the absence of Speedaway, an unentered dog—a black called Sport—was placed to run against her. A hare was soon started and Sport turned it handsomely into Bell's mouth, who killed within one hundred yards from the start. No points could be determined. For the next run the same dogs were again put down. The beaters went into the bluffs back of the club house and soon had two hares running down to the dogs. A lamentable confusion existed among the beaters, and the rules were violated by continuous shouting. The dogs were confused, each dog seeing a different hare. Sport broke away but was stopped. No points.

Again the same dogs. The beaters now came in line across the green cornfield, often mentioned before, and drove a hare well toward the dogs; but the latter did not see it for some time. Then Emporia Bell killed after a short run. It was claimed the hare was diseased and not a good runner.

Second Series.

NEEDLE AND BELLE P.

Running was now begun in the second series in the Sapling Stake, Needle and Belle P. being first. Much interest was manifested in this course, and both the little beauties were eager in the slips. A hare was soon started and both were close behind her. Each dog had a turn and wrench and Needle killed. There being no points over, the course was undecided.

The same dogs were again put down. A strong hare was started and both dogs ran together for a quarter of a mile in lovely form. Belle P. then crowded in and got several points in this part of the course. Needle ran in grand style, leaning to her turns in a style peculiar to her. Needle ran against Belle P., and threw herself an entire somersault, but recovered, and gained on the nervy brindle and scored point after point. Her wrenches were beautiful, and after two trips she at last killed, after two miles of the prettiest running seen at the meet. Needle was lamed by her fall and showed great pluck in her running after it. The Nebraska brindle made a typical race also, and was a close in every point as a second can be and not be first. This was a grand course.

MIDNIGHT AND KANSAS CHIEF.

Mr. David Taylor's black dog Midnight and Mr. J. H. Jones's red fawn dog Kansas Chief were drawn for the last course of the day, it being now well on toward sundown, and were soon off after a strong hare. Kansas Chief got a go-by and did all the running throughout, the black not gaining. The hare turned and ran among the vehicles, and Kansas Chief struck himself against a wheel. The black emerged from the vehicles ahead, but the game red dog again passed him and everybody thought it was his race, as indeed it should have been. It was his running which turned the hare even at the last, when Midnight twice scutted her and finally killed, being given the course by the judge. This decision excited surprise, and was thought unwarrantable by the rules of coursing. There was, however, no demur to the ruling of the judge on the score of unfairness.

This closed the running of the day. The sport had been very fair, and barring the good-natured awkwardness of the crowd and the officiousness of a certain book agent who imposed upon the managers as a representative of the press, and who kindly took the entire control of the coursing under his own charge, there was little to mar the pleasure of the day.

THIRD DAY.

On the morning of the third day, Oct. 21, the weather was very raw and chilly, and remained so throughout the day, with a cold rain in the evening. There were perhaps 1,500 spectators on the flats. The running began earlier than on the preceding day.

TRUST AND BELLE R.

Trust, the bye dog in the Sapling Stake, having run an undecided course with Raven, was now placed to run again, and to oblige Mr. Allison, who wanted his little bitch Belle R. "waked up," the latter was admitted to run in the bye race with Trust.

The result proved that the little bitch could "wake up," and she retrieved the reputation lost on the day before. At the start she took a straight go-by, and soon after a close wrench, and then at once ran clear away from the black and white dog, who hardly seemed to move, and fell out of the race. For two and a half miles the little bitch showed wonderful speed, and Trust, of course, was thrown out of the running. The hare was lost.

NEEDLE AND MIDNIGHT

now went into the slips to decide the Sapling Stake. A hare was soon started, proving a tremendous white-tailed fellow. Needle was first from the slips, and got a go-by. In the half mile following Midnight made a clean go-by and kept ahead, showing great and unexpected speed. The course was run thus for two miles on end, without a turn or wrench, the dogs never being nearer than thirty yards to the hare, which was a phenomenon. The course was undecided, the hare escaping in some tall weeds at the edge of the bluffs.

RENO BELLE AND LEO.

Running was now begun in the last, the Field Stake. The first brace were Mr. M. E. Allison's red fawn bitch Reno Belle and Dr. T. F. Foncannon's white and fawn dog Leo; the first dog from Hutchinson, and the latter from Emporia. The dogs were slipped on a strong black-tailed jack, which was a good one hundred yards away at the start. Leo drew ahead and got a go-by and a turn, clearly leading in speed. Reno Belle got a turn. Then Leo scored three wrenches and Reno Belle two, and each dog earned a go-by. Wrench after wrench followed near the finish, and in this work Reno Belle rolled up enough points to beat her competitor, who made a rare good course, and whom many who did not see the close thought to be entitled to the course. The run lasted over two miles.

SPORT ALEEN AND SANDY JIM.

Mr. D. C. Luse's red fawn dog Sport Aleen and Mr. M. E. Allison's red dog Sandy Jim were now brought forward, but fought so savagely in the slips that they had to be started separately. Three hares were jumped at once out of a grassy wallow, and by good fortune both dogs were started nicely on the same hare. Sandy Jim drew ahead on a go-by, and for over a mile and a half held it by at least 50yds., the hare not being turned once by the dogs. Then Sport Aleen drew up inch by inch and got a go-by by the hardest work, leading plainly for the next mile. The pace was so terrific that at this point the judge was entirely distanced and could not distinguish the dogs, being held back also by a wire fence and water. The course was almost in a circle about the starting

point, and as the radius of the circle was fully a mile, but little could be seen by the spectators, and no horse in the field could keep near enough to the dogs to enable one to be certain about the finish. One dog was seen to turn the hare, and then both wrenched and turned until the kill, but at the distance it could not be said which dog did the work. This grand course was therefore undecided.

SWIFT AND MIDNIGHT.

After dinner the crowd was dense, and the flats appeared swept as if by an army. The running was in the Field stake, and the runners were Mr. C. G. Page's black and white dog Swift and Col. David Taylor's black dog Midnight, the latter making his second course for the day. There was plenty of excellent work by both dogs in this course, and the running lay very prettily back and forth before the spectators. Each dog scored a turn and Midnight also a trip, but Swift passed, got two wrenches, and killed. On taking up the dogs Swift was found to have broken the bones of his right forefoot, it was not known in what part of the course. He surely showed great pluck in running as he did. The dog Midnight also needs mention. This dog was a veritable "dark horse." He was picked up on the streets of Great Bend and entered with his age and antecedents unknown at first, though afterward it was claimed that a former owner from whom he was stolen certified him properly as to age. His speed was a great surprise to all.

CUSTER AND BELLE R.

Mr. C. G. Page's brindle and white dog Custer now went into the slips with Belle R., and friends of the little bitch said she had a hard one to beat. Two hares were started by the beaters, and one gave the brace a good start. The hare fell into a hole and threw a complete somersault, and the dogs got in close before she recovered. Each dog earned a turn and a go-by, but toward the last the Nebraska brindle turned several times and killed alone. Belle R. seemed to be loafing, but she must have tried hard to beat the winner.

MIKE G. AND JIM BLAINE.

Two grand dogs were now brought up—Mr. M. E. Allison's well-known blue dog Mike G. and Mr. J. H. Jones's light fawn dog Jim Blaine. Mike is not a perfect greyhound in build, being rather stocky in look, and his frequent battles have left him badly seamed and scarred; but he has the reputation of being always able to run just a little faster. Jim is also known for a good one, though sometimes a loafer. The two dogs have killed many an antelope together. Much interest centered in this event. After much trouble from the turbulence of the crowd, a large white-tailed hare was put up, which proved worthy of the dogs. Both dogs ran neck and neck up to a deep ditch or draw; here Mike got over first and drew ahead. The hare turned and Jim came in, but did not gain on Mike, who showed the speed. The dogs ran a mile straight down a road, both going at terrific speed and both showing wonderful endurance, with Mike leading by one point. The hare then began swerving, though well in front of the dogs, and both dogs did splendid work, Mike scoring only a trifle ahead. Jim made the kill, but Mike won the course on merit and was awarded it. The scoring was: Mike G., 11 points; Jim Blaine, 10. It was regretted that these two grand ones should have been run together so early, as the game young dog Jim was thus shut out of a place which he ought doubtless to have had nearer the top; but that was one of the necessities.

TERRY AND EMPORIA BELL.

Running was now resumed in the second series of the All-Aged Stake. The first brace down were Terry and Emporia Bell. Terry had it all. Emporia Bell scored only two points, on a go-by. Terry took a go-by and staid wide in front, coursing the hare all by himself. He made a trip and two wrenches, and then another trip, which showed the white belly of the hare high over the ground. He killed within ten feet of this last trip and won the course by twelve points against Emporia Bell's two.

ROWDY BOY AND NANNIE BLACK

were now brought up and led toward where a hare was marked sitting in form. When the hare was started Nannie Black ran ahead, but the hare turned of itself and Rowdy Boy picked her up at once, within one hundred yards of the start. This course must have been undecided, but it was left unjudged by reason of a deplorable and serious accident. The horse of the judge, Mr. Holloway, while going nearly at full speed, stepped in a badger hole and fell, rolling completely over. Mr. Holloway was thrown violently, striking the ground upon his face and head, and when picked up was quite insensible. His face was badly torn by the fall and at first it was feared he was hurt internally, as the horse appeared to have rolled upon him. Under medical treatment he gradually regained consciousness, and was presently able to be driven in a carriage to the neighboring ranch house. This, of course, ended the running for the day.

Great regret was expressed at the accident to Mr. Holloway, who had accomplished the rare feat of pleasing both spectators and owners. The position of a judge at a coursing meet requires nerve, manhood and horsemanship, besides quickness and fairness of decision. Of all of these qualities Mr. Holloway has shown himself possessed, and also of a quiet modesty which has endeared him to the hearts of all members of the association. Mr. Holloway is an Englishman, and has had large experience at this work in the old country. The club was fortunate to gain his services.

FOURTH DAY.

On the morning of the fourth day the weather was cloudy and muggy with gusts and showers of rain. Not more than fifty persons followed the dogs afield, though the number increased until in the afternoon there were probably three hundred in the line. To the surprise of every one Mr. Holloway was present and declared that he would continue the judging, which he did, though badly lamed and somewhat disfigured about the face.

MIKE G. AND ROWDY BOY

were put down to run in the second series of the All-Aged. It was claimed by friends of the latter that he would catch the hare out of hand, as he had in his two previous courses; and indeed he came near it, for he at once ran in and wrenched the hare five times within two hundred yards. It looked as if Mike would be beaten pointless. However, the old fellow played his usual waiting game, and finally started his running just in time to prevent his losing the course for running sly—as he evidently was. Rowdy Boy pumped himself early, and as the hare ran down a fence line Mike took a go-by and evened up all the wrenches in a great burst of speed. Rowdy Boy drew in on a turn, but Mike again passed nearer the head of a pond along which the hare ran, and after that the red and white dog was out of the course, Mike leading for a mile at his peculiar mechanical gait, which he seemed to think was enough to kill the hare without any further effort. The hare was lost in the corn with Rowdy Boy one hundred yards behind. It is fair to say the latter had quit the course.

MIDNIGHT AND NEEDLE.

There was little regularity exercised in running out any one stake or any one series. Midnight and Needle were therefore now put down to run the deciding course for the Sapling Stakes. The mysterious black dog was the favorite, and Needle's chances were the worse by her accident of the previous day. Midnight was first off but Needle got a go-by, though she could not stay. Midnight passed and wrenched the hare a dozen times, showing all the speed and running with the hare under his nose. During this wrenching Needle drew up a little but did not score. Midnight killed neatly with Needle thirty-five yards behind.

At the dinner hour some disagreeable news was learned. Two of Mr C. G. Page's dogs were withdrawn by reason of accidents. Custer had torn his feet up in a private race with a jack, and the course with Belle R. the day before, in which he won, had left his feet in such bad shape that his owner would not run him. This grand fellow was probably the swiftest dog among the stayers at the meet, and it was to be regretted he could not get somewhere nearer to the place where he belonged. Mr. Page's Swift, who broke his foot in his course with Midnight, beating Midnight, was also unfit for running. Upon this it was announced that Mr. D. C. Luse had withdrawn Sport Aleen, being dissatisfied with the judge's decision in the undecided heat with Sandy Jim. As there was no possibility of the judge's seeing this course, and as he decided against neither dog in a course where not even any two of the spectators were agreed, it is only just to say that Mr. Luse showed very questionable taste in this action. As a member of the ground committee Mr. Luse has done much for the club, but he can not hurt it worse than by such imputations against so fair-minded a judge as Mr. Holloway. Had the latter decided against Mr. Luse's dog in this course Mr. Luse might properly have objected, and he very probably would have done so.

SANDY JIM AND NANNIE BLACK.

Running was resumed in the second series of the All-Aged, and Sandy Jim went into the slips with Nannie Black. The dogs got off on a tricky old white-tail, and made a rattling course for a mile and a half, each having a distinct go-by and numbers of wrenches. The red dog won only by his kill, and had therefore only one point in preponderance.

CLUMSY JACK AND FLINK

were next. Three hares got away unseen, but both dogs got off well on the fourth. Flink got the lead, but Jack drew in on a turn. Jack stumbled and Flink drew past, led, wrenched the hare time after time, killed and won in great style, showing surprising speed.

MIKE G. AND RENO BELLE

went into the slips in the second series of the Field Cup. Two hares were lost, but a strong one at last gave the dogs a start. At first there were no points; then each dog got two wrenches; then a neck and neck ensued for a mile and a half straight down a road, and after that they exchanged wrenches. Reno Belle then showing a disposition to use more speed, Mike concluded to let her go ahead and wear herself out on the plowed ground of a rye field. She went ahead, but, unfortunately for the wily old strategist, she killed the hare before she wore herself out, Mike stumbling in his last reach. The red flag went up for the bitch amid great enthusiasm over this great course.

The coursers and spectators were now entertained for a few moments by excellent music discoursed by the Great Bend Ladies' Band. The more gallant members of the club lingered near the band wagon and appeared to think it well to rest the dogs for a time.

FLINK AND TERRY

were led up in the third series of the All-Aged. The line of beaters went out in a weedy field and soon started a hare down to the dogs. Flink got away and made a great pace, scoring a go-by and several wrenches. He then stumbled and fell, and, though he recovered finely, Terry passed and led, doing all the running after that and rolling up points enough to beat Flink by three. Flink killed the hare, rolling completely over in the act. Flink would have won but for the stumble.

MIKE G. AND SANDY JIM

were now matched in the All-Aged. A hare was started in the rye field near the barn and started at once for the hills. Mike lost the course in less than two minutes. He ran sly, and in fact nearly stopped, waiting for the hare to turn. Instead of turning to the left, as Mike evidently thought she would, she ran over the point of the hill and down a draw, not showing again, and leaving Mike looking very much confused and shorn of all honors for the meet. Jim ran fair, and though the hare was lost in a hole, the course was given to the honester dog.

This left the All-Aged to be finally run by Sandy Jim and Terry. As it was growing very late and as there was yet a course to be run in the Field Stakes, it was announced that the All-Aged would be divided between the above-mentioned dogs.

RENO BELLE AND SANDY JIM

were now the last competitors in the Field Stake and were put into the slips just as the sun was sinking behind the hills. The hares were now obviously becoming scarcer, and the dogs were taken from the flats, and a wide detour made upon the tableland back of the ranch house. None were found here, and the beaters swung to the left into the breaks of the big pasture. Here, almost at dusk, a hare was started and the dogs were slipped. The hare ran sharp to the left and over a hill, then turning again to the left and getting behind the beaters. The dogs lost sight as they turned around the hill and the course was held undecided. Adjournment was made as it was now quite dark.

FIFTH DAY.

The morning of the last day, Oct. 23, was clear and cool. Arrangements for finishing the running were soon completed. Contrary to the announcement of the evening previous, it was now announced that the All-Aged would not be divided but run off by Sandy Jim and Terry.

SANDY JIM AND RENO BELLE

were at once sent into the slips to decide the Field Stake. When but a little distance from the club house a hare was seen in form, and the dogs were led up and sighted on a good start. Jim went ahead from the slip and kept space between himself and his mother for two hundred and fifty yards, wrenching the hare time after time. He then turned the hare, and Reno Belle took up the running for a time. Jim drew ahead again, wrenched, reached to kill and missed, the hare turning and being picked up by Belle, who thus made her only point in the entire course. Sandy Jim was declared winner of the Field Stakes.

The old red bitch, Reno Belle, was held by some to be the swiftest dog at the meet. She did not show that, though she is unquestionably fast and thoroughly honest. She is the mother of Sandy Jim, and of Terry, who ran the last course in the Field Stakes; also of Jim Blaine, who was beaten by Mike G. Had Jim Blaine been entered in the Puppy Stakes—where his age would have admitted him as well as did that of the winner, Midnight—it is more than probable that Reno Belle would have seen her children winners in every stake, with herself runner-up in the only stake where she was entered. These grand young dogs, all big, game-looking fellows, of a bright panther color for the most part, are Mr. Allison's choice for hunting dogs, and are the result of fifteen years breeding and hunting on those Western plains.

SANDY JIM AND TERRY.

Sandy Jim was allowed to rest half an hour, and then he and Terry were put in for the last course in the All-Aged. A hare was started on the grass and ran obliquely in such manner that the crowd for a moment hid it from view. The dogs were slipped without sighting, or got unsighted at once after being slipped. Jim's handler—who really had both dogs in charge, Mr. Allison being absent—rode up to help the dogs, which were confused. Terry ran to the left of a little lake, getting unsighted. Jim ran to the right. The handler caught sight of the hare, or pretended to, and carried Jim along after the hare through a hard run of a mile and a half, Terry not running. Without criticising this course on the part of the handler, or inquiring into the motives for it, the judge promptly and very properly cut short all argument and all suspicion by giving the course to Jim. Had he done otherwise it would have been little less than an outrage.

Sandy Jim was thus winner of both the All-Aged and the Field Stakes. There is little doubt that he is the right one, so nearly as the chances of a coursing meet can determine. He can not beat Mike G., if the latter would run fair. To our mind the only dog that could even, perhaps, do that was the Nebraska brindle, Custer. A race between these last two dogs, if each dog was fit and was doing his best, would be a better one than any shown in the meet. Custer's accident and Mike's trickiness were both greatly to be deplored.

A wolf chase on the flats was now announced, but the greater part of all present returned to town. The meet had lasted longer than had been expected, and many were obliged to depart at once for home.

As a first event, this meet of the American Coursing Club was a pronounced and unmistakable success. It needed a beginning, of course; and of course, also, the next year will see more dogs entered including, it is hoped, numbers from the East. The experiment is made. It has been shown that hares can be found in sufficient numbers for steady work. It has been shown that the meet can be made an event of great interest to the people as well as to sportsmen; and that is a great point gained in the way of making it really a national event.

The managers had to solve the knotty question of a big experiment, with all its hundred exigencies of the moment. They did it well, and barring its inevitable little delays which were strictly incident to the occasion, everything went smoothly. They deserve credit.

Much of the success of the meet was directly due to the coolness, experience and cheerful endurance of the judge, Mr. Joseph Holloway, and the slipper, Mr. Charles Holloway. The heat and burden of the day devolved upon these two and they were always prompt and patient, showing themselves men and gentlemen.

Although criticism should be light in this the first year of the club's organization, there is one point upon which a suggestion might be offered. As they stand, the printed rules of the club are obviously copied outright from the English coursing rules. They should be amended until at least American in their tone. Such expressions as "sticking in a meuse" are not American and not all Americans understand them. Coursing is a sport naturally adapted to us. We can develop it. If at first we must imitate the English let us not do it parrot-fashion.

SUMMARY SAPLING STAKES.

First Series.

G. I. Royce's mouse and white bitch Needle beat D. C. Luse's black dog Raven.

C. G. Page's brindle bitch Belle P. beat B. M. Mutersbaugh's dark brindle dog Lead.

David Taylor's black dog Midnight beat Chas. D. Webber's black bitch Sister in Black.

J. H. Jones's red fawn dog Kansas Chief beat D. C. Luse's black dog Fleet Aleen.

David Taylor's light fawn bitch Belle R. beat same owner's black and white dog Trust (a bye).

Second Series.

Needle beat Belle P.

Midnight beat Kansas Chief.

Third Series.

Midnight beat Needle and won.

ALL-AGED STAKES.

First Series.

M. E. Allison's red fawn dog Sandy Jim beat D. C. Luse's black dog Fleet Aleen.

M. E. Allison's mouse dog Mike G. beat Jos. Roetzel's red fawn dog Tipperary.

C. G. Page's black bitch Nannie Black beat Amos Johnson's black and tan dog January.

Peter Doherty's black dog Flink beat David Taylor's light fawn bitch Belle R.

B. M. Mutersbaugh's brindle dog Clumsy Jack beat W. J. Dixon's fawn and white dog Piper Heidsieck.

J. R. Price's red fawn dog Terry beat David Taylor's red fawn dog Tom Moonlight.

B. M. Mutersbaugh's fawn and white dog Rowdy Boy beat R. D. Salisbury's mouse bitch Fanny.

R. D. Salisbury's black bitch Emporia Bell beat unentered dog Sport (a bye).*

Second Series.

Sandy Jim beat Nannie Black.

Terry beat Emporia Bell.

Mike G. beat Rowdy Boy.

Flink beat Clumsy Jack.

Third Series.

Terry beat Flink.

Sandy Jim beat Mike G.

Fourth Series.

Sandy Jim beat Terry and won.

FIELD STAKES.

First Series.

M. E. Allison's red fawn bitch Reno Belle beat Dr. T. F. Foncannon's white and fawn dog Leo.

C. G. Page's black and white dog Swift beat David Taylor's black dog Midnight.

C. G. Page's black dog Custer beat David Taylor's light fawn bitch Belle R.

M. E. Allison's mouse dog Mike G. beat J. H. Jones's light fawn dog Jim Blaine.

M. E. Allison's red fawn dog Sandy Jim a bye. (Sport Aleen withdrawn.)

Second Series.

Reno Belle beat Mike G.

(Swift and Custer withdrawn.)

Sandy Jim a bye.

Third Series.

Sandy Jim beat Reno Belle and won.†

*(The unentered dog Sport ran the bye with Emporia Bell by agreement. It was rather unusual. The absence of Speedaway gave Rowdy Boy to the slips with Fanny, Emporia Bell's proper mate.)

†The extra running of Sandy Jim in the All-Aged left him with no advantage in the Field Stake byes, even had the owner of the last competing dogs not agreed to run them as above.

THE PRESIDENT'S PUPS.—At a White House reception last week appeared a Virginian who had with him two well-bred pointer pups, which he said he had brought to present to the President. The old man met with some opposition at the door in getting his pups passed in, but finally succeeded. On entering the parlor he seated himself in an easy chair with a pup on either knee. When the President entered the proud Virginian took a place in the line, with a pup in each arm. Just before reaching the President the pups began to quarrel, and in less time than it takes to write it a genuine dog fight was in progress. The owner in his excitement dropped the belligerents to the floor, where they continued their hostilities, not stopping until they had rolled over between the President's feet. The dogs were quickly taken out of the room with the owner following. After the reception an effort was made to allow him to make the present, but the doors were barred and the pups were taken back to Virginia.

PHILADELPHIA KENNEL CLUB FIELD TRIALS.

Editor Forest and Stream:

The third annual field trials of the Philadelphia Kennel Club will be held in Delaware, Nov. 16, 17 and 18. Owing to the inability of some of the members to be present it was decided to make an extra stake this year, allowing professional handlers. The entries will close next week. The following are the entries to date:

DERBY.

BEGORRA (Chas. T. Thompson), Irish setter bitch (Blarney—Lady Clare).

VOLLEY (Col. B. Ridgway), English setter bitch (Antic—Princess Mix).

LURAY (I. H. Roberts), Irish setter bitch (Chief—Leigh Doane).

DAISY (I. H. Roberts), Irish setter bitch (Chief—Leigh Doane).

MEMBERS' STAKE.

CASSINO GLADSTONE (E. Comfort), English setter bitch (Gladstone—Countess Druid).

CLEMENTINE D. (L. Shuster, Jr.), English setter bitch (Dash III.—Cornelia).

LEIGH DOANE II. (W. H. Child), Irish setter bitch (Chief—Leigh Doane).

BEGORRA (Chas. T. Thompson), Irish setter bitch (Blarney—Lady Clare).

VICTORIA (J. A. Stovell), Irish setter bitch (Berkley—Nora).

BLARNEY (E. W. Clark, Jr.), Irish setter dog (Bruce—Luray).

BRUCE (I. H. Roberts), Irish setter dog (Elcho—Noreen).

LITTLE NELL (I. H. Roberts), Irish setter bitch (Elcho—Rose).

CREOLE (I. H. Roberts), Irish setter bitch (Grafton—Meg).

LURAY (I. H. Roberts), Irish setter bitch (Chief—Leigh Doane).

DAISY (I. H. Roberts), Irish setter bitch (Chief—Leigh Doane).

OPEN STAKE.

NELLY (Chas. T. Thompson), Irish setter bitch (Glencho—Bess).

MOLLY BAWN (Charles T. Thompson), Irish setter bitch (Glencho—Biddy).

CASSINO GLADSTONE (E. Comfort), English setter bitch (Gladstone—Countess Druid).

GROUSE (M. Richardson), English setter dog (Grouse—Leda).

LEIGH DOANE II. (Wm. H. Child), Irish setter bitch (Chief—Leigh Doane).

VICTORIA (J. A. Stovell), Irish setter bitch (Berkley—Nora).

BRUCE (I. H. Roberts), Irish setter dog (Elcho—Noreen).

LITTLE NELL (I. H. Roberts), Irish setter bitch (Elcho—Rose).

CREOLE (I. H. Roberts), Irish setter bitch (Grafton—Meg).

Mr. C. J. Peshall, president of N. J. Kennel Club, will act as judge.

Reports from Delaware give indications of plenty of birds, and the recent rains will make the shooting better than it has been for past two weeks. RED IRISH.

MASTIFFS.

Editor Forest and Stream:

I had a streak of luck to-day. I read the beginning of the report of a dog show, the preface, perhaps, will be the best name. Generally I pass over that as too dry for common diet. However, this time I was fortunate enough to see mine ancient enemy and always friend C. H. Mason's name at the bottom of the report, and concluded it must be something better than the invariable of "Our Special Reporter." Now, I don't think I am a subject of congratulation. I laid aside my pen because nobody would take me up, and it is poor fighting without an antagonist, and Mr. Mason has the thanks of "yours truly" in giving me a chance for a fresh whack at "fanciers," mastiff ones in particular. Now, I most emphatically deny that I like leggy, houndy-headed dogs. I have fought against leggy ones from the start and picked a flint with Mr. Portier on the O. E. M. Club's standard not being sufficiently clear in its reprobation of this fault. Nor do I admire long-headed ones. The mastiff is a short, broad-headed dog, but here is where Mr. Mason and his brother "fanciers" make their mistake. Because a dog is short-headed they jump to the conclusion that the shorter the better! This won't do by a long shot. A small dog has a short, broad head. Is he, therefore, an example for mastiff breeders to follow? There were Turk, Governor, Colonel, etc. They were great dogs in their day; yet any readers of the *A. K. R.* or FOREST AND STREAM can easily satisfy themselves that Turk was very much longer-headed than say Baby. Colonel's head scales as 7.8 is to 4.2, assuming total as 12in. Perhaps Mr. Mason will remember that he has frequently quoted Mr. Hanbury as an authority, and what suits Mr. Hanbury ought to be good enough for me, or any of us, yet didn't he put a dog with a head "longish, but strong, without any appearance of bulldog" first for the O. E. M. Club's challenge cup this year, over such choice "fancy" animals as Beaufort, Minting, King Canute, Ilford Chancellor and Id Hoc? Didn't he put the square-muzzled Prince Regent over the "short-faced" Crown Prince? Don't you spring that condition business on me, I have searched the record, and there is no allegation that Crown Prince was out of condition. Or perhaps Mr. Mason has experienced a change of heart and doubts Mr. Hanbury's judgment? But to come down, right down to the spot, *i. e.*, Baby himself. Here is Mr. Wynn's comment on the dog's photo, and I am abundantly willing to risk it, whether the doggy common sense of America does not set it down as the highest praise of a dog, although Mr. Wynn did not mean it for that: "He is a dog of *no faults* of any moment, but no great special merits." (My italics.) What is the best dog? The one best all round, coming on an average nearer the right thing than any other? Or is it the grand-headed cripple, or the "typical" straight-hocked beast? I have no doubt for a moment what the verdict will be. I believe I have as large, if not the largest collection of mastiff photographs in the world. I have all of Mr. Wynn's that are of moment, and many that I have got from others. I can recall no dogs of note that I have not a photo of except Briton, Green's Monarch, Granby, Wallace, Druid, and a few more. They run back to Couchez, Lukey's Lion, Lukey's Countess, Cautley's Quaker, etc.; and I assert most positively, and call on Mr. Haldeman to correct me if I am wrong, that none of them show the very short head of Crown Prince, etc. Such famous ones as Rajah, the fount of modern dogs, Mrs. Rawlinson's Countess, her sister, Curtis's Duchess, etc., are about such headed ones as Baby (that is, as compared with such dogs as—say Crown Prince), and such dogs as Turk, Mr. Wynn's cracks, Taurus and Taurus II., are decidedly longer faced. Then it is in "character," "type," or some such gibberish, is it, that these dogs excel Baby in? Well, I suppose even you (FOREST AND STREAM) will admit that character should accord with the standards set up by the special club of the breed? Well, is Crown Prince, Ilford Caution, etc., within its range when it demands a square nose, and defines square as making a right angle with the upper line of the face? when it sets forth that the hocks must be well bent, when Crown Prince's are straight as a telegraph pole? that the loin must be broad, flat and muscular, when some of your "typical" pets have no loin at all, as far as power goes?

I do not expect that I can ever come to an agreement with Messrs. Mason, Watson, etc., for they have the incurable disease "fancy." They insist that a dog must first be "good looking," which means conforming to idea, or of "character," the interpretation of which would have baffled Daniel of old, for it practically shows itself in each quoter of it, deciding about as a dog as his private fancy leads him. Even if it was said in my support, the *Fancier's Gazette* gave the clearest exposition of the absurdities of "fancy" that I have seen, and after "abusing" me as you have done, you should publish it. I insist that a dog must first conform, physically, to the uses they are meant for; a mastiff must not be a cripple or he must not have straight hocks that estop him from his first duty, *i. e.*, springing on a man and knocking him down; a collie must not have a coat that would soak full of water in an hour's rain until it prevented his moving without enormous fatigue. Imagine Marcus out for an hour in a heavy rain and attempting to head off a flock of sheep.

The "fancier" deals with the whim of the hour, the passing fancy of "the rage," the imaginings of ideas as abstract as Heine's and as changeable as the reports of our late friend Whitford. They are attempts to interpret fashion, a task never yet achieved by human mind. And mark my words! Chalk it down in your sanctum if you wish: I predict, that in less than five years you will see the Baby type of dog recognized as the mastiff, and your pets as monstrosities of the magnified bulldog order. Such a breeder as Mr. Hanbury does not set an example in vain, nor does such a paper as the London *Field* often sound a false signal.

But one thing more and I am done (until somebody gives me another excuse for hauling out my pen), Mr. Mason speaks of my attacks on dogs I have never seen, and wholly incorrect descriptions of English winners. I assert most positively, that I have never expressed an opinion of a dog that I did not have his photo (unless I knew him in life), and that I have never described an English winner without having the same grounds for my opinion. If I mistake not, I have never expressed an opinion of a dog without saying then, or having said at some previous time, that it was based on a photo. Nor have I ever found fault with a dog without being able to produce his photo to prove what I say. If you don't believe this, frame your indictment, set the trial, and I will bring the proof. W. WADE.

HULTON, Pa., Oct. 28.

THE IRISH SETTER FIELD TRIALS.

Editor Forest and Stream:

Messrs. J. O. Donner, New York; and W. A. Coster, Flatbush, L. I., have kindly consented to act as judges at the field trials of the Irish Setter Club to be run at Salisbury, N. C., commencing Dec. 1. The members of the club are very enthusiastic and will do all in their power to make the trial a success. Many good dogs will enter, and no breeder of any pretension can afford to stand back on this occasion, but should join the club at once and enter his best dog for this event, which will undoubtedly be the turning point for the Irish setter as a field dog. A number of breeders have donated handsomely toward the expenses and we expect a large entry. MAX WENZEL.

HOBOKEN, Oct. 26.

[The trials promise to be very interesting. Twelve entries are assured, and the members of the club are confident that this number will be more than doubled. Birds are reported plenty on the grounds selected and visitors are sure of a hearty welcome from the sportsmen of Salisbury. The prizes offered are $200 and the Elcho Cup, donated by Dr. Wm. Jarvis to first, $100 to second, $50 to third and a piece of plate to fourth, with an entry fee of $10. Entries close on Nov. 15. Blanks are now ready and may be obtained by addressing the president, Mr. M. Dunphy, Peekskill, N. Y.]

THE ROBINS ISLAND CLUB.—The fifth annual field trials of the Robins Island Club commence on Robins Island Nov. 23. The trials are open to members only. Birds are very plenty and a large number of entries will undoubtedly be made. The club have greatly improved the island, building a nice house and dock and have a fine boat to ferry across to the main shore. They have also planted lots of quail, squirrels and wild turkeys, put fish in the pond, making the place a sportsman's paradise.

THE EASTERN FIELD TRIALS.—Mr. W. A. Coster, secretary of the Eastern Field Trials Club, informs us that his address until the close of the trials will be at High Point, N. C. He also states that there will be ample accommodation for all visitors to the trials, and that arrangements have been made for plenty of saddle horses as well as general conveyances during the trials.

PITTSBURGH DOG SHOW.—Pittsburgh, Pa., Oct. 28.—*Editor Forest and Stream:* At a meeting of the Western Pennsylvania Poultry Society, held this day, it was decided to hold a dog show the second Tuesday in April, 1887.—C. B. ELBEN, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Topsy II. By Napoleon Morin, Stoneham, Mass., for white and liver ticked pointer bitch, whelped July 12, 1885, by Sir Philip Sydney (Dash—Fanny) out of Topsy (Jake—Fann).

Glencho II., Barney, Patsy G., Dan II. and Glenmore. By Gem Kennels, Chardon, O., for red Irish setter dogs, whelped Aug. 27, 1886, by Glencho (Elcho—Noreen) out of Magg (Duncan—Red Maud).

THE MASSACHUSETTS TEAM.

BOSTON, Oct. 26.—The presentation to-day of the prizes won at the recent Creedmoor meet by the Massachusetts team was made the occasion of a notable gathering at the Revere House to-day. The Boston *Herald* in reporting the ceremony of presentation very fittingly said:

"The success of this State's team at the recent contest participated in by teams representing the best shooting ability of New York, Connecticut and the regular forces of the United States, gives the citizens of the old Bay State just cause for congratulation. It shows that, behind the pomp and circumstance of military duty performed in times of peace, there is a silent force, unnoticed on occasions of ceremony, that promises to be a grand bulwark of national defense in case the assistance of military arm is found necessary for the preservation of peace.

"The theory of the purpose of the militia is that it shall be a force, ready at a moment's notice, to support the civil power, in case of emergency; and the plan of its organization contemplates thorough instruction in every thing necessary to make an effective soldiery, but it was not until 1880 that any effort was made to make rifle practice an integral part of State duty. The number of marksmen in service now exceeds 1300. This is nearly one-third of the effective force of the State, and one of the most striking evidences of the rapid development and increase in the scope of the military rifle work is to be found in the story of the four teams sent to Creedmoor in 1877, 1879, 1885 and 1886. The first two can hardly be said to have been sent under State authority. The teams of both years were voluntary, the men exhibiting their personal interest in the form of a request for permission to go; a majority of them (in both years) coming from one company. The rifles used were the ordinary old pattern of Springfield rifle, illy adapted to compete with the Sharps' and other patterns used by the teams of other States. The men had but limited practice, and their scores were far from winning, though creditable under the circumstances. In 1885, for the first trial, in competition with other States, of our best marksmen, developed under the progressive system adopted two years previously, a team was selected and sent, under State authority, to Creedmoor, and the majority of the team shot well up to the average of the winning teams. This year another team was sent, selected from about 30 candidates, and it achieved a great success, not only against the three State teams competing, but against the teams of the regular army. In the interstate match the scores of the competing teams this year were: Massachusetts, 1024; New York, 1012; Pennsylvania, 997; Connecticut, 817."

The presentation of the prizes was before the executive head of the State and many officers of the guard.

Lieutenant Zalinski, Fifth Artillery, U. S. A., the representative of the National Association, said: Colonel Rockwell, on behalf of the National Rifle Association, it affords me great pleasure to place in your custody the Hilton prize and the trophy, "The Soldier of Marathon," won by your team from those of New York, Pennsylvania and Connecticut. In winning these you have achieved victories over no mean competitors. The team from the regular army had more than ordinary facilities, and the scores made by the other teams show your foemen were worthy of your steel. But if you are to keep these trophies you will have to work in the future as hard as in the past. The general results show that this victory was not a matter of chance, but secured by hard work, and it was to your credit that you returned to the fight with determination, after you had before been defeated. The Governor himself has had medals prepared for your own individual wear. Many of your members won prizes in the individual matches, and Private Bull of the Second Regiment won the military championship of the United States. As an executive officer it affords me pleasure to advert to the manly bearing of your men; the lack of petty fault-finding and the raising of small questions. I cannot forget one protest made by one of your own men, which protest lowered his own score. That was very much to his credit, but it is not a customary thing to do. It is a pleasure to see the good work you have done, which I know is fully appreciated by the authorities. This is shown by the presence of your governor and your commanding officers. Those who have had experience in rifle practice know how much personal sacrifice attends it, and I trust the authorities will recognize that you are rendering good service, as in our country we rely on the volunteer service for our defense, and the knowledge of the use of small arms is of importance. Every encouragement should be offered you to keep on in this way. One matter I would like to call attention to. In the skirmishing match only one team of the national guard entered into competition with the regular army. As individuals, it was proved that the one arm was equal to the other, but the national guard has not had practice in skirmishing at unknown distances, and in this was the difference. Skirmish fire represents more closely the actual conditions of service, and I hope you may improve in this, and that you will be able to make a good showing with the regular army. Judging distance drill, freely practiced, will bring you success. [Loud applause.]

Colonel Rockwell, of the Governor's staff, addressing his reply to Lieutenant Zalinski, spoke as follows: It affords me great pleasure to stand in the position which entitles me to receive from you these trophies. It gives me great satisfaction personally as it must to every member of the team present at Creedmoor, that the association has extended its courtesy to send a commissioner with these trophies, and more especially that it should be you who have been chosen for this purpose. In my several visits to Creedmoor I never passed through a week more comfortably than this last one, and I must say the executive officers were courteous and kind to all. As to skirmishing I should have been glad to have entered, but I knew it was exhausting work, and I remember that you persistently urged me to put in a team, but I decided it was not well to do so. I am glad we did not, for the men of the regular army were pretty well used up after the skirmishing. I appreciate all you have said, but it will be for others to speak. General Dalton, in turning over these trophies to you, I might, perhaps, refer to many of the facts of the last few years in connection with the Massachusetts militia. The thing we all take greatest satisfaction in is that this victory is typical of the advance of this very important part of militia instruction.

Adjt.-Gen. Dalton in response, said: Colonel Rockwell and Officers: During the four years of my adjutant-generalship there have been many pleasant episodes connected with you; but when I read on that Sunday morning of your capturing these trophies, it was the happiest time I had known. I assure you the work you have done is highly appreciated at headquarters. When the victories were known, I conferred with his excellency, who has always been warm in his support of the militia. He thought that it would be a proper manner of recognizing the event to present each member of the team with a medal from the State, and that he ought to be present when they should be awarded.

Governor Robinson, as commander-in-chief, replied to the previous speakers, and said: Gentlemen: The transfer and acceptance of these trophies seem to have been completed without another word. Your work, grand in itself, has returned here to be finished, and Massachusetts does not stand an indifferent spectator or disregarding. You represent all her people, but it must come from me at the present time, and I am called to bear to you her befitting congratulation and esteem. She contributes largely for her military establishment; she gives it unreservedly, and so long she will continue to do so as she receives such an abundant equivalent.

At the close of the Governor's remarks, the gold badges given by the State, and the bronze badges given by the national association, were presented to the members of the team. A lunch followed.

Among the military gentlemen present were Gen. Peach, Gen. Wales, Gen. Newdeton, Gen. Holt, Col. Wellington, Col. Osgood, Col. Strachan, Col. Bridges, Col. Greene, Col. Bancroft, Lieut.-Col. Edmunds, Lieut.-Col. Dalton, Major Kemp, Major Merrill, Capt. Rice, Capt. Sessions, Lieut. Clark, Lieut. Laug, Lieut. Reardon, Lieut. Hayes, Lieut. Gould, Col. Currier, Capt. Harris, Capt. Abbott and Adjt. Nelson. At the close of the reception the members of the team visited the Hollis Street Theatre.

THOMASTON, Conn., Oct. 23.—Weather conditions good:

E Thomas	8	10	7	6	9	9	9	8	8	7—81
G A Lemmon	9	8	4	10	7	10	8	7	6	7—76

Judge, J. Kenny, Jr. Scorers, William Skinner and J. T. Leonard.

CONLIN'S GALLERY.—The following scores were made at Conlin's Gallery, Thirty-first street and Broadway, N. Y. The two matches have just been completed after very close contests, and were greatly enjoyed by all who participated, as well as by the spectators. The prizes were unique and elegant and the grouping of shots to win them were so close that a three cent piece would cover them. The match will be combined with variations in distance, manner of holding and targets, and the public are invited to participate and compete for the attractive prizes. The conditions governing the following scores were: 36ft., any 32-cal. rifle, off-hand, targets, reduced standard decimal, 1in. bullseye, 7 shots, and Conlin's 10 bullseye measurement match target, 10 shots. Result of 10 bullseye match:

	Inches.		Inches.
J B Blydenburgh	2 6-16	W H Gurmall	3 13-16
H G Dohman	2 11-12	D Crocker	3 15-16
J J Munroe	2 12-16	T B Doolittle	4
G Stuart Scott	2 15-16	R Welserbe	5 2-16
Dr T C Moller	3 11-16	G S Young	5 5-16

Result of standard decimal target match, possible 70:

Maynard Bixby	70	J J Munroe	66
C C Gensch, Jr	69	E E Tiffany	65
T B Doolittle	69	Geo E Betts	64
Jos H Wheelock	67	G A Stevens	63
D Crocker	66	August Magale	61
N F Brisac	66	T T Cartwright	60
Peter DeNyse	63	Frank H Smith	58

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ATHENS, Pa., Oct. 24.—Five members of the Athens Gun Club met for their weekly shoot yesterday and contested for the gold badge. Following is the score:

E W Davies	1111111111—10	C Armstrong	1101111111— 9
F Fuller	1111111111—10	N Knaresboro	1110111011— 8
A D Smith	1111111111—10		

In shooting off ties F. Fuller won the badge.—P.

LA SALLE, N. Y., Oct 22.—Niagara River Shooting Club.—9 Niagara Falls blackbirds:

Jewett	1011101010—6	Clarke	0111011111—7
E H Smith	1111111110—8	Shader	1110011110—6

BAY RIDGE, Long Island, Oct. 25.—Mr. James Dean of this town has placed in the hands of the secretary of the Bay Ridge Gun Club a gold medal to represent the championship of Kings county, open to all residents of the said county. The match will be shot at 10 o'clock A. M. sharp, Thanksgiving Day, at Bay Ridge, Bay Ridge Gun Club rules, copy of which will be sent to all contestants. All desiring to shoot for this medal are required to send address before Nov. 20; on that date entries close. Shooters will be called to the score in the order in which their applications for entrance are received; 50 clay-pigeons per man, 21yds. rise, 3 traps.—E. D. WAKEMAN (Sec. Bay Ridge Gun Club).

THE INTERNATIONAL CHALLENGE.—Cincinnati, Oct. 29.—*Editor Forest and Stream:* Col. L. C. Bruce, of New York city, in accepting the onerous task of being appointed a committee of one to select the American team for the international challenge match (in the event of its acceptance), says under date of Oct. 25: "I wish to say * * * I will do all in my power to bring about the contest regardless of the position I may hold on the team. * * * If deemed best by the National Gun Association, or by a vote of the team, some other than myself is chosen (as captain of the team), I will very cheerfully step aside, I say this * * in order that you may understand and can act in any manner so as most successfully carry out the movement. * * The match will be most popular with all classes."—J. E. BLOOM.

Yachting.

HULL Y. C.—A meeting of the Hull Y. C. was held on Oct. 27, with Vice-Com. Tower in the chair. The committee on a new club house asked for more time. The question of dues was taken up and a reduction was made from $10 per year to $5, the old figure. The regatta committee was reduced to 5 and the membership committee to 9 members, the former also including the commodore and vice-commodore. A supper committee was appointed consisting of Messrs. Harry Hutchinson, Galston Whittemore and J. W. Wheeler. Messrs. J. B. Forsaith, Harry Hutchinson, J. R. Chadwick, B. L. M. Tower and Fred Pope were appointed representatives to the New England Y. R. A. After the meeting the club proceeded to the winter quarters of the Great Head Y. C., at No. 8 Bosworth street, where they were entertained by the club.

THE CLYDE CHALLENGE.

THE letter of the Royal Clyde Y. C. which has been so carefully guarded by the New York Y. C. for a month past was made public at the meeting of the Club on Oct. 28 and, as was expected, contained nothing to justify the secrecy maintained in regard to it, reading as follows:

ROYAL CLYDE Y. C., SECRETARY'S OFFICE,
GLASGOW, Sept. 21, 1886.

John H. Bird, Secretary New York Y. C., New York:

SIR—In confirmation of my cable of to-day, I now, as secretary, and as authorized by the Royal Clyde Y. C., formally challenge your club for the possession of the Americans Cup in the name of Mr. James Bell, a member and lately Rear Commodore of this club.

The challenger intends building a yacht for the race, and I am unable at present to give length or tonnage. Should your club decide to race Mayflower the challenger is prepared to build a yacht of about her size. If, however, you determine to build a new vessel it might be as satisfactory and less costly were smaller vessels built—say from 65 to 75ft. long. In any case it would be well that the competing yachts be about the same length, so as to make the trial as much as possible a test of model.

The only other suggestion the challenger desires to make at present is that, in order to eliminate as far as may be the elements of chance, the contest should be decided by the best of five trials.

I do not, in the meantime, name any day or days for the proposed race, as Mr. Geo. L. Schuyler's letter of Jan. 4, 1882, provides that the day named shall not be later than seven months from the date of the notice; but it is proposed that the race should take place next September, and due notice of not less than six months and not more than seven months will be sent in conformity with the conditions in Mr. Schuyler's letter.

Awaiting the favor of an early reply, I have the honor to remain, sir, yours faithfully, WILLIAM YORK, Secretary.

The following answer was sent by the New York Y. C.:

NEW YORK Y. C., SECRETARY'S OFFICE,
NEW YORK, Oct. 4, 1886.

William York, Esq., Secretary Royal Clyde Y. C.:

SIR—I have the honor of acknowledging the receipt of your cablegram of Sept. 21, of an extract from the minutes of the Royal Clyde Y. C. of like date, and of your letter of same, purporting to be a challenge for the possession of the America's Cup. In compliance with your request for early action thereon, I have the further honor of informing you that the several documents above referred to will be laid before the New York Y. C. at its next regular meeting, to be held on the 28th inst.

Very truly yours, JOHN H. BIRD, Secretary.

To this letter the secretary of the Royal Clyde Y. C. responded as follows:

ROYAL CLYDE Y. C., SECRETARY'S OFFICE,
GLASGOW, Oct. 15, 1886.

SIR—I have to thank you for your letter of 4th inst., informing me that the document relating to Mr. Bell's challenge would be laid before the next regular meeting of your club on the 28th inst.

In view of this meeting and of removing any possible informality in the challenge, I would ask you to be good enough to send me an authentic copy of the whole conditions regulating the challenge, with any further explanation that may be necessary to enable me to put the challenge (if it is not so already) in such a form as your club can accept *simpliciter*.

Be so good as to lay this letter before your club meeting on the 28th inst., along with the letter and documents already sent.

Yours, very truly, WILLIAM YORK, Secretary.

JOHN H. BIRD, Esq.

The entire matter was very summarily disposed of at the meeting by the unanimous adoption of the following resolution offered by Mr. John R. Platt:

Resolved, That the secretary forward the Royal Clyde Y. C. the documents asked for and the full terms regarding the challenge for the America's Cup, at the same time stating that the communications already received from the said Royal Clyde Y. C. cannot, under the deed of gift, be considered as a sufficient challenge. When said challenge comes in proper form it will receive due consideration.

In acting in this manner the New York Y. C. has ignored entirely the letter and spirit of a bona fide and sportsmanlike challenge and has fallen back on a literal interpretation of the deed of gift that is not at all in accordance with the dignity of their position as holders of the Cup. The point of view from which they evidently regard the matter is well set forth in the following editorial from the New York *Herald*, which we quote, not from any special importance that attaches to it, but because it voices opinions which are held by a certain part of the New York Y. C. and which have been expressed more or less prominently for some time past:

"The New York Y. C. has considered the 'challenge' which the Royal Clyde Y. C., in behalf of Mr. James Bell, forwarded last month, and has returned the only answer possible under the circumstances. Mr. Bell, it seems, wishes to impose conditions upon the New York Y. C. which, according to the terms upon which the America's Cup is held, cannot be conceded. It ought not to be forgotten that the schooner yacht America sailed over to England in 1851 and defeated the fastest schooners and cutters embodying the pick of the British yachting fleet, and this, too, in the face of extreme odds and with no allowance of time for tonnage.

"Mr. Bell, however, would like to know in advance the type of boat which shall be chosen to sail against his yacht, which is yet in embryo. It is, of course, a matter of regret to the New York Y. C. that the present formalities which hedge about the America's Cup challenge cannot be dispensed with. The New York Y. C. is a patriotic body, and it has already expended a vast sum of money in defending the Cup against several yachts which were neither fast nor representative. But while the club has been always ready to entertain each and every challenge from any recognized club, it is now the opinion of the leading yachtsmen of this country that no foreign squadron ought to challenge except with a boat well qualified from its past performance to at any rate make good running for the Cup.

"The challenge is open to the world. It embraces any eligible yacht measuring from thirty to three hundred tons, and it is not asking too much that the dimensions of the challenging boat should be made known to the New York Y. C. Mr. Bell is a sportsman and belongs to a club of sportsmen, but when all the facts of the case are taken into consideration it will be granted that he asks too much, and that the New York Y. C. is perfectly justified in declining a 'challenge' which is based upon so slight a foundation. When Mr. Bell really means business the New York Y. C. will be ready to meet him."

A sufficient answer to such misstatements is found in the original letter given above, the case actually being, as there clearly expressed, that certain yachtsmen wish to challenge for the Cup and are willing to invest a considerable sum in building a suitable yacht. Before doing so they ask the holders of the Cup whether they will meet them with one of the large yachts, Mayflower or Puritan, or whether they will agree to limit the contestants to a smaller size; expressing their willingness to build either, but preferring the latter. It is understood that the letter is not a formal challenge, as such is not possible at this stage, but is simply to settle a necessary preliminary. No favors are asked. No request is made for the lines of the American yacht or for any limitation as to type, the only object being to settle on a certain length of waterline, so as to eliminate, as far as possible, the inequalities of a time allowance. There is no objection to making known the dimensions of the challenger as soon as they are decided upon, nor to complying with all prescribed formalities; in short, the letter is perfectly fair and open, and in all courtesy entitles its senders to a civil answer. Had the New York Y. C. replied that they preferred to race the large yachts now at their disposal, as they have a perfect right to do, the matter would at once have been settled; but instead of so doing, they have chosen to ignore entirely a proposition which a regard for their own dignity should have constrained them to reply to with due courtesy. Under the circumstances the only course left for the challengers is to send a challenge in strict accordance with the deed of gift, naming the dimensions of the boat they will build, and it follows that this will be as large as Mayflower.

Considering only the proposition of the Royal Clyde Y. C. it would seem that the New York Y. C. has neglected an opportunity that might be so utilized as to be of the greatest benefit to American yachting, whose interests as defenders of the Cup they are supposed to promote. Leaving for the present any claims which the owners of the large yachts may advance, the main question is, what size of yacht is it most advisable to encourage? The fact that any certain class, is selected for an international match is certain to result in the building of more boats for that class, as evidenced by the building of Puritan, Mayflower and Atlantic outside of the New York Y. C. Now it would seem that this fact would at once suggest itself as the best possible means of strengthening some one class and the only question then to be decided is which is it advisable to encourage? The 50ft. class comes under the 30 tons limit and besides is fully able to take care of itself, being now the most patronized of any. The next class, under 70ft., has heretofore been the most important one, including the largest and best yachts of the Atlantic fleet. It is the class that most men prefer to build to, as there are as yet very few men who have the

means and at the same time an active love of yachting and will build for the 85ft. class. Of course one need not be a Gould, Vanderbilt or Astor to build and run the Puritan or Mayflower, but on the other hand the really live racing men are few of them millionaires and there are half a dozen who are ready to build a Bedouin or Thetis to one who will add another to the large class.

What the ultimate fate of the latter will be is as yet uncertain. Whether it will grow and prosper without the stimulus of international contests and become a fixture in American yachting, or whether, when their immediate service is over they will be converted into schooners, only time can show. Even though the class should continue, there is no doubt but that a smaller size will be more popular and more worthy of such encouragement as the clubs can give. For sport itself the 50ft. class is all that is desirable, and from a racing point of view there are no higher rewards for the ardent Corinthian than Oriva's owner has won in this same class, but the yachts are too small for the needs of many who wish to cruise during the season with family and friends. For this purpose the Bedouin class is far better adapted, giving good accommodation below and at the same time making a good size to race, without the big crews of the 85-footer or the limited room of the 50ft. class. American yachting has not yet reached a point where a special racing craft must be kept up, with no regard for cruising. The races are not numerous enough to justify it, except in such cases as this year and last, and the popular size of boat will be one that can enter the eight or ten races of the year, can cruise the coast in the season and can serve all the purposes of pleasure yachting as well as match racing. This size is, as all experience has proved, about 65 to 70ft., and in the past the class has been tolerably well filled. Just now it is under a temporary cloud, the only racers in it this season being Bedouin, Thetis and Stranger. There are now in the class the following yachts: Bedouin, Gracie, Mischief, Thetis, Huron, Ileen, Stranger, Wenonah, Hildegarde and Fanny. Of these, several have decidedly seen better days as racers, but there is still the nucleus of a fine racing class, and the best possible opportunity to develop it has just been offered by the letter of inquiry given above. Had the New York Y. C. deigned to consider at all the Royal Clyde's proposition and replied that they would meet the Scotch yacht with one of 65ft. waterline, there would have been no trouble in securing at least half a dozen boats at the line for the first trial race next summer. Of the dozen now built, two or three at least would enter, while in the event of such a decision there would be quite a fleet built this winter. There are now a number of racing owners whose love of the sport is as keen as it was a few years since when the "American sloop" had a place in the races, but who to-day are entirely out of it in their old ships. That they must build something new is evident, and they are only waiting to decide what the new boat shall be. There are few of them who care to build for the 85ft. class, and the 50ft., as we have noticed, is too small. The opportunity has offered to bring all these men into racing again, to foster a class that will be within the means of most of the leading yachtmen, and that is large enough to afford every opportunity for experiment without the expense of the larger boats.

It may be that those who have sunk so much money in the latter would feel that they have a right to compete in the next races, and that it would be an injustice to virtually debar them from such competition, and in such a case their objections would certainly demand a full consideration, but the New York Y. C. has taken no means to ascertain their views, it has not considered either the policy or the justice of its course, but has simply thrown aside a proposition made fairly and in good faith, without according it the common civility of an answer.

Those familiar with the international races of the past 15 years, will remember how the New York Y. C. in deference to the pressure of a healthy public opinion outside the club, has gradually retreated from the position it once held, giving up one treasured point after another until the last two matches have been sailed on terms which makes it equally fair for both parties. It is well known that a portion of the club have strenuously opposed these changes, and if they could would to-day make the challenger sail over the club course against a fleet. Fortunately for the reputation of the club and of American yachting, their protests of late have been unavailing, but the above resolution of Mr. Platt, unanimously adopted, shows very plainly the feeling of a large portion of the club.

THE SEASON'S RECORD.

Editor Forest and Stream:

Most of the quibbles of your correspondent "Fair Play" have been answered in my letter in last week's issue.

A few more remain for refutation.

I will not follow him and charge willful deception when he asserts that Clara only met a lot of old boats, with the exception of Cinderella. She did meet and thoroughly beat Cinderella, Athlon, Thistle, Roamer, Daphne, Bertie, Regina, Hildegarde, Gaviota, Gracie, Active and others, as mentioned in detail in the review. With the exception of Active and Gaviota, these are all the very pick of racing craft. It is evident that your correspondent, in addition to being too quick with his language, is a slovenly reader and superficial thinker, impervious to an idea unless several times repeated.

He asks whether the beaten sloops should not be properly classed as "plugs."

Most certainly not.

Shadow, Gracie, Fanny, Cinderella, Athlon, Hildegarde, Regina, Daphne, Bertie, etc., are the fastest yachts among hundreds of their size, the very best we have shown ourselves able to produce after fifty years of sloop building experience. Cinderella, Athlon, Thetis, Bertie and Daphne are boats of the most recent construction, thoroughly modern in every respect, lauded to the skies for their speed in the public prints, built in the full blaze of all the teachings derived from the cutter agitation and built avowedly for the purpose of "cleaning out the cutters."

When, in face of this, your correspondent "claims" that the victorious cutters would be beaten by what he is pleased to imagine as "really" modern sloops, he is dealing with shadows. He is welcome to his "claims." I have been reviewing accomplished facts and have no desire to contest speculative philosophy.

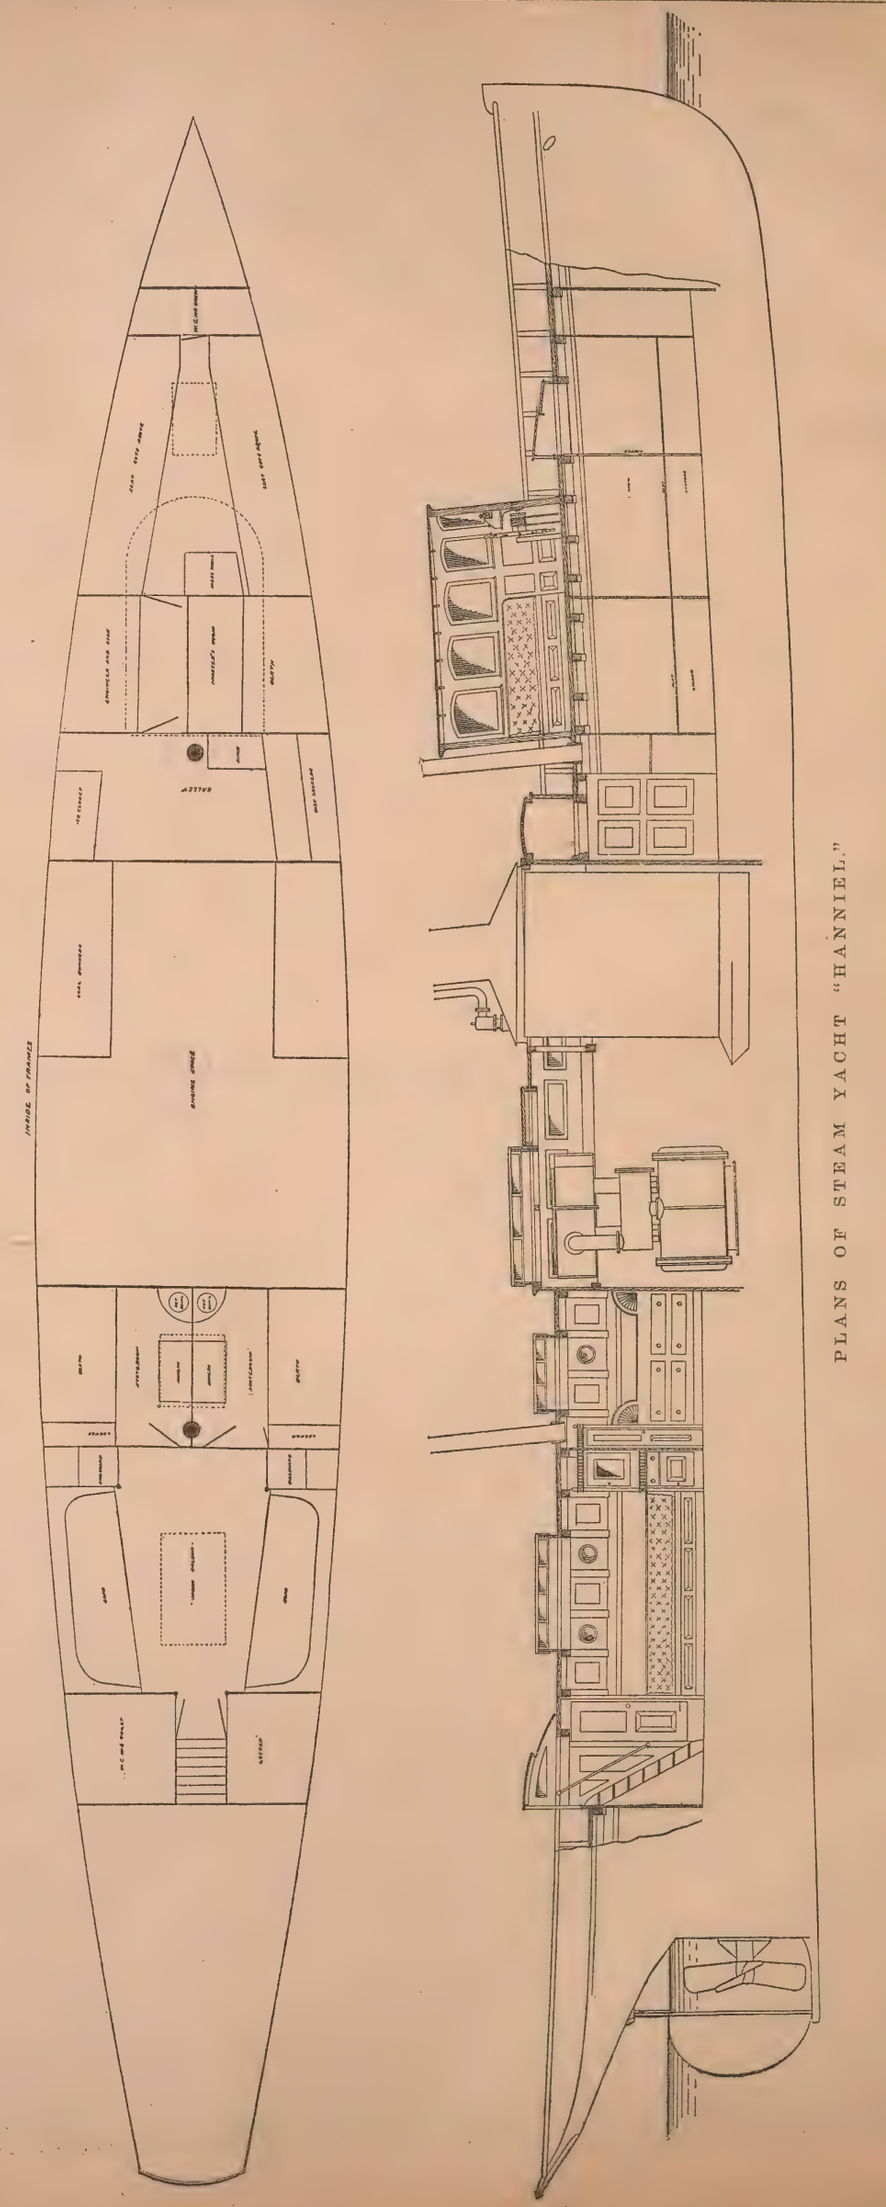
He assumes that, with dishonest intent, I overlooked Ulidia in the races of the Eastern Y. C. The Ulidia is about 42ft. 6in. loadline. The Active is 51ft. Though both fell in the same class under the club's private arrangement, the difference in length is enough to render the result valueless from a technical point of view, and I omitted Ulida for the same reason that I excused the alleged sloop Thetis, only 5ft. shorter than the Bedouin. Even the intellect of your correspondent "Fair Play" may be equal to comprehending the equities in the case. Had he bestowed a single thought upon my review in the first place, this supplementary explanation would not have been necessary; but I evidently erred in placing even such a trifling tax upon his mental powers.

He states that I said Shona raced in "a slashing sea."

I said nothing of the kind. Your correspondent should learn to read English.

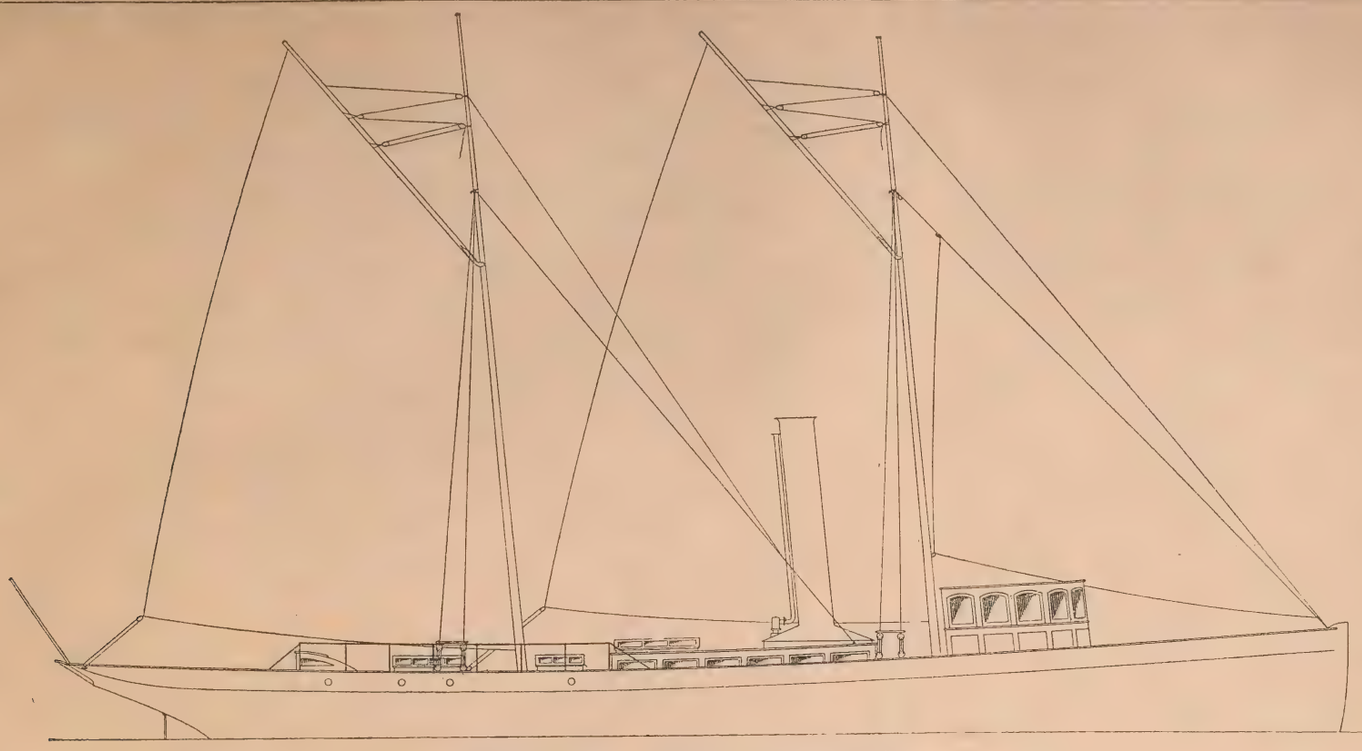
As he is a landlubber, he will not be able to appreciate how silly such an expression as a "slashing sea" sounds to the nautical ear.

Let me suggest that the next time "Fair Play" charges another with a perversion of the truth he stick to the truth himself and make his charge over his own name.



To shirk under the lee of an alias is deemed cowardly. I overlook his offense, believing him to be simply verdant of the amenities of the world.

Let me also express my surprise that his trivial communication should have encumbered the precious space of your columns. The waste basket is the proper receptacle for such light timber.



C. P. KUNHARDT.

THETIS AND STRANGER.—*Editor Forest and Stream:* In the FOREST AND STREAM of Oct. 21 I saw a letter from a gentleman who does not appear to think that Stranger's light weather victories amount to anything. It seems to me that a good light weather yacht is entitled to as much credit as one that needs a hard blow to drive her. A yacht that can sail when others are lying with flapping sails may at least save her owner a good deal of tedious waiting. About those "drifting matches" off Marblehead, which (oddly enough) were won by Stranger, as I saw no mention in the papers of the wind being puffy, I infer that they gave a good test of the yachts' light weather abilities. I do not see how "Sloop Crank" explains away Stranger's two hours' lead in the Newport race by a trifling difference in breeze. It looks as though Thetis can beat Stranger in a hard blow but in moderate weather it will be the other way. Stranger and Thetis have sailed together seven times this year and Stranger has won four out of the seven, even according to "Sloop Crank." But he says that Thetis was undersparred. I do not know whether he would admit that Galatea could beat Mayflower with more sail (Mr. Kunhardt's claim). I don't believe he would.—STERNPOST (Boston, Oct. 27.)

SHIPPING A YACHT TO FLORIDA.—A correspondent asks how to ship a 25ft. sloop to Florida, also whether such a boat can be purchased there. Perhaps some of our readers can answer his questions. Such a boat could be shipped by steamer from New York, but at considerable expense. Good cruising boats are, we believe, scarce along the Florida coast, either for hire or purchase.

PLANS OF STEAM YACHT "HANNIEL."

STEAM YACHT "HANNIEL."—SAIL PLAN.

THE STEAM YACHT HANNIEL.

THE steam yacht Hanniel was designed last winter by Mr. Edward Burgess for Mr. Daniel S. Ford, of Boston, publisher of the *Youth's Companion*, to meet the demands of the owner for a fast and comfortable coasting steamer of moderate size. Her service is chiefly to carry her owner between Boston and his home in Marblehead, which she has performed to his complete satisfaction, making the trip quickly and comfortably. She was also seen about New York and Newport in attendance at the races. Her dimensions are:

Length over all	97ft.
Length on L. W. L.	85ft.
Beam	15ft.
Hold	9ft.
Draft	7ft.

The engine space, 19ft. 9in. long amidships, contains a compound engine with 14 and 25in. cylinders, by Webb & Watson, of East Boston, and her vertical steel boiler, by Robinson & Co., is 7½ft. diameter and 10ft. extreme height.

Abaft the engines are the owner's quarters, two staterooms each 7ft. 4in. long and 7ft. wide, fitted with berth and drawers, closet, washstand and bureau. These open into the main saloon, 11ft. 4in. long, and the full width of the boat, handsomely fitted with lockers, sofas, etc. At the after end is the main stairway, with w. c. and toilet on port side and a stateroom on the other.

Forward of the engines is a roomy galley 6ft. in length and as wide as the boat, with ice box, etc. The captain's room, forward of the galley, is 6ft. square, while opposite to it are berths for the engineer and cook. The forecastle is 12ft. long. The deck is flush, with a pilot house forward, the after part making a saloon. The yacht spreads a good area of sail in a schooner rig with two pole masts and lug-footed sails. The Hanniel has made 14¼ knots on trial, and has run from Boston to Marblehead, over 17 miles, in 1h. 15m.

THE FLEET OF SMALL CRUISERS.

THERE is a growing desire to own yachts of a manageable size among those who care to really skipper and feel the boats they own in every particular. The keel and outside ballast seem to receive preference, owing to immunity from capsizing and increased room in the cabin, things of the greatest importance in small yachts. The Lawleys, of Boston, have recently launched a 25ft. cutter for Mr. Archibald Rogers, of the big crack Bedouin. Commodore Chard, of the East River Y. C., is having a three-beam cutter of 30ft. loadline built by Driscoll, of Greenpoint. A small craft of 17ft. loadline has just been launched by H. C. Ford, of Bordentown, N. J. The first mentioned have already been described. Particulars of the last one are as follows: The Lark resembles in general the Mignonette, illustrated in "Small Yachts," but is an improvement in form. The average boating man, accustomed to shoal centerboards, will hardly understand how a full-fledged yacht can be produced on such limited length. To him a visit to the Lark would be a surprising revelation. He would find a smart, able and even quite roomy little vessel, brought about by the introduction of depth and the omission of the board. The Lark can accommodate three hands below, and with ample stowage room and sloop rig, is prepared to undertake cruises of any length. Many will agree that a much greater return in the way of yachting is to be expected from this boat than from an open racing machine.

She is a very stylish boat in her lines as well as in profile and cut of her rig. The cabin house, which is low, is as handsome a piece of joiner work as can be seen on any sloop. In all respects the Lark is an example of superior taste and the best class of workmanship. It would be hard to surpass her, for she is thoroughly "one boat" fore and aft, each part being in perfect harmony with every other. Very few boats can pretend to this distinction.

DIMENSIONS OF THE LARK.

Length over all	21ft. 6in.
Length on load line	17ft.
Beam across deck	7ft.
Beam on load line	6ft. 3in.
Depth, deck to top of keel	3ft. 3in.
Least freeboard	1ft. 3in.
Draft 2ft. from stem	8in.
Draft aft	2ft. 10in.
Rake of post in 1ft.	8in.
Depth of keel amidships	1ft.
Ballast on keel	1,000lbs.
Ballast inside	1,200lbs.
Mast from stem	5ft. 8in.
Bowsprit outboard	10ft.
Diameter at stem	4in.
Mast over all	25ft.
Mast, deck to hounds	19ft.
Masthead	3ft.
Diameter in partners	6in.
Diameter at hounds	5in.
Boom over all	24ft.
Diameter	4in.
Gaff over all	14ft.
Diameter	2½in.
Topmast over all	17ft.
Diameter at cap	3½in.
Area mainsail	300sq. ft.
Area jib	125sq. ft.
Area clubtopsail	110sq. ft.
Area lower sail to square L.W.L.	1.47

Specifications as follows: Keel of white oak, 6x12; stem and sternpost sided, 4in.; frames of white oak, double, 3x4 at keel and 2½x3 at deck. These frames are boxed into the keel and through riveted.; clamps of white oak, 1x4in., sprung to sheer and in one length; ceiling of Norway pine, ½x3in.; deck beams of yellow pine, 2x4, with taper at ends; breasthooks of oak; knees of hackmatack; plankshear, 1x3 oak, sprung to side line; mast partners or king plank, 1½x15in., running from stem to cabin house, with chocks between the mast beams for additional bearing to the wedges; deck of white pine, 1x3, covered with canvas and painted; waist, 1x3 oak; caprail, 1x2, oval section; cabin house of 1x18in. oak boards sprung to shape and paneled on the outside with ½in. pine. There are six brass air ports in the house; cockpit finished in walnut and chestnut; cap of cherry, 1x2½; cockpit floor covered with canvas and painted; hatches and fittings of hard wood; interior is hard oil finish, with hardwood trimmings and plush upholstery; closets in cherry; the rudder is one piece of 1in. oak; tiller of locust; lower sails of 8oz. duck, close bighted; topsail of 6½oz. yacht drill. Photographs of the Lark and her plans can be seen at this office.

The same builder has contracted for another fine keel yacht of 32x10ft. for Philadelphia owners. She will be, in general, like the Mignonette. Also a third keel boat of 30ft., for Beverly, N. J., owners. A large number of similar keel yachts are in various stages in the Boston yards, so that safe and rational yachts of small size promise well for the future.

The Lark has been tried under canvas and excels in light weather. She also on one occasion carried her sail longer than a 36ft. centerboard sloop.

Mr. Ford is now erecting new shops at Bordentown and looks for a lively season, as many new craft are in contemplation.

NEW YORK YACHT CLUB.—A meeting was held on Oct. 28 with Com. Gerry presiding. The correspondence relating to the Clyde challenge was read and acted on as noticed elsewhere, after which Mr. G. M. Edwards, of the Gaviota, offered the following resolution, which was adopted: "Resolved, That the thanks of the New York Yacht Club are due to the owner of the sloop Mayflower for his gallant defense of the America's cup, and that the club, to show its appreciation of the same, hereby authorizes and empowers the regatta committee to select a piece of silver commemorative of the event and present the same, in the name of the club, to General Paine." The following candidates were elected: D. A. Egleston, Edward M. Field, Albert W. Nickerson, James Renwick, Herman Beckman, Buchanan Winthrop, Frederick Grinnell, William Wall, John W. Loomis, Thomas Manning, John H. Flagler, J. G. Chapman, W. F. Burden, Jr., W. H. Thomas, Thomas H. Thomas, Clarence F. McKim, F. C. Griffiths, R. F. H. Durkee, Thorndike Nourse, D. A. Lendley, Ludwig Marx and James E. Martin. The nominating committee elected included the following: Owners—Lloyd Phœnix, Joseph P. Earle, G. G. Haven, Edward M. Brown and Gouverneur Kortright. Non-owners—Philip Schuyler, John R. Platt, Chester Griswold, Frank T. Robinson and William Krebs.

JAMAICA BAY RACES.—The third and last of the series was sailed on Oct. 31 in a strong N.E. wind, the boats turning in second reefs. The course was from Ruffle's Bar to the spar buoy in the inlet and return. The start was made at 12:36 for first class and 12:41 for second. The times were:

CLASS 1.—CAT-RIGGED YACHTS.

	Start.	Finish.	Elapsed.	Corrected.
Aurora	12 36	2 05 25	1 29 35	1 26 30
Secret	12 36	2 02 55	1 26 55	1 26 55
Julita	12 36	2 05 15	1 29 15	1 28 15
Amphion	12 36	2 07 50	1 31 30	1 30 05
Gypsy Baron	12 36	2 00 15	1 23 15	1 32 25

CLASS 2.—CAT-RIGGED YACHTS.

Florence	12 41	2 11 25	1 30 25	1 30 15
Ethel	12 41	2 11 20	1 30 20	1 30 20

THE COOT AS A CRUISER.—A correspondent writes to know why Mr. Kunhardt made his cruise in a catrigged centerboard boat instead of a keel yawl as advocated by him for cruising. The reasons for taking such a boat were set forth in the opening chapters of the "Cruise of the Coot," and the experience of the entire cruise only served to prove her unfitness for such work. The small cruiser is as yet a rarity in New York waters, and none were in the market last fall, the Coot being the best boat obtainable without building to order. While better in model than most of her class and with a small rig for winter work, she was a poor makeshift at the best for a singlehanded cruise, and that she went through all so well is due chiefly to the pluck and determination of her skipper. In a boat like the Windward or Columbine the work would have been far less trying, the danger would have been greatly lessened, and life on board would have been comfortable, whereas in the Coot it was at times hardly endurable.

A NEW LIGHTHOUSE ON DELAWARE BAY.—An iron lighthouse to be erected on the Fourteen-Foot Bank, Delaware Bay, is being constructed at the H. A. Ramsay Engineering Works, in Baltimore. The lighthouse will stand on an iron caisson already in position, and the focal plane of the lantern will be 59ft. above the sea. The structure will consist of a gallery 40ft. in diameter, surmounted by a cast-iron parapet and rail, with iron cranes or boat davits. From the parapet will rise an iron octagonal structure 26ft. in diamater, three stories in height, surmounted by a tower in which there will be a watch-room for the lantern keepers. On this gallery will be an ornamental gallery and the lantern. The completed lighthouse was erected in the works of Mr. Ramsay and inspected by the United States officials having charge of the work, and the first consignment of the tower has left Baltimore.—*The Iron Age.*

DISTANT CRUISING.—The steam yacht Lancashire Witch, known from her cruise around the world with Sir Thomas Hesketh, has left England for Bombay, India. Her present owner is Mr. James. The Sunbeam, steam yacht, Sir Thomas Brassy, will soon sail from the same port.

RAMONA.—The new steam yacht Ramona, built at Newburgh for Mr. Jas. Bigler, made her trial trip lately on the Hudson.

TARTAR.—This well-known catboat has been sold by F. L. Dunn to J. B. Forsyth.

LAWLEY & SON.—This firm is now beginning a steam launch 45×10ft. for Mr. R. S. White, and a keel sloop 26ft. over all, 22ft. L.W.L. and 9ft. beam for Com. J. B. Neer, Boston Y. C.

JOSIE.—This sloop, now owned by Messrs. Wright & Young, is at Smith's yard, City Point, where an iron keel of 2,500lbs. is being bolted on. Her board has been removed.

ARETHUSA—Schooner, Com. Savage, Dorchester Y. C., is at Dinsmore's, City Point, for alterations below. The cabin will be lengthened, a stateroom added, and the cockpit and companion rebuilt.

DELPHINE—Catboat, has been sold by F. J. Bradlee to S. F. Freeman.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A SITE FOR A SALT-WATER MEET.

WHAT'S the matter with Shinnecock Bay? Nothing. That is what my friend B. and myself thought, so the Girofle was packed and on Oct. 12 was shipped for said bay, the crew leaving Springfield on the afternoon of Thursday, Oct. 14, on the Boston & Albany R. R. to Palmer, Mass., then the New London R. R. to New London, Conn., arriving there at 11 P. M. The next morning leaving New London on the steamer Manhanset at 8:55, we arrived at Sag Harbor at 12 noon. The crew then took dinner and left at 1:55 on the Long Island R. R. for Good Ground, arriving there at 2:30, and finding the Girofle at the freight house, loaded her on a wagon and started for the house of Wm. N. Lane on Shinnecock Bay. The crew then unpacked her and went for a short sail. Oh, how refreshing the salt air was to us inland land lubbers. The wind was from the northwest, so we laid our course southwest for the life saving station on the West Bay, distant about three miles. Arriving there very soon, we landed and enjoyed a view of the Atlantic Ocean that was just immense to one who had seen nothing larger than the St. Lawrence River or Lake George for a couple of years or so. We then sailed home. The wind was very steady, and I enjoyed the sail more than any I have had for many moons.

I do not intend to give our log, and what I am trying to get at is this, to let canoeists know what a perfect place Shinnecock Bay is for the A. C. A. meet for 1887, and, having spent some fifteen days cruising on its waters, will try and explain. Shinnecock Bay is at the southeast end of Long Island and is separated from the ocean by a narrow strip of sand about twenty feet high and about three hundred feet wide. It is divided into two bays, one called East and the other West Bay. It is ten miles long and from one and a half to three and a half miles in width; it is from four to eight feet deep; there is no tide, and during my stay there of two weeks I could not see that it rose or fell as much as an inch. The natives told us they did not have any tide, as the inlet from the Atlantic was closed generally during the summer. They also informed me that they always had good winds, and I know we did every day during our stay.

There are two places I would recommend for our camp. The first is in the West Bay or Tiana Inlet, where a three or five mile course can be laid out. This is my choice, as the shore is very fine, with some shade trees and some open ground, also a very fine sandy beach. The Long Island Railroad runs within twenty feet of the head of the inlet, thus doing away with any trucking of canoes from railroad to water. There are several good boarding houses near by, where canoeists can get their meals, and plenty of fresh water right near at hand.

The second site is at the East Bay, near Canoe Place Inn, where there is a hotel and all the fixings. This bay is large, and with the wind in the south or southwest or southeast becomes quite rough, but not any more so than we have it at the Thousand Islands. The railroad runs within 500ft. of the bay. The shores are all fine white sand. No rocks to be found anywhere on the bay.

Now as to provisions. Good Ground is about half way between these two bays and it has several grocery stores and markets, and they will run their wagons to camp (if we have one there) several times a day, so that canoeists can get anything they may want in their line. In regard to transportation of canoes, the L. I. R. R. Co., I think, without doubt, will stop for us anywhere. Shinnecock Bay is about three hours' ride from New York, and canoeists from the North and West can reach it best from that point. Those so desiring can cruise inland from Far Rockaway through Great South Bay, then through East Bay, through canal at Quogue into Shinnecock without a single carry. Then, canoeists from the East can cruise from Greenport or Shelter Island through Peconic Bay—that is, Little Peconic into Great Peconic—then through the new canal now under process of construction into Shinnecock. Now, what do we want better? The earth with a fence around it? No, let us have Shinnecock. Look at the cruising ground we would have in East and Great South Bay, with its shores lined with summer hotels, and then Peconic bays with Shelter Island. I have heard Peconic mentioned, or Jessup's Neck, for a camp. They are no good, for it is very rough there. And then look at the rise and fall of the tide; several feet, I am informed, and that it is very strong. No, Shinnecock is the place for us. I saw the name of Dr. Curtis and his canoe Minna registered at Canoe Place Inn. I should like to have him give his views of the place, and hope it will be Shinnecock for 1887.

C. M. SHEDD ("Girofle").

A. C. A. EXECUTIVE COMMITTEE MEETING.

To the Members of the American Canoe Association:

The Executive Committee of the American Canoe Association will meet on Saturday morning at 10 o'clock, Nov. 13, at the Gilsey House, New York city. All are invited.

DESERONTO, Ont., Oct. 26. F. S. RATHBUN, Commodore.

PADDLE AND CURRENT.

FIRST PAPER.

TO the cruising canoeist the memory of his river trips give the most pleasure of all his varied experiences. Without violent work the man who is not a sailor there travels onward at a rate that should satisfy the most ambitious seaman, and has enough mild exercise to keep his mind alert and active to receive impressions from everything that comes within range of the senses. In the rapids, dams and natural falls to be run he who delights in excitement can often be more than satisfied. Here the lover of nature will find her in greatest perfection. Here abounds animal life, here foliage is most exuberant, here exists that variety in the water itself that is not found in lake or ocean, the traveler always being in proximity to the land, and rivers frequently flowing through mountainous country, where the scenic effects are the finest. Each moment discloses some hidden feature in the landscape; sight and sound constantly contribute unexpected charms.

These attractions are more fully appreciated in a small river, for then the voyager is near to both banks. He is on a level with the ground, and not only has he the perspective view which the pen writer affords him, but, without the annoyances of walking through tangled underbrush, he is enabled to see better than the pedestrian the hidden recesses of the woods. Except in wild and emote districts, large rivers are early explored; but small streams, even in well settled regions, not being considered navigable or by the practical worthy of exploration, are generally overhung with mystery. Here then the canoeist who is willing to submit to the discomforts of wading and an occasional portage, has, added to the natural features found nowhere else, the enjoyment of being a discoverer.

The village of Hamilton, some thirty miles south of Utica, is on the watershed that separates the streams that find their way into the Mohawk and thence into the Hudson from those that seek an outlet to the ocean through the rivers that empty into the Delaware and Chesapeake bays. From a tiny lake on the outskirts of the village issues an insignificant brook which, gathering strength from numerous small affluents, after winding southward through New York over a hundred miles as the Chenango River, mingles its flood with the Susquehanna at Binghamton on the Pennsylvania border and pours its waters into Chesapeake Bay.

Formerly residing at Hamilton, the advantages offered by this continuous watercourse for a long canoe trip every season awakened my desires. Last summer, finding myself with the time, a good canoe and a pleasant companion, the Chenango recommended itself above all other rivers. Our canoe was a 16 by 30 Peterboro, of cedar, weighing only 50lbs., but capable of comfortably carrying two people with enough camp equipage to last them an indefinite time. We had a light pyramid tent, besides wool and rubber blankets, overcoats and rubber overcoats, provisions, canned and otherwise, in fact all that was necessary for a long voyage. By means of the rubber goods we expected to keep dry in any storm but a torrent. It was arranged that Will Morris, my friend, was to occupy a bow seat, I was to take the stern, while betweeen us in two meal sacks covered by rubber blankets would be placed our outfit. It was our object to descend to Binghamton and take the cars some fifty miles to the Delaware, descending that river as far as it suited our fancy.

On the day appointed for our departure we were favored by heavy rains. Late in the afternoon, the rain ceasing, we carried the canoe to where the road crossed the brook. While I waited for Morris to drum up our friends, I smiled at the thought of our floating in the water I saw before me.

The brook could not have been more than 5ft. wide and 3in. deep, and at the start we had to wade. The meadow grass was long and wet, the bed of the brook was muddy and treacherous; the water would barely float the canoe alone. Morris walked along the bank and I waded, shoved and lifted the boat over shallows. It required strong faith to believe that this trickling rivulet would become the broad, deep river we subsequently found. Our friends were either lacking in faith or overstocked with humor, for they made the most of our ludicrous situation. "Are you fellows going down all the way in that style?" "Morris, you will have to work your passage with your feet," were a few of the encouragements we received.

A short distance below the bridge the stream enters a swamp. Here the current slackens and the water deepens. We now could get aboard and it was well we could. This swamp is covered with pampas grass and extends across the valley. It is known to the natives as the Prairie. In the swamp the bottom of the stream is a soft, imponderable mud which has never been fathomed. Scattered over the surface of the bog are a few ponds, the water of which is as clear and cold as any ever found, and the bottom apparently of hard white sand. A pole thrust down penetrated this bottom with scarcely more resistance than if it was water. The entire swamp is known to be a hidden lake. That such is the case can be proved by jumping on the sod that separates the ponds, when the mass of floating roots heave like ocean billows. Nearly a mile of this and we reach the house of a friend, our objective point for the night. Mr. Ely and his family entertained us well, but when they were about to show us to our rooms we objected; beds no doubt might be very good things, but we were campers and must insist upon the barn. The next day, Sunday, was raining, and a promise to take us and our canoes early Monday morning four miles down the river to where it was more navigable induced us to remain there all day.

Monday morning we were up before dawn, and at the end of our ride and launching our boats at Earlville long before any one was stirring. We now felt that our cruise had really begun. Although only a small creek the stream at this point could without any serious absurdity be called a river. The water was perfectly transparent and the bed of the stream was covered with long hair-like weeds, which in the current and eddies moved and writhed in snake-like contortions. The water being so clear and the creek so small we often unconsciously imagined that we were floating in ice; while, to further strengthen the idea, the weeds and rushes bending beneath made us feel that we were skimming over fields of wind-swept grain. We thought from its purity that the water must have a spring origin, and we soon found another characteristic of spring water. Our first rift was too shallow to float us. Upon jumping out we made a momentous discovery. "Ice-water is warm compared with this," shouted Morris. "I would rather not have to swim very far in such water." After a few repetitions of this performance the warm sunshine seemed very welcome. The canoe and the river both being in miniature so harmonized that we seemed to be making a voyage in fairyland. Very often our craft filled up the stream and we could touch both banks at once. The turns in the river were mere velous. Some of them were at right angles to the former course of the stream, and the only way they could be passed was by simultaneously shoving off from opposite banks at both bow and stern. We would be paddling along on a straight course in still water, when suddenly we had to turn sharply to right or left and would find ourselves scudding down a ridiculous little rapid, at not, however, such a ridiculous speed; for be it known the swiftness of the current does not altogether depend upon the volume of water —a rift 5ft. broad may flow with the velocity of the Lachine rapids. Another time, the swift current dividing, we would see before us a fleet of little green islands, apparently sailing upstream. Drifting down between these islands to the music of birds and the harmonious gurgling and rippling of the surging current, we would sweep along in the perfumed air under a continuous canopy of drooping boughs that seemed to hang as fondly over the beautiful water as some fair lady over her jewels.

There were, however, some unpleasant features; often the canoe would stick in the shallows, many times we had to recklessly jump overboard and freeze our feet. Then again, when running down a rapid too fast to stop, we would discover some half submerged log. Such obstructions are always dangerous, but in a stream no wider than ours it was sometimes almost impossible to avoid them. Morris with a friend had formerly been over this part of the river in a rowboat, and he now regaled me with their experience. He said that they had struck a snag, and with all their baggage were left swimming in deep water. They had no more than started again, when in making quickly a sharp turn they once more came to grief. They persevered to the next village, but in their wretched and destitute condition were glad enough to take the cars for home. Such a mishap, by losing our goods, would have terminated our voyage. We were, therefore, very careful.

Noon found us at Sherbourne. The river flowed in on the right hand side of the valley. The village lay to the left. A road led from the right of the river to the town. A few feet below the bridge was a sandy island, and here we landed for dinner. I prepared the food while Morris went to an adjoining farmhouse for supplies. He soon came back smiling. "I saw an old lady at the house and when she heard who we were and where we were going she would not take a cent for the bread and milk. She also insisted on our having some cake." We did not calculate to eat in public, but we had no sooner settled ourselves than wagons began to pass over the bridge without intermission. A farmer would drive along in sleepy abstraction till about the middle of the bridge, when suddenly spying us, with a pull on the lines and a whoa! to his horses, would stop and a colloquy something like the following would ensue: "Nice boat you've got there." "Yes. It's a very good boat for our purposes." "Been fishing?". "No." "What are you doing with that boat then?" "Going to New York in it." "Phew! You don't say so? Are you doing it on a bet?" The average granger seems incapable of grasping the idea of physical exercise for pleasure. When he walks it must be behind a plow, when he goes boating it must be to catch fish. Such a conception of enjoyment probably grows out of his daily work being almost exclusively physical. The benevolent old lady that Morris had seen came down to the bank, and after viewing our outfit wanted us to go again to her house and get some butter. She supplied us very liberally, but on tasting we found the milk to be skimmed and the butter unfit to eat.

Late in the afternoon we reached Norwich and hauled up for the night. The next morning we started along with a furious northerly gale at our backs. This at times took us along faster than was pleasant, for in descending a shallow rapid, since we were momentarily expected to strike, it was desirable that the shock should be as light as possible; also, the wind being down stream, flattened out the waves in the rifts, and these signs of rocks, that concealed, left us nothing by which to direct our course. We soon experienced that chief annoyance of small rivers—dams. We would not have so much objected to the dams that were in use, but the fact of the many discarded dams being left in the river to obstruct navigation sorely tried our patience. Upon coming to one of these the inevitable experience was, first, to paddle around to find the best place for a portage; then succeeded wading on slippery rocks or wood, unloading the canoe, carrying or shoving the boat over débris that contained sharp spikes and stones, finally balancing ourselves to load our craft in a swift current that every minute threatened to tear the boat out of our grasp.

After many exhausting repetitions of this procedure we came to a new dam that had in the middle a sluiceway just wide enough to permit us to pass. The mouth of this was boarded up, and these boards we commenced to remove. Upon this the miller came out of his mill like a spider out of a corner of its web. In vigorous English he remonstrated with us. We informed him that we must reluctantly decline his invitation to carry around, that his dam was obstructing navigation, and then continued in our destructive course, and the jolly miller withdrew, a sadder and wiser man. About noon we reached Oxford, and after carrying around the dam we stopped for dinner and again ate amid the admiring gaze of the multitude. This time the sacred precincts of our pots and kettles was invaded, and, not satisfied with questioning us, our would-be friends performed gymnastic feats over our cocoa pail and flourished their feet about our meat and bread.

This was to be our first night under a new tent, and we looked for a spot where we might not be disturbed and at the same time be conveniently near a farmhouse where milk could be had. The advantages of every field were discussed. Few would suit, and, when we found one that did, it was rejected upon the plea that we had not gone far enough. If we saw any ugly rapid ahead we always, before stopping, wished to get through. It makes one nervous to hear the boiling and splashing of a bad rift that he must run the next day, and it is not a pleasant thing, just after rising from warm blankets and a hearty meal to jump into the cold water to save one's canoe. These considerations kept us on our way till dark, and thus brought us mischief. We came to the remains of an old mill, which allowed the water to go through in only one shoot. This was an aperture but a few feet wide, below in the middle of which could be dimly distinguished the outlines of a snag lying transversely in the current. We expected by hard paddling to avoid this, but the frightful force of the rush, concentrated as it was, we had miscalculated. Despite our utmost efforts we spun up against the submerged part of the snag, were lifted bodily out of the water over the portion of the obstruction which was above the surface, and landed on our beam ends on the other side. By throwing our weights to the opposite direction we did not capsize, and thanks to good workmanship the boat sustained no injury.

We immediately landed, finding our enforced camping place to be an immense clover field, far from any habitation. Once erected, our mansion of cloth was a complete success; it was though so diminutive, a mote in the air, a chip on the ocean, that we laughed outright. Lying in my blankets the continuous hum of insects did not serve to diminish the feeling of Crusoe-like isolation; on the contrary, remembering that the din came from such minute and insignificant creatures, it reminded me but the more forcibly of the absence of human companions. How helpless one feels under the open sky—it is to a house-dweller like the feeling a snail or a hermit crab must have when it is separated from its shell. Close after this thought comes the trust in that force, that, though the possibilities of danger are so great, chooses to protect not only me, having some powers, but also the vegetable and animal organisms that are utterly powerless. Surely the space, the quiet and the accompanying sense of personal insignificance makes a man appreciate more absolutely the reality of God than many sermons. The man is withdrawn from the artificial life of human relations, feeling himself, as truly as did the first man, a part of that nature he sees and hears about him.

The next morning as we progressed the river grew wider and deeper, and the rapids, although not to be compared with some we subsequently encountered on the Delaware, became heavier and more exciting. As with most all things of decided character in external nature people unconsciously personify in word or thought, so we got to look upon the rapids as individuals. This one, deep and swift and straight, with a few lively waves, was a strong, frank character, a square person to deal with; another, promising well at the beginning, but soon breaking up into islands and troublesome reefs, was a promising individual with shallow attainments, one where the careful investigator could soon strike bottom. Again we had a rapid typifying a still different man, a rapid full of rocks, of boiling eddies, of sharp turns, a veritable heavy villain, a satanic personage that showed his teeth on all occasions.

The swift water prevents a river trip ever being tedious. No drowsiness here, no neglect to use every power of body and mind. At what point shall we begin the descent of this rift? We have made a mistake in striking in here; there is a shoal below on this side. Paddle across for the opposite shore. See that rock in the middle of the river? It seems to be running up stream right for us. Work with all your might. Quick! Quick! Shove off. That was a hairbreadth escape. We are not out of sight yet. There is a reef all the way across. Jump before we strike! Then succeeds wading over rough stones. The wading is not an inevitable part of the programme, and when we can omit it we are happy.

Just above the village of Greene, where the river widens and the current slackens, we came across an old man trying to sail, and, as we had seen no one all day, attempted to strike up a conversation. He answered us a question which we answered. We then spoke to him and he made no reply. I shouted, Morris shouted, and we both yelled together, but nothing could we get from the surly old fellow. He not even turned his head. We stopped in Greene to buy supplies, and while waiting there our mysterious acquaintance stopped and explained. He did not need to tell the reason of his conduct, for when he came alongside and we screamed into his ear we could barely make him understand. Our judgment had been too severe, he was as deaf as a post. The three days of north wind were now very perceptible in the temperature. Soon chilled by the cutting wind and the wading, we decided to stop at the first opportunity and build a fire. Fortunately we came to an old dam containing a large amount of timber, and on the surface dry in most places.

From this we soon had a very fine fire, and put on our dinner to cook. Waiting close at hand, we were startled by a loud explosion. Another, much greater, throwing hot embers in a regardless fashion and capsizing our dishes, abruptly reminded us that though the timbers might be dry on top they were wet beneath. This bombardment compelled us to evacuate and complete our culinary operations by the aid of an alcohol stove.

That night we had the ideal camp. In an opening in a fringe of trees that lined the bank was a shallow gully. On the violet-covered field at the head of the depression we pitched our tent, and in the hollow made an immense fire. A drift pile lay close by, and we spared no pains to raise the temperature. What an institution a camp-fire is. Writers in poetry and prose have made much of the hearthstone, and not without cause; a humanizing and domestic influence hangs round a cheerful fire. We felt at once as if that part of space lit by our blaze was home. Reclining in our tent, talking over the day's experience and telling stories, watching the vivid light gradually grow less and the grotesque flickering shadows on the white walls become darker, the popping of the fire sounded fainter, objects began to mingle and we were fast falling asleep, when suddenly wild wailing, yelling and roaring, like the breaking loose of the animals of a menagerie or a carnival of fiends, roused us. Our first impulse was to grasp our revolvers, our next to laugh heartily, for we now recognized the sweet refrain of the festive horse-fiddle and the gentle melody of tin pans and horns. We supposed that our hiding place was discovered and the local band had come out to do us homage. However, the honor was not ours, the serenading was across the valley, fully half a mile away. The din ceased, and then just as we were again gently dozing, started up once more. So it alternated far into the night, till finally from sheer exhaustion we slumbered.

Our last day on the Chenango was the only one in which scenery in perspective was worthy of notice. While the river had been beautiful, the water clear, the banks steep and low by turns and diversified by woods or fields of grain or grass, the hills had been far off and low and tame. Now, as we approached the village of Chenango Forks all this changed. The hills came down to the river and instead of being low and cultivated as before, rose wooded to the top, to a great height straight from the water. The houses of the village lined both banks of the river, but though the buildings were numerous and our rig always attracted attention, we could see no one. No wagons passed along the road, no persons were visible on the streets, no smoke issued from the chimneys; the only indication of life was the clatter of a departing train. We had expected that Binghinoga Creek, which here joins the Chenango, would greatly decrease the difficulties of navigation. We found that the river bed was indeed much wider, but this greater width was not accompanied by a proportionate accession of water. The increased breadth made it harder to choose a channel, and the different character of the country through which the river flowed filled the stream with large boulders. We now for the next three miles did penance by wading most of the way over angular fragments of stone. The hills with their dense green garments outlined against the matchless richness of a clear July sky, the black line of the railroad binding them as with girdles, and the beautiful river, like a thing of life, swiftly flowing and turning as if in frolic, to touch their feet, were lost upon us in our solicitude to tread lightly.

About ten miles below Chenango Forks the river began to improve, the rapids being deeper and swifter; the valley widened, houses came in view, and we began to think that before long we might get somewhere. Gas works and water works, the inevitable announcement of the proximity of a city, appeared; railways crossed the river, vehicles lumbered along the roads, and then the spires and roofs of Binghamton, close clustering above the stream, loomed up in the distance. Many people gathered along the banks and on the bridges to see us pass; for effect I stood up to paddle, and our novel craft, method of propulsion and our appearance, which certainly indicated decidedly rough usage, made us the attraction of the hour. Our friend Dr. F. lived close to the water, and after some trouble we found him. There we left the Chenango, the next stage of our cruise being made by rail.

RALPH K. WING.

WATERY WANDERINGS AMONG WESTERN LOCHS.—Under this appropriate title Mr. T. H. Holding (Severn), of the Royal C. C., tells a pleasant story of a canoe cruise in Scotland, made by a party of four in three canoes. The weather seems to have been bad enough to spoil the spirits of the most enthusiastic canoeist, rain all the time, head winds and rough waters, but in spite of all the cruise was a very pleasant one, to judge from the log. We believe that Scotch scenery is something to be enjoyed, but we should prefer a dryer climate even at expense of the glorious views. The canoe carriages invented by Mr. Holding several years ago played a very important part in the necessary land transit, and must be a very useful affair. The book is published by Marlborough & Co., London.

SMOOTHSKINS IN THE TORONTO C. C.—*Editor Forest and Stream:* In describing the canoes at the meet you state that the Toronto canoes are smooth built something like the Pecowsie. As a matter of fact, only one canoe in the club, the Isabel, is built like the Pecowsie. The others are either the ordinary Peterboro or Rice Lake build, or the good old-fashioned lapstreak. I can count eleven sailing canoes and one paddling, all lapstreak. This winter, however, may see some new boats built with smooth skins. —BOREAS. [The statement alluded to was that "the Pearls" of the Toronto C. C. were built with smooth skins. We believe there are and were but two Pearl canoes in this club, and one of the two is, as stated, a smoothskin canoe.]

THE EXECUTIVE COMMITTEE MEETING.—The executive committee of the A. C. A. will hold their meeting in New York on Nov. 13, as stated in Com. Rathbun's notice. The meeting will be an important one as the first under the new arrangement, and as a commodore and secretary for the entire Association will be elected. Besides this there are some points in the Constitution to be considered, as the full scheme for the division is not yet perfected. The site for next year's meet is also to be decided upon, the points proposed thus far being the east end of Long Island and Lake Champlain. Altogether the meeting promises to be the most important yet held.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. A. Hazlet, N. J.—The law on quail and rabbits in your State was off Nov. 1.

B. B. D., Suffolk, Va., whose address has been mislaid, will oblige by communicating with us.

R. N. S.—A non-resident's license will be necessary in Nova Scotia or New Brunswick. It may be had on application to the Commissioner of Crown Lands.

G. W. J., Tenant's Harbor, Me.—1. The rifle ought to be safe. 2. Pink curlews have been pursued for years in Florida until they are now extremely rare. You will find few terns.

W. L. B.—The New Jersey prohibition of European pheasant shooting (for three years) does not have any reference to ruffed grouse, which are in season from Nov. 1 to Dec. 31.

G. T. K., Richmond, Va.—Will you kindly inform me what is the best load to use for quail and rabbits in a No. 10 breechloading gun? Ans. Try 3drs. powder, 7/8oz. No. 10 shot in first barrel; 3drs. powder, 1oz. No. 8 shot in second barrel.

J. S. S., Cassopolis, Mich.—You will probably find the fishing pages of Hallock's "Sportsman's Tourist" better suited to your purpose than any other work on the same subject. For bass fishing the best book is Henshall's "Book of the Black Bass."

CONSTANT READER, Derby, Ind.—The "Travels in Boon Gah Arrahbiggee," as has been explained, are from Mr. Goater's manuscript diary, and not from a printed book, as you seem to suppose. They have never been published before.

W. H. P.—A cross between Skye and Scotch terriers might answer your purpose, provided you have such an animal; a cross between a Skye terrier and a cocker spaniel might also answer in a mongrel way. This is on the supposition that you already have such dogs; we do not recommend you to breed them.

JACK SNIPE.—While on a hunting excursion to Ipswich, Mass., in August last, a few birds were shot, which were, as near as I can estimate from memory, about the size of the summer yellowleg, having a gray back and light slate-color breast. We were informed by an old hunter that the birds were "blue plover," which name I am unable to find in any work which I have access to. Can you or some of your readers advise me as to the name?—Ans. It is possible that the birds killed were purple sandpipers (*A. maritima*), but the description is so vague that it is impossible to say definitely.

MEAD.—There are some of your readers who are anxious to go shooting for small game, such as squirrels, partridges, quail, etc., and who do not know the ground in this vicinity. Will you not, for their convenience, indicate by some sort of sportsman's directory, where, within a radius of from fifty to seventy-five miles of New York city, such sport may be found? Ans. The stations of the Erie Railroad in Sullivan, Rockland and Orange counties, of the Long Island Railroad in Queens and Suffolk counties, and some of the points reached by the Harlem Railroad afford fair sport; as a rule, the further from New York the better.

D. M. P., Vicksburg, Miss.—I notice the advertisement of "Johns' Patent Automatic Sporting Shrapnell Shell" continues in your paper, but there seems to be no United States agent. I will be greatly obliged if you will inform me if the above shells can be used in a chokebore, if they will do what is stated of them in the advertisement, and if they can be procured in the U. S.? Ans. We do not think that the Shrapnell shells can be obtained in the United States at present, though we have understood that arrangements are being made to establish an agency here. We have tried those shells at targets and obtained very good results at 100 and 125yds. from a cylinder gun. Those shot from a chokebore gun did not seem to spread at all, but went like a solid ball.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

I. The Sloop Yacht Schemer.

Fine pups always on hand, all colors, evenly marked liver and white dogs and bitches a specialty, at HANDSOME BROOK KENNELS, E. Cohoon, Prop., Franklin, Del. Co., N.Y. 1t

FOR SALE.—THREE CHOICE SETTER DOG puppies, pure Llewellin, sired by Gus Bondhu out of a fine Rake bitch, whelped May 11, 1886. Also one by Dash III. Also a nice bitch, 15 mos. old, ready for the field, strong in the Gladstone blood. Address A. M. TUCKER, 85 Main street, Charlestown, Mass.

FOR SALE.—VERY FINE ENGLISH FOX-hound puppies, very cheap; rare bargains. Also bull-terrier dog; 25 cents for cabinet pictures of foxhound. L. N. EDWARDS, Box 84, Oxford, Me. 1t

FOR SALE.—TWO FINE BRED POINTER pups, dogs, 5 and 8 mos. old. Write for pedigree and price. JULIUS E. WILSON, Lake Village, N. H. 1t

The Kennel.

INAUGURAL FIELD TRIALS

OF THE

Irish Setter Club,

At Salisbury, N. C.,

DECEMBER 1, 1886.

PURSE $850.

First Prize, $200; Second Prize, $100; Third prize, $50; Fourth in Plate.

Entry fee $10; Open to all pure-blooded Irish setters. Entries close Nov. 15, 1886.

For entry blanks address

MR. W. DUNPHY,
Box 310, Peekskill, N. Y.

Dr. W. Jarvis donates the Elcho Cup to go with first prize.

ENGLISH MASTIFFS.

For Sale—Fine litter of pups by the celebrated

ILFORD CAUTION

Winner of 1st at each Boston, Hartford and New York Fanciers' shows, 1886. These pups are of the new type.

ILFORD CAUTION is acknowledged to be the best headed mastiff in America if not in the world.

For price and catalogue apply to

E. H. MOORE,
Pine Hill Kennel,
Melrose, Mass.

RABBIT HOUNDS.

A large lot of English beagles, 14 to 16 inches high, dogs and bitches, well broken; $15 each. Pups from 6 mos. to 1 yr. old, $8 each. Satisfaction guaranteed. WM. W. SILVEY, 135 South Eighth st., Philadelphia, Pa. oct7,tf

Irish Setters

Under life insurance at $10 and upwards, by Chief out of Yoube, by Tim out of Jersey Beauty, Dora, Patty, Florid; all well bred, thoroughly broken on game and good ones. Full explanation by circular. Both dogs in the stud at $25 to bitches of guaranteed field quality only. MAX WENZEL, 89 Fourth street, Hoboken, N. J.

POINTERS FOR SALE.—AT THE LATE Waverly show, every prize but one in the puppy classes (21 entries) was won by Nick of Naso puppies. (See report this issue.) Nearly 5 mos. old; just right for the field. GEO. L. WILMS, 142 Monticello ave., Jersey City, N. J. sep25,tf

WHITE BULL-TERRIER YOUNG ROYAL Prince (A.K.R. 2102). Fee $15. Pups by Royal Prince and 50 bull-terriers for sale, dogs, bitches and puppies, white or colored, large or small kinds; all first-class stock; state what you want. J. W. NEWMAN, 87 Hanover street, Boston, Mass. jy22,3mo

SETTERS FOR $10 EACH.

A large lot of English setters, taken in exchange for other dogs, will be closed out at this remarkably low price. They are of both sexes, excellent looking, are guaranteed not gunshy and to have fair nose. Ages from 6 to 15 mos. If on inspection they should not prove satisfactory the money will be returned. ASSOCIATED FANCIERS, 237 South Eighth st., Philadelphia, Pa. sep2,tf

FOR SALE.—ITALIAN GREYHOUND PUPS from imported stock. Also fine English pugs. HENRY C. BURDICK, 150 Bridge street, Springfield, Mass. sep2,3mos

PRIZE AND PEDIGREE ENGLISH MASTIFFS.—Mr. James Hutchings, 25 Gandy st., Exeter, England, has several grand ones for sale, brindles and fawns, including stud dogs brood bitches and puppies. Tourists' inspection invited.

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. sept22,tf

Claire-Reeta Kennels.

PALMYRA, N. Y.

Irish and Gordon setters for work as well as show dec17,tf

DOGS FOR SALE.

Setters, pointers, spaniels, foxhounds, beagles, dachshunde, Newfoundlands, German tiger mastiffs, fox-terriers, Scotch terriers, Skye terriers, Yorkshire terriers, bull-terriers, bulldogs, pugs, French poodles, St. Bernards, mastiffs and black and tan terriers. Pups of all the above breeds constantly on hand. Those desiring to purchase will do well to consult me. WM. W. SILVEY, 135 South Eighth street, Philadelphia, Pa.

WANTED.—A DOG TRAINER WITH BEST of references as to method and results. Can take two or three to train, either setters or pointers. Also trained teams of cockers. Address NED DAVIS, 1133 N. Clark st., Chicago, Ill. oct28,3t

Champion Duke—Grace

(A.K.R. 1250). Puppies by these celebrated pointers. Also by Llewellin setters Rock (Rock—Hazel Kirk) ex LaBelle Creole (A.K.R. 3036). Box 472, Pittsburgh, Pa.

English Setters Boarded

AND

English Setter Puppies Trained.

Warm and healthy location and personal attention given. As I employ no attendants, only a limited number will be accommodated. Address H. J. PIERRE, Winsted, Conn.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 11, 1886.

VOL. XXVII.—No. 16. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six, and twelve months. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be nserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

ATLANTIC.

IT is never pleasant to chronicle the failure of an honest attempt to promote the interests of any sport, and all true yachtsmen will sympathize with the liberal and spirited gentlemen who gave unlimited time and money to the construction of an American champion, and who have met with such a poor return. With the certainty before them that the venture would be financially a losing one, and that, at most, all they could hope for would be the honor which a victory would bring to their club and city, they subscribed liberally to a scheme which has resulted in a complete failure in every way. Perhaps the least severe loss is that of the money, though this is no small item. The cost of the Atlantic is given as $30,000, but the aggregate expense of building, altering and racing will probably bring it much higher, while at her sale last week she realized but $7,500. Further than this, as a racer, she has completely failed to fill the purpose for which she was built, and it is very doubtful what disposition will be ultimately made of her, as she is unfitted both in design and construction for a cruising yacht or even a trading vessel.

Whether she will be broken up for her lead and gear, whether she will in some way be sold into trade, or whether she will disappear among the wrecks which line the shores of Brooklyn, is as yet an uncertainty. Surely the last fate is the worst that can happen to any boat, to join the melancholy collection which tugs and surges at its cables as the tide rises and falls, from one year to the next. High speed steamers whose engines decline to turn over, wonderful propellers whose promoters evidently have not yet "found it," cumbrous but gorgeous schooners, and racing sloops; all classes are represented in the motley collection, and yet the list is not full.

It cannot be claimed for the Atlantic that she has demonstrated any new principle or has added in the least to the data that form the chief tools of the naval architect. There are some points, however, about her construction which are not only interesting but which carry their own lessons. Those who were chiefly concerned, both in her design and construction, have been known for many years as the most prominent defenders of the theories which have been considered as distinctively American; of light displacement, shoal draft, sloop rig and a single jib; and they have owned and raced the very fastest of these craft. Year after year through a long and bitter discussion they have boldly advanced and defended certain definite views expressed in no doubtful language; and their position on the questions of ballast, displacement, dimensions and rig have been known to all. After a stubborn defense of these opinions they have never yet renounced them or admitted their error, and when the time came that wood and iron could be put in place of words it was expected that their new boat would embody the practical application of their doctrines.

What she was need not be retold. In every detail a complete surrender to the ideas of their opponents, deep, heavily ballasted, with lead keel and cutter rig, she proved but a clumsy and unsuccessful burlesque of the boats which her sponsors had persistently decried.

Had they fought the battle with their own weapons a victory would have been greater and a defeat less crushing; had they been consistent to their principles on the one hand or had they boldly avowed their error when it was apparent, their course would at least have commanded respect; but while adhering tenaciously to their theories to the very last, when the time to test them came they abandoned them as rapidly as possible and sought safety in the lead keel they had so long ridiculed, only to burn their fingers with it. Had they built a single-stick Grayling last winter they might possibly have swept the field in the light weather of the season's races; had they watched and studied the whole drift of American yachting for the past half dozen years they might in good time have adapted themselves to the new dispensation and have avoided the charge that they have simply followed Mr. Burgess and the cutters in adopting the lead keel.

As it stands to-day they have hastily abandoned their avowed beliefs, they have copied the Boston and the British cutter, and the resulting nondescript has proved an utter failure. Money and skill have done all that is possible with the Atlantic, she has had the benefit of all the talent available and has been sailed by a skipper of undisputed ability and whose personal efforts only have saved her to a certain extent, and yet she is out of the racing; her shortcomings being made still more apparent by the injudicious newspaper gush over the "Pride of Bay Ridge" which heralded her building.

Whether with the consent of her owners or not, the Atlantic has been put forward prominently as an example of the so-called "rule of thumb" methods, and as such she must now be judged. Her modeler, whose sole handiwork we believe her to be, is widely known as the modeler of many very successful boats. His vessels are found among the winners in all classes, and he has fairly won an enviable reputation with a certain type of boat. His genius and skill in certain lines are undisputed, but he has not, and lays no claim to the wider and more extended training which we consider is essential to the thorough designer. With his own tools he is expert, but they are limited in number; with the tools of others he is unfamiliar, and attempts to borrow them will, in all probability, result as this last. The value of such skill as his, and such a sense of form and fairness is apparent, but we contend that to meet the many problems that confront the designer to-day, to obtain the greatest speed from the wood, steel and iron which nature places before him, requires not only a natural aptitude but such a thorough and systematic course of training as the engineer, the artist or the architect expects to undergo as a matter of course. The theory of inborn genius and the accompanying ridicule of solid scientific attainments (not mere superficial dabbling), which is the chief support of the so-called "practical man" and the "rule of thumb" mechanic is a thing of the past, and hard work, careful study and a thorough training are more certain than ever of meeting their just reward.

THE MAINE TRAGEDY.

THE tragedy at Fletcher Brook, in Washington county, Me., last Monday, when two game wardens were murdered by a deer dogger, reveals, as by a lightning flash, a condition of affairs in the Maine woods little understood by the general public, though known and appreciated by the plucky game officials. The deer doggers are, for the most part, a set of law-defying ruffians, murderous at heart, fertile in threats, desperate in resistance, and vindictive in avenging any attempt to punish their crimes. They burn barns and houses, poison cows, behead horses, shoot at officers from ambush, or, as in this case, murder them in broad daylight. The notorious Wesley barn burners were fair types of Maine deer doggers; the sympathy manifested for them by Wesley people was a fair indication of the depraved moral sentiment which upholds and encourages these outlaws. Maine game officials, commissioners and wardens, understand the character of those whose lawlessness they are pledged to punish; and it is not unlikely that Hill and Niles knew full well, when they started out on their mission to apprehend the Fletcher Brook doggers, that they were taking their lives in their hands.

It is well that the citizens of Maine and of other States should now once and for all comprehend that no sympathy is to be wasted on the classes of poachers who complain bitterly of the hardships of game laws. These poachers are not good citizens, they are not hardy frontiersmen, they are not poverty-stricken woods dwellers, eking out a bare subsistence by tilling the unfruitful soil and killing a deer now and then to save themselves from starvation. They are, on the contrary, shiftless ruffians, too lazy to earn an honest living; outlaws who defy righteous statutes and who want only occasion to become firebugs and murderers.

THE GALLERY EPIDEMIC.—The metropolis is having a bad outbreak of shooting galleries. Vacant stores on the principal streets are hired, undergo a transformation during the night and blossom on the morrow in dazzling tinsel. A dozen yards is ample length for these courts of arms, and big bullseyes, with bells easily set ringing by even a mediocre shot, make up the plant. The craze is on and patronage runs heavy for sixteen hours a day. Practice is cheap, and, thanks to the low rates fixed by our cartridge makers, the gallery bosses can profitably allow their customers to bang away at a cent a shot. Those who shoot come from all classes. There are boys getting ready to go on Indian slaughtering raids; pirates in their teens; anarchists getting ready to pick off millionaires by cheap practice upon the pink-tighted effigies before them, are helping to consume the million-a-day output of our cartridge factories. The rifles are more or less erratic in their work, the shooters more so in their manipulation of them. Altogether the places are nuisances, more or less dangerous through the firearms in use, and serving no valuable purpose. Gallery practice, under proper conditions, is an enticing sport and a pleasant way of passing the time. It helps the marksmen and the scores made are worthy of notice; but no such word of commendation can be said of the catch-penny concerns that fringe our already too noisy streets of the cheaper section of the city.

THE MASSACHUSETTTS FISH AND GAME PROTECTIVE ASSOCIATION has been very active during the past year in making known the game laws and securing their enforcement. Cloth posters, with a draft of the law, have been sent to every post-office in the State, and more than 4,000 pamphlet copies of the laws have been distributed. The association has much important work now in hand, and needs funds to carry it on. This work is of direct benefit to all Massachusetts sportsmen, and to other citizens of the State as well. It should be supported more freely than it is, both morally and financially. The secretary's address is H. J. Thayer, 246 Washington street, Boston. Applications for membership, and subscriptions of money for carrying on the work of law enforcement may be sent to him.

THE FIELD TRIAL SEASON.—November and December are the seasons for running field trials, and for a couple of months now the columns of the kennel papers will be filled with reports of the races. It is earnestly to be hoped that the meetings this fall may pass off without any of those unseemly wrangles which in the past have gone far toward destroying the pleasure, not only of those who were present on the ground but of all dog lovers as well. To almost every question there are two sides, and it ought certainly to be possible for sportsmen to discuss their differences in a quiet, well-bred way. Those who cannot control themselves have no business to take part in the competitions, and might far better remain away altogether.

OYSTERS ARE FISH is the dictum of the Treasury Department, after considering the question of customs.

THE NATIONAL HORSE SHOW.

ALL true lovers of the horse will regret that the show which closed in this city last Saturday was so entirely unsatisfactory. Last year the exhibition was an excellent one, the entries were numerous, and the classes well filled, so that the admirers of all the different types of horses were attracted to the show, and found there the animals in which they were especially interested. This year it was not so, and the exhibits were to a considerable extent crossbred animals, which, however well they may perform their work, present no distinct type. Even the trotting horse, which is America's especial pride, was poorly represented as to numbers.

Heavy horses, such as Percherons, Clydesdales and Cart Horses were conspicuous by their absence; thoroughbreds were very few in number, and, although there were some superb trotters on exhibition, they were few and far between. On the other hand, the entries of carriage horses, cobs, ponies, saddle horses and hunters were numerous. There were scarcely any entries of donkeys and mules.

It is, of course, very well and proper that there should be a good showing of dog-cart horses, tandems, four-in-hands, high steppers and all that, but it seems a pity that the whole show should be given up to exhibits of that description. There should have been some representation of work horses as distinguished from those used only for pleasure. Classes for family horses, single and double, driven to their ordinary rigs would, no doubt, have brought in many entries from about New York, and would have given recognition to a most valuable and useful animal.

The criticisms upon the judging were sharp and in many cases deserved. It is an undoubted fact that in many cases the judges might have profitably taken lessons in horse flesh from their own grooms, and in one case at least, where a prize was given to a cripple, it seems unfortunate that the grooms had not occupied their employers' places.

A horse show, properly conducted and with full classes, is a most valuable educator, but the one which has just closed cannot claim to have filled any useful purpose. It may have been—and probably was—a financial success, but it was nothing more. People will flock to a horse show to see hurdle and bar jumping, just as they will go to a circus, but, as at the circus, they receive entertainment and nothing more.

The National Horse Show Association is not supposed to have been formed for the purpose of making money. We have imagined that it was established with a higher object in view than the mere screwing of dollars out of the pockets of the people of New York city by means of a hippodrome performance once a year in Madison Square Garden.

If this belief is a correct one, the Association will see to it that their next year's show is planned on lines very different from that of the last. A National horse show should have a representation of horses of all classes, and a little energetic work on the part of the managers will insure such a representation. Thoroughbreds, trotters, carriage horses, cobs, ponies, saddle horses, hunters, family horses, draught horses and mules, ought all to be shown and in good numbers. If the National Horse Show is to consist of nothing but a little jumping and such a display as can be seen in Central Park almost any fine afternoon, its present name had better be abandoned and some other more appropriate one chosen.

NEW YORK MILITIA PRACTICE.

THE scheme of rifle practice laid down for the members of the National Guard of this State is very perfect—on paper. The returns of rifle practice under this system are very pretty—on paper. In fact, the system is very far from satisfactory, and another year should see it changed. It was originally intended that the men should parade for practice, each man taking his rifle to the range, making a score with it at the prescribed distances, and being graded according to the record thus made. But as an accommodation to the men who already give a great deal of time to their volunteer soldier duties, it was agreed that certain of the matches of the National Rifle Association should stand in place of regular practice, and that scores made in these matches, when properly certified, should go upon the official record. In other words, members of one organization with abundant time at their disposal visit the ranges on these off-day shoots, shoot and then rest upon the best score made, while members of other commands, having neither time nor money for this extra practice, go through their official duties only and fill a place low down on the column of merit.

The State gains by this plan in having a few very good regiments at its call; but the injustice comes in when an enforced comparison is made between the men under these conditions.

Another point of criticism is that the scores are made with a few chosen rifles out of the stock doled out to each regiment. The average weapon issued under the contract system, by which the State is supplied, is worse than useless as an arm of precision. The good shots in the regiment find this out, pick out the trusty rifles, get them in working order, nicely sighted, while the mob of duffers stand by, take the rifle when it is handed to them and run up a score in very much of a parrot fashion, holding on the spot of the target pointed out to them, and having only the faintest theoretical knowledge of the fixing of the sights and none of a practical value.

While, therefore, the progress made by the State regiments has been most gratifying, it is not altogether safe to place too much reliance on the figures of merit shown. The way out of the difficulty is to rely upon armory practice during the winter months and upon skirmish firing in the open air season. The regular army went through the plague of pencil scores; the militia hereabouts are now enduring it.

"NESSMUK'S" POEMS.—We repeat the subscription blank for "Nessmuk's" forthcoming volume of poems. Intending subscribers are requested to send in the blanks at once.

COAST FISHING IN SUPERIOR.—II.

DOWN the coast from Peninsular Harbor there are numerous fine fishing places. On one occasion we were wind bound in a small bay and camped in a little cove a mile or so from some outlying islands which were about on the line of the general course of the coast. The bay was a shallow one and terminated in a long sandy beach flanked by rocky projections. We entered the bay in the early afternoon, and after dinner one of the half-breed Indians discovered some fresh "bear signs." Being somewhat unfitted for running by a military "accident" in the "late unpleasantness" I declined to accompany the boys in what commenced as a pursuit but I feared would terminate as a flight, and took my rod and went to the rocks. From that point it was a grand sight, the heavy and constantly increasing swell breaking about 20ft. from the shore line, where I stood some 12ft. above the lake level. Occasionally a heavy roller reached the face of the rocks before breaking and the spray dashed over me, while the trough of the sea seemed to lift the bottom so that only 2 or 3ft. of water appeared to cover it. It was hard work to get out more than 20 or 25ft. of line in the wind, but as neither mosquito nor black fly could torment, there was pleasure even in unrewarded attempt at angling. But the labor was rewarded in that instance, and a number of fine trout were landed, although not without difficulty, as a landing net could only be used by guiding the fish around a point of the rocks into a little quieter water. The boys returned without the bear, but particulars were omitted in the story of the chase.

Next day, the wind continuing, the boys made fair baskets along the rocky coast, but getting only moderate sized fish. Now, in that particular bay I should not have looked for good fishing, or even any. It was too shallow and ordinarily too quiet a water. I have since tried the same ground several times, but never with the success of the first time. Nor do I believe it was ever tried by others, as there were no white man's signs along the shore other than were left by us. It is true, however, that sometimes in very sheltered places where the shores showed no evidences of being surf-beaten, unexpected success has been met with. But such places were ordinarily near exposed points, or where the sparkling water of brooks found their way into the lake.

We were taking dinner one day in a sheltered cove a few miles from Otter Island where the water was deep and cool, but with no near brook known to myself or the voyagers or laid down on the charts. The day was bright and still, but several trout were taken as well as one three and a half pound lake trout. This was the final blow to my previously arranged theories. I have had none since. It is possible there were unobserved currents in this place which took the place of the wave motion I had previously considered necessary for a trout's abiding place, but there were no evidences at hand to sustain the hypothesis and the situation was against it. Certain it is that I have met with better success in exposed than in protected localities. I would like the benefit of the experience of others.

At and immediately about Otter Island I never had "luck." But between that point and Michipicoteu River are several fine angling places. It is fair to say I have tried only one or two places near the sea face of the southern point of the island.

I have frequently heard of fine catches of large trout off the rocky islets at the mouth of Michipicoteu River, but my success has been poor there both in number and weight of fish, and while there is fair fishing a few miles from that point in either direction, I cannot speak very favorably of it. One can do better both below and above Michipicoteu Bay. Some seven or eight miles below the mouth of the river is a high point projecting well into the lake, where several times I have found rare sport. And several times I have cast my flies off that point in vain. I shall not soon forget my first experience there. We had left Michipicoteu in the early morning under a "spruce breeze," as the voyageurs termed it, what little wind there was being against us, trying with no success the lake waters and with better two or three brooks on the way down. F.'s fly had gotten the worse for wear in the bush fishing, and he made a cast off the point with the result, a fly carried away. I had not thought of trying that spot, and my rod lay upon some wooden forks set up on the boat's gunwale. I hastily took it up, attached a second fly to the leader, and made a cast. The flies had no sooner touched the water than my tail fly went to seek the company of F.'s. But better material was at hand, and my second cast succeeded in hanging two fish, which were brought in after a half hour's brisk fighting. The pair could not be weighed, as my scales were broken; but I judged the united weight to be near 9lbs. I never took but one larger fish than the heavier of the two, and that weighed 5lb. 6oz. With the smaller of the two I recovered F.'s lost fly. Had there been less sea room I might have lost both fish. After that I used but one fly. I do not remember how many fish we took on that occasion. An hour of such fishing was enough for that day, and we adjourned the meeting until the next morning. But the sport when we resumed was tame. Somehow the conditions had changed. In the afternoon's fishing there was a light southwest wind, bright sunshine and clear sky, with quite a heavy swell from the direction of the wind and a good strong current sweeping around the point from the north, making quite a choppy although not rough sea. It was hardly safe to stand on the boat seats to cast. The swell had ceased the next morning, there was no perceptible current, and the weather was thick although not dark.

In fact, in looking over my various essays at angling off that point, I can recall no success on other than brilliant days with breeze from the lake and a good swell on. When these conditions existed with a perceptible current around the point, success was assured. The bottom is rock, not very uneven, but with some massive angular boulders strewn about, and the depth of water reaches perhaps forty feet a hundred yards from the point. Owing to the swell on successful occasions we did not fish in less than 10ft. of water at any time.

Still further down the coast there are good places, but the choice ones, in my experience, are on the east shore of Pancake Bay and down to Corbier Point, and on the exposed points of Bachewanung (or Bachewanu) Island. The fishing of the last-named locality will average as good as is to be found in Lake Superior. The water is not deep nor the shores bold. Many an expert stream angler has pronounced the fishing here and at other points I have named unworthy of attention, and in short, a failure. But I apprehend the difficulty is in the lack of some of the conditions under which trout are active and somewhat in defect of patience. It will not do to say there are no trout in a particular locality because none are taken at a given time. Another trial may result differently. Only once or twice have I met with success in foggy or cloudy weather. But with a lifting fog and the sun shining through the rifts better work has been done. Nor could I ever do much in lake fishing in the early morning or late evening. It has been better from 10 to 12 in the morning and 2 or 3 to 5 in the afternoon. But one must not be discouraged by a day's or even two or three days' failures.

It is hardly necessary that the pleasures of the daily sail and nightly camp should be mentioned to a true sportsman. But some persons need a little barbaric civilization and should be educated. Most men have tendencies in that direction if they would only give them vent. There are some persons, however, constitutionally unable to see anything lovely and charming or grand in nature. Such should never go a-fishing. I met one of this sort some years ago upon the upper waters of the Nepigon River. He was an Englishman, guest of an American party on the way up the river when we were returning. He was "bored" with the river, the "stupid" fishing, the portages and indeed everything about him, saving some of the more pronounced "creature comforts." His party were to coast from Red Rock to the Sault (Sault Ste. Marie) on their return, as mine was to do. When we reached the Sault, some two and a half weeks afterward, he was the first man we met on the dock. Surprised at seeing him there, for we knew no one had passed us on the way down, in answer to our inquiries he explained that he had left the party at Red Rock, taking canoe with Indians to Silver Inlet, and thence by steamer down the lake. He grumbled much at the three days' paddling from Red Rock to Silver Islet, and as a partial consolation the fine scenery of Black Bay and its islands was mentioned. "The scenery!" said he, "What's all that? Here's an island and that's green; there's another and that's green, and there's water between. And that's all there is of it!" True enough to him, for it was evident nature spoke no "various language" to his ear.

Nor do I need to more than refer to the drawbacks of the mosquitoes, the black fly and the almost invisible sand fly. The last can be avoided by care in selection of camps. Seek the open ground as far as practicable. The first may be rendered comparatively harmless by "bars" or netting. The black fly is the angler's worst enemy, for they work during the same hours. But the fly is not troublesome a few rods from shore, and on shore a little "dope" prevents serious attacks. If he was "out nights" the angler would have little peace. After all these insects are mere inconveniences which a philosopher, as every real fisherman eventually becomes, bears without grumbling. H.

THE SPORT OF HAWKING.

IV.—The Lanier Falcon.

ON the prairies of the great Southwest, and even so far eastward as Illinois, is found a large and powerful "desert falcon," the American lanier (*Falco mexicanus*, Lichtenstein). This bold bird closely resembles the lanners of Europe and Asia (*Falco lanarius* and *Falco jugger*). The European bird was highly prized in the palmy days of falconry, and his Indian cousin is still flown at the game of that country. The American species, which is also called the prairie falcon, measures from 18 to 20in. in length, and the female above 45in. from tip to tip of her outstretched wings. The average length of the tail is 8in. The tarsus is feathered one-third of the way down. The upper parts are rich brown in color, under parts white, marked with long stripes and spots of brown. There is a narrow white frontal band and a white line over the eye. The lanier is a true "dark-eyed hawk," the iris being brown.

This falcon is, according to Coues, rather common on the prairies lying within its geographical range, and might be easily obtained with the low net and live bait or by taking the young hawks from the nest.

It is said to prefer the border of wide prairies for its home but wanders far over the treeless plains in pursuit of food. It is at least as swift a bird as the peregrine, and is much more powerful than the latter; its manner of flight is the same. The lanier is also one of the shyest of hawks, although at times apparently regardless of danger. Its food consists of quails, hares and larger game, and it frequently overpowers the very active and powerful black-tailed hare (*Lepus callotis*). The prairi

falcon has been known to snatch a large fowl from before the very door of a dwelling house, and carry it off bodily. To the smaller species of the order, *Gallinæ*, it is a fierce and determined enemy. The nearly allied juggur of India is flown mainly at crows, in the pursuit of which it shows much speed and daring, following the crow through all its twists and windings. It has even been known to kill its quarry so near to a camp-fire that the feathers of the falcon were singed by the blaze. The lanier is said to have been formerly flown at the kite in Europe; probably only very strong females could take this strong and difficult quarry.

But little is known of the breeding habits of the prairie falcon; the lanners of Asia and Europe build their nests in the tops of the tallest trees and occasionally on cliffs; and it is probable that the American species resembles them in habits. The ground color of the eggs is rich cream, which is handsomely marked with splashes of chestnut-red and purplish shadings. The extreme average length of the eggs is 2 3/4in.

The lanners of the Old World are easy to train, obedient in the field and bold and enduring in the pursuit of game; there is no doubt that their American representative would at least equal, if not exceed, them in powers. A female would doubtless take buzzards, ravens and crows, as well as cranes, hares and grouse, while a tiercel would probably be a full match for any of the *Tetraonidæ* or the genus *Lepus* found on the plains.

The lanier is a true falcon, a "long-winged hawk," and its training, whether taken as a haggard or as an eyas, is precisely like that proper to peregrines or gyrfalcons, described in a previous paper.

Thoroughly trained falcons of any species seldom need to wear a hood, except when being carried to the hunting field, as it is important that they should see as much as possible of horses, dogs and men, as well as become accustomed to all sorts of lights and sounds, which of course they are prevented from doing by the hood. The block of a well tamed falcon may be left out on the lawn—sheltered from the sun by being placed under a tree in very warm weather—throughout the summer on clear days, but the hawks require protection from heavy rain storms. Peregrines and gyrfalcons may be kept under an open shed throughout the winter, but must be protected carefully from wet and high winds. The lanier would probably require the protection of an outhouse during the cold months in this climate (Pennsylvania). In very severe weather all falcons require the shelter of an outhouse or stable, which is best kept nearly dark or the birds will bate very much and injure their feathers. The block wherever placed should be surrounded with a layer of fine sand, which is to be frequently removed. In moving hawks with their blocks from one position to another, call the bird to your wrist and give him the wing of a bird or a small piece of gristly meat to tear at; the block is then easily carried in the other hand by the ring let into its top to any desired position and the hawk replaced upon it without the trouble of hooding, or even untying him from the block.

Falcons after being properly "entered" may be flown at game three or four times a week, and when not hunted must be allowed to kill at least one strong pigeon on the wing each week. Powerful birds may even be flown six times a week, but it is difficult to keep them in fine condition and yet daily "sharp set" and in proper condition for hunting when so used.

Should a hawk be lost it may be captured with the low net and a live pigeon if very wild. A better plan is to allow it to kill a pigeon which has been pegged down with 6 or 8yds. of free line attached to its leg. Approach when the hawk has killed; he will fly up if wild enough to have been lost; pull some long feathers from the wings of the dead pigeon, stick them in the ground around the prey in the form of a circle, and place around outside them a slip noose of soft cord. Go off with your end of the cord a dozen yards or more; the falcon will then return to the pigeon, and may be caught by jerking the noose over his feet, the pigeon quills causing it to run up freely and high on the hawk's legs, so as to catch him firmly over the bells. It is well to peg down the freshly killed pigeon, or the falcon may stoop and carry it off before you have time to jerk the snare over his legs. The live lure ought always to recover a well-trained hawk, however, if by any accident he be lost, and is too well gorged to care for the artificial lure or dead pigeon.

During their training hawks frequently break one or more of their pinion feathers, and these it is necessary to replace by imping before the falcon is flown at wild and difficult quarry, as the loss of even a single feather will greatly impair the bird's power of flight. Never on any account pull out a broken feather, or the one which replaces it will be certain to be weak and deformed. A number of perfect pinion feathers of the species of hawk kept should always be on hand to supply the place of broken ones on your hawks. To imp a broken feather, select a feather corresponding to the broken one from your stock; hood the falcon and have him held by an assistant. Choose a firm, pithy part of the broken feather, of course above the point of fracture, and being careful not to injure the web, cut it neatly and obliquely across with a sharp knife. Next cut the false feather at a position and angle to match the real one. An imping needle, consisting of a piece of soft iron wire rather finer than the inside diameter of the two feathers, and 1½in. long, and filed to a point at both ends and to a triangular form, is now pushed, after having been first dipped into liquid

Fig. 2.

glue, half way (see Fig. 2) into the pith of each feather. the needle is next pushed up until the oblique edges of the two feathers are neatly approximated, and the feather is impaled, and is nearly as strong as the original one. Should the falcon's feather be simply broken clean across and the plume not lost or injured, the feather may be imped with its own plume in the same manner as above described.

When flying hawks, either at pigeons or wild game, the neighborhood of wild fences must be avoided, else the falcon will likely enough be killed by dashing against them when in pursuit of quarry, especially running game. Of course, it will also be necessary to take precautions

AMERICAN LANIER FALCON.

that your birds are not killed by strange dogs or shot while on quarry, when they have killed at a long distance from you. Of course, also, you will always get in as rapidly as possible after the kill, or the hawk will first gorge itself and then fly off, and you may have difficulty in recovering it.

The falcon, whether taken as haggard or as eyas, having now been properly tamed, trained and "entered" at her quarry, is now ready for the field and the chase of wild game. There are two methods of using falcons for the capture of wild game: when they will "wait on" well they are only carried hooded to the field, and as soon as a game region is reached are unhooded and allowed to take wing and sail over the falconer's head, following him and his dogs from field to field until game is flushed. Hawks which will not "wait on" satisfactorily, and indeed all falcons when flown at certain quarry, are flown "out of the hood," the cap being worn either until game is actually flushed, or until the dogs point, or the quarry is seen. For game hawking proper, dogs are always used, and the birds soon learn to recognize a "point" as well as the sportsman himself, and know what is coming. Hawks which have been regularly hunted for several years become very cunning, and follow with wonderful sagacity the movements of the dogs and hunters, and instead of being frightened by, are only encouraged by the noise of the field. Of course, the dogs used must be familiar with the hawks, and the birds with them, and be carefully trained not to run in when the falcon has killed. It is always discouraging to a hawk to be driven from its quarry, and is apt to cause sulkiness and disobedience. The falcon, of course, stoops as soon as the bird or hare is flushed by the dogs or beaters.

For game hawking eyases are to be preferred, as they are more tractable and "wait on" better, and are but seldom lost. For the chase of heavy or difficult quarry, such as herons, ducks or crows, haggards should be used, as their strength and power of flight is greater. Sometimes a cast or pair of hawks are flown at such powerful prey as the larger herons; the falcons mutually assisting each other and stooping in turn as the quarry dodges.

Game birds lie very close when a falcon is waiting on over them, and give the hawk a good chance when they are flushed, as he has been watching directly over the dog. It is a gallant sight; the setter at a dead point, the falcon at her point high in the air, but just above him, both trembling with eagerness. The game is flushed, and swish! those great wings are closed and the bird has stooped like a flash of light. So tremendous is the power of the stoop that I have seen the roof of the skull of an adult bluejay torn completely off by a wild peregrine in a single swoop, and trained peregrines have been known to amputate the head of a Scotch grouse at a single blow with their terrible hind talons. A grouse will often give a long chase, foiling a dozen stoops, and "putting in" or dashing into cover several times. In the latter case the falcon must be "served"—or the quarry flushed—as soon as possible and encouraged by shouts, as falcons are unable to kill prey among trees or brush, and soon become discouraged if their quarry is not speedily flushed. For this reason the most open country accessible should always be chosen for the hunting field. When the hawk kills, at once approach and call her to the lure, or, better still, lift her on the quarry to the wrist and feed the falcon from the head and neck of the bird. Hood up when the slight meal is finished and he is ready for another flight. The hawk must be always "fed up" from your hand from the body of the last bird killed when the hunt is over; it is not well to hood him until the meal is finished, as the experience of being carried through the fields—perhaps among prancing horses and barking dogs—is very valuable, training the falcon to be regardless of any sight or sounds. The bird if well trained will not bate while you feed him.

A powerful falcon will fly—and this is especially true of the dashing peregrine and lanier—three, four or even six times in an afternoon if the individual flights be not very fatiguing, and a pair of hawks used alternately will afford from eight to eleven flights at slow quarry in a day before being fed up. If a hawk lose his prey, immediately swing the well known lure round your head and sound your whistle, and when he "comes in" be sure to reward him with some fresh and tender pieces of beef. It will never do to allow haggards to be upon the wing flying aimlessly around when not waiting on for game.

Herons, crows, and heavy prey generally is captured by stalking with the falcon on your wrist, hooded of course. As the game takes to flight, unhood, and toss off the hawk. The trained birds are "served" and "taken up" after the kill precisely as in game hawking, but only the strongest and boldest of females are able to fly more than once or twice at such prey as geese. gulls, ravens or cranes. Should a falcon kill a mile or so away from you, and you are unable to "get in" before he has gorged himself, he will generally be found in some tall tree or on some wall of rocks near the remains of the quarry. If the lure will not bring him to your call, try the live pigeon in a creance, or a dead one, with string attached, thrown up to his feet; hawk and pigeon may then be pulled down together, for if the falcon once grasps it he will not relax his hold. Magpie hawking was and still is, with a few gentlemen, a great favorite in England; the cunning and alertness of the quarry giving the best possible sport. A field is required armed with light whips to put up mag when she takes refuge in bushes and hedges to escape the stoops of the peregrine, which she does again and again. The chase often lasts twenty minutes and covers a mile or more of ground, and often gives plenty of hard riding and running for that time. The American bluejay might yield similar sport. Woodcock also give good sport with peregrines, the hawks being particularly keen after this quarry. Such a chase would hardly be possible in this country, however, save in the rare instances when the longbills are found in open country which can be run or ridden over. Duck hawking can only be practiced in cornfields or open country where there are no bodies of water of any considerable size—too large to be beaten by a dog—otherwise the falcon will always be foiled by the quarry taking to water. Almost all game hawking can be conducted on foot, but for crow, heron, or haggard hawking the falconer should be mounted, and, of course, a ridable country must be selected for the hunt.

All falcons have a highly scientific knowledge of where the life lies—in which they differ markedly from the more clumsy true hawks—and lose no time in killing quarry outright when brought down. Their point of attack is usually the head, and grasping a bird by the head and neck, they rip open its throat or split its skull at once before beginning to tear the prey to pieces. This habit gives them an immense advantage, the short-winged hawks often being injured by strong-beaked quarry, and always wasting their energies in holding down prey which they are fully able to kill at once. Wild short-winged hawks must put their prey to terrible torture, as they generally begin to drag out feathers and tear their victim without any attempt to kill it outright.

Fig. 1 is a portrait of an American lanier falcon in the adult plumage; the peculiar markings and the general form of the bird are well shown.

Fig. 2 illustrates the manner of imping a broken feather above described; the imping needle is cross lined, and is shown in position ready to be pushed up into the two quills.

RALPH W. SEISS.

AMERICAN ORNITHOLOGISTS' UNION.

Bulletin No. 2 of the Committee on Protection of Birds.

PROTECTION OF BIRDS BY LEGISLATION.

"BULLETIN NO. 1" of the A. O. U. Committee on Bird Protection, originally published in *Science* (p. 160, Supplement, Feb. 26, 1886), and subsequently republished in pamphlet form, with some additions, under the title given above, contained a draft of "An Act for the Protection of Birds and their Nests and Eggs." In drafting this proposed act, birds were divided into two classes, game birds and non-game birds. The game birds were defined as "the Anatidæ, commonly known as swans, geese, brant, river and sea ducks; the Rallidæ, commonly known as rails, coots, mudhens and gallinules; the Limicolæ, commonly known as shore birds, plovers, surf birds, snipe, woodcock, sandpipers, tatlers and curlews; the Gallinæ, commonly known as wild turkeys, grouse, prairie chickens, pheasants, partridges and quails." There being laws relating especially to game birds in most parts of the United States and Canada, and they being also more or less cared for by various game protective associations, it seemed unnecessary to include them in a law intended especially for the protection of song birds and such other wild birds as are not properly game birds, for many of which latter there is no legislative protection. It seemed also desirable to give them protection under a separate act rather than to attempt it in a game law, properly so-called, since by this method there is less danger of failing to accomplish the purpose desired.

Among the non-game birds, as defined by the proposed act, the Committee purposely included a few species sometimes regarded as game birds, and in some States legalized as such, as the robin, the meadow lark, the bobolink and the flicker or golden-winged woodpecker. The act as drawn is also especially intended to give protection to the birds of prey, the herons, bitterns, ibises, gulls, terns or sea swallows, grebes, etc. Very few of the birds of prey are injurious to man, while the greater part of them are unquestionably highly beneficial to his interests. The law also contemplates protection to crows, jays and blackbirds, the Committee being firmly of the opinion that much of the prejudice against these species is unfounded. Wild pigeons are included among the protected species, in consequence of their recent rapid decrease and probable speedy extirpation, unless some means be found to check their present wholesale slaughter wherever they still linger in sufficient numbers to make their capture or destruction remunerative.

As the act proposed by the Committee has been substantially adopted by the Legislature of the State of New York (see Chapter 427 of the Laws of New York, entitled, "An act for the preservation of song and wild birds," passed May 20, 1886), it has become the subject of much comment and criticism, and much needless alarm has arisen in respect to certain of its provisions. In view of this the Committee deem it desirable to offer some comment on its intent and purport. The parts of the law enacted by the Legislature of New York, to which objections have been raised, are mainly interpolations in and deviations from the act proposed by the Committee; yet the New York law seems quite defensible as it stands, though open to misinterpretation. The following commentary is therefore offered respecting it; a transcript of the law is subjoined.

THE NEW YORK LAW.

Chap. 427.

AN ACT for the preservation of song and wild birds.

Passed May 20, 1886; three-fifths being present; without the approval of the Governor.*

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. No person in any of the counties of this State, shall kill, wound, trap, net, snare, catch with bird lime, or with any similiar substance, poison or drug, any bird of song or any linnet, blue bird, yellow hammer, yellow bird, thrush, woodpecker, catbird, pewee, swallow, martin, bluejay, oriole, kildee, snowbird, gross beak, bobolink, phœbe bird, humming bird, wren, robin, meadow lark or starling, or any other wild bird, other than a game bird. Nor shall any person purchase, or have in possession, or expose for sale any such song or wild bird, or any part thereof, after the same has been killed. For the purpose of this act the following only shall be considered game birds: the Anatidæ, commonly known as swans, geese, brant, and river and sea ducks; the Rallidæ, commonly known as rails, coots, mud-hens and galli mules; the Limicolæ, commonly known as shore birds, plovers, surf-birds, snipe, woodcock; sandpipers, tatlers and curlews; the Gallinæ, commonly known as wild turkeys, grouse, prairie chickens, pheasants, partridges and quails.

SEC. 2. No person shall take or needlessly destroy the nest or eggs of any song or wild bird.

SEC. 3. Sections one and two of this act shall not apply to any person holding a certificate giving the right to take birds, and their nests and eggs, for scientific purposes, as provided for in section four of this act.

SEC. 4. Certificates may be granted by any incorporated society of natural history in this State, through such persons or officers as said society may designate, to any properly accredited person of the age of eighteen years or upward, permitting the holder thereof to collect birds, their nests or eggs, for strictly scientific purposes only. In order to obtain such certificate, the applicant for the same must present to the person or persons having the power to grant said certificates, written testimonials from two well-known scientific men, certifying to the good character and fitness of said applicant to be intrusted with such privilege; must pay to said persons or officers one dollar to defray the necessary expenses attending the granting of such certificates; and must file with said persons or officers a properly executed bond, in the sum of two hundred dollars, signed by two responsible citizens of the State as sureties. This bond shall be forfeited to the State, and the certificate become void, upon proof that the holder of such a certificate has killed any bird, or taken the nest or eggs of any bird, for other than the purposes named in sections three and four of this act, and shall be further subject for each such offense to the penalties provided therefor in sections one and two of this act.

SEC. 5. The certificates authorized by this act shall be in force for one year only from the date of their issue, and shall not be transferable.

SEC. 6. The English or European house sparrow (*Passer domesticus*) is not included among the birds protected by this act.

SEC. 7. Any person or persons violating any of the provisions of this act shall be deemed guilty of a misdemeanor, punishable by imprisonment in the county jail or penitentiary, of not less than five nor more than thirty days, or to a fine of not less than ten nor more than fifty dollars, or both, at the discretion of the court

SEC. 8. In all actions for the recovery of penalties under this act, one-half of the recovery shall belong to the plaintiff, and the remainder shall belong to the county where the offense is committed, except if the offense be committed in the city and county of New York, the remaining one-half shall be paid to the chamberlain of said city.

SEC. 9. All acts or parts of acts inconsistent with, or contrary to the provisions of this act, are hereby appealed.

SEC. 10. This act shall take effect immediately.

STATE OF NEW YORK, } ss.:
Office of the Secretary of State, }

I have compared the preceding with the original law on file in this office, and do hereby certify that the same is a correct transcript therefrom and of the whole of said original law.

FREDERICK COOK, Secretary of State.

*Not returned by the Governor within ten days after it was presented to him, and became a law without his signature. [Art. IV., Sec. 9, Constitution of the State of New York.]

(1.) In Section 1 the phrase "or any part thereof" in the sentence, "Nor shall any person purchase or have in possession or expose for sale any such song or wild bird, or any part thereof, after the same has been killed," has been construed as rendering liable to prosecution under this act any person having a cabinet of bird skins or of mounted birds collected for scientific purposes, or any birds stuffed as objects of curiosity or ornament. It has also been claimed that taxidermists and milliners holding birds in stock for sale are liable to prosecution, and likewise that ladies may be arrested for wearing birds or parts of any birds protected by this act. On this point it is sufficient to say, in the words of the Committee's counsel, Mr. Edward R. Johnes, that "No criminal law can be retroactive, and that the penalty can only be inflicted on showing that the bird exposed for sale or worn was killed after the passage of the act. * * * *Ex post facto* laws are not constitutional, and vested rights cannot be attacked. Any one, therefore, having a bird's head or skin in his or her possession could oppose any arrest unless it be proved that the bird was killed after the passage of the act." This, of course, is not only the legal but the common-sense interpretation of the law. On the other hand, possession of a freshly-killed bird, "or parts thereof," would be proof of violation of the law. A taxidermist, unless legally authorized to collect birds for scientific purposes, having in possession a freshly killed bird or a bird mounted from a recently killed specimen, would be liable to arrest, even though he did not kill the bird or even own it or offer it for sale. It is sufficient simply that he has it in possession. If, however, the bird was killed by a person holding a permit under the law granting permission to take birds for scientific purposes, certification of the fact to the taxidermist by the owner of the bird would be protection to the taxidermist from prosecution. It, therefore, would be well for taxidermists to require from their customers a written statement to the effect that the birds placed in their hands for preparation were not killed in violation of law, and that they refuse to receive freshly-killed birds the owners of which are unable to make a truthful statement to this effect.

(2.) It has been assumed that the wording of Section 1 is such that, by implication, game birds may be shot, snared, trapped, etc., at any time. The Committee's counsel states that there is no such implication in the wording of the act; but adds that the exception should be made clearer, as, perhaps, by the insertion after the words "game birds" the words "all of which are governed by special laws relating to each, and are not intended to be affected by this act."

(3.) In Section 2 of the New York law ("No person shall take or needlessly destroy the nest or eggs of any song or wild bird"), as also in the Committee's draft, the word "needlessly" is considered as affording a possible loophole of escape in case of prosecution. It was intended to cover merely cases of accidental or unavoidable destruction, as in the destruction of nests and eggs of birds in the prosecution of agriculture, as by mowing machines, horse rakes, plowing, etc. As prosecution in such cases of destruction would be doubtless for malicious purposes, and is not likely to often occur, it seems better to strengthen the law by omitting the word in question.

(4.) Section 4 of the New York law and Section 3 of the Committee's draft, relating to the granting of permits for collecting birds, their nests and eggs for scientific purposes, contain the restriction that the person receiving such a permit must be of the age of eighteen years or upward. This portion of the law has been strongly objected to on the ground that it is an injustice to any person below the age of eighteen years who desires to engage in the scientific study of ornithology, since a boy of twelve, or even younger, who is a "born ornithologist," is not only capable of making good collections, but is often an acute and trustworthy field naturalist. The other restrictions of Section 4 seem an ample safeguard against the abuse of the permit clause, since not only the good character and fitness of the applicant must be certified to by the written testimonials of two well-known scientific men, but he must furnish bonds in the sum of $200, forfeitable to the State on proof that he has taken birds for other than scientific purposes. The Committee therefore now consider that an age restriction in reference to permits granting permission to collect birds for scientific purposes is unnecessary and inexpedient.

(5.) The penalty for each offense suggested by the Committee in its proposed act was a "fine of five dollars, or imprisonment for ten days, or both, at the discretion of the court." In the New York law any violation of the act makes the offender "punishable by imprisonment in the county jail or penitentiary, of [for] not less than five nor more than thirty days, or to a fine of not less than ten nor more than fifty dollars, or both, at the discretion of the court." In view of the customary leniency of judges in such cases, the Committee, by advice of its attorney, now approves of the penalty enjoined by the New York law.

(7.) Section 8 of the New York law provides that one-half of the fines recovered in all actions under the law shall go to the plaintiff, which is an acceptable provision additional to the Committee's draft.

(8.) Section 4 contains a clerical error in the last line, where "Sections 1 and 2" should read Section 7," which, however, fortunately does not seriously impair the efficiency of the law.

REVISED DRAFT.

A new draft of the proposed act for the protection of birds, modified as already indicated, is now offered to legislators and the general public as a guide in framing laws for the protection of such native wild birds as are not properly to be considered as game birds, each point of which has been most carefully considered by the Committee, aided by competent legal advice. The proposed act as revised here follows:

AN ACT for the protection of birds and their nests and eggs.

SECTION 1. Any person who shall, within the State of ——, kill any wild bird other than a game bird, or purchase, offer or expose for sale any such wild bird, after it has been killed, shall for each offense be subject to a fine of not less than ten nor more than fifty dollars, or imprisonment for not less than five nor more than thirty days, or both, at the discretion of the court. For the purpose of this act the following only shall be considered game birds: The Anatidæ, commonly known as swans, geese, brant, and river and sea ducks; the Rallidæ, commonly known as rails, coots, mud-hens and gallinules; the Limicolæ, commonly known as shore birds, plovers, surf-birds, snipe, woodcock, sandpipers, tatlers and curlews; the Gallinæ, commonly known as wild turkeys, grouse, prairie chickens, pheasants, partridges and quails, all of which are governed by specific laws affecting each, and are not intended to be affected by this act.

SEC. 2. Any person who shall, within the State of ——, take or destroy the nest or the eggs of any wild bird, shall be subject for each offense to a fine of not less than ten nor more than fifty dollars, or imprisonment for not less than five nor more than thirty days, or both, at the discretion of the court.

SEC. 3. Sections 1 and 2 of this act shall not apply to any person holding a permit giving the right to take birds, or their nests and eggs, for scientific purposes, as provided for in Section 4 of this act.

SEC. 4. Permits may be granted by [here follow the names of the persons, if any, duly authorized by this act to grant such permits], or by any incorporated society of natural history in the State, through such persons or officers as said society may designate, to any properly accredited person, permitting the holder thereof to collect birds, their nests or eggs, for strictly scientific purposes. In order to obtain such permit, the applicant for the same must present to the person or persons having the power to grant said permit, written testimonials from two well-known scientific men, certifying to the good character and fitness of said applicant to be intrusted with such privilege; must pay to said persons or officers one dollar to defray the necessary expenses attending the granting of such permits; and must file with said persons or officers a properly executed bond, in the sum of two hundred dollars, signed by two responsible citizens of the State as sureties. This bond shall be forfeited to the State, and the permit become void, upon proof that the holder of such permit has killed any bird, or taken the nest or eggs of any bird, for other than the purpose named in Sections 3 and 4 of this act, and shall be further subject for each such offense to the penalties provided therefore in Sections 1 and 2 of this act.

SEC. 5. The permits authorized by this act shall be in force for one year only from the date of their issue, and shall not be transferable.

SEC. 6. The English or European house-sparrow (*Passer domesticus*) is not included among the birds protected by this act.

SEC. 7. In all actions for the recovery of penalties under this act, one-half of the recovery shall belong to the plaintiff, and the remainder shall be paid to the county treasurer of the county where the offense is committed.

SEC. 8. All acts, or parts of acts, heretofore passed, inconsistent with or contrary to the provisions of this act, are hereby repealed.

SEC. 9. This act shall take effect upon its passage.

COMMENT.

It will be noticed that in Sec. 1 the different species of birds intended to be protected are not separately enumerated. Some attempt at such an enumeration is made in the New York law, as, indeed, is the case in most similar acts passed by the various States. As the birds intended to be protected by this and similar acts include about two-thirds to three-fourths of the birds of any area affected by such an act, or over two hundred species, it is impracticable to enumerate them; the brief enumerations usually attempted are so imperfect and are couched in such vague terms that in many cases conviction could be evaded on technicalities, owing to the looseness of the language usually employed in such acts. In the present draft the few groups of birds not covered by the proposed act are alone specified, and explicitly so through the use of the technical names commonly employed in ornithology for the designation of these groups. This leaves the application of the act unequivocal and exact—a most desirable point to secure. The phraseology of Sec. 1 of the New York law, however, is not particularly objectionable, since the phrase "or any wild bird other than a game bird," covers all the species intended to be protected not particularly mentioned.

Sec. 2 of the act requires no comment.

Sec. 3 is intended to legalize the taking of birds, their nests and eggs for strictly scientific purposes only, as for scientific museums and by persons seriously engaged in the scientific study of birds. In this section and in the following one the word permit is substituted for the word certificate, simply on account of its being a fitter term to use.

Sec. 4. This provision is intended to be so strict in its requirements that only a person who is properly entitled to a permit will be able to secure one. Such persons will cheerfully submit to the trouble necessary to obtain a permit, in behalf of the proper protection of our birds.

The act contemplates vesting with authority to issue permits only such persons or agents as will be most likely to exercise due care in regard to the fitness of applicants to receive them. It is accordingly placed in the hands of incorporated societies of natural history, but authorizes its delegation to such State officers as may be especially designated for that purpose, as game commissioners or game wardens. But preferably, for obvious reasons, such authority should be delegated only to incorporated scientific societies, who, through their executive officers, or through committees specially appointed for the purpose, are naturally the best judges of the fitness of applicants to receive permits. It is desirable that the methods of procedure under Section 4 should be as nearly uniform as possible, as regards especially the character of the bond, and the applicant's testimonials and other obligations.

The following series of blanks, prepared and already in use under the New York law, are herewith submitted as having satisfactorily stood the test of actual use. It may be premised that form "A" is sent in answer to an application for a permit, with which forms "B" and "C" are to be inclosed. When these are returned and found to be satisfactory, form "D" gives notice that the application is granted and states what other requirements are necessary to receive the permit. Form "E" is the permit itself. Form "F" gives notice of the expiration of the permit and directions for obtaining its renewal; this, of course, is not to be sent until near the end of the term for which a permit is originally issued.

The headings of forms "A," "D," "E" and "F" should be changed to suit the circumstances of their issue, as regards the society or officers from whom they may emanate:

[A.] *American Museum of Natural History,*
(INCORPORATED MAY, 1869),
Central Park (77th St. & 8th Ave.),
New York City.....188

SIR:

In answer to your request for a certificate permitting you to take birds and their nests and eggs for scientific purposes under the Laws of the State of New York, I inclose an obligation, in signing which you promise to take specimens only for scientific purposes and to strictly observe the letter and spirit of the laws of this State for the preservation of birds.

This obligation must be accompanied by a properly executed bond in the sum of two hundred dollars, and by the indorsement herewith sent, signed by two responsible scientific men to whom the President of the American Museum of Natural History* can refer.

No notice will be taken of any application which does not conform to the requirements here prescribed.

If the certificate is granted, a fee of one dollar will be charged to cover the expenses attending the granting of such certificates.

....., *President.*

N. B.—The bond must be executed strictly in accordance with Section 4 of Chapter 427 of the Laws of the State of New York, a copy of which Act is herewith inclosed.

*Here may be substituted the name of the officer, the society, or its properly appointed agent.

[B.]

Application for a permit to collect birds for scientific purposes under the provisions of Chapter 427 of the Laws of the State of New York.

.....188

I, THE UNDERSIGNED, a resident of .....do hereby apply to the President of the American Museum of Natural History of New York City, for a permit granting the right to collect birds, their nests and eggs, for strictly scientific purposes only, in accordance with Chapter 427 of the Laws of the State of New York, being an Act passed May 20, 1886, entitled "An Act for the preservation of Song and Wild Birds." I do hereby agree and promise that in availing myself of this privilege, I will strictly comply with the spirit and letter of the Act above cited.

I herewith inclose my bond, duly executed in accordance with said Act, and the required indorsement of two scientific men, certifying to my good character and fitness to be intrusted with such a privilege.

[*Signed.*].....

Witnessed, ...

FORM OF INDORSEMENT.

.....188

WE, THE UNDERSIGNED, personally know ..... and believe him to be a person of good character, and fit to be intrusted with the privilege of collecting wild birds, and their nests and eggs, in accordance with the provisions of Section 4 of Chapter 427 of the Laws of the State of New York, which Act we have carefully examined and fully comprehend.

[*Sign with name and address in full.*] .....

[C.] KNOW ALL MEN BY THESE PRESENTS, THAT WE .....Principal, and.....Surety, and.....Surety, of the.....of.....State of.....are held and firmly bound unto the PRESIDENT OF THE AMERICAN MUSEUM OF NATURAL HISTORY, of the City of New York, in the just and full sum of TWO HUNDRED DOLLARS lawful money of the United States, to be paid to the TREASURER OF THE STATE OF NEW YORK, for which payment well and truly to be made, we bind ourselves, our heirs, executors, or administrators, jointly and severally, firmly by these presents—sealed with our seals, and dated the.....day of.....in the year one thousand eight hundred and eighty.....

Whereas, the above bounden.....has been given a Permit, dated the.....day of.....In the year one thousand eight hundred and eighty.....by the PRESIDENT OF THE AMERICAN MUSEUM OF NATURAL HISTORY, of the City of New York, to collect birds, their nests or eggs, for strictly scientific purposes only, under the provisions of Chapter 427 of the Laws of the State of New York, which Chapter is "An Act for the Preservation of Song and Wild Birds," passed May 20, 1886; now the conditions of the foregoing obligations are such, that if the said..... .....shall abstain from any infringement of said Act, then this obligation to be void, otherwise to be and remain in full force and virtue.

Sealed and delivered in the presence of

.....[SEAL.] Residence.....

[D.]

American Museum of Natural History,
(INCORPORATED MAY, 1869),
(Central Park 77th St. & 8th Ave.),

New York City,.....188

DEAR SIR:

The President of the American Museum of Natural History* has decided to grant your application for a permit "to collect birds, their nests or eggs, for strictly scientific purposes only," in accordance with Sections 3 and 4 of Chapter 427 of the Laws of the State of New York for 1886, entitled, "An Act for the preservation of Song and Wild Birds."

To cover expenses incurred for postage, printing, etc., you will be charged $1, on receipt of which said permit will be mailed to your address. .....*President.*

[E.]

[THIS PERMIT EXPIRES JULY 1, 188... AND IS NOT TRANSFERABLE.]

American Museum of Natural History,
(INCORPORATED MAY, 1869),
Central Park (77th St. & 8th Av.),

New York City.....188

The President of the American Museum of Natural History* having received satisfactory evidence that Mr..... of....., is engaged in the scientific study of Ornithology and in the collection of wild birds, birds' nests and eggs for scientific purposes, does hereby, in accordance with Chapter 427 of the Laws of the State of New York, grant him a permit on the condition that he will faithfully observe his written promise to the President to obey the letter and spirit of the Act for the "Preservation of Song and Wild Birds;" and in case of wanton destruction of birds or birds' eggs, or killing birds for merely ornamental purposes, or for any other breach of said promise, by the said .....this certificate shall be revoked, and notice of such revocation given in any manner the President may think best.

The holder of this permit shall not take nor kill any game bird, nor destroy their eggs, contrary to the Laws of New York, enacted for the protection or preservation of game birds.

This permit expires the first day of July, eighteen hundred and eighty-——, and is not transferable. The holder thereof is not authorized to collect specimens in defiance of local laws or regulations, nor in violation of laws against trespass on private property.

....., *President.*

*Or whoever the proper authority may chance to be.

[F.]

American Museum of Natural History,
(INCORPORATED MAY, 1869),
Central Park (77th St. & 8th Ave.),

New York City,.....188

DEAR SIR:

I beg to notify you that the permit given to you by the President of the American Museum of Natural History in accordance with Chapter 427 of the Laws of the State of New York—an Act for the "Preservation of Song and Wild Birds"—expires July 1, 188—. If you desire its renewal under the same obligations, you will please return this circular with your name and address subscribed and the sum of one dollar, on receipt of which a new permit will be sent to you. Respectfully,

.....*President.*

Sec. 5. The permits are issued for one year only, and are not transferable. The bond, however, may stand indefinitely, or until canceled, and the permit be annually renewed at the owner's option, in virtue of the bond continuing in force.

The remaining sections of the proposed act need no comment beyond that already made in speaking of the New York law.

ENFORCEMENT OF LAWS FOR THE PROTECTION OF BIRDS.

Any constable or police officer may be called upon to make arrests under legislative acts for the protection of birds; if they fail to take proper action, through indifference or from other causes, complaints for neglect of duty should be duly lodged against them. To secure more efficient enforcement of such laws it would be well to have officers specially appointed for the purpose, say one for each county, whose duties should be similar to those of game wardens—namely, to arrest and prosecute violators of the law. The paid agents—nearly five thousand in number—of the American Humane Association may also be called upon to assist in their enforcement.

PURPOSE AND OBJECTS OF THE PROPOSED ACT.

The primary purpose of the proposed act is the prevention of the slaughter of birds for millinery use, and by thoughtless men and boys in mere sport or to gratify a destructive propensity. As is well known, boys destroy countless numbers of the nests and eggs of birds, and even of birds themselves—the latter not only with guns, but especially by use of slings, catapults or pea-shooters—simply for mischievous pleasure. It may not be so well-known that many men thoughtlessly shoot hundreds and even thousands of swallows, swifts, nighthawks, gulls, terns, herons and other birds, including even ducks and other waterfowl, simply for the practice of shooting on the wing, or to gratify a desire to kill something. As they make no use of the birds thus killed, their only profit from such heartless destruction is the satisfaction of exercising or displaying their skill as marksmen. It is needless to say that such proceedings are wanton and barbarous, without excuse or defence, and should be summarily stopped.

The proposed act is not intended to interfere with the wearing of decorations made from the feathers of domesticated birds, or from birds lawfully killed as game, or with the use of ostrich plumes. The wings and other parts of grouse, partridges, pheasants, ptarmigans, ducks, etc., employed so extensively for hat trimmings, are not objectionable from the point of view of bird protection.

GENERAL REMARKS AND SUGGESTIONS.

In any prohibitory legislation the "greatest good to the greatest number" is the first point to be considered. It is with this principle in view that the above draft of a protective bird act has been drawn. Hence if it can be shown that certain birds are included by it among those to be protected, which for any reason it is unwise to protect, as for example, the birds of prey, crows, jays, blackbirds, the robin and the bobolink, the Committee is quite willing to see protection withheld from them. The United States Department of Agriculture, through its Division of Economic Ornithology, in charge of an expert naturalist, Dr. C. Hart Merriam, is at present thoroughly investigating these and similar problems, and doubtless will be able soon to throw much light upon the real economic status of these and many other species, but for the present the Committee believe, judging from the evidence already at hand, that it would be detrimental to the public interest to declare the species in question unentitled to protection.

Again, while it is desirable to secure uniformity throughout the country in laws for the protection of birds, the conditions may so far vary in different portions of the country as to warrant deviations and exceptions for some parts which would be unnecessary in others. The bobolink affords a notable case; throughout its breeding area, in the Northern States, it is unquestionably a useful insect destroyer as well as one of the most vivacious and pleasing of song birds; in the Southern States its depredations during its migrations on the rice crop are unquestionably of serious magnitude. How it had best be treated at large is not, therefore, an easily solved problem. And the same is to some extent true of the various species of blackbirds. These are problems of the future, however, rather than of the present.

Another question of moment is the proper attitude of the law toward taxidermists, who, as a class, are valuable aids of the scientific museum and the ornithologist. The mounting of birds, single or in groups, as objects of ornament or interest, is not objectionable, since they are instructive and tend to foster a taste for natural history studies, the number so used being comparatively small.

The preparation of skins, also a legitimate part of a taxidermist's work, is, however, more open to abuse, since it is in this form that birds find a ready sale for illegitimate uses. Many taxidermists are unquestionably upright and conscientious men, who scorn becoming accessories to the milliner's art; to such it would be proper to grant permits for collecting specimens. But many are notoriously unscrupulous, and consequently unfit to be trusted with such a privilege. Such persons, however, would doubtless be unable to furnish satisfactory testimonials of good character and fitness, or the necessary bonds. But special care should be exercised both in issuing the permits and in guarding against their abuse.

EFFECT OF THE NEW YORK LAW AND OF THE MOVEMENT IN BEHALF OF THE BIRDS.

It is impossible to say to just what extent the New York law for the protection of birds is enforced, but it is evidently far from a "dead letter." In the vicinity of New York city, at least, there have been a number of successful prosecutions for shooting robins. These have had a salutary effect, not only for the protection of robins, but for bobolinks, meadow larks and golden-winged woodpeckers. The existence of the law appears to be not only generally known, but it inspires caution on the part of market dealers, taxidermists and bird shooters who have been publicly warned against its violation. Infringements of the law are doubtless still not rare, but they are generally covert, and it is evident that if a little more interest were shown in its enforcement it would soon be properly respected.

Public sentiment in behalf of the better protection of our smaller native birds has evidently been deeply aroused, especially against their use for millinery purposes. The press at large has so generally supported the movement, and so thoroughly made known the extent of the wholesale destruction of birds for hat decoration, that at least the more intelligent women of the country can no longer sin ignorantly in the matter of wearing birds for personal adornment. In this good work the AUDUBON SOCIETY, through its publications and earnest workers, has done eminent service, its co-operation with the A. O. U. Committee having been most hearty and efficient. The result of the agitation is easily seen in the comparative absence at the present time of song birds on women's hats. While the plumage of birds is still extensively worn, it has notably changed in character, and consists mainly of (1) materials of legitimate origin, as the wings and other parts of game birds, domestic fowls and pigeons, and ostrich plumes, or (2) of bright-plumaged exotic species, chiefly South American, East Indian and African, such as parrots, trogons, toucans, humming birds, birds of paradise, grackles, starlings, fruit pigeons, etc. Terns, shore birds, dyed grebe plumage and egret plumes, are, however, still frequent, and the heads or other parts of owls and small hawks are sparingly used, as are also the wings of the golden-winged woodpecker. But the bunches of kinglets, warblers, sparrows and other song birds, which a year since so conspicuously disgraced the headgear of so many women, have almost entirely disappeared. It is an encouraging fact that dealers who heretofore so largely furnished the milliners with native birds, report that their orders for such materials are now only one-tenth to one-twentieth as numerous as they were a year ago. It is also highly encouraging to note that such trimmings are now confined to the lower grades of goods, and therefore, it is almost needless to say, to the lower ranks of wearers. The wealthier and more cultivated women of the land employ other and far more tasteful hat trimmings, as one can easily see, not only by a visit to the millinery establishments, but by observation on the street, in churches, theaters and other public assemblies. It is no longer in "good form" for a lady to appear in a hat embellished with dead song birds or sea fowl, and the old stock carried over by the trade is evidently being worked off slowly and through the medium of low caste goods.

On the whole it may therefore be safely assumed that the effort in behalf of the birds has produced most excellent results, far better than even the most sanguine could have anticipated, while the outlook for the future is full of encouragement. But the time has not yet come when effort in this direction may be safely relaxed. There is much still to be done, and now that public sentiment has been so thoroughly and favorably aroused, the way is clearly open to the enforcement of more intelligent and efficient legal protection for our birds.

In this connection another point is worthy of attention. Of late a new phase of the "bird-wearing craze" has become conspicuous, namely, the wearing of sandpipers, plovers, "snipe" and other shore birds, which during the last few months have been slaughtered especially to furnish material for the milliner's art, their destruction for this purpose proving more remunerative than for legitimate use as game. This is a matter that should earnestly interest sportsmen and game protective associations, as well as bird lovers and philanthropists, and means should be speedily devised for checking this new enterprise of the milliners and their bird-wearing patrons.

The Committee of the American Ornithologists' Union on Bird Protection has thus far met the considerable expense incurred for printing, postage and the distribution of its Bulletin by assessments upon its members, except the sum of one hundred dollars, presented to it by friends of the cause it represents. Further pecuniary aid would enable the Committee to publish and distribute additional matter of importance relating to bird protection and otherwise aid its work. It is hoped that this mere statement of its needs will prove an effective appeal to the friends of the cause. Remittances may be sent to Mr. Wm. Dutcher, treasurer of the committee, 51 Liberty street, New York city, or to the chairman, Mr. George B. Sennett.

The committee is desirous of co-operating with all persons or societies interested in bird protection. The headquarters of the committee are at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, New York city, N. Y., where the officers or any of the members may be addressed.

AMERICAN ORNITHOLOGISTS' UNION.—The fourth Congress of the American Ornithologists' Union will convene in Washington, D. C., Tuesday, November 16, 1886, at 11 o'clock, A. M. The meetings will be held in the Lecture Room of the U. S. National Museum. The presentation of ornithological papers is expected to form a prominent feature of the meetings, and all members, both active and associate, are earnestly requested to contribute. A large attendance of associate members is hoped for.

THE OTTER IN CONNECTICUT.—Three otters (*Lutra canadensis*) were captured in Marlboro, Conn., Oct. 6, by a Mr. Buell. The young of the year, a male and female, are in the collection of Dr. A. K. Fisher, of Washington, D. C., the adult female being in my cabinet. Mr. Buell informs me that he has seen tracks of another since he killed the others.—JOHN H. SAGE (Portland, Conn.).

PINE FINCHES IN MAINE.—I have recently seen large flocks of pine finches (*C. pinus*); have not observed them in this locality for three years before. Several specimens of Acadian owl (*N. acadica*) have been sent me for mounting the past week.—M. (North Cumberland county, Maine).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One white-throated capucin (*Cebus hypoleucus*); three common macaques (*Macacus cynomolgus*); one Guinea baboon (*Cynocephalus sphinx*); two sooty mangabeys (*Cercocebus fuliginosus*); six rhesus macaques (*Macacus cryptuvus*); two rose-bill parrakeets (*Platycercus eximius*); one common tropial (*Icterus vulgaris*); one pine snake (*Pityophis menanoleucus*), and two banded rattlesnakes (*Crotalus horridus*). Presented—Two fish hawks (*Pandion haliaetus*); one red-tailed buzzard (*Buteo borealis*); one mocking bird (*Turdus polyglottus*); two white crowned-pigeons (*Columba leucocephela*), and four alligators (*Alligator mississippiensis*).

A SURPLUS OF OVER $2,000,000 is the solid guaranty offered by the Travelers, of Hartford, Conn., that all just claims will be paid in full, as they always have been.—*Adv.*

AN ARKANSAS IDYL.

BY "NESSMUK."

[Suggested by newspaper accounts of a Southern family feud, in which the adult males on either side were nearly exterminated—the feud being finally settled by intermarriage.]

IN a half decayed log cabin, on the shore of Apple Lake,
Dwelt a lank, ill-favored squatter by the name of Poker Jake,
(Which his real name was Likens), and he raised a motley crew
Of tow-headed sons and daughters, as such fellows mostly do,
Without culture or good manners, and with no regard for law,
Trained to loafing, drinking, fighting, and to fish and shoot and chaw.

Seven miles below Old Likens, by a marshy, muddy sloo,
At the turning of the river, lived Old Simmons and his crew;
And as between the fathers or the sons of either gang,
It would be very hard to say which most deserved to hang.
And yet, though they were ornery, it must be freely owned,
They were exceeding chivalric—surprisingly high-toned.
One of them might abstract a horse, or rob the mail by night—
But just insinuate he lied—he'd slice you up on sight.

Now, old man Likens had a mule, a spike-tailed smoky gray,
Which Ikey Simmons found at large, and claimed it as a stray,
And took it off and sold it, and pocketed the dust,
Which filled the tribe of Poker Jake with anger and disgust.
Then Yancey Likens took his gun and sallied out alone,
And soon the tribe of Simmons had a funeral of their own.

Such summary proceedings in a rural neighborhood
Produce unpleasant feelings, and result in nothing good.
For Davis Simmons took his gun, and laid for Poker Jake,
And shot him, catching catties, in a dugout on the lake.

Then all the neighbors felt that this had gone too deep for fun,
And that a deadly quarrel had undoubtedly begun.
For Yancey Likens at the grave was heard to swear aloud,
He'd lay for every Simmons and exterminate the crowd!
It was a rash expression, and could only be condoned
By the fact that he was fiery, and uncommonly high-toned.
Likewise he was the coolest man, and hardest shot by odds—
He had been known to hit a deer at five and forty rods.

The Simmons cabin faced the sloo, with just a path between,
And on the other side came down the forest, dense and green.
And just within the forest's edge, beside a sycamore,
Did Yancey Likens take his stand, to watch the cabin door.
And when he saw Old Simmons come meandering round the sloo,
He took a rest across a log, and bored him through and through!

Old Simmons had a daughter—Martha Washington by name,
A round-limbed, blue-eyed, handsome jade, of most decided game.
And she had loved this Yancey—but that was over now—
She took a shotgun from its hooks, and registered a vow.
She loaded up both barrels with the biggest kind of shot,
And went gunning after Yancey. Yancey, he got up and got.
He was as brave in single fight as any man unhung,
But could he harm the girl he loved, so brave, so fair and young?

And so, although she prowled around, and hid beside the road,
And bushwhacked every cowpath that led to his abode,
And though Ma'am Likens got a charge of bird shot in a place
That caused her to repose at night by lying on her face,
And though old granny Simmons, picking chips beside her door,
Got hit just where Ma'am Likens had been hit the week before,
And though Andrew Jackson Likens got a bullet in his thigh,
She could get no shot at Yancey. Yancey held his hand too high.
Perhaps if Yancey chose to tell, he might explain just how
It happened no one shot at her in all this precious row.

But, anyway, she had her way, and played the Indian scout,
Until one afternoon, when strength and pluck were giving out,
She sought a quiet spot, and scraping leaves into a heap,
But meaning still to keep awake, dropped calmly off to sleep,
And dreamed her love dream o'er again, and that 'twas early spring,
And Yancey Likens came to her, and brought the wedding ring.
But when he strove to put it on, she saw it, with alarm,
Expand, and slip above her hand, and rest upon her arm.
And then the ring began to shrink, until it grew so tight,
The sharp compression caused her pain, and woke her in a fright.
And then she saw, with sudden fear, a pair of brawny fists,
That most uncompromisingly imprisoned both her wrists!

She fought like any mountain cat, and in her struggles swore
She never had been so misused by any man before.
She wrenched herself as she had been an acrobat on show,
And shrieked, "You low-down, ornery pup, how dar you squeeze me so!"

But still the iron grip remained, and o'er her shoulders fell
The steady gaze of steel-gray eyes—the eyes she knew so well!
A laughing face looked down on hers, and all in vain she tried
To free herself, and then—and then she wilted down and cried.

* * * * * * * * *

Ma'am Likens, with a water-gourd, went hobbling to the spring.
She was too old and lame to dance—too cussed mad to sing.
She crooned and grumbled in her wrath, until she met her son,
A-galivanting down the path, with Martha Washington!

No matter how they compromised each ugly word and deed—
Young Yancey had the leading mind—and leading minds will lead.

They sent young Thomas Benton Likens off to bring a priest,
Likewise, a keg of applejack—ten gallons at the least.
The tribe of Simmons all came up—the Likenses were there,
The neighbors swore they ne'er before had seen a bride so fair.*
Young Yancey led the festive dance, with Martha at his side,
While Montagues and Capulets pranced after them with pride.
Ma'am Likens, primed with applejack, went halting thro' a reel,
While granny Simmons in her chair, kept time with toe and heel.

They smoked the fragrant cob of peace, they drank their toddy hot,
They swore an everlasting truce and sealed it on the spot,
By digging underneath a tree a narrow grave and deep,
And burying the tomahawk where Martha went to sleep.

*This was written years before Joaquin Miller's "William Brown, of Oregon," saw the light.

CONCERNING COOTS.—*Editor Forest and Stream:* I notice in your columns from time to time enthusiastic accounts of very enjoyable coot shooting on the eastern coast. Now, if this coot is the same black, long, straight-necked, tame, tough, fishy, entirely non-edible, useless bird that is called coot on the southern coast, I am entirely unable to perceive wherein lies the sport of killing him, her or it. Will the ardent coot shooter rise with his argument?—O. O. S. [He is not, but is a black sea duck of the genus *Oidemia*, of which three species are common on the New England coast.]

Game Bag and Gun.

MOOSE IN MAINE.

ALTHOUGH the open season has hardly been over a month an open one, yet at least three moose have fallen to the sportsman's rifle in Maine. The returned hunters report "a good many moose, deer very plenty, but shy." The lordly old fellow of the Kennebago region has fallen to the toils of Capt. Thomas. He is reported to have weighed 1,100lbs., and to have stood 18 hands high. What a giant! If such game can be multiplied in Maine, and it is certain that it is being multiplied under the present protection, it is worthy of the best effort of every true sportsman in the land. Another bull moose has been killed in the Moosehead region. A worthy doctor, of Boston, is the happy sportsman, if a sportsman can be happy. The report is that the doctor killed his moose in a little stream that leads out of Mud Lake. The doctor and his Indian guide were in the canoe, when the moose answered to the call of what he would make his mate, but alas, like many another lover, he met his fate. The story goes that the moose came down within a few feet, when the doctor fired. His shot took effect, but only to enrage the moose and in a measure weaken him. Though the bullet passed completely through him just back of the lungs, he came directly for the canoe, which was fortunately in the very shallow water of the stream. The enraged animal, with antlers in air, ten feet from the ground, struck the frail canoe with both feet. They crashed through it like an eggshell. The animal, weakened by the doctor's first shot, fell on his knees in the water as he struck the canoe. The cunning Indian was too much for him, and in a moment had him by the antlers as he attempted to rise, when another shot from the rifle of the now thoroughly frightened doctor put an end to the struggles of another great moose in Maine. The fellow had a most remarkable pair of antlers, spreading over four feet and armed with twenty-four prongs. The third moose is reported to have been killed in the vicinity of Lake Nicatous.

I give the above moose stories as they were told me by returned sportsmen whom I know, but yet, as they came home a good deal excited at the success of their friends, I do not care to vouch for the accuracy of the statement in detail. It need only to be said that it is a pity to kill these moose till the increase of the stock is greater than to-day. The killing of the bulls is not quite as bad as the destroying of the cows would be, but it is true, as Commissioner Stillwell says, that even the bull moose are far too scarce in Maine. It is a fact that will strike any careful observer, that it is the male that always falls to the wiles of the calling horn. It is in the deep snows of winter where the female moose suffer the greatest danger.

A Boston gentleman, who has had considerable experience in hunting moose in Maine, is of the opinion that the increase under the protection of the present law is greater than might at first be supposed. In the Upper Moosehead region, where this gentleman has hunted a good deal, he says there has been a very marked increase in their numbers within a couple of years. He remarks that he never saw the moose signs so plenty as this year on his annual trip. The Indian guides also tell large stories of the number of moose seen and heard. To the number already mentioned as killed this season must be added two or three more. The principal difficulty now appears to be to get some trophy of these moose killed, out of the State; the very wise provision of the law prohibiting even the hides or horns being shipped out of the State. It is whispered that some underground railroad will be found for getting out two or three noble pairs of antlers before the spring opens. In this it will be the skill of the wardens and detectives against the cunning of the Indian guides. It is now believed by some of the sportsmen, who have been down into Maine the past season and killed moose and deer out of season, that even the Indian guide is not always true. In fact, two or three cases have lately come out where the Indian guide has given the whole affair away and his affidavit has been secured. Thus two or three moose have been paid for by sportsmen quietly, lest their friends in Boston or some other city get hold of the outcome of their hunting adventures.

But there comes a bitter complaint from these punished moose hunters, and from some other people, about the number of moose killed by the lumbermen at their camps in winter. One of them declares that he has positive evidence that three moose were killed at one camp last winter, and that another was supplied with moose meat all winter. These sportsmen say that the number of this noble game killed by hunters from without the State, is very insignificant when compared with the number that the lumbermen and the guides who trap in the winter destroy. There also comes a complaint, and doubtless a true one, that the Indians come from over the Canadian border and crust-hunt moose, deer and caribou in Maine to a very alarming extent. To this it may be answered that these hunters and sportsmen who are aware of such destruction to the noble game of Maine, will render the Commissioners a great service and help their own future success in hunting, by giving all the evidence in their power, in order that the offenders they mention may be brought to justice. The large game of the country has almost been driven into extermination by worthless skin-hunters and irresponsible poachers, and it is now a good time for the true lover of the woods and what there might be in them to turn a helping hand toward those who are trying to preserve a showing of Maine's noble game for the future. What stronger reasoning does the reasonable man need than that such game has increased wonderfully under the insignificant protection—insignificant because of the penuriousness of the State itself—it has had, and that in the open season he and every other man is allowed to come into Maine and obtain his share. There is no restriction, yet it might be mentioned that at the time the present game laws of that State were being framed, that a great many members of the Legislature were in favor of putting on some sort of a restriction or tax, either utterly prohibiting sportsmen from out of the State from taking moose, deer or caribou, or not giving them more than half of the open season. But the Commissioners said "No; we want no such restriction." Much as these Commissioners are blamed by those who have been punished for killing game out of season, they might have had such a restrictive law against hunters from out of the State if they had asked for it—yes, even if they had permitted it to pass.

SPECIAL.

The forests of Maine have ever abounded with this noble game. Up to 1855, through all the border counties near Canada, and unsettled townships of wild lands throughout the State, the moose roamed in great freedom, yarding on the tops and sides of almost every mountain through the long cold winters, living on the bark of the maple, moose wood, willow and some other trees, and descending to the low lands in early spring, when the snows melted and the warm south winds gave notice of opening spring; then wading the waters of opening bogs and rivulets as the summer advanced, to feed on the succulent water plants, as well as to rid themselves of the millions of flying insects which preyed upon their mammoth bodies.

In May and June, while the cow moose is bringing forth her young and caring for them, the male is cultivating his soft growing antlers, which he had shed during the thaws of winter; and when fully grown to their natural size—with a prong for every year of his life after his first year—in July he retires to the fastnesses of the mountains and isolates himself from his kind, until the soft velvety substance is thoroughly hardened. This occupies about a month's time. Then he descends to the low lands, bogs and waters again, and may be found in August and September in company with others of both sexes or alone, wading secluded lakes, rivers and pokelogans, in early morning and late evenings. He may be called from his hidden day retreat by the imitating sound of the birch bark trumpet, near the fatal boat of the hunter, through all the early fall. Later he slowly makes his way toward the mountain highlands, around the foothills of which he feeds on the tender buds of underbrush and shrubbery, occasionally stripping the bark from the small maple or willow trees until the snows of winter remind him that it is time to commence the slow ascent of his mountain home. When the moose is undisturbed, the hunter can trace him to his winter yarding ground by the manner of his feeding. For instance, as he faces a certain way, he breaks the end of the twig over his under teeth—he has no upper teeth—leaving a strip of the tender bark of the twig still out beyond the break of the main twig, thus showing the way he stood when he broke off the bud of the bush. By watching the general direction the moose is pursuing, the hunter can follow on the trail with no other sign for miles, and with comparative good speed. Footprints, among the leaves and undergrowth of thick woods, are scarcely discernible. A good moose hunter can follow a moose from one winter's feeding ground to another through all his meanderings, by his feeding signs alone, providing the moose is not driven off his stamping grounds by outside influences.

From 1850 to 1860 the number of moose visibly decreased, until it became apparent that unless there was some stop put to the wholesale slaughter, they would soon be entirely annihilated. Public opinion now turned toward our Legislature to enact some law to protect the game, and the first law passed was to stop the white man from killing—but allowing the Indian perfect liberty in the premises. It was soon discovered that the Indians killed more moose than all the rest of the State, and left the carcass to rot in the woods, only saving the hide, with which to fill snowshoes, or for the market. Thus in the eastern part of the State, among the lakes and ponds of the great basins of the headwaters of the Penobscot and St. Johns rivers, the Indians, in canoes in the summer, and on snowshoes in winter, destroyed hundreds, if not thousands, of moose yearly, and saved only a moiety of the carcass. With this knowledge and because of the growing scarcity of game, the public became alarmed, and our Legislature passed another act—this time to stop the killing of moose for five years by everybody. But this noble game had become so thinned out that even the five year close time only left us a few scattering animals. One great reason for this was, that the sentiment of the people in the backwoods was not schooled up to game laws; and frontiermen felt that they had a natural right to the game of the forest for a living, and that the law protecting the game was more in the interest of the city sportsman than for their benefit, and so whenever the opportunity presented, he helped himself to what he considered his by the rights of the higher law.

At the present time we must say the supply of moose in our forests is very meager. Of course an occasional specimen exists, but there is no abundance. Through the summer season guides conducting parties to the headwaters of our rivers to fish for trout in the far away ponds and lakes mark well when they discover the track of the moose in the soft sands of the shore, and when the open season arrives, with or without the same party, they return to the haunts of the game and with much skill and patience secure the coveted prize. It is far more honor to kill a moose now than it was back in the forties. Then a novice could kill a moose, summer or winter. In 1844 the winter snow fell to the depth of 7ft., and it was common to go into the woods armed with nothing but a knife; find a moose yard, trace it up, follow alongside of the animal, and, with the knife tied to the end of a short pole, cut his throat, as the animal was entirely helpless the moment he left his beat or road, or as the hunters call it, break his yard. In the Rangeleys in those days every settler depended as much on his saddle of moose as his crop of barley for bread, and it was a common occurrence to kill a moose in both winter and summer. Lying in wait in a small canoe, I killed my first moose in June, 1844. I had never seen a moose before and was not much used to a gun, but I brought him the first shot and it was late in the evening and no moon. I had taken the precaution to chalk the top of my gun so I could get a sight along the barrel. Any one who never tried that will be surprised to find how much better he can get a sight in the dark. The first night I ever camped out alone was where the Kennebago Camps are—owned by the Oquassa Angling Association—near the locality of the boat house, and I remember there was a moose carcass at the landing, which had been killed a few days before. I remember, too, that there were in those days two kinds of moose—a short-legged black moose and the long-legged gray moose. The short leg was a round-bodied animal, more like the caribou, and the gray moose was slab-sided.

A large moose was killed three weeks ago by a gentle

man having Dana Brooks for guide in a bog north of Parmachcene Lake. They were watching from a crow's nest or stand built in a tree in the bog for that purpose. The gentleman also shot a caribou and missed a deer. A large moose was killed by Capt. Thomas, of the Kennebago steamer, last week, above the first Kennebago Lake. This specimen stood 18½ hands high and was said to weigh 900lbs.; the head and horns sold for $75. Two moose were killed on the Dead River waters ten days ago, making four killed in this part of the State the present month, in two border counties. There are yet two months of open season and doubtless many more will be killed, especially if snow falls in November, for then they can be tracked and more easily stalked. Moose, though scarce, afford a grand basis for a hunt to any ambitious nimrod, for he need not be confined to moose only, but take caribou, which are fairly plentiful, and deer which are abundant, and an occasional bear.

While writing I have been informed that five moose were killed in the vicinity of Moosehead Lake since the first of the open season, and brought into the Mt. Kineo House. They are reported plenty in that region, but we imagine these were killed in Mud Pond, down the west branch of the Penobscot, and other waters below. There is a vast region of unbroken forest in the north part of Maine—where the foot of man never trod and where the wild denizens of the forest have unlimited freedom and breed without obstruction—where a hunter can satiate his love of the wilderness, and secure all the variety of fur-bearing animals, as well as venison, that his heart desires. But the prize is secured only at an expenditure of hard work, with endurance, exposure, cold, hunger, and a thousand discomforts; and to succeed, good judgment and some knowledge of woodcraft must be had. In Oxford and Franklin counties there is less game, yet a fair chance of success, with less discomforts and less expense. The next two months are open to all sportsmen for large game in Maine, and "to the victor belongs the prize." J. G. R.

Bethel, Maine.

GAME PRESERVING IN BRITAIN.

V.—THE GAME OF THE MOORS.

The Red Grouse.

THE red grouse, which we in Britain simply term grouse, applying the distinctive appellation of black game to its more sombre congener, is exclusively confined to the British Islands, and should, as many writers have pointed out, be styled rather *Tetrao britannicus* than as it is, because it occurs as well in the other provinces of the kingdom as in Scotland. Grouse is very plentifully spread over all the moorland districts, but occurs in greatest profusion in the Highland districts of Scotland, and is less plentiful the further south we go, until in the new forest in Hampshire we find it but just holding its own. Many English counties, notably the six northern ones, Staffordshire and Derbyshire, are able to count it among their game, while in Wales and Ireland it is also very plentiful in some localities.

The grouse is in every particular a thoroughly wild bird and differs in this respect very much from the pheasant as preserved in many parts of England. It is a moor bird, and as such very indisposed to suffer molestation and disturbance by man or beast. The wild, uncultivated, neglected districts which it haunts, tend to remove it far from the usual walks of man and away from the ever encroaching and disturbing hand of the agriculturist. Whatever people may say there is no doubt but that half the art of successful grouse preserving depends upon the assiduousness with which the moors are watched and the birds held free of disturbance. It is usual to turn the waste hill lands where grouse abound to other account by utilizing them as sheep runs, where large, very large numbers of sheep and cattle are depastured. This, of course, bears great influence upon the quietude of the moors, for with sheep come shepherds, and more particularly sheep dogs, and the concomitant amount of disturbance.

Grouse seem to possess but little preference as regards the particular nature of a moor, but on the whole these highlands of ours vary but little. They extend over great distances and consist of series of large, undulating hills, never rising to any great height, averaging probably 1,000 to 1,500 feet above sea-level. Invariably granite, here and there and everywhere the stone projects through the thin coating of soil which covers them. In parts the hills will be of large extent not very marked in outline, but reaching for many miles, large waving downs. In others they will be steeper, more rugged, often in parts precipitous and boulder-strewn, while occasional hills will rear their weather-beaten heads high out above the surrounding moors. Bogs, mires and morasses often fill the valleys between, and small mountain streams dash their way impetuously between the steeper hills, widening out into broad and quieter waters where they meander through the more level ground. Beyond surface verdure, vegetation there is none; no bush or tree occurs to break the monotony of the landscape, and everywhere one is made cognizant of the wild, inhospitable, weatherbeaten aspect of the place, smile it never so sweetly beneath the warming rays of the summer sun. The verdure on these moors consists of rough grass, heather, heath, countless little moorland plants, occasionally gorse, rushes, spret, and a host of such usual growth. The soil is black and peaty, full of small stones, granite refuse, and the surface of the ground is everywhere more or less scarred and broken.

Upon such lands does the red grouse love to dwell, but it will also be found in localities of less inhospitable aspect, where small plantations of larch and fir are springing up in places and where the general surroundings are of a nature more calculated to suit the tastes of the black grouse. Of course, every moor does not find favor in the sight of these game birds. On the contrary, they exhibit great likes and dislikes as regards various expanses, choosing one and neglecting another in very curious irregularity. It is very difficult to point out what might guide the birds in this respect; but, as far as one can judge, the merit which bears most influence is that the formation of the ground serves to shelter to some extent the particular slope most affected by the birds so as to provide them with some protection against severe weather. Then, again, the ground must quickly run off the rain falling upon it, for, although grouse are found in rainy localities, they cannot stand wet camping ground. That the cover, the heather, etc., should be thick is also, of course, an important consideration, as is also the question of food. Beyond haunting a particular locality, grouse do no stick very closely to one spot; they do not always go to roost in the same place, but move from one to another from night to night, from week to week.

The red grouse is monogamous, strictly so, in fact, which is curious, seeing that the black grouse is the opposite of this. Pairing commences at the end of winter or very early spring, and by about the end of February the mating time reaches a close. In another month the hens are laying and by the end of April this process is in full force. The nest is placed in a characteristic spot beneath some tuft of heather, at the base of a projecting granite rock, or in any such similar dry spot where it will be well hidden and remain reasonably dry even in the worst of wet weather. The lining of the nest is simple in the extreme, a few bits of moss, bents and heather being scraped together in the little hollow. The eggs, from four to fourteen, and averaging probably eight or nine, are deposited in this apology for a nest and the hen then commences her very serious incubation of them, lasting twenty days, the cock taking no part in it, but assisting assiduously in the rearing and protection of the young brood, which remains in company of the old birds until well into the autumn when the brood is broken up, the members of it pursuing their own lines of life until the birds commence to "pack" in winter. By packing we understand the consorting together of large numbers of birds—the pack sometimes reaching as many as forty or fifty grouse—which pass the winter season in company, and are altogether very wild and far less "come-at-able" than the ordinary coveys.

The every-day life of the red grouse is distinctly interesting and noteworthy, as is to great extent the case with nearly all moor game. It is in every respect an early bird, taking its first meal very close upon sunrise. Indeed, I never remember to have been early enough afoot to find the birds otherwise than engaged in their matutinal meal. After this grouse resort to certain particular haunts, where they will bask in the sun, dust themselves, or appear otherwise very busy, according to conditions of weather, until the afternoon, when the acquisition of means to bodily sustenance again claims attention until dusk, when they retire to roost. Grouse do not—unless actually disturbed—fly at dusk, much less after darkness sets in, and I never remember having put them up when moving across the moor at night time, so that it is evident they lie uncommonly close.

The food of the red grouse consists for the most part of the natural vegetable products of the lands they affect, and to enumerate all these would be of little service here, but the mountain berries, which we call craw, whortle, crow and red bear berries and their new growth may be mentioned. At times in winter grouse run very short of food, and hunger will then compel them to resort to the stubbles of outlying moorland farms for their food. Indeed to such an extent are grouse now preserved that it is a recognized necessary and common custom to provide the birds with suitable food, chiefly grain, during severe weather.

Our red grouse is a bird of from 15 to 16in. in length, weighs about 20 or 21oz. on an average and in coloring is a rich sienna brown, shading into nearly a true black upon the belly, the under parts of the feathers being white, the feet and legs being thickly feathered over their whole length. The female is slighter, lighter of hue, but both birds differ largely in the intensity of their coloring, some grouse being very light, others equally dark in general coloring.

Obviously the preservation of grouse is a vastly different affair to that of partridges and pheasants, this bird being much nearer a thoroughly wild bird than are either of the two we have previously taken note of, yet for all that the science of grouse preservation, for science it is, has made wonderful strides in this country, and almost incredible quantities are annually killed upon our numerous and widely spread and widely differing moors.

MOORMAN.

Editor Forest and Stream:

In your issue of October 28, 1886, "Moorman" says in his interesting account of the woodcock in Britain: "The woodcock (*Scolopax rusticola*) of Britain is also the woodcock of America and of almost every other country under the sun which does not rejoice in a tropical climate." This statement is misleading, being true in only a very limited sense.

At best, *Scolopax rusticola* can only be considered as "occasional in Eastern North America." Indeed, a vast majority of sportsmen, myself among the number, have never seen this bird in American coverts. The woodcock of this continent is not only specifically distinct from that of the Old World, but also occupies a different genus, *Philohela*, the swamp-lover, of Gray. The American bird has hitherto rarely, if ever, been specifically confounded with the European, there being a considerable difference in size, in favor of the Old World form. As early as 1788 Gmelin described our bird, giving to it the specific name *minor*, which is retained to-day, and which alludes to this difference in size, as perhaps most distinguishable. Other characters, however, have since been pointed out which are more radical, and upon these the generic distinction is based.

Yet from the sportsman's point of view, these scientific and technical differences are of minor importance, and the habits and gaminess of the two 'cock cause them to appear more akin, more so, indeed, than science will allow. Thus in the field, in working the dogs, and in looking up coverts, they might be considered essentially the same, nevertheless, it would not be well, even for the sportsman, to entirely overlook the distinctions mentioned above.

LOUIS A. ZEREGA.

WORCESTER, Mass., Nov. 5.—The hunting party which left this city the first of last September returned home this week after an absence of sixty days. It included Mr. and Mrs. Jerome Marble, Mr. and Mrs. A. B. F. Kenny, Miss Edith Kenny, of this city; Mr. and Mrs. H. F. Allen, of Grafton, Mass.; Hon. M. D. Richardson, of Oswego, N. Y.; Dr., Mrs. L. and Master Corcoran, of Springfield, Mass.; Mr. and Mrs. George W. Morris, of Hartford, Conn. and Mr. W. H. Hutchinson, of Lynn, Mass. During their absence the party have lived in the car "David Garrick." They went across the continent to Portland, Oregon, stopping at points of interest in Illinois, Minnesota, Dakota, Montana, Idaho and Oregon. The time was spent in sight seeing and hunting. They report plenty of sport and game. During their absence they have traveled over 8,000 miles and had a fine time from first to last.

PENNSYLVANIA GAME.

Editor Forest and Stream:

Summer woodcock shooting is allowed in Northeastern Pennsylvania, so that in Pike county by the 15th of last July at least 85 per cent. of the adults which nested there and their broods were wiped out. This year was a remarkable one for ruffed grouse, and but for the woodcock shooting sportsmen would at the proper time have found them more numerous than at any time during the past twelve years. The demand, however, for chicken partridges at a local Delmonico's and by game dealers collecting for the New York and Philadelphia markets made everything a dog pointed at in July and August a woodcock. It is estimated that 1,500 undeveloped birds passed through Milford alone before Sept. 1. In spite of this shooting has been more than fair this fall.

There have been two small flights of woodcock; one last week yielded forty-seven birds to two guns. In a day's hunt from thirty to fifty pheasants or ruffed grouse are seen, but the brush will not be clear until the 6th or 7th inst. The great flight of woodcock will be between the 8th and 20th inst., when there will be good sport. The general sentiment is in favor of abolishing summer woodcock shooting, thus protecting the local nesting birds and the grouse.

Deer are cleaned out in the Log Tavern ponds region along the Shohola, but there are many on the ridges from Foster's Glen to Matamora, notably above Pond Eddy and the Big Yellow Pine Swamp. Bears are more plentiful than deer and there will be grand times with the next snowfall.

A good headquarters for a gunner with or without dogs is George M. Quick's at the Shockapee Farm, a mile and a half northwest of Milford. He is a good shot, has excellent setters, his wife knows how to cook and his terms are reasonable. Milford is reached via Port Jervis on the Erie and John Finley's stages. Quick does not hound deer, but tracks with the first snowfall, and he has "meat" from Nov. 15 till late in March. Trout must be given a rest here next year. The streams were very low in the late summer and autumn and the piscivorous snakes, birds and animals had full swing.

AMATEUR.

SOUTH CAROLINA GAME.

SUMTER, S. C.—In my letter published Oct. 9, I extended an invitation to sportsmen to come down to South Carolina to try their hand in the field. Several gentlemen have written to me for information, and I have endeavored to give it. I desire to add a word through your columns. About Dec. 1 a party of us go down to the waters around Georgetown after ducks. They are just now beginning to fly in great numbers, but the large ducks are not yet on hand. While it is generally possible to hire decoys on the ground, we found it better to carry them if we have time. We do not need camping outfits, as we are always able to find lodging with the rice planters, and in the rudely constructed watchmen's houses in the fields. Almost every rice-field negro is a good cook. I struck one chap this summer who prepared so fine a dinner on a rickety old stove that I told him I would recommend him even to a Delmonico.

In my last letter I stated that I was not sure as to the supply of quail this season, the spring rains having broken up their nests. Being desirous of going out on Monday, the beginning of the open season, I took my dogs yesterday to see if I could locate any coveys. I had scarcely gone beyond the corporate limits when my pointer struck a trail, and in a few moments three dogs were down, and a fourth one, a puppy descended from Sensation, was standing off looking on. I flushed them, but had no gun. Having joined the Protective Association, I was afraid to trust myself with a gun. I went on a little further, and Dingle ran out on a second trial. This was the largest covy I ever saw. Returning, Roger, a setter, ran into a third covey, and I went after them, the dogs coming to some beautiful single points. These three coveys I found within less than three-quarters of an hour, and at no time did I leave the road more than a few steps. To-morrow I will be out. Having a puppy to break, I do not expect much pleasure during the first few outings; but if I fail to bag a thousand birds during the season, I shall call it bad luck or poor shooting.

If any of the gentlemen who have written to me, or even others, should desire to visit this section of South Carolina, it will give me pleasure to help them along. The only difficulty lies in the fact that here no one hunts on foot. Our horses are trained to the gun, and if others come to join us, they are put to the expense of hiring a horse. However, after a few days, they will learn the fields, and then they can shift for themselves. I would advise against too costly an outfit. There was one visitor here who was "gotten up" at considerable cost, and he tramped the fields for weeks, returning at night with from one to four quail. He could do everything but shoot. Several of our non-professional shots bag three birds out of five all day, shooting in close woods or in open fields just as the birds rise, and even then they call themselves unprofitable servants. However, when a fellow shoots out of pure love of hunting, it does not make any difference how many birds he bags. C. C. BROWN.

"AN OLD MAN'S ACTIVITY."—A Berlin dispatch to the London *Daily News* says: "The Emperor William returned here this afternoon from Blankenburg, apparently none the worse for yesterday's exertions. According to the official report, his Majesty brought down with his rifle twenty-eight head of large game, which is certainly good proof of his keenness of hand and eye." It requires no special "keenness of hand and eye" to bring down game in the Blankenburg fashion. The hunters are posted along lanes of netting; the game is driven through these lanes and the guns belch at close range. It would require "keenness" to miss the mark under such conditions.

SHELDRAKE ON THE EAST RIVER.—One morning last week, while walking over the New York and Brooklyn bridge, I saw a large bird coming from the direction of the Navy Yard. Approaching with rapid flight the bird suddenly saw the structure directly in his course. He wheeled around several times, deciding whether to fly below or above the bridge, or strike through the forests (of masts) on either side of the river. In a moment he had made up his mind and, rising, came flying directly over me, when I saw that it was an ordinary sheldrake, but more than ordinarily interesting for the few moments I watched its perplexity.—F'LIN.

ILLINOIS RIVER DUCKING GROUNDS.

AN ominous growl is rising from the swamp lands along the margin of the Illinois River from the market hunters and other disciples of Nimrod whom the action of speculative or monopolistically inclined proprietors has debarred from following their accustomed calling or sport, as the case may be, and it is not unlikely that considerable litigation, if not something worse, may be the outcome. The first attempt we believe to monopolize the sporting privileges in the river bottoms in this section of the State, was in Woodford county last year, when a syndicate composed of Benjamin Ellis, Samuel Ramsey, Louis Johnson and Louis Gulbert, who are all owners of swamp lands lying between Spring Bay and the road leading to Chillicothe, secured, or pretended they had secured, a lease of that entire territory, and running a single wire around that whole section of country, claimed that it was an inclosure, and warned the hunting fraternity not to trespass thereon. This was followed by a similar movement on the part of the Jones family, who claimed to have leased a large territory above the Chillicothe road, including what is known as the Rice Pond, and which is one of the best ducking grounds in the State. The object of the parties interested in the scheme was to rent the privilege of shooting in the bottoms to individuals at so much per gun, patterning after the fashion of old country landlords. A number of Chillicothe hunters paid and agreed to pay a per capita tax to the monopolists, ranging from $5 to $33.30, on condition that they were to be protected by the "landlords," and that other parties were to be kept off the hunting grounds. The rise of the river in the fall put an end to the arrangement in part, for a number of outsiders, believing that the river extended from bank to bank and could not be controlled by individuals, over-ran the bottoms and shot where they pleased. Others, claiming that a single wire did not constitute a lawful fence, and that therefore the ground was not inclosed within the meaning of the law, did not wait for the river to rise but invaded the prescribed hunting grounds in spite of the warnings of the lessees. Nick Ohl, the fisherman, was one of the latter, and he was arrested and his case tried in Metamora, but up to this time we believe no decision has been given by the court in the matter.

With the end of the fall shooting in 1885 the trouble was buried for a time, but the commencement of the duck season last August brought it again to the surface. The Chillicothe hunters, a trifle careful at first, discovered that round a large portion of the lower territory there was not even a single wire; that in many places where there was a wire it was on the ground or so high that they could easily walk under it, made up their minds that no jury in the world would consider such wire a fence, and again have invaded the sacred precincts of the goose pond. It is alleged that threats have been made by the Chillicothe hunters that if the lessees attempt to enforce the law or drive them off there will be serious trouble, and we are informed that there are parties none too good to pot one or two of the objectionable "landlords" with a Winchester, providing the brush is thick enough to afford them concealment, and that their chances to escape detection are good. It is further alleged that such rumors have come to the ears of some or all of the "landlords," and that now one at least, who is a market hunter himself, is trying to lay the responsibility on his partners, and declaring that so far as he is individually concerned any one may hunt on his territory. Whether it be that the other "landlords" are fearful of the Chillicothe swamp angels' Winchesters, or whether they believe themselves that their wire will not hold good in law as constituting an inclosure, one thing is certain that so far the hunters have not been molested. In the Rice Pond District we understand a syndicate have leased the privilege of shooting, and are at present allowed to remain in undisturbed possession. This is accounted for from the difficulty of access to the pond, and the fact that the majority of the Chillicothe hunters prefer the lower country. Just how long it will be before some enterprising swamp hunter breaks into this territory it is hard to say, but probably just as soon as the shooting begins to get poor in the lower district.

The Chillicothe market hunters claim to hold a whip over the heads of one or two of the goose pond landlords, and this, perhaps, may also account, in some measure, for the fact that they have been undisturbed in the hunting grounds this season. It is alleged by them that at several shooting matches that have been held in Woodford county this and last season one or two of the "landlords" have supplied the thirsty marksmen with fermented beverages in direct contravention of the revenue laws, and the Chillicothe men declare that a trip to Chicago and an interview with Uncle Sam's officials regarding the matter would be "a picnic" the "landlords" would hardly enjoy. They allege further that liquor or beer has been sold to minors by these same parties, and hint that if the consequences of the infringement of the revenue laws do not prove a sufficient warning, they will try the effect of the State law on the latter charge.

A syndicate of Peoria men—alleged sportsmen—have leased what is known as Duck Island or Beebe's Lake, below Copperas Creek, and have inclosed those shooting grounds and given notice to all not members of the monopolistic fraternity not to set foot within their fence on pain of prosecution to the fullest extent of the law.

Already the natives of that section are concocting retaliatory measures and we are informed that notice has been served on these alleged sportsmen that if they persist in denying to the inhabitants of that vicinity the privilege of shooting ducks over the territory they have hunted for the last thirty or forty years that they will enforce the State Sunday law and prosecute the Peoria sports who shoot on the Lord's Day. As this is the favorite day for the monopolists the action of the Duck Island natives may seriously interfere with their sport.

Not long since a syndicate of wealthy St. Louis men leased a large hunting territory in the neighborhood of Grand Tower and excluded the natives. The latter said nothing but bided their time. The St. Louis men built a fine club house and on its completion sent down two men, a negro cook and a white roustabout, with their dogs, provisions and outfit to prepare for their coming. After getting the dogs kenneled and the wines, provisions and other camp equipage safely stowed away, the two men left the club house to go to the steamboat landing. They were gone two or three hours, and when they returned the dogs were all dead and the fine club house with all its contents a mass of smoking ruins. On the arrival of the party from St. Louis, they drove out to the scene in two two-horse wagons. They tied their horses on the lake front while they went up to where their once handsome club house had stood. Hearing some shooting they returned to the teams to find that six Winchester rifles were playing on them from an island in the lake, the shooters being concealed from view in the brush. Afraid to venture near the teams they stood and saw their horses killed, and now it is alleged they don't care to hunt in that neighborhood any more.

It is hardly probable that in this section of the country, where the inhabitants are supposed to be more law-abiding than in Egypt, such a state of retaliatory action will ever come about, but there is little doubt that if some amicable arrangement is not arrived at between the "landlords" and those men whose bread and butter depends in a large measure during the season on the game they kill, and who have held undisturbed possession of these hunting grounds for over a quarter of a century, that we shall hear of some trouble in the river bottom. The market hunters look upon the action of these "landlords" a good deal as the Irish people do on an eviction, and are just as bitter in their denunciations of what they consider one of the most "damnable monopolies" ever conceived.—*Peoria (Ill.) Transcript.*

A SQUIRREL HUNT.

THE country surrounding Blairville, Indiana county, Pa., is not at all noted for being a hunter's paradise. Whatever game is bagged in this locality has to be hunted for, and when a person returns from a day's hunt with from six to eight squirrels, it is accepted by his brethren as very good evidence that he has not spent the day in play, but that all of the time has been spent in good, solid hunting, and that too in every sense of the word. In spite of the fact that but very little game usually rewards the efforts of a sportsman, yet we do not want the readers of your journal to think that Blairville is devoid of men who possess sporting blood. No, on the contrary, we have in this little town that numbers not more than perhaps three thousand inhabitants, quite a number of mighty hunters, dead shots, dog fanciers, and all-around sporting men. And every now and again three or four of them will hire a rig, and with good guns and plenty of shells, start out for a day or two's fun in the field.

Quite recently such a party gathered itself together and started for Jacksonville, some nine miles distant. For brevity's sake let me call the members that composed it Jack, Will, George and Dick. The party left town in the afternoon, and after a delightful ride reached the hostelry in safety.

Retired early, leaving instructiens with the landloard—who in his own proper person was Boniface, clerk, hostler and porter—to be called early in the morning. The stentorian tenor of mine host gave warning that breakfast was ready. This was soon disposed of, and as it had rained for about an hour before daylight, each felt certain that when evening came and results were summed up, it would be found that the trip had resulted favorably in every way. So with many laughs and hearty shouts the party started.

After reaching the hunting ground the party separated, each one striking out for himself, with the understanding that at six o'clock in the evening they were to meet at a given point, where the landlord would await them with their rig. As the writer could not follow each one of them he is now forced to depend upon second-hand information for the individual experience of the hunt proper. There is just one thing certain, he can vouch for the score, as he saw and counted the game. In regard to the incidents and happenings, there is another way out of the hole, and that is to carefully watch the conversation and every man and then a *lapsus linguæ* will contain pretty nearly as much information as though the tale had been fully told.

Promptly at six the party met, and Will was the first to shoot off, which he did by holding up a string of ten grays and saying to Dick, "If it hadn't been for that blasted gun you gave me I could have had twice as many more; it snapped three times out of five. The squirrels got on to it and would sit on the branch of a tree and utter one sarcastic bark after another." William's dishevelled appearance, fatigued air and general "knocked-out" looks were ample evidence that he had worked hard for the ten squirrels. Jack then toed the mark with twelve of the woodland beauties, and as he held up his string for inspection said proudly, "And I killed every one of them myself." And no one had said that he didn't. We allow the reader to infer for himself whether or not during the time that Jack lay stretched out under a tree reading one of the latest novels he had had a "sub" out. The next one who came to the front was George. He had thirteen squirrels, each one a beauty, and as the party surveyed them, George evidently thinking that he was champion, said: "Why, boys, I could have shot a red-headed hog if I had only had some way of carrying it home." His face was flushed with victory and in his imagination he saw his name blazoned in the pages of the "STREAM" as being the champion hunter of Indiana county. But his glory was withered and his countenance fell when Dick jumped over the fence and held up twenty with a loud yell. We supposed that he killed them all himself, but in a day or so afterward he was heard to remark that the squirrel market was pretty firm. The thing seems just a little hazy. Dick shoots a 10-bore Bonehill, and said that the first shot he fired the shell stuck, and he had to walk a mile and a half to the nearest farm house to get the tools with which to remove the shell, and then remarked that had it not been for this little mishap his string would have been larger still.

And now the party wended its way hotelward, and after supper the start was made for home, which was reached in good shape, and the boys say that better than all the game they bagged are the pleasant recollections of this most pleasant trip.

Let me add that the champion hunter, Billy Brady, was not along. He is saving all his energies for a deer hunt on Siran Mountain the latter part of this month, and as soon as he returns the readers of FOREST AND STREAM will be favored with full particulars.

ONE WHO WAS THERE.

KANSAS.—Paola, Miami County, Oct. 30.—Quail are very plentiful in Miami county, the law is out to-day, Oct. 30. Ducks are very plentiful on the rivers and ponds. Sportsmen who are going west for fall and winter hunting would do well by stopping in Miami county. Wild geese are flying south in vast numbers.—RABBIT FOOT.

MURDERED BY DEER DOGGERS.

A PORTLAND, Me., dispatch to the New York *Times*, dated Nov. 9, reports the murder of Maine wardens: Among the wardens none were more deservedly popular than Lyman O. Hill, by occupation a farmer, living just outside East Machias village. He was a brave soldier, saw much active service as a member of the Ninth Maine Regiment, and gave an arm to his country. Some five or six years ago Mr. Hill was appointed State Game Warden, and since that time had been almost constantly engaged protecting his district from illegal hunting and fishing. About a week ago Hill, accompanied by Charles Niles, a brother warden about 24 years old, and a resident of Wesley, started on a cruise among the Machias chain of lakes, and nothing further was heard from them until word was brought late last night that they had died in defense of the laws they had sworn to protect.

Shortly after dinner yesterday Hill and his companion discovered two men and a dog in the yard in front of an abandoned logging camp at Fletcher Brook. The men had an express wagon full of camping utensils, and appearances indicated that they had come prepared for a long hunting trip. Under the Maine laws hunting deer with dogs is strictly prohibited, and the hunters were informed that they must give their dog up. This they refused to do, and gave the wardens to understand they were prepared to defend him. Niles then threw off his overcoat and made preparations to capture the dog. It is not known whether he received any warning, or was threatened with violence should he attack the dog, but no sooner had he made a move in that direction than the shorter of the two men threw a double-barreled gun to his shoulder, took deliberate aim, and fired. Niles dropped to the ground and died without a struggle, the ball passing directly through his head. Without a moment's hesitation or a word the murderer half turned, aimed his rifle at Mr. Hill, and fired. His aim was only too deadly and his second victim dropped dead at his feet.

Thomas McReavy, of Whitneyville, and his son Frank, the latter 17 years old, had been cruising the timber land in the neighborhood all day. After the midday meal they had separated, with the understanding that they were to meet at the old logging camp during the afternoon. The son reached the rendezvous a few moments before the shooting occurred and was a silent witness to the dastardly deed. The boy was terribly frightened, and even yet cannot give a connected account of what he saw. After the deed was done the man turned to the boy and coolly remarked, "I had to do it." The boy, not knowing but his turn was coming next, replied "It served them right," and turned and ran into the woods. The murderer and his companion were still at camp, and had apparently made no move to depart when Mr. McReavy arrived. He had heard the report of guns, and was hurrying to ascertain the whereabouts of his son. On entering the yard he was horror-struck at the scene before him. The sight of the two wardens lying dead excited fears for his own safety and a belief that his son had shared their fate. He had some talk with the men, but cannot remember what was said beyond the fact that he told them they had better leave the vicinity as soon as possible, which they did.

The sheriff of Hancock county with a posse has started to look for two men from Hancock who partially answer the description and who were thought to be hunting in the vicinity of the murder.

QUAIL IN MAINE.—Manasseh Smith, of Woodfords, Me., writes to the Portland *Press:* "I was much interested in the account published in your issue of this morning, reporting the capture of a pair of Virginia quail, *Ortyx virginianus*, at Morrill's Corner. But allow me to say that you are in error in stating that it is 'the first authenticated case of this species ever being found in Maine.' Some thirty or more years ago, in the town of Warren, Lincoln (now Knox) county, Me., I killed a quail (with a bow and arrow), and I am very sure he imported himself. Some time in the fifties, Mr. Charles Cleaves, of Biddeford, Me., brought a number of quail from Massachusetts and turned them out in the woods near Biddeford. The birds flourished and increased in numbers rapidly for several years, until they were finally exterminated by a storm of snow and sleet. Some fifteen or eighteen years ago, a Mr. Rowell owned and cultivated some twenty acres of land near Morrill's Corner and abutting the cemetery lot. He told me that there were two coveys of quail hatched in the woods near there and that they had been feeding in his garden. He had lived for years in Massachusetts and knew the bird. It was late in the season when he told me, I think about Dec. 1. I took out my dog and looked after the birds, but did not find them. Massachusetts is about the average of northern climatic limit of the range of the *Ortyx virginianus*, but he frequently spreads over into New Hampshire and even into Maine. He does not mind the cold any more than our ruffed grouse does; but the *Ortyx* roosts on the ground, and our heavy snow storms of late February and early March, ending up with sleet and ice, bury him so that he does not get out until a mink, skunk or weasel resurrects him. In other words, Maine is a little north of the natural habitat of *Ortyx virginianus*, but often on his own account, and occasionally by superior influence he has been domiciled here. If the experiments that have been tried in importing and turning out quail had been done at a distance from the sea coast, I believe that they would have been more successful. Quail laugh at cold, but a heavy snowfall covered with a strong ice crust is extermination to all. A quail will pull out of three feet of dry January snow, but cannot cut through one-quarter of an inch of February or March ice. There is no reason why quail should not be raised through the southern half of Maine. Once in from three to five years they would be killed off if not protected, but in Connecticut the farmers catch and feed through the winter from one to ten dozen quail and turn them out by pairs in the spring. They get more than market value for the birds by selling shooting privileges to Boston, New York and other sportsmen. The same thing could be done in Maine."

NORTH CAROLINA.—Glen Ridge, Nov. 1.—I returned from Charlotte Saturday. The country about there is about dried up, as they have had no rain of any account for two or three months. I found very few birds where I have been accustomed to find large coveys. Also found several coveys of very small birds, showing the spring nests were drowned out by the heavy spring rains, and the birds had raised second broods.—C. E. B.

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.—Between forty-five and fifty members attended the regular monthly meeting of the Massachusetts Fish and Game Protective Association at the Tremont House, Boston, last Wednesday (Nov. 3) and passed a pleasant and also profitable evening. The membership list was increased by two, and four proposals were referred over till the next meeting. Committee reports showed that since Aug. 1 there had been some fourteen or fifteen prosecutions of the fish and game laws made, some of which had been settled and some appealed (but one only being lost), and that there were before the Association about eight or nine complaints, which on account of the depleted treasury it had not seemed advisable to undertake without express authority. A number of members spoke on the necessity of responding to appeals for help, and it being decided upon to open a subscription list for defraying expenses, between $150 and $200 was subscribed and paid to the treasurer during the evening, and a committee was appointed to solicit subscriptions from others who were not present.

THE "CAMPS."—Many must have regretted the close of the delightful series of sketches in FOREST AND STREAM entitled "Sam Lovel's Camps," descriptive of wood and water life in early spring. These will be glad to learn that Sam has been camping again this fall, and his friends are to get the benefit of his observations from the same gifted pen that reported the spring experience, and in the columns of the same interesting weekly. The author evidently has watched outdoor phenomena with keen and sympathetic eyes, and in point of style he is perhaps the best contributor FOREST AND STREAM has had in recent years. In the use of the Yankee dialect some of the *habitués* of Sam's camp and Uncle Lisha's shop rival Hosea Bigelow himself. We think we cannot be mistaken in attributing these sketches to the author of the graceful little essays on "Hunting Without a Gun," which appeared in FOREST AND STREAM two or three years ago.—*Syracuse (N. Y.) Standard, Nov. 3.*

TOLEDO, Ohio.—During the past season one of the guests entertained by the Cedar Point Club, of Toledo, was Frank H. Ellis, and in recognition of the club's hospitality they have received from Mr. Ellis a very fine and costly present, in the shape of a "fire place outfit," for their club house. The set consists of a crane, andirons, tongs, fire shovel, poker and water kettle. The material is iron and the designs very appropriate. The andirons are in the shape of a duck, head and neck, web-feet and wings, and the workmanship is admirable. The water kettle is a duck, the body of copper trimmed with iron. The mouth or spout is the head of a duck with wings and feet of iron, and on the side is the Cedar Point Club monogram. The designs of the rest of the set are made to correspond, and the workmanship is ingenious. The cost was $1,000, including the duty. The set was made in Paris.

THE "BLUE PLOVER."—(See FOREST AND STREAM Nov. 4, 1886.) If "Jack Snipe" will refer to Baird, Brewer and Ridgway's "History of North American Water Birds." Vol. I., p. 212, he will find a good description of his "blue plover" as the young of the "knot" or "robin snipe" (*Tringa canutus*). The name is common on the New England coast between Boston and Portland, where the adult bird is always called "redbreast".—JOHN MURDOCH (U. S. National Museum, Nov. 6).

MINNESOTA.—Swanville, 123 miles from St. Paul, affords good grouse shooting. I went out two days and made a good bag. Ducks are abundant and there are black and gray squirrels in fair numbers. Board may be had at the hotel for $5 per week. There are deer to be had here later in the season, and bruin has also paid the penalty time and again hereabouts. One sportsman made a bag of over one hundred geese in about ten days' time in the fields.—DELL.

PHEASANTS FOR TUXEDO PARK.—Messrs. Reiche & Bros. received last week a consignment of 250 European pheasants for Mr. Lorillard's preserves at Tuxedo Park, Orange county, New York. The birds came from Bohemia and Silesia.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

CENTRAL LAKE, MICH.

CONTINUING his account of the adventures of five anglers "In Northern Michigan" (see last issue) our correspondent "Dick" writes of their camp on Island No. 2, in Central Lake: On entering Central Lake, three small heavily-timbered islands met our delighted gaze, and according to directions we pulled for the middle one which is called "No. 2." It is about 100yds. wide and 200yds. long, covered with grass, trees and bushes, and about midway on the east side is the landing and a clean grassy space about sixty feet long by forty feet wide, for pitching tents. The island is owned by Mr. Frank Lewis, of the Lewis House, a summer resort on the narrow neck of land between the upper end of Torch Lake and Lake Michigan. Mr. Lewis once built a small house on the island for the purpose of entertaining tourist fishermen, but the location was so far in the wilderness that sportsmen didn't frequent it much, and consequently Mr. Lewis had the house removed. He improved the island by clearing out the underbrush and planting angle worms. The worms thrived wonderfully, and fishermen now come to the island from points a half dozen miles away for bait.

Island No. 2 is situated a mile from the foot of the lake, a quarter of a mile from the east shore and a little more than that from the west shore. There is good fishing for bass, pickerel or sunfish within a hundred yards of the landing; there is an abundance of shade trees and the underbrush has been partially cut away to give access to the breezes, which keep the festive mosquito away until evening. The only disadvantage of the island is lack of fuel and drinking water, but on the east shore of the lake directly opposite our landing is a spring of pure cold water and near by an abundance of fuel. So taking it all in all we think it an excellent camping ground.

We circumvented the mosquitoes, at length, and this is how we did it. We banked the tent with sand on all sides, and pinning back the flap pinned a mosquito bar over the orifice, letting it trail on the ground enough to be well sanded from the inside of the tent. When ready to go into the tent we would brush out what mosquitoes we could, and then after fastening the net from the inside so that none could return, we took candles and caught and killed all that remained. It only required a few minutes each evening and was a perfect success. We could then pass the evenings comfortably.

Monday morning there was a nice breeze from the southwest, and Jack, Paul and Frank went fishing. They came in for breakfast singing and shouting, which we knew meant good luck; they had captured sixteen fine bass, weighing in the aggregate 46lbs.

Visiting Bellaire for some needed articles, Jack and I decided to try the Cedar for trout. We struck the river at the bridge, which is a little more than half a mile from its mouth. Jack fished down stream and I up, agreeing to start for the boat at 3. Cedar River is a cold, dark, swift-running stream, and so brushy and full of fallen trees that it only admits of bait-fishing. It is about 30ft. wide, and the banks are such a tangle of cedar as to be almost impassable; in fact, they are impassable to any one save a trout fisherman. The banks in some places are high, but are mostly low and swampy. The mosquitoes, black flies, deer flies and "no-see-ums" are a "power in the land," and it is a plucky fisherman who holds out for a six-hours' fish. We tried all the different "dopes" we could hear of, but didn't find anything that did very much good. Oil of tar we considered the best, but it is rather disagreeable, and will tan a person black as an Indian.

When I reached the boat Jack showed me 27 trout, all good average and the largest weighing 15oz., Dick 24 and the largest weighing 13oz. Henry, our cook, proved a character; a regular encyclopædia of gossip and information. He could not be within hearing of any discussion without taking a hand, and would leave his work at any time to inflict us with his eloquence. His ears were always open to hear a question asked and his tongue always ready to volunteer a reply.

Each day of our stay on the island was as lovely as could be and each day's fishing brought all the fish we could use—more we did not want. Each day two or three would go to Cedar River after trout, so we always had at least one mess of trout per day. After ten days on our island Frank's leave of absence being about over he regretfully took his departure. Four days later Paul bade us good bye and a week later Jack, Bob and I said farewell to our island home, and jumping into our boats pulled out for the head of Intermediate River. The ride down the river that morning was most charming and will long dwell in my memory as an hour of unalloyed happiness. We reached Anderson's for dinner and caught the Queen on her down trip, arriving in Elk Rapids for supper. Next day we went over to Traverse City, where we staid a week, fishing in the lakes in the vicinity and trouting in the Boardman River. While at Traverse Jack caught the "king trout" of the trip; it weighed just 2lbs. and was said to be the largest caught that season, although they have been captured in the Boardman weighing as high as 5lbs.

DICK.

THE ALBANY FLY-CASTING.

ALBANY, N. Y., Nov. 8.—*Editor Forest and Stream:* The first annual fly-casting tournament of the Fly-Casting Association of Albany, N. Y., took place to-day. It would be hard to select a worse day. The wind blew from the north, south, east and west. Snow flew and the water was choppy. Taking all in all it was a grand success. There were about seventy-five fly-fishermen present and it was held on Washington Park Lake. The judges were: Messrs. Dean Sage, Wm. Kirk, Wm. G. Carr, James H. Manning. I inclose a score which explains itself:

	Length of rod.	Distance in feet.	Delicacy.	Accuracy.	T'l
H. R. Sweny	11.0	59	22½	2½	25
T. W. Olcott	11.6	52	17½	5	22½
			22½	2½	25
W. D. Frothingham	10.6	57	20	....	20
			20	....	20
Fred K. Wood	10.4	69	12½	10	22½
		74	12½	2½	15
Howard Paddock	11.6	72	....	2½	2½
W. W. Hill	11.6	67	17½	....	17½
Dr. H. L. Whitbeck	11.0	56	20	....	20
			7½	....	7½
George Brooks	11.6	66	10	7½	17½
Frank Tyler	10.6	64	7½	5	12½
P. M. Luffman	11.6	69	12½	5	17½
		71			
B. F. Reese	10.6	50	5	....	5
M. Stark	10.4	50	....	5	5
Wm. G. Paddock	11.6	63	7½	2½	10
Dayton Ball	11.0	58	12½	2½	15

The prizes for longest casts were won as follows: First, Howard Paddock, 72ft. (Spalding rod); second, Fred K. Wood, 69ft. (Nichols rod); third, P. M. Luffman, 69ft. (4 dozen Scotch bass flies); fourth, W. W. Hill, 67ft. (50yds. enamel line). Wood and Luffman tied on 69ft. and in casting off Wood made 74ft. and Luffman 71ft.

The prizes for accuracy and delicacy were as follows: First, H. R. Sweny (automatic reel); second, T. W. Olcott (Bray fly-book); third, F. K. Wood (50yds. enamel line); fourth, W. D. Frothingham (4 dozen trout flies).

It is expected that the association will grow considerably and another year will make a better show.

W. G. PADDOCK.

ANOTHER CRITIC ON A CRITIC.—The critic, so severely criticized by "Awahsoose" and others in the last number of your paper, would evidently subject the editor to his own limitations. He fails to recognize the fact ever present to the inner consciousness of so many thousand lovers of nature, albeit overworked and heavy laden with the cares of life, that the FOREST AND STREAM, under its present editorial management, is a sovereign balm for the sick and wearied soul. Let your correspondent pass his leisure in the study of statistical reports, the bigger and mustier the better, and may he find such solace healthful and entertaining, for so shall he exercise one among the many glorious privileges of American citizenship, but let him not too strongly condemn the preference of those who choose rather the dash of waves, the forest odors that ever float in upon our souls with the advent of our favorite journal in the green cover, on which sitteth the semblance of a sportsman who loveth nature for herself, and who telleth his bosom friend, not how many fish his creel contains, but how he caught them.—KELPIE.

NUMBERING FISH HOOKS.

THERE has been a movement in England, headed by the *Fishing Gazette*, and backed by Mr. Cholmondeley-Pennell, to reform the numbering of fish hooks and to get the different makers to unite on a common system. One maker acknowledges to three modes of numbering, as follows: "Our sneck bend hooks commence at 000; round, Kirby and Limerick bends at 00; Sproat's and Pennell's bends at No. 1," and adds that the No. 1 of the various shapes are about equal in size but does not say how nearly they approximate. It seems that the Redditch No. 1 hook is the No. 12 under the Kendal system, while the No. 6 becomes No. 7 and the No. 10 becomes No. 3, etc. Surely here is a chance for reformation, but the day of accomplishment seems distant.

It was proposed to have all hooks number upward from the smallest, thus: 000, 00, 0, 1, 2, 3, etc., up to the largest sizes. This method will allow of additions at either end, should larger or smaller hooks be made, and would soon become familiar. It is already in use by one firm, and perhaps professional rivalry prevents others from adopting it. Certain it is that in answer to circulars sent out by the *Fishing Gazette* to the principal makers of hooks, seven firms replied, and six of these say that it would be "impossible" for them to make the change. This is what might be expected from men engaged in any business in which they have sale for their goods to those who are familiar with their labels, and what more do they want? Anglers and fishermen must have hooks and will buy them if there are no numbers at all on the packages, as they could select what they want by the eye, but the more intelligent anglers desire that all hooks of one size shall bear the same number. As one of them puts it: "Imagine for a moment all the gunmakers in England numbering the bores of guns each according to his own particular fancy."

We are in hearty sympathy with this movement, for it affects America as much as it does England, and we are sorry to see the trade so conservative, to put it mildly. It strikes us that the claim of the makers that a new system of numbering is "impossible," merely means that they are indifferent to this proposed reform, because it would cause them some slight trouble. A way out of this difficulty would be to adopt some uniform system for labeling hooks, and then for convenience add below the numbers, in parenthesis, "Old numbers ——." Within a few years the new system would gradually come into use and the old ones would die. The adoption of a standard for reel plates by the National Rod and Reel Association in this country has worked well. Most all reels now conform to it and only a few rural makers adhere to their individual standard. Let the hook makers meet and agree to adopt a uniform standard and to use double labels as long as may be necessary, and anglers the world over will feel grateful.

WHITE PERCH WITH THE FLY.

THE letter in FOREST AND STREAM of Nov. 4 in regard to the white perch as a game fish was something of a surprise to me. Not as regards the qualities of the fish, but that a gentleman of Mr. Mather's reputation should have just discovered them. As I have caught white perch with the fly for years, I may be able to give a little information to others who may not have tried taking them in that manner.

White perch in this section of the country generally take the fly best in the latter half of June and first part of July, from a half hour before sunset until dark, when they naturally are swimming near the surface to take the "bass flies," as we call them here, which, on calm, warm evenings, swarm about the ponds. This year was an exception. I did not once get perch enough for a mess until almost the last of July, when for a few days they took the fly very freely. I then, one evening between 6 o'clock and 7:30, caught fifty white perch, and a few days later took forty more within the same length of time, an average of one fish every two minutes for the full time of fishing.

I used three flies on a 6ft. leader and on one of these evenings I took three perch at a time seven times in succession. As they most always swim in schools, it is very often the case that before one can be reeled in the other flies will be taken. As I have made all the flies I have used for years for trout, black bass and white perch, I have experimented a good deal as regards color, and will unhesitatingly say that, for white perch fishing in this part of the country, the two flies which are most taking are the red-ibis and a fly made of red, yellow and white. I make it as follows: White body ribbed with gold, wings red and yellow mixed, yellow hackle and red or yellow tail. No doubt the Parmacheenbelle, which combines about the same colors, would do as well. I use a No. 5 or 6 Sproat hook.

There was one thing in Mr. Mather's letter which particularly interested me. He speaks of his white perch throwing himself out of the water. I have only caught them in lakes and ponds in this part of Massachusetts and just across the line in Rhode Island. In fact almost entirely in our Watuppa Lakes, near the city, but I have never, out of many hundreds caught, seen one jump out of water and never heard of one doing so before. I had considered it here an almost infallible sign in hooking a fish whether it was a perch or small black bass, by noticing that where it was a very rare case to reel in a black bass without its breaking water a white perch never did. It is only one more proof of the difference in the habits of the same fish in different sections of the country.

O. E. BORDEN.

FALL RIVER, Mass., Nov. 8.

MINNESOTA.—Sauk Center, Minn., Oct. 27.—Gray Eagle, Minn., is a good resort for those who like to cast a fly or cast a minnow. On the Little Falls & Dakota Railway, 135 miles from St. Paul, northeast. The route is via N. P. R. R., from St. Paul to Little Falls. It has some of the finest fishing in this State; pike, pickerel, bass, etc., are easily brought up by a "grub" worm or minnow. The lake is a beautiful sheet of water one mile from town; board may be had for $4 or $5 per week at the Fuller House.—DELL.

FORT WAYNE, Ind., Oct. 28.—I have just seen 76 black bass, 7 of which were small-mouths, also 6 pike, all caught in two days fishing by Messrs. Moritz and Hayden, of this city, at West Lakes, 32 miles north of here. Live minnow used as bait.—J. P. H.

TWO FISH.

Editor Forest and Stream:

When the clock struck 2 yesterday afternoon, I had a very bad attack of restlessness; in other words I ached to go a-fishing. I had not wet a line for several weeks and could not wait any longer. A drive of six miles took me to the headwaters of the San Antonio River, to a favorite place at the junction of the Olmus and the San Antonio River. In a very few minutes after my arrival I was busily engaged in casting the fly to the best of my ability. Working down the stream for nearly one mile I caught but one small large-mouthed black bass. Reaching at last the upper end of a long pool of shallow water, a veritable spring of pure, fresh water, clear as crystal, with a solid rock bottom. A light deposit put upon this rocky bottom furnished a foothold for pond lilies and other aquatic plants, which pronounced this the natural home of the black bass, and one could not select a more desirable place to cast the fly in anticipation of rich reward. Taking a good position from which to make a long cast down the stream (about forty feet is the maximum when as was the case at this time I was using a very light rod, not over 5oz. in weight), at the third cast I felt the expected strike and knew that I had hooked a large fish. Making a rush down the stream some forty or fifty feet, under all the strain the rod and line could bear, the fish broke from the water. Being under a high bank protected by a deep fringe of bushes, I did not get a good view of him, but the splashing was enough to convince me that I had hooked a small whale. With a strong pull he insisted on going down the stream and could not be checked until he had taken another fifty feet of line off the reel. Now then he tugged and tugged, and seemed determined to burrow in the rocky bottom. At last he started up the stream and in a very short time I had a glimpse of his tail as he partially broke from the water. Bah! it was a catfish, (called blue cat in this locality, channel cub in Ohio and Indiana). I landed the fish which weighed 3lbs. and found he had taken the stretcher, a Parmacheene-belle. Concluding that it was not a good day for bass fishing, I set out on my way back to the starting point. I noticed a fallen treetop in a pool I had not tried on the way down the stream. As a last chance I made a cast to its friendly border. This was rewarded with a strike and the feel of a large fish. He made direct for the center of the fallen treetop, and there was nothing for the rod and line to do but stand the strain or break. I did not feel good. I wanted that fish; I knew he must be a black bass of good size, 5lbs. at least. Smaller ones do not move off with that uniform motion and strong steady pull on the line; only the very large ones put confidence in main strength. I expected every instant to feel the line catch on a projecting limb, two or three times it snubbed and freed itself, I felt like kicking myself. How often have I solemnly vowed never to use more than one fly when casting for black bass in small streams filled with snags and other obstructions. One fish at a cast ought to satisfy any reasonable angler. I will never do it again, not even if I land the fish. He rises to the strain on the line sufficient for me to determine that he is hooked upon the dropper. Now I know he will get the line tangled in the brush. That stretcher fly will always be in the way. Down he goes under the brush again. No, he comes out and rushes full speed down the stream. Go it old fellow, take all the line you want. Don't like the shallow water on that sandbar. Never mind; go right over; that is right, there is deep water below and no obstructions. You and I can now have as many rounds as you please, make your own rules. The Parmacheene-belle shall be the referee. Now you are landed—a 4lbs. catfish. I will go home and hasten to tell FOREST AND STREAM how I was fooled twice on the same day.

The above story is as near the literal truth as can be expected from the mouth of an old member of the fraternity. The fish were not weighed, but I have no doubt that together they weighed 7lbs. The fish took the fly on the surface of the water, the strike was as quick and strong as could be expected from a large black bass or brook trout. I am half way inclined to rate the blue cat as a game fish, they take minnows, crawfish, dobsons, grasshoppers and sometimes the fly. They frequent swift waters and usually take the bait at or near the surface.

GRINGO.

SAN ANTONIO, Texas.

SENSIBILITY OF FISHES TO PAIN.—*Editor Forest and Stream:* Anent this subject I have nothing new to offer, though I might present corroborative testimony as to fish with broken hooks in their mouths taking bait or fly again almost immediately, or of fish fresh from the water being thrown on wharves or the ground, or carried on strings by the hour without being killed, and in ecstatic enjoyment lifting up their eyes in tearful thankfulness for the privileges, but I notice the account from "B. F. M.," Ralcigh, N. C., of the experience of the "Rev. Dr. M. M. Marshall, pastor of Christ Church," who cut a slice from a live fish, then threw him into the water and straightway caught him again. It was no doubt the fault of the fish, the insensible fish, that he was impaled again (did the kind Doctor try it over again?), but I wonder if the "pastor of Christ Church" though he was following the precepts of his gentle, thoughtful and merciful master.—O. O. S.

MASKINONGÉ.—*Editor Forest and Stream:* Mr. Fred Mather in his letter published in your number of 28th ult., states that *E. nobilior* is called by French Canadians "masque allonge." I have lived among French Canadians more than thirty years, have fished and hunted with guides of that nationality, and have associated intimately with merchants, professional men and in fact all ranks of the same race, and never yet heard the fish called anything but maskinongé, (pronounced mas-kee-nôn-jai) being almost precisely the same as the Chippewa name which was given to Col. Graves by John B. Codotte. There are numerous lakes, a river, a county and a town in this Province named Maskinongé, but none that I know of, called Masque Allonge. From all of which I conclude that the conservative French Canadian has handed down the name exactly as he got it from the Indians, and as the Chippewas aforesaid still have it.—H. R. (Montreal, Nov. 5).

THE MAINE FISH COMMISSION.

AMONG those who took the Grand Trunk passenger train at the station in this city, Wednesday morning, were Hon. E. M. Stillwell, of Banger, Hon. H. O. Stanley, of Dixfield, Fish and Game Commissioners of Maine; R. H. Stanley, a correspondent of the Boston *Globe*, and a representative of the *Press*. The objective point of the party was Edes Falls, in the town of Naples, this county, and the object of the visit was to inspect the new salmon hatching works at that place. At Mechanic Falls the train was left, and a team was taken for a twenty-mile trip overland. This part of the journey was over a hard road, through monotonous scenery, and on a day when the atmosphere was heavily surcharged with moisture, which threatened at any moment to fall in rain. The ride, however, was made pleasant by the conversation of the Commissioners, who gave facts in relation to and comments upon Maine's fish and game interests.

In 1866 or '67 Mr. Charles G. Atkins, now an assistant of Prof. Baird, of Washington, D. C., and Mr. Foster, who has since died, were appointed the first Fish and Game Commissioners of the State. In 1872 the present incumbents of the offices were appointed, and have held the positions until the present time because of their thorough competency to do the work which devolves upon them.

The work of re-stocking the waters of Maine with salmon, rightly called the king of fish, began as early as 1873. Salmon then run to the headwaters of our rivers to spawn, but the work of re-stocking the lakes and streams in a natural way was a slow process. The spawn of the salmon has deadly enemies in the rivers—the eel, pickerel and other fish—and it is estimated that from 10,000 eggs deposited by a salmon not over one per cent. reach maturity. A resort was had to artificial means. In 1873, the first salmon fry, the name for the young fish, were purchased for Maine in Ontario at a cost per 1,000 of $40 in gold. Then experiments began in earnest and from hatching works at Orland and Grand Lake Stream good results have been obtained. The waters of Maine in many parts have been re-stocked with this noble fish, and many thousands of dollars have been added to the revenue of the State. The fly-fishing has attracted tourists to Maine, and they have left thousands of dollars within our borders.

Many interesting things by experiments have been learned of the habits of salmon. It is now well established that they spawn but once in two years. After spawning they go, no one knows where, but some think far out to sea, as far even as the Grand Banks. It is the opinion of Prof. Baird that they go only to find deep water where they feed upon shrimps, which gives the rich color and delicate flavor to their meat. Salmon have been taken in the Penobscot, and after having been weighed and measured and tin tags numbered tied to them, have been set free. In two years salmon, thus marked, have been caught again in the weirs of the Penobscot. A salmon always returns to the river of its nativity. Two salmon, one born in the Penobscot, the other in the St. Croix, may meet at sea, but when the time for their return to their former homes arrives, each seeks its old haunts. The salmon has its enemies and schools of suckers follow them to the spawning beds to devour the eggs. By the long course of experiments made it has been determined how fast salmon increase in weight and size. The number of eggs which a salmon produces is about 600 to a pound, and so the number obtained from the average fish is about 5,000, once in two years.

Lake Sebago has been noted for many years for its so-called landlocked salmon. For some years the Fish Commissioners have had their attention called to the salmon of Sebago. The salmon which go to the sandy beaches of the headwaters of Sebago to spawn were gradually being extinct by poachers, who speared them. As many as 50 have been killed by two men in a night, and this too at the season when they were on the spawning beds. Again, the Commissioners were anxious to obtain eggs from the landlocked salmon in order to restock the Sebago waters, as well as Moosehead and other places. In accordance with this plan a place was selected this season on Crooked River, the principal stream which runs into Sebago, on which to conduct the experiment.

Messrs. Stillwell and Stanley had a weir of wood built entirely across the stream. This weir is 75 feet in length, and to protect it against a freshet it is weighted with 100 tons of stone. At short intervals places have been left through which refuse matter floating down the river can pass. In the center of the weir, on the down river side, has been built a "trap," in the shape of a letter V, the apex is toward the weir. In the center of the apex has been left an opening which enters into another trap 12x14 feet in size. The salmon going up the river on his way to the spawning grounds, passes into the first "trap," thence into the second, and there he is a secure prisoner. He will swim around and around his prison, but never succeeds in passing out of the place in which he entered. The salmon is taken from his pen by means of a dip net, and placed in a pond 40x20 feet, and then the males and females are separated, and placed in "cars." These are simply rough floating boxes 5x14 feet in size. They are useful for keeping the salmon in a small space, and also to tow the fish to the lake again. As good luck would have it a salmon had the kindness to come up the river Thursday, and the visitors had an opportunity to see an 18 pound salmon taken with a dip net.

How has this experiment succeeded?

The weir was finished the 1st day of September, and on the 15th of that month the work of taking the eggs was begun. When all is ready for the operation to begin the men dress themselves in suits of oil cloth, and placed on their hands woolen mittens, the insides of which are roughened so as to hold fast to the fish. A female salmon is first taken from the water and carried to the bank where the spawn is extracted by gentle pressure on the fish. The spawn is then impregnated and the work of development begins. As soon as the work of development begins globules are formed about as large as medium-sized peas, and these become hard and are of a yellowish amber color. The eggs are then carefully washed with water and placed on trays, and carefully taken, for they break easily, to the hatching house, which is at Edes Falls, two miles distant. The Commissioners, at the beginning of their experimental work, thought that during the season, which lasts some two months, 25 fish might be taken and 100,000 eggs obtained. Already 296 fish are in captivity, and it is expected that 400 in all will be taken and 1,000,000 eggs obtained. The fish already captured are fine specimens. One of them weighs 27lbs. and the average of the 296 is over 10lbs., and thus it will be seen that there is almost a ton and a half of live salmon in the pond and cars. The salmon all strongly resemble the best specimens of the Penobscot River, and Mr. Stilwell says the most marked difference is that the Sebago salmon are thicker. The characteristic of the Penobscot salmon is that they are round and generally of good length. The 27-pounder taken at Crooked River is a splendid specimen of the king of fish and would be a splendid subject for a painting. He is to be photographed before he is given his liberty. Recently 71 salmon ran into the weir in 24 hours.

Prof. Baird obtained 280,000 eggs here at an expense of $500. The 1,000,000 eggs which it is expected will be taken this season, will not cost over $1 per thousand. It will be remembered that the first eggs bought by Maine cost $40 per thousand. This is a remarkably fine showing for the excellent management of our Commissioners.

The work is in the hands of I. P. Harriman, of Orland, a very efficient man, who is assisted by his son E. A., and by Charles Floyd. When the work here is finished the salmon will all be taken to Sebago Lake, and in two years, it is expected, will again try to seek the head waters of the Crooked River. The people in this vicinity were at first very hostile to the undertaking, and threats were made of destroying the weir. Night and day watch is kept, and thus far no trouble has been experienced. Some poaching has been done on the river below the weir, and a few nights ago a boat, in which was a villainous looking spear, large enough to kill a whale, was captured. But the people begin to see that this work is for their own benefit, and look with more favor upon it.

During the past season the Fish Commissioners have placed in the Kennebec, Androscoggin and Penobscot rivers and tributaries, 700,000 sea salmon; in Moosehead and other lakes in the State, 280,000 landlocked salmon; and 200,000 into the St. Croix River. These last were placed jointly by Maine and New Brunswick, a province whose people know the benefit of protecting fish and game, and of re-stocking its lakes and rivers. The best of feeling exists between Maine and New Brunswick on this question, and they will continue jointly to work for the accomplishment of still greater results.

The people of New Brunswick are much more advanced in this matter of protection to fish and game than in many of the States of the Union. As a matter of fact no State has as yet taken the advanced steps in this direction which Maine has. Massachusetts pays a small sum, very small, to help to sustain the salmon hatchery at Grand Lake in this State, but it only amounts to a drop in the bucket to what that State ought to expend. Our own State should continue to do more from year to year. The coming winter the Legislature should appropriate at least $20,000, and this sum could be wisely expended in the building of fish ways, in hatching eggs of salmon and other fish, and in many directions. Our Legislature, on a whole, look at this matter from the true view, and there is not much doubt but that they will adopt a liberal policy.

Once in awhile a man is found, like the old fellow near Bangor, who wanted the close time on catching white perch and black bass removed because, he said, the fish had become so plentiful that when his meadows were overflowed by the spring freshets the fish ate the roots of his grass, and destroyed the prospects of a hay crop. He said that he should sue the State for damages. A man visited the camp at Edes a few days ago and was accompanied by his little boy. He bemoaned his fate because he was prevented from spearing salmon. A gentleman said to him that if a wholesale destruction of salmon was allowed that his little boy and the rest of the rising generation would have no salmon, as they would be extinct. His reply was that he didn't care a continental for the rising generation; that it was for his own gratification for which he lived. Fortunately there are comparatively few who allow selfishness to be paramount to the public welfare. There are no such lakes, ponds and rivers, no such grounds for hunting in the world, as there are in Maine to-day, is the opinion of a gentleman well qualified to judge. The revenue from this source is enormous, as the sportsmen from other States now visit this State in large numbers. It is said that the eighty salmon caught by fly-fishing at the dam at Bangor last season were the means of bringing people to that city who expended at least $5,000.

Referring now more particularly to Sebago. It is for the interest of the people in all the towns about that sheet of water and its tributaries; it is for the interest of the city of Portland, of the people of all Western Maine to aid the Commissioners in the work which has been begun in restocking the lake with salmon. In a few years it would be the finest salmon fishing ground in the world, and would attract visitors from all parts of the country, and thus be a means of adding to the wealth of the State.

Public opinion in favor of protective fish and game laws is now greatly in advance of what it was only a few years ago, and the majority of our citizens now believe in giving our faithful commissioners more assistance, so as to encourage them in their work.—*Portland (Me.) Press.*

LIVE CARP SHIPPED WITHOUT WATER.—Last week Mr. Valentine Stilabower, a carp breeder at Edinburg, Ind., sent some live carp to State Fish Commissioner Enos B. Reed, at Indianapolis, Ind., packed in "excelsior," a sort of wood shaving, and they arrived safely and lived afterward. Mr. Reed, in an editorial note in *The People*, says: "On last Wednesday we received a box of live carp—eight in number—from Mr. Valentine Stilabower, the extensive carp raiser of Edinburg, Ind. They were covered by excelsior packing and lay in a double row on top of one another and must have been at least three hours on the road. To say that we were surprised expresses it but feebly. We had never heard of carp being shipped dry, and here they were alive and kicking and not a drop of water around them. They embraced scale and mirror and were about the handsomest carp we have ever seen. We lost no time in putting the carp into our pond. They are doing well."

BLACK BASS IN EUROPE.—We have a private letter from Count von dem Borne, of Berneuchen, Germany, which says that an agent of the Marquis of Exeter was at his ponds recently after black bass for English waters and took 1,432 fish. We do not understand why this fish should be imported into England from Germany, because the Marquis of Exeter has had ten times the number of black bass that Herr von dem Borne has had, and, therefore, should be able to supply Germany by this time. We know that the latter gentleman has been very successful in breeding black bass, as he has in the case of many other fishes; but from the fact stated above it looks as though the Marquis of Exeter has not met with much success with his fish.

CARP.—This week a car load of young carp will leave Washington for New York city, consigned to Mr. E. G. Blackford, Fulton Market, for distribution to applicants in New York and neighboring States. Applications should be made by letter as soon as possible. In former years twenty fish were given to each applicant, but we do not know whether the allowance has been increased or not. On Monday last we saw one hundred carp, averaging three pounds each, on Mr. Blackford's slabs. They were in excellent condition and came from ponds at Absecom, N. J. There is a very limited sale for the fish in the city.

DR. BAIRD.—Among those to whom were awarded the degree of Doctor of Laws, at the celebration of the 250th anniversary of the founding of Harvard College, appears the name of "Spencer Fullerton Baird, Secretary of the Smithsonian Institution, Director of the National Museum; United States Fish Commissioner, promoter of zoological science."

The Portland *Oregonian* says, "The spostsman of the Northwest has no mutterings to make over his variety of shooting. He can go into eastern Oregon and shoot prairie chickens, and fish to his heart's content. Within two hours' travel of the metropolis of the North Pacific coast he can shoot within twenty-four hours elk, deer, bear, panther, grouse, pheasant, geese, quail, pigeon, mallard duck, widgeon, canvasback, teal, sprigtail, gray duck, bluebill and snipe, besides swan and sandhill crane."

FIXTURES.

DOG SHOWS.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 15 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

April 12, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Nov. 23.—Fifth Annual Field Trials of the Robins Island Club, Robins Island, L. I. Open to members only. C. Waterbury, Secretary.

Dec. 1.—First Annual Field Trials of the Irish Setter Club, at Salisbury, N. C. W. Dunphy, President, Peekskill, N. Y.

Dec. 13.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4236.**

PENNSYLVANIA TRIALS.

Editor Forest and Stream:

The following additional entries have been made for the Philadelphia Kennel Club's field trials:

DERBY.

MINNETONKA.—English setter bitch (Don Juan—Petrel III.); Jos. Fronefield, Jr.

DUKE WIND'EM.—English setter dog (Rebel Wind'em—Leda); M. Richardson.

MEMBERS' STAKE.

WEE CLARA.—English setter bitch (Count Noble—Dashing Romp); E. W. Jester.

OPEN STAKE.

KNOB.—English setter dog (Grouse—Flora); G. Schreiber.

Reports from New Jersey indicate plenty of quail, but the fine weather has interfered with duck shooting at Havre de Grace. RED IRISH.

WESTERN TRIALS.

[*Special to Forest and Stream.*]

ABILENE, Kan., Nov. 9.—The All-Aged Stakes of the Western Field Trials Association were begun to-day. The weather fine, but cover dry. Birds found in sufficient numbers. The judges are Messrs. A. Merriman, A. A. Whipple, H. H. Briggs. The starters were drawn as follows:

NATALIE (J. Hayward, Jr.), black, white and tan bitch (Gladstone—Donna J.),

against

DICK BERWYN (H. P. Dillon), black, white and tan dog (Dashing Berwyn—Vanity Fair).

KRUPP (Castleman Kennels), liver and white dog (Meteor—Dell),

against

DICK B. (J. I. Case, Jr.), black and white dog (McKinney—Flossy).

BLITZ BURGLAR D. (W. B. Smith), black, white and tan dog (Burglar—Queen Dido),

against

CORNER STONE (J. W. Blythe), liver and white dog (Meteor—Accident).

ROD (Castleman Kennel), liver and white dog (Meteor—Dell),

against

DICK T. (N. B. Nesbitt), black and white dog (Cashier—Flake).

CROW (J. R. Daugherty), black dog (Starr's Broncho—Waddell's Fan),

against

COUNTESS LLEWELLIN (G. H. Laughten), lemon and white bitch (Druid—Princess Draco).

BRIDGEPORT (E. E. Pray), black, white and tan dog (Dashing Monarch—Vannette),

against

PATSY D. (R. C. Van Horn), red dog (Lord Dufferin—Queen Bess).

LUFRA (N. B. Nesbitt), blue belton and tan bitch (Dog Whip—Juno),

against

KING BELTON (J. I. Case, Jr.), blue belton dog (Count Noble—Rosalind).

NELLIE TRUE (A. J. Gleason), white and liver bitch (Robert le Diable—Dixie),

against

DON BURGLAR D. (G. H. Laughten), black, white and tan dog (Burglar—Queen Dido).

SPOT BELTON (J. I. Case, Jr.), blue belton bitch (Dick B.—Belle Belton) a *bye*.

Winners first series: Natalie, Dick B., Cornerstone, Rod, Crow, Bridgeport. SPECIAL.

THE AMERICAN MASTIFF CLUB.

Editor Forest and Stream:

As the positions of the American members of the English Mastiff Club and the recently organized American Mastiff Club have become somewhat a matter of public comment, it may be well for me to state what the facts are and why there should be any opposition on the part of American mastiff men to the newly organized club. The prime and vital one is the well founded and almost universal belief that it was started in the interests of a clique and as a balm to their own wounded feelings, by the disappointed exhibitors at the last New York show. That this belief is well founded is shown by the secrecy with which the affair was managed, no public notice whatever having been given of the intent to form such a club. That it was a scheme of three disappointed exhibitors is shown by such prominent and representative mastiff men as Perry, Haldeman, Winchell, Aston, etc., not being invited to participate in the formation of the club, and if support of this view is needed, it is had in the appointment of these three disgruntled exhibitors as half of the original executive committee, with a gentleman as secretary who is only known to mastiff men as the owner of a little dog, bred and still exhibited by one of "the triumvirate." Messrs. Mead and Dudley are the only men in it well and favorably known to mastiff men at large, but they are swamped by the "packing of the jury." I do not know either Mr. Belknap or Mr. Bowditch and find no general knowledge of them, but all that I can learn of them is to their credit, and I firmly believe that neither of the four would have had a hand in the organization of the club had they known that care had been taken to prevent such representative mastiff men as those I have named, from any participation in its organization. In fact I can answer for Mr. Mead, as he took the trouble to notify me of the proposed meeting. That it may be possible for those left out to now come in (only possible, mind you, two black balls exclude) does not help the matter, for which of us cares to come in at the tail of the hunt after the power has been firmly lodged in the hands of the "you tickle me, I'll tickle you" Council of Three? I have no hesitation in saying that it was the most deliberate insult to the mastiff men of America to form a club and not invite the most prominent mastiff men in the country to join it.

Note how differently gentlemen arrange such affairs: The Collie Club was charged with purposely leaving Mr. Terry without notice of their proposed organization, and although it seems to have been entirely unintentional, they promptly amended their by-laws, increasing the number of the committee, and if my suspicions are correct, they about forced Mr. Terry on to it; apparently, in their estimation, they could not stand even an appearance of trickery.

Now as to the American members of the Old English Mastiff Club. They are fourteen in number, eight of whom have been elected since the formation of the American club. I can speak for six of these, that under no circumstances would they join with the American club, or even show under their judges, as long as the club remains as it is. The only member of the English club who is also one of the "American" is Mr. Mead. It is a very serious blunder to suppose that the decision of the English committee against the erection of an American branch, is a defeat of the purpose of the American members, as they never asked that, and time will speedily show the kind of metal they are made of.

An obscure writer, more distinguished for broad brogue than brains, and whose murder of English rivals his boot licking of the W. K. C., has recently emptied his bucket of hogwash on this subject, but as he has been the only one to attempt a whitewash of the pewter medal fraud, perhaps I am unwise in departing from my practice of taking no notice of what he scribbles, as nobody forms or changes an opinion on his blatant drivel. W. WADE.

HULTON, Pa., Nov. 4.

NEWS FROM HIGH POINT.

LEAVING New York at 4:30 P. M. on Wednesday, I arrived here the next morning. High Point has not changed much within the year, nor has there been much change in the population, although the pickaninnies appear to be slightly on the increase. The weather here for the last two or three months has been hot and dry, with but very little rain, and consequently shooting has been poor. Birds are reported more plenty than for some years, but most of the broods were late hatched, and, as a rule, they are but little more than half grown, they will soon be in good condition, however, as there is an abundance of feed. To-day the welcome rain commenced falling about noon, and although at this writing the indications point to fair weather, enough has fallen to insure good sport among the birds. The ground has become softened, which will prove a great blessing to the dogs, as hitherto it has been impossible for them to do much work without becoming crippled by cutting their feet on the sharp stones which were immovably set in the hard baked surface of the ground.

Yesterday in company with the Messrs. Brower, of New York, and my old shooting companion, Mr. A. E. Smith, of this place, and his Irish setter Birdo, I took a turn among the birds. I had taken every precaution to insure a successful campaign, but some of the boys, anxious to see the inside of the old gun, had actually swabbed it out. This was a damper and I was in a dubious state of mind as to the result. Driving out of town a few miles we struck out across the fields toward a run near which Birdo found a nice bevy and scored a point. There is a peculiarity about his points that is rarely seen. When on single birds or when backing he is rigid and puts on considerable style, but when a bevy is before him you can generally make a close estimate of the number of birds by the more or less animated and expressive wag of his tail. As he was working it for all it was worth on this occasion we were not surprised when we walked in front of him to raise a large bevy. Some of them went in my direction and I gave it to them right and left, and under the excitement claimed the two that dropped, but as I cooled down and realized the enormous handicap imposed by the condition of my gun, I was tortured with the doubt that perhaps stray pellets from the other guns were entitled to the score. This doubt became more aggressive as the day wore on and several birds escaped notwithstanding my well-directed aim. Finally, by repeated firing I got the old gun in condition, and a fair share of a fair bag was scored to its credit. The weather was simply perfect and we had a most enjoyable day.

Upon my arrival here I found Mr. Coster and Buckellew at the Belleview House busily engaged in arranging the details for the trials. Mr. F. R. Hitchcock, the only other member near here, is at Thomasville. Several handlers with their strings are located in the vicinity. Luke W. and John White are at Thomasville, C. Tucker is about eight miles west from here, T. M. Aldrich is at Progress, Alonzo Koll at Greensboro, R. M. Morgan at Linwood, E. H. Haight is near Statesville, and J. N. Lewis and J. C. Vail are near Raleigh. I have seen none of them yet, and, therefore, cannot give the names of the winners before next week. The Members' Stake will probably prove to be the most interesting event of the kind that has yet been seen. The entries already received are: Buckellew, W. A. Coster; Brimstone, H. E. Hamilton; Bang Grace, J. L. Breeze; Brandon, J. O'H. Denny; Gloster, Edward Dexter, and Slocum, J. Simpkins. Messrs. J. O. Donner, D. S. Gregory, F. R. Hitchcock, R. C. Cornell, G. DeF. Grant, J. W. Orth and J. Henrich have signified their intention to enter, and it is probable that several others will also do so. Mr. Coster is confident that there will be at least twenty entries. I hope to be able to give a full list in season for publication next week. The Derby also promises to be very interesting and to have a larger number of starters than has previously been seen. Many of the entries are reported to be going nicely and sure to start, and we may confidently look for a closely contested race. It is yet early to form an opinion as to the number of starters in the All-Aged Stake, but it is safe to say that it will be much greater than that of any previous year. A few heavy frosts and a little more rain will put the fields in capital order and insure a successful meeting. SHADOW.

HIGH POINT, Nov. 6.

COLLIE SWEEPSTAKES.—*Editor Forest and Stream:* I have the pleasure of giving the following notice: "A special cash prize of not less than $50 has been offered in addition to the sweepstakes of 1887, to be open for competition only to puppies whelped after Aug. 1, 1886, provided ten or more entries of this age are made. This prize will be given to the best dog or bitch. Exhibitors must conform to the rules that govern the sweepstakes, and entries are to be made in the same manner." I wish to remind collie owners that entries close Dec. 1, 1886. Information and blanks on application.—GEORGE A. SMITH, Secretary and Treasurer (520 Walnut street, Philadelphia, Pa.).

NATIONAL FIELD TRIALS.

Editor Forest and Stream:

The field trials of the National Field Trials Club, announced for Dec. 6, will be postponed to Dec. 13.

There will be a meeting of the members of the club Tuesday, Dec. 14, at 8 P. M., at Grand Junction, Tenn., for election of officers and the transaction of such other business as may be brought before the club.

I have arranged with the Southern Passenger Committee to return all who pay full fare going to attend the trials at Grand Junction, Tenn., Dec. 13, at one-third fare on the certificate plan. Gentlemen intending to visit these trials and who desire to return at one-third fare, should write to B. M. Stephenson, Secretary of the National Field Trial Club, La Grange, Tenn., for a certificate, which they will present to the ticket agent, when they purchase their ticket to Grand Junction, and request the ticket agent to fill out the necessary blanks. This certificate should be returned and presented to Mr. Stephenson at the trials, who will indorse it good for return ticket.

W. B. SHATTUC, President.

MASTIFFS.

Editor Forest and Stream:

May I ask you to put the inclosed extracts in parallel column. CHAS. H. MASON.

From Forest and Stream Aug. 19, 1886.

I am willing at any time to enter into a lengthy discussion (with any practical man writing over his own signature) of the merits of pointers and setters, or the various non-sporting classes with which I have had lengthy experience, but I cannot waste my time arguing with gentlemen such as * * * who have not bred good dogs or won the highest honors at our shows. CHAS. H. MASON.

From Forest and Stream Nov. 4, 1886.

I have never expressed an opinion of a dog without saying then, or having said at some previous time, that it was based on a photo. W. WADE.

STAFFORD AND WAVERLY.—New York, Nov. 5.—*Editor Forest and Stream:* I have deferred alluding to your report of the Stafford Springs show, expecting to see some comment upon it in your number of Nov. 4. It seems to me that as you always claim to criticise sporting matters fairly, impartially and fearlessly, your aquiescence in the report of the show in your number of Oct. 28, signed "Stafford," violates your creed. The Stafford Kennel Club deserves the severest censure for a badly conducted and ill-benched show. What exhibitors of other breeds have to say at the absence of a catalogue and the almost open air benching of the 100 (?) dogs, comprising the exhibits in all the classes, in a tent ventilated with rents, I do not know; but I for one as an exhibitor of fox-terriers, and at that, of my best two terriers, Safety and Bacchanal, in the pink of condition, protest against your claim to fairness, if you permit the awards, in this class at least, to pass unchallenged, as well as the wretched manner in which the entire show was conducted. Mr. Tallman, not Dr. Walton, judged fox-terriers, and, I understand, was pressed into it against his will and acceded to the importunities of the management with the apology that he knew nothing about fox-terriers. He is essentially a sporting dog admirer and owner, and a reflection upon anything beyond his knowledge about fox-terriers is far from my intention, quite the contrary. There is nothing even close in the competition between Safety and Di nor much more between Raby Tyrant II. and Bacchanal, while Somerset Mike is to a good fox-terrier what a cart horse is to an Arabian, and no one is better aware of it than your kennel reporting staff. I was deceived by the representations of the secretary of the Stafford Kennel Club, as to the intended high standard of this year's show, and consequently made my entries. For being thus victimized, while I confess it was done in a most polite and tempting manner, I have but myself to blame, but it is to be hoped that the American Kennel Club will not in like manner fall a prey to the blandishments of the Stafford Kennel Club's very courteous and plausible secretary and admit it to membership. I asked you in a recent number to do me the justice to correct the statement that Diadem competed at Waverley. Instead of this, you reiterated that she had. She was taken into the ring by Mr. Lacy, and at the instance of some of my friends taken out again before the competition began, as the hair had not grown out on a bare spot on her back sufficiently to allow her to compete. She will, if her present excellent condition continues, I trust, appear at the spring shows, and then she will be most cheerfully submitted to your criticism.—AUGUST BELMONT, JR. [If all the exhibits were in normal condition the awards named were wrong; we agree with our correspondent on that point. It was distinctly stated by our Stafford correspondent that Mr. Tallman judged the sporting classes, among which of course fox-terriers were included, though Mr. Belmont's remarks appear to imply the contrary. As to the Diadem incident at Waverly we can only reiterate the exact statement of fact already made by us, namely, that the bitch Diadem was taken into the ring and was ordered out by the judge. In other words she was brought before the judge in the ring for competition, and the judge, refusing to pass upon her in her condition, directed Mr. Lacy to take her out. If Mr. Belmont wishes any further assurance of this he will get it by consulting either Mr. Lacy or the judge himself.]

SALE OF DOGS.—At Madison Square Garden on Monday last, at the close of the horse sale, a number of deerhounds and fox-terriers were sold. The former were from the kennels of Mr. Edward Kelly, and the terriers came in part from Mr. Kelly's kennel, and in part from that of Mr. August Belmont, Jr. Dog men did not seem to be present in great numbers, and the bidding was slow. The sale opened with Mr. Kelly's deerhounds. Mac, by Paddy, 4 years, winner of five first and seven champion prizes, started at $50, and ran up to $205, at which price Mr. Jas. Mortimer secured him. Perth, by Gillie, 5 yrs., sold for $50. Bras, 5, by Bruce, brought $50, and Mercia, 5, by Warwick, went for $10. Four promising bitch puppies sold for $15 each. The fox-terriers started with Mr. Kelly's champion Scarsdale, 4 years, by Joker. Mr. John Dunne got him for $120; Clover Belle, a prize bitch, brought $75, and Clover Blossom, $50. Eight others belonging to Mr. Kelly were sold at lower prices. Mr. Belmont's consignment consisted of six fox-terriers. Blemton Saffron, 1883, by Belgrave Primrose, brought $40; Blemton Rosebud, 1883, by Warren Joe, $32; Blemton Marigold, 1884, by Terror, $30; Blemton Tansy, 1885, $15; Dancer, March, 1886, by Regent Vox, $25, and Frisky March, 1886, by Regent Vox, $22.

WINSTED SHOW.—The premium lists and entry blanks are now ready and may be had on application to the superintendent, F. D. Hallett, Winsted, Conn. American Kennel Club rules will govern. Fifty-five classes. Premiums for most breeds; dog class, $5 and $3; bitch class, $5 and $3, and puppy class, $3 and $2. Forty specials, ranging from $10 cash to a dozen cans of dog food.

DOG LOST.—My W. A. Coster's Nellie Druid strayed away last Saturday. Is small, black and white, and somewhat stiff in hindquarters. Return to Mr. Coster's residence on Linden Boulevard, fourth house from Flatbush avenue, Flatbush, L. I., or to me.—HERM. F. SCHELLHASS (6 Brevoort Place, Brooklyn, N. Y.).

IRISH SETTER TRIALS.—*Editor Forest and Stream.* Please state that no handler will be permitted to run any dog in the Irish Setter Club field trials who has trained an entry on the grounds on which the trials are to be held. Everything looks very favorable for the meet. The entries will close Nov. 15.—MAX WENZEL (Fisher's Island, N. Y.)

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

SAN FRANCISCO, Oct. 24.—The regular monthly shoot of the California Schuetzen Club took place this afternoon at Harbor View Park. The weather was all that could be desired, and some capital scoring was made. Ring targets were used, each member being allowed 20 shots at the 200yds. range, the rifleman who succeeded in striking nearest the center of the ring being adjudged the winner. The following are the points made: A. Zeiker, dead center; F. O. Young, 44; Captain Kline, 64½; J. Stanton, 72½; O. Burmeister, 76; A. Pollak, 78; A. Renbold, 89½; F. Bockeman, 91½; W. Ehrenpfort, 101½; A. J. Field, 152½. The dead-center shot made by A. Zeiker was considered particularly good, it having been made in California but on one previous occasion.

There was a small attendance at the Shell Mound Rifle Range to-day, many of the usual attendants being lured away by the superior sport that is offered in the opening of the game season. Several members of the National Club were present and made very good scores at two distances, the best being that of P. M. Diess, who recorded 88. The City Guard Rifle Club, composed o members of the B Company, 1st Infantry, had its regular monthly medal shoot. The result and the scores of the winners of the various classes, are as follows:

First Class Medal.

A S Ramm, 200yds. 5 4 5 4 4 5 4 4 4 4—43

Second Class Medal.

A Shula, 200yds. 4 4 4 4 5 5 5 4 4 5—44

Third Class Medal.

F S Taylor, 200yds. 3 3 4 3 4 5 3 4 4 3—36

Capt. F. A. Kuhls and Gen. Lew Townsend had several matches for tonic cups before the 200yds. target. After his first defeat, Gen. Townsend repeatedly demanded satisfaction, but darkness intervened before he was able to defeat the splendid scores made by the Captain.

NEW ORLEANS, Oct. 31.—The following score was made during the week at Clinton's gallery, at 30yds., out of a possible 168 points:

Wm Weiss	166	F Dymond	162
E B Colton	164	James White	162
A B Rice	164	Wm Martin	161
Chas Ruch	163	L C C Kopel	159
E W Marborough	163	E R Star	158

The following is the result of the shooting match between the Elcke and Hunter Rifle Clubs, which took place at the latter's range on Clouet street, between Craps and Love streets, distance 50yds., bullseye 2in., possible 325 points:

Elcke Team.		Hunter Team.	
M Hunter	277	T Ahrens	275
Geo Boydell	263	C Schindler	272
Thos Brockett	250	C Ahrens	270
John Kenny	264	Jos Smith	275
Pat Powers	260	L Rickert	224
H C Claiborne	277	Wm Skinner	242
	1590		1558

J. T. Seaward and F. Baker, scorers; H. L. Kenny, judge.

Elcke Team No. 2 and the Atlantic Team had a shoot on Saturday evening at a 2in. bullseye, at 50yds., 325 possible points, with the following result:

Elcke Team No. 2.		Atlantic Team.	
Capt H L Kenny	262	Capt H Jones	274
L Laurence	235	J Scott	250
H Eicke	245	J Roberts	232
J T Seaward	255	E Morgan	220
J Brewer	253	M Shea	249
J Swan	219	J Sommers	223
	1469		1466

Official scorers, L. King and A. Norieri; judge, H. Lambert.

CREEDMOOR, Nov. 2.—To-day was all that could be desired, and from as early as 7 o'clock in the morning until dark in the evening the crack of the rifle was heard. Every regiment and company of the First and Second brigades were largely represented. E. F. Young, of the 7th regiment, who had won the gold champion marksman's badge the greatest number of times during the series of matches which closed to-day, was presented with the handsome medal amid the greatest enthusiasm.

The following are the winners of the eight prizes, in which over 1,400 entries were made:

	200yds.	500yds.	Total.
T J Dolan, 12th regt	24	24	48
E V Howard, 23d regt	24	23	47
W A Stokes, 23d regt	21	25	46
E F Young, 7th regt	21	25	46
F C McLewee, State staff	21	25	46
J F Klein, 12th Sep. Co	22	24	46
F Stuart, 69th regt	23	23	46
W H Palmer, I. R. practice	20	25	45

TOPEKA, Oct. 23.—The Topeka Rifle Club shot a friendly telegraph match with the Carson City, Nevada, Rifle Club to-day. Conditions: 3 men, 10 shots each, 200yds., off-hand, standard American target. The following is the score of the home team:

Rob Thompson	4	8	6	10	9	8	8	9	6	9—77
J L Paine	9	9	6	7	7	7	5	5	9	9—73
F H Martin	6	10	7	6	7	7	7	7	6	6—72
R H James	6	10	8	8	9	5	8	10	5	8—71
C C Trimmer	6	7	10	8	6	6	6	8	9	5—70
G E Harrison	6	8	4	9	7	4	9	7	10	5—69
Reed McCarter	8	8	6	7	4	6	5	7	6	8—66
S W Edwards	7	5	7	8	9	4	4	8	8	3—63—561

CLEVELAND, Nov. 1.—The semi-monthly badge shoot of the Cleveland Police Rifle Team was held this afternoon. Patrolman Blood won the badge, making 47 out of a possible 50 at 300yds. The following is the score:

Varner	4445555545—46	Blood	5455553541—47
Gates	4454554455—45	Eustace	5455454444—44
McCready	4434334434—36		

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW YORK, Nov. 6.—Regular monthly shoot of the Washington Heights Gun Club for the club badge, a beautiful trophy, at the club grounds, at One Hundred and Sixty-eighth street and Twelfth avenue. The attendance was poor and the shooting ditto. Mr. Harrison won for the third consecutive time and it is his property. Fifteen clays and bats:

Harrison	110110101111001—9	E H Fox	100001110010111—8
Snooks	100110100111100—8	Davidson	100110101111100—9
Glaser	001111110001100—8	Parsons	100000000000000—1

Tie, miss and go out at 3 birds: Harrison 3, Davidson 0. Sweepstakes, 3 birds each: Glazer 2, Fox 1, Snooks 2, Davidson 3.—E. H. F.

BOSTON, Nov. 3.—A good number of shotgun men visited the range at Walnut Hill Range to-day and shot in the "diamond match" and other matches. The weather conditions were of the best, and good scores were made. Following is a list of the matches and prize winners. Final winners of diamonds—Stanton 1, Swift 2, Snow 3, Nichols 4, Sanborn 5. The score: Six clay-pigeons—Wardwell first, Nichols second. Six clay-pigeons—Snow first, Charles second, Harris third. Six clay-pigeons—Nichols and Wardwell first, Charles second, Harris third. Six blackbirds—Wardwell and Swift first, Harris and Sanborn second, Stanton third. Three pairs quail—Wilson first, Stanton and Nichols second, Wardwell third. Six clay-pigeons—Wardwell and Wilson first, Stanton and Lawson second. Nichols and Swift third. Six straightaway clay pigeons—Stanton first, Sanborn and Wilson second, Brett and Nichols third. Ten clay-pigeons—Stanton and Swift first, Snow and Nichols second, Wardwell third. Badge match—Seven clay-pigeons—Wardwell first, Sanborn second, Lawson third. Badge match—Three pairs blackbirds—Wilson first, Lawson second, Nichols third. Three pairs clay-pigeons—Stanton and Wilson first, Nichols second, Snow third. Walk-up—Six clay-pigeons—Swift and Wardwell first, Sanborn second, Lawson third. Seven blackbirds—Stanton first, Wilson second, Swift third. Five clay-pigeons—Stanton first, Wilson and Snow second.

Diamond Match.

*Stanton	1111111 11 10 11—12	*Lawson	0101101 10 11 10— 8
*Wardwell	1111111 10 11 10—11	Snow	1001001 10 11 00— 6
*Swift	1111111 10 10 10—10	Nichols	0001101 11 10 00— 6

Visitors' Match.

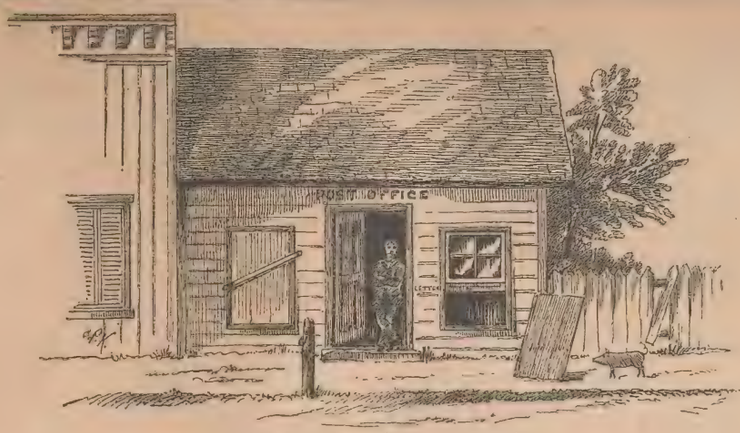
*Sanborn	1011011 11 11 10—10	Wilson	1110001 10 11 11— 9

*Prize winners.

BOSTON GUN CLUB.—There will be a shooting tournament on the grounds of the club, at Wellington, Mass., next Thursday, Nov. 18. The principal event will be shooting for the Climax diamond badge. Another tournament will be held on Dec. 8, the principal event during the day being the shooting for an elegant gold badge presented by the club.—D. KIRKWOOD, Boston, Secretary and Treasurer.

"The dogs of war" have been let loose once more. Our usually quiet village was thrown into a fever heat on Tuesday evening last, by the appearance of two noted nimrods from New York, armed and equipped with all the modern conveniences for slaying bears and catamounts. They proved to be Dr. Frank Knapp, of Hudson street, and Colonel Colby of the N. Y. Pension Bureau. Wednesday they made a raid on the game at Mongaup Valley, under the guidance of Mr. Howard Tillotson. One of their most exciting episodes consisted in the chasing for nearly two hours after what they supposed was an immense "jack rabbit." He led them through tangled thickets and dense undergrowth, through devious ways and obscure paths, but the Doctor finally brought the game low by a well-directed shot. A shout of exultation brought the others to his side, when it was discovered that a neighbor's large white cat had been slain. The Doctor claims that as a shot he is perfection and will hereafter be known as "Acme."—*Port Jervis (N. Y.) Gazette, Oct. 21.*

Yachting.



CRUISE OF THE COOT.

XXVIII.

PLYMOUTH was the scene of some stirring events during the war. The ironclad ram Albemarle was here prepared to force the blockade of the Sound. While moored at the docks, she was attacked by the daring Lieutenant Cushing, of the U. S. Navy, in an open launch and blown up by a torpedo run out on a pole over the bows of the launch. Cushing's crew were nearly all killed or drowned in the adventure. Cushing himself escaped by swimming and hiding in the marshes until nearly exhausted. At present Plymouth is a typical Southern country town of the better sort and is not without signs of material prosperity. The business street runs along the river bank and is lined with small frame buildings of the barn order of architecture, the general aspect being not unlike the main thoroughfare of a Western mining camp. The buildings are isolated "because about once a year the town burns down" and no merchant cares to erect a costly structure. Ruins of burnt buildings were plentiful and seemed to justify the precautions taken against serious loss. There is no fire department, and if there were it could do next to nothing to prevent a conflagration. A number of rather dilapidated piers jut into the river and serve as landings to numerous steamers plying up the Roanoke. When cotton comes in the town grows lively. Bales are stacked in great piles on the wharves and in storehouses. The country round about makes its annual purchases and settlements, which causes money to circulate. There is always considerable stir in the town, for its interests are many-sided. The surrounding land is fertile and produces liberal crops in cotton, corn and market produce. Agricultural machinery is in general use on the large farms. Even traction engines find employment on the high-roads towing crop-laden wagons into the city.

While cruising through the streets a familiar whir of shafting in a long low building attracted my attention and I was surprised to discover a regular machine shop with lathes, planers, boring tools and a full outfit for working in metal. Before the doors were cotton-gins, boilers, engines, presses and castings of all sorts. An enterprising Southerner with a good deal of the thrifty Yankee about him had started the concern not long ago with his savings earned as a salesman of machinery for Northern houses. He had strewn cotton gins about the neighboring counties in such profusion that a repair shop became a necessity. So he gave up "the road" and now conducts the first machine shop south of Norfolk. Not satisfied with this he has erected a large mill for working up the wealth of native woods, and in this has met with great success. Shingles are turned out in vast quantities and shipped by steamer or schooner to Northern centers. Balustrades turned out of ash, oak and walnut are sent by the thousands to builders in Washington. Tools were being added for the manufacture of furniture, which, with some capital, can be carried on with great profit, the margin being as high as 40 per cent. No locality could be more favorably situated, for the material is right at the door in inexhaustible quantity, and shipment by water up and down the whole coast. A number of lumber and shingle mills are now in operation and Plymouth has become a headquarters for these industries.

The fisheries of Roanoke River are another source of wealth to the place, shad and herring visiting the fresh waters in great numbers during February, March and April. Last spring saw the largest run of fish in twenty years, and the people were correspondingly elated. The darkies and poor whites had a surfeit of fish and money in their pockets. Two men would paddle out in a canoe paying out their drift net astern across the river. The net was allowed to drift down with the current half a mile and then hauled in. The catch would average thirty to forty per day, worth thirty-five cents a pair in Plymouth. I heard one old woman sing out to her young hopeful, "Johnny, we want some fish for dinner." "Alright, m'am," said Johnny, as he jumped into his dugout with a chum and threw out a small drift net over the stern. In twenty minutes he returned with shad enough for a whole week's consumption, a sturgeon and a lot of herring for which he had no use.

POST OFFICE AT COLUMBIA.

squirrels in the woods," said a genuine representative of his class, as he slowed down alongside the Coot and spontaneously responded to my plan to interview him concerning the game of the country, "They are more plentiful than ever this year. It is seldom I go home without fresh meat, and right good eating they be." There are plenty of deer in Bertie county, he went on, and hunting the minx, otter and muskrat for their furs is still a paying industry. Quail are not common, but ducks can be shot in great numbers in season. The swampy forests are a stronghold for game, and owing to the difficulties of pursuit constitute an excellent preserve. I saw a number of big muskrats during my short stay in the river. The swam fearlessly across the Coot's bow and it was lucky for them that the highly refined morality of the cockpit was a bar to their wanton destruction.

Late in the afternoon I made for the post office, and of course met the whole town, from the long-haired, good-natured yokels who bashfully inquired for their letters, to the usual bevy of giggling young misses, who in the South, as elsewhere, can do a lot of talking without saying anything. The poor postmaster was so flustered by their onslaught that I gave him time to cool down before presenting an order for funds. Some really elegant turnouts drew up before the door, and the occupants proved to be ladies quite stylishly dressed, from which the agricultural wealth of the country can be inferred. I bought some coffee and tried to have it ground in the store. The thirty-dollars-a-month clerk was quite taken aback at such an idea, and insisted on selling me a fancy brass-bound grinder. I compromised by offering him a nickel to grind the coffee in the self same fancy machine. It took him twenty minutes, and when he got through the grinder was only fit for a second-hand shop. As it slowly dawned upon him that a nickel was poor consolation, I sailed through the door, leaving him sadly collapsed in return for the haughty thirty-dollars-a-month air in which he attended to my wants. After sunset a light air sprang up, and I cleared out for the mouth of the Roanoke, where anchor was dropped for the night.

The wind next day fortunately came out from the west, enabling me to steer east for the Scuppernong River and Columbia as the next port. In a southeaster this would have been impossible against the high sea such a wind raises. Passed out around the lighthouse and gave the stumps on the point a berth, then laid course parallel to the south shore and leisurely drove along before a moderate wind. When out an hour a smart-looking schooner with a Chesapeake cut to her rig bore away as if to speak me. Here crew were swinging hats to draw attention. I jibed over and hauled up, passing under the schooner's lee. The skipper and his men hailed to know if they had not seen the Coot some months before in Great Wicomico River. It was the same schooner whose captain warned me against putting to sea with the sky looking so wild, and whose prophesied storm drove me back into Mill Creek on the voyage down. The schooner was now bound up to Plymouth in search of a cargo of shingles, the oyster trade in the Chesapeake having ceased with the expiration of March. I fell in again with this schooner in Norfolk during the return voyage. The captain's son was so smitten with the Coot that an offer was made to take her off my hands.

Nothing further occurred to break the even tenor of the day. Slowly the yacht closed up on the Laurel Point Lighthouse and hauled her wind for a harbor in the creek round the point, as it was too late to beat up the Scuppernong against the light breeze drawing right out the river. The creek is entered by a narrow channel between two overlapping sandbars and is supposed to be marked by beacons, but no signs of these could be found, and I picked my way in by frequent sounding with a pole and taking bearings from the chart.

There was not a breath stirring next morning and the sun shone out warm. So I turned to for a grand house cleaning fore and aft. Everything movable was roused out from below, scrubbed, dried in the sun and returned to its place. The floor was ripped up and the bilges scraped clean. Finally I wound up by taking a swim myself, the first one of the season. The water was still very cold. A few days later the atmosphere grew chilly and forbidding again until well along in June, the spring this year being very much the same as in the latitude of New York, owing to the unusual prevalence of easterly weather. While everything was in confusion on board the Coot a white whale boat sailed alongside and the keeper from the Laurel Point light stepped aboard, followed by some of his friends. They were very much interested in the domestic arrangements of the Coot, and extended a pressing invitation to remain over with them a few days at their snug little farm near by. In the afternoon a light breeze came out the Scuppernong. Sail was got on the Coot and a beat up to Columbia undertaken. The wind increased enough to bring the yacht down to her rail, and the water remained smooth, owing to the turns in the river. All government marks in the entrance were gone. A long, very narrow, gutter-like channel leads in between two sand flats. A boat drawing three feet must keep this channel. I had some trouble locating it, but after a while discovered it with the sounding pole and then easily made out two big stakes driven by the steam packets for their guidance. With these stakes in line the lead is fair. Once in the river the bottom is pretty level at 10ft. from shore to shore. The elbows in the river reveal picturesque groupings of trees and fresh scenery at every turn. As I worked the Coot up board after board with no tide to interfere, the afternoon's sail was declared to be the finest bit of tooling the cruise had so far afforded. Two local schooners were picked up by the Coot and so easily winded that they were quickly shut out by the bends. Farms and fisheries were passed. The natives collected on their little wharves and eagerly followed the movements of the Coot. I steered her almost within reach of these critics and then swung the boat round in stays in a way that made them marvel, for the Coot is particularly quick in stays even for a catboat. She was just in her element and it was fun showing her off. The sun had sunk behind the woods fringing the banks, and the mists of the evening hung over the water when the last elbow was rounded and the little town Columbia spied out ahead. The wind died away, and under cover of darkness the Coot was skulled up abreast of the houses and her anchor let go. A bridge spans the river and there is a "draw" at the town end. As steamers pass through this draw, the opposite shore should be chosen for anchorage, but not too close to the bridge for "there be stumps there, Mister."

After things had been snugged I was leaning over the boom drawing whiffs from the pipe while contemplating the little town in the warm evening glow. Some youngsters paddled off and circled round the Coot, gradually drawing nearer.

"Be you the boat what's fetched the lawyers, Mister?" one of them finally ventured after trying in vain to "size up" the Coot.

"What lawyers?"

"Why, the lawyers that's tendin' cote."

"Oh, it's court week here too, is it? No, I did not fetch any lawyers."

"Be you here for fish?"

"No."

"Do you take pictures?"

"No, just knocking round for fun."

"Where you from, Mister?"

"New York."

SCUPPERNONG RIVER.

From the business quarter the hills rise in gentle undulation, the streets being laid out square. On the crest of these hills are handsome avenues, well shaded, with hard roads and well-kept sidewalks. Neat little cottage residences are scattered at intervals along these drives, each surrounded by a pretty garden of lawns and flower beds and cooly nestled among overhanging bows of shade trees. Many of these dwellings are recent additions, some have architectural pretensions, and with their ornamental iron fences indicate a well-to-do community.

On the principal avenue, in a space of greensward, the county court house has been erected. This is rather an ungainly wooden box of two stories, with a belfry on top, the public character of which is announced by the ragged paths leading up to a dirty door, the soiled windows and the regulation crew of slouchy individuals in top boots and broad-brimmed felt hats, who lean back up to the building, intent upon keeping it from falling over, while they squirt tobacco juice at some imaginary mark ahead. It happens to be "cote week" and court in the South is synonymous with a general gathering of the country clans for a grand palaver and comparison of notes, said notes being mainly family gossip of a very racy sort and the state of the "craps." Some exciting case is going on within, for the building is packed, the surplus overflowing by sitting in the windows. All have their hats off and are intently following the points made by the learned opposing rural counsel as to whether Jones had "orter" keep his chickens out of Brown's field or whether Brown was guilty of a heinous crime in going gunning after the interloping fowl.

The weather had suddenly turned warm, the sun's rays being extremely powerful at midday and I found the Coot's cockpit the most comfortable and coolest in which to loaf for a day until my expected mail from New York should arrive. The river afforded plenty of life and pastime, and the natives in their canoes good material for an "interview." Farmers from up river floated leisurely down stream in their dugouts, laden with the usual products of their calling. These were sold or bartered in town. Canoes which descended in the morning could be observed paddling their way home in the deepening shades of the twilight hours. Paterfamilias would wield the paddle in the stern and before him would be piled the inevitable bag of meal, sundry groceries and may be a few yards of calico for the old woman. Occasionally a young hopeful, clad airily in homespun shirt and baggy breeches, crouched up in the bow, would stare wonderingly at the Coot and desperately attempt to spell out the big letters on her counter. A shotgun of antiquated pattern was always close at hand, the muzzle protruding over the boat's side, "For the

"Never heard of the place."

Columbia lies off the regular routes of traffic, and with Tyrrel county, of which it is the seat, forms a little world to itself, which has no concern for affairs beyond its own borders. The whole peninsula between Albemarle and Pamlico Sounds is isolated from the rest of the State, having no railroad connection, but depending upon occasional steam propellers and the universal canoe for means of communication. This makes the region and its inhabitants quaint and interesting legacies from Colonial days, retaining much of the primitive simplicity, hospitality and frugality, and not a little of the social caste of the earlier settlers. A peculiar trait of the population is their respect for the gentler sex and reverence of old age, of which I had several illustrations during my stay.

The town is remarkably neat and clean with a thrifty air and a fair amount of activity. The herring fishery was at its height, and so was the noise and boisterous hilarity of the negroes who carried on the catch and the women who cleaned and packed away the fish. All day long a crew of eight stalwart darkies were engaged in pulling a clumsy scow in a semi-circle in front of the "battery." The net was faked or bighted down on a platform across the stern upon which stood the brawny African in command. He would order "Pull right, pull left," as the scow needed steering, and at the same time pay the net out over the stern. By means of crabs the net was then drawn ashore and the catch split out upon the battery amid the cheers of the whole crew. The men are paid $18 a month and "found." The business lasts about three months and a family of four may clear perhaps $200, a snug sum in a country where the cost of living and rent are almost nominal. Then follows work upon the farm, the harvest and cotton picking. Each dwelling has also its own patch of corn and garden sass, chickens, ducks and hogs, so that a thrifty person can live in ease, comfort and independence far beyond the lot of the laborer in great cities. Furthermore, there is no grog to be had in the county, a blessing which is apparent on every side. There is no drug store in town, but quinine is sold at all places, malarial fever of a mild type being not uncommon at certain seasons of the year. Several insatiable sawmills have cleared the timber near by and are now fed with logs brought from the swamps along the edge of the Sound. The mail arrives three times a week via Plymouth and is distributed from a little office with a new ten-dollar counter, which is the pride and admiration of the inhabitants. The "rascals had been turned out" just before my arrival, and a newly-fledged postmaster, of highly moral democratic persuasion, had entered upon his duties. He was a little slow in spelling out ad-

dresses, but considerately gave me some of the latest papers in his possession, consisting of goody-goody religious weeklies several weeks old and not suited to my taste. "When you see the shutter down," he said, "the office is open."

Dressed up in long togs and canvas yacht shoes I strode through the streets the first day on a hunt for eggs and potatoes. A lank, old typical Southerner in top boots and slouch hat sailed up alongside, and tapping me on the shoulder remarked, "Reminds me of old war times, those shoes, when we were furnished with moccasins and leather to tie 'em up from Richmond." All the forenoon dusty buggies and mud-splashed one-horse shays had been rolling across the bridge into town, the occupants rigged out in their best to attend court and hold the grand palaver customary upon the occasion. An itinerant artist had erected a tent wherein stood his antiquated apparatus for daguerreotyping such flies as he could inveigle into his meshes. He pounced upon his game like a Chatham street dealer in old clothes, and found his victims in sundry amatory bucolic couples. The court house faced a gravelly square, and opposite on each side of the street stood two rival hotels catering to the crowds of fresh arrivals. These public houses were owned by two brothers, one of whom was done out of his custom by the heartless machinations of the sun. Both caravanseries were surrounded by piazzas. In the morning the crowd collected in the shade of the house on the east side and pre-empted all the chairs and benches to be had. By half-past 11 the sun got so far on his journey as to send his relentless rays directly under the eaves of the protecting roof, driving the occupants across the way in search of the new retreat now offered by the shade on the west side of the street. When noon came not a soul was to be seen on the east side, while seventy hungry individuals were massed on the piazza of the lucky Boniface who had built on the west side. Two rival bells in the hands of zealous waiters clanged forth a brassy summons to the midday feast. One bell rang in vain, while seventy stalwart feeders filed into the door of the opposite establishment and were received by mine host with a pleasant smile and much gleeful rubbing of hands. He had heard of my arrival and singled me out, conducting me to a seat at the head of the table, a post of honor, which the darky waiters quickly recognized by piling the best dishes on the table before me, a sort of confusion of riches. The natives went at it with a will and got through with their task in a jiffy. Then all hands adjourned to the shady piazza once more and leaned their chairs back against the clapboards, complacently watching a solitary female who could be seen through the window of the opposite establishment dispatching her meal, with four waiters fanning her for want of other guests to attend.

Among the crowd there soon appeared a central star of attraction. A well preserved old gentleman, straight as an arrow, broad across the shoulders, with smallest of feet encased in silk stockings, low-cut shoes, sauntered up the steps of the hotel and created a little sensation. In dignified fashion he gracefully bowed to the multitude and received in turn their congratulations. The best arm chair was proffered and the old gentleman seated himself, glancing occasionally at his little feet, of which he seemed quite proud. His refined manners, black broadcloth suit, silk tile and patent leather shoes proclaimed him the great man of the county. I thought he might be the judge presiding at court. A moment later the conversation opened: "When I was in Washington." That settled it. Soon after the word "deestrict" was bandied back and forth and it became evident that this fine old Southern gentleman was none other than "the Member" from the Congressional District. Hence the respect with which he was treated and the deference with which his audience received his really intelligent opinions on current affairs: "When I was in Washington" has a magical effect in a country constituency. The contrast between the choice of this community of small farmers and the questionable characters sent to Congress by great and alleged enlightened cities was certainly very much in favor of hayseed electors.

The next six days it blew a heavy gale from N.E., accompanied by torrents of rain. The Coot remained off the town during this time and dragged her anchors till she came near splitting her precious self on some of the stumps. C. P. K.

THE THETIS-STRANGER CONTROVERSY.

WITH the following letters we close this subject, as it is evident that no good can result from a continuation of the discussion. Mr. Kunhardt has declined to pursue the subject any further, though the right to reply belongs to him, and the matter must end here:

Editor Forest and Stream:

You have already given much space to the Thetis-Stranger races from Newport to Marblehead, but I hope you will find a place still for Captain Snow's own account of it—much more detailed and accurate than any yet published—because the numbers of the FOREST AND STREAM are preserved for a permanent record of yachting matters, and this race, as bearing on the only real issue now in dispute in the cutter-Puritan type controversy, has an importance greater than all other races of the last two seasons put together. Mr. Kunhardt, in the FOREST AND STREAM of Oct. 14, writes so as to convey the impression that his views have been widely different from what he has really put on record. He there aims to make it appear he has never claimed superiority for the cutter as a type. That his opinion has always been that in trials of speed type does not enter at all, but only the merits in design and construction of the several boats; that a more finely modeled sloop will beat a less finely modeled cutter and vice versa. In other words, that his view has been the natural and reasonable one, that, of whatever style, all yachts when pitted against each other, must be judged by their individual merits, just as two sloops would be when pitted against each other. But he has claimed this and much more, and the "much more" happens to be the real essence of the controversy.

His real view has been often expressed as follows: In normal conditions of yachting weather there is no superiority of type, the better modeled boat will win. But in high winds and heavy head seas a cutter, simply because she is cutter, without special individual merit, will beat the best sloop which can be produced, and beat her so badly as to make a show of her. Fortunately he has summed up his opinion in the "Whose Waterloo?" articles in a few words easily quoted. In the last of those articles, after giving his opinion as to future cup races, in which the Puritan type should contest, viz., that in normal conditions the better modeled boat would win without regard to type, he added, "If Galatea catches us in a cringle blow and chalk-pit sea, then unless Galatea is below the rest of her family the rotter will make sport of any sloop we can ever produce." * * * "Puritan would fail to score in reefing breezes" (in British waters). And this has been, no matter how it is now disclaimed, the theory of about all cutter men. Mr. John Harvey, over his own signature in the Boston *Herald*, before the 1886 Cup races, said that while only a mediocre cutter, Galatea, "like all vessels of her type, would beat Mayflower [and her type] in a howling breeze to windward and in a rough sea."

The importance of the Thetis-Stranger race is that it has "teetotally" knocked this dogmatic, out-of-hand theory into a cocked hat. Sachem has kicked the hat into the deep sea. The way is now cleared for a reasonable discussion of the capabilities of any vessel of any type, in any weather, and a free field is open to the development of all, without a pseudo-scientific theory barring the way to all but one.

Captain Snow's letter was written while Thetis was at Marblehead, in response to questions from me as to the force and direction of the wind, and performance of the yachts in the beat up Cape Cod, I stating that his letter might be sent to the FOREST AND STREAM. I quote all of Captain Snow's letter bearing on the race. D. W. BROWN.

"NEW YORK, Oct. 30, 1886.—We left Newport precisely at 10 o'clock. It was blowing a good stiff breeze from N.W. or thereabouts. We started with our three lower sails set, and after rounding Fort Adams we set our gafftopsail, which was followed by Stranger. After jibing around Brenton's Reef buoy we set our jibtopsail; Stranger did the same. We then had a little the better position, the Stranger about 200yds. off our lee quarter, but a little abaft our beam. We gained a little; when off Wood End were a half mile or more ahead. We then took the passage through Quick's Hole and had to jibe twice. Stranger went around Sow and Pigs, and we came in abreast in the Sound. When off Tarpaulin Cove our topmast backstay parted and carried away topmast. Then we felt the race was lost, so we took the north channel and he the south over the Shoals, he getting to the Handkerchief Light about 30min. ahead of us. Then he had to take in his light sails on account of wind. From there to Pollock Rip buoy we shortened his lead to 17min. So when we hauled up around the buoy, he was 17min. ahead of us—and a very bad sea and more wind than either of us needed for three sails. In 10min. were up abreast of him, he apparently bearing up all the time and not making much headway, while we were going like a racehorse. About this time our throat halliard parted, and again we were crippled. Soon after this he tacked inshore and housed his topmast and two-reefed his sail. We rove off our throat halliard and two-reefed the mainsail, which took us about one-half hour, and furled our forestaysail. We tacked inshore to make it smoother, as we could see him standing up the shore, and he crossed our bow about one-half mile ahead of us. When abreast Chatham Bar we saw what we called Stranger, a little to the leeward of us, with jib down, which afterward proved to be correct, as he said he changed his big jib for a smaller one. This was the last we saw of him. After 12 o'clock at night the wind moderated a very little and we set our forestaysail. We then were off the Highlands of Cape Cod, with a very bad sea, for the tide was running to windward. I should have said that the wind was about N.N.W. As we drew up the cape it gradually hauled to the N.W., making it a dead beat. After weathering Peaked Hill bar we stood well over to the Carnet, and tacked to stand to the north. Shortly after tacking the wind hauled a little more to the west and let us up on our course for Marblehead, arriving there at 9:40:55 A. M.—remarkably good time, considering seventy miles dead to windward, beating Stranger 4h. 8m. By what I hear from those on board of the Stranger, she was completely drowned out. We set the watch at the usual time, and had no trouble keeping one man forward on the lookout all night. In the morning Stranger was nowhere in sight and we could not tell who was ahead, but we had a very strong impression we were. The wind slanted to the westward, so that the Stranger fetched right over from the cape, making a shorter distance for him to go than we had. If the wind had not hauled I think we would have beaten him five hours, for he had the advantage of the wind's hauling. E. A. SNOW."

Editor Forest and Stream:

I do not know who "Sternpost" is, but I see by his letter in your last issue that my letter to you over the signature of "Sloop Crank" is capable of a construction which I had not intended. In writing as "Sloop Crank" I was only engaged in the harmless and hopeless undertaking of trying to clear one of Mr. Kunhardt's kinky yarns. The Stranger is, I am perfectly willing to admit, a faster light-weather boat than the Thetis. I do not think I have claimed that any of the races except the Newport one were fluky, and in that I probably had my share of the flukes with the rest. I have no wish to belittle light weather boats, the fact that I dislike them is nothing against them, so far as I know. I have no intention of increasing the sail area of Thetis, but what she has should be further aft.

In regard to the N. Y. Y. C. regatta, I gave up my right to the second class sloop prize to help the Regatta Committee out of a scrape. Had I known that Mr. Rogers wished the first class prize, to which he is entitled, nothing would have induced me to give up the second class prize. I think the Stranger is probably the fastest light-weather boat in America of her size; she certainly went through the Bedouin's lee very prettily in the Newport race while the boats were together after rounding the bell buoy.

BOSTON, Nov. 7, 1886. HENRY BRYANT.

Editor Forest and Stream:

In reply to Mr. Kunhardt's answer to my note, it may surprise the reader, who remembers his stigmatism of cowardice in using an alias, to know that I authorized the FOREST AND STREAM to give him my name. Again, the custom of using an alias in the FOREST AND STREAM is almost universal with those not desirous of notoriety.

Mr. K. makes it appear that I called Cinderella, Daphne, Shadow and some others "plugs." I did not do so in any case, and referred to Shadow and Cinderella as "cracks."

He says I assumed he "omitted Ulidia in the E. Y. C. race from dishonest motives." I assumed nothing, but stated the fact that he printed her record and omitted that defeat.

He now says, "I omitted Ulidia for the same reason that I excused the alleged sloop Thetis." But the article in question reads, "June 29. E. Y. C.—Bedouin beat Thetis," and twice reads, "June 29. Y. C.—Stranger beat Thetis." He omits the cutter's defeat from record and simply excuses that of the sloop, his excuse still showing her defeat, while his omission of the cutter's conceals hers.

Evidently Mr. K.'s memory does not run back as far as Oct. 14, or else he did not write the article appearing over his name.

My point was a simple one, viz., that he had published so-called records of three or four cutters, omitting some of the races where they were beaten. I mentioned E. Y. C. race in Ulidia's record and now add that he omitted Goelet Cup race from Stranger's record and N. R. Y. C. fall race from Ulidia's, they being beaten in both.

The word "slashing," as applied to "sea," may be foolish, in fact I think it is, but I simply quoted it, as I did "plug" from his article of Oct. 14; he will find it there if he looks.

BOSTON, Nov. 5. FAIR PLAY.

[Fair Play is correct in stating that he authorized us to disclose his name to Mr. Kunhardt, but he did not authorize us to append it to his letter, the statements in which were made over a *nom de plume*, and were consequently anonymous as far as the public, for whom the letter was written, were concerned. We may explain that Mr. Kunhardt's article was in type and had been revised by him prior to the New Rochelle Y. C. race, which consequently was not included. The expression alluded to reads "a slashing breeze and sea."]

Editor Forest and Stream:

The statement of sloops being frightened out in the Shona class in the E. Y. C. race merely shows ignorance of the facts, for any one who knows Dr. Bryant, owner of Shadow, knows full well that if he were willing to tackle Madge—45ft. in length—in half a gale of wind, off Point Judith, and beat her on a stretch to windward against a heavy sea—till the wind suddenly shifted—knows that he wouldn't scare much at a 36ft. boat, and a cutter at that, in a good breeze and smooth water. Shona only beat Shadow after the latter split tacks with her, and why should Shadow not split tacks? She had beaten her in thirty minutes from start and badly, and furthermore, Shona was not in Shadow's class. Shona stood off shore took perhaps a trifle better breeze, or less tide, perhaps, and by this "fluke," as Mr. Kunhardt calls it, when the "boot is on the other leg," and managed then and there to get three or four minutes' lead.

Mr. Kunhardt alludes to Thetis as a "second class racer;" now although Thetis is not claimed to be a racer in any sense, simply a cruising boat, will Mr. Kunhardt inform me where he draws the line between a first class racer, second class racer and racer. Yet Thetis as second rate racer, as depicted by him, raced around Cape Cod in the teeth of a gale of wind—not a half gale, but a good old-fashioned out and out howl, and I fancy I know whereof I speak—and showed her ability under two reefs to log 7 knots an hour against a terrible sea and tide, while 3-masted schooners laden with 500 to 1,000 tons coal, tied up under lee of Cape Cod, rather than risk their vessels in the jump off the Cape.

Now where was the boasted safe—if nothing more—model? Stranger laid to in the bay under two reefs and jib bobbed, while the hands lying under weather bulwarks had their feet and legs in solid water, which swept this "safe model" from stem to stern, and all hands doubted if Stranger would live through the night. Mr. Kunhardt will find it hard to find excuse for the action of his pet model, as Stranger's skipper is from the other side and is a very capable man.

The "second rate racer," which arrived 4 hours ahead of Stranger at Marblehead had meals served in the cabin throughout the entire race at the usual times. EDWARD H. HAWES.

BOSTON, Nov. 1.

[The fact that Shona and Shadow were in different classes has nothing to do with their respective merits, as the two boats, of the same waterline length, sailed over the same course at the same time and in a fair breeze, the keel beating the centerboard decisively. Whatever Thetis's ability may be as a heavy weather boat, her races for two seasons have proved that she has no place with the leaders in ordinary weather, and few yachtsmen will claim that she is in any sense a first-rate crack.

THE CONSTRUCTION OF RACING YACHTS.

Editor Forest and Stream:

In the matter of construction the yacht designer of Great Britain attaches a much higher value to the virtue of light material in the build of racing yachts than the generality of our builders and designers. He knows full well that as far as refinement of lines is concerned, the greatest perfection has been well nigh attained, and that it is useless to look for the hoped for superiority in that direction.

What then so natural as that he should turn to the almost unlimited possibilities of light building to attain the highest speed the form of his design is capable of. Tied down to the beam taxing, spin 'em out endways, tonnage rule, his ideas naturally tend toward greater length and less beam with the hope of obtaining equal or greater speed than in the existing boats, and at the same time to receive allowance from them. This is practically the only element of uncertainty connected with the design, for it stands to reason that there must be a limit to this elongating narrowing process somewhere.

The Oona, planned by the late W. E. Paton, is one on the newest examples of an extreme 5-tonner. Longer and narrower than any of her predecessors, with a displacement of 12 tons, her hull and equipments only weighed 3 tons. Such fine calculations as were bestowed on the scheming out of this yacht would indeed be a revelation to the builders of this country. It is greatly to be regretted that the capabilities of this thoroughbred racing cutter should be unknown. But what can be said of Clara, Ulidia, Shona and Madge, the exiles to these waters? Are they lightly built? Assuredly they are. All are living arguments in favor of light scantling. How else could Clara have made such an unrivalled record? How else could Ulidia have topped the heap in her class at home? For what other reason could Madge have overturned the placid assurance of the skimming dish persuasion of yachtsmen? Not until she met the Shadow did her victorious career receive a check.

The modern racing cutter has reached her highest prestige. Her star is paling before the dawn of a new era in yacht designing. For the good she has accomplished in assisting the evolution of our ideas to that higher pitch of naval perfection exemplified in the Shadow type of American sloop, all praise shall be hers. Her mission is accomplished. Let her die.

To the fact of superiority in build alone I ascribe the successes of the most prominent representative cutters now in this country. When, for instance, Clara, by reason of her build, is able to carry 25 or 30 per cent. more ballast, in proportion to her displacement, than her competitors of like loadline, is it any wonder that her record is so favorable in comparison? Besides, it is a well known fact that her handling could not well be bettered. In her first season, and with her best form as yet undiscovered, the performance of Cinderella in her last two races is remarkable, making Clara sail for every bit that was in her in order to score.

The poor showing of Galatea against Mayflower is traceable to her shortcomings in respect to build, for with the defeat of Genesta as a warning she could not afford to sacrifice any advantage to be derived from the ability to carry more ballast at same loadline, and as a natural sequence a larger sail area. Galatea's sail area is indeed paltry when compared with Mayflower's allowance of sail; but how often have we been told that, other things being equal, the cutter, with a smaller and more economical rig, is as fast as the sloop. Although Galatea's ability to do as well as some other British yachts in the try for the Cup was questioned by the English sporting journals, not one word was said about any shortcoming in the matter of sail area. For, be it remembered, her first fit of muslin was found to be too large for best performance and was therefore cut down with improved results.

Clara, with a sail area of a like proportion with Galatea, smaller than that of our sloops, shows up in far better form comparatively. How is this fact to be accounted for? Either by the supposition that there is something wrong about Galatea's form or build, or else a Yankee sloop can be turned out that will defeat Clara as badly as was Galatea defeated by Mayflower. The length and sail area rule of the N. Y. Y. C. must be radically incorrect, or else the value of the factor of sail area must be largely increased to rate Mayflower and Galatea at evens.

Galatea has undoubtedly as good a form on her dimensions as Mayflower possesses. To her heavy build then must we look to explain why her record is not up to Clara's list of wins. Her ratio of ballast to displacement being about the same as Mayflower's, viz., 50 per cent., she has no extra ballast-carrying power as a margin to offset her inferiority.

When I was a boy I made and sailed a large number of miniature yachts, and the boat that, by reason of being gouged out the thinnest, was able to carry the most ballast and sail was invariably—although perhaps of a less favorable shape for speed—faster than her sisters.

Apropos of Mr. Kunhardt's statement that Thetis is "not a flyer of the first water," I venture to assert that the British cutter of her length that falls in with her in a wholesail breeze and steep sea, has great need of being a "recognized crack" to get out on the above named sloop's weather.

As to the victory of Shona over Shadow, any yachtsman knows that the result of one race is a poor criterion on which to base a conclusion of the respective merits of two yachts. The aversion of Shona's sponsors to a match with Shadow savors of an evident desire to shirk the issue of such a contest, in which they well know that the chances are in favor of Shadow.

Until the efficacy of lightness in speed-making is more generally recognized in the construction of our yachts, the day is not far distant when a British keel cutter, possessing large initial stability, and above all, of great lightness and strength, will come over and foreclose an indisputable mortgage on the international cup. And that it will be a very hard task to get it back is the unwilling dictum of DEEP DRAFT CENTERBOARD.

[Our correspondent is entirely correct in ascribing the success of the narrow cutters in part to their superior build, but he overlooks the fact that their peculiar model, with solid keel and easy bilge is in itself naturally stronger than that of the "deep draft centerboard" with a hard bilge and heavy keel, the latter necessarily divided. It is also to the advantage of the cutter that she may be driven with a smaller sail area, but it does not follow of necessity that she cannot be under-rigged. Galatea's sail plan this year is the original one with which she first raced in 1885, at which time her ballast was stowed much higher than at present. There is, no doubt, ample room for improvement in the build and rigging of our yachts, but it must not be forgotten that in wood, at least, the form requires greater weight and strength than in such boats as Clara and Ulidia.]

CHANGES OF OWNERSHIP.—The steam yacht Stranger was sold on Nov. 5 to Mr. George Scott, American Y. C., by her owner, Mr. E. S. Jaffray. The price reported being $60,000. Mr. Jaffray will at once build another steamer, which will have as high a speed as can be obtained. Her dimensions will probably be about 250ft. L.W.L. by 28ft. beam and 18ft. hold, drawing 17ft. Mr. Scott formerly owned the Viking, built for him by John Roach and afterward sold by him to the late Samuel J. Tilden....Marina, steam yacht, built by the Herreshoffs for Mr. Geo. Beck, in 1884, has been sold by him to Mr. Chas. F. Chickering....The little steam yacht Anna A., built at Nyack for Ferdinand Ward and lately owned by Mr. Alexander Pollock, has been sold to go to Colon for use as a despatch boat on the Panama canal....Hermes, schooner, Mr. Daniel Appleton, has been sold to a Pittsburgh yachtsman.

LAKE ONTARIO.—The following statement has been prepared by Com. Phelps, Oswego Y. C., showing the strength of yachting on Lake Ontario: Oswego Y. C., founded 1881, 151 active members, 19 yachts; Royal Canadian Y. C., organized 1854, 330 active members, 15 yachts; Toronto Y. C., organized 1881, 225 active members, 29 yachts; Kingston Y. C., organized 1883, 35 active members, 12 yachts, and the Bay of Quinte Y. C., organized 1870, 100 active members, 10 yachts, making a total of 350 active yachtsmen and 83 yachts on Lake Ontario.

CRUISING.—The sloop Sparkle, Mr. E. S. Brown, New Bedford Y. C., arrived at Beaufort, N. C., on Nov. 3, having left New Bedford on Oct. 6. She is bound to Florida....Mascotte, sloop, from New York, was also in port on Nov. 5, on her way to Panama....Regina, sloop, Rear-Com. Ralph N. Ellis, C. Y. C., will cruise in the Chesapeake Bay this winter. Sesqua, sloop, Com. Henry Andrus, Harlem Y. C., has just returned from a shooting and fishing cruise on Long Island Sound....Dauntless, schooner, Mr. C. H. Colt, has also been on a similar cruise about the Thimble Islands....Talisman, steam yacht, Mr. J. W. Slater, will cruise about Florida and the West Indies this winter.

SALE OF THE ATLANTIC.—The yacht Atlantic was offered at auction on Nov. 4, at the rooms of R. H. Montgomery on Wall street, in the presence of about 60 yachtsmen, most of them evidently attracted only by curiosity. After stating that the yacht cost $80,000 and was very fast, the auctioneer called for bids which were not forthcoming, then he expressed his willingness to accept as little as $10,000 to start with. Finally an offer of $2,000 was heard which Mr. L. A. Fish raised quickly to $3,000. After this the bidding was slowly raised to $7,500, at which figure she was knocked down to Mr. Fish.

JAMAICA BAY RACES.—A match for $50 per side was sailed on Nov. 7 off Ruffle Bar between the Kate and Lizzie R., the course being out to a markboat off Swift's Dock and back. There was a strong N. W. wind, and both carried single reefs, Lizzie R. first trying whole sail on the beat out, and Kate carrying a reef until headed homeward. The times were:

	Start.	Turn.	Finish.	Elapsed.
Kate	3 20 20	4 38 10	4 44 10	1 17 50
Lizzie R	3 26 40	4 14 30	4 46 55	1 20 15

OSWEGO Y. C.—On Nov. 4 the Oswego Y. C. held a meeting at which the following officers for 1887 were elected: Commodore, John T. Mott; Vice-Commodore, W. B. Phelps, Jr.; Captain, J. B. McMurrich; Secretary, A. N. Radcliffe; Treasurer, J. D. Henderson; Surgeon, J. W. Eddy; Measurer, Wm. P. Judson; Directors, J. P. Phelps, J. D. Donnelly, Swits Conde.

HARLEM Y. C.—The following officers were elected on Nov. 4: Commodore, J. A. Hutchinson; Vice-Com., W. L. Wheeler; Secretary, W. J. Parker; Treasurer, H. M. Jones; Measurer, J. B. Bates; Board of Directors, Henry Andruss, A. Metzger, J. T. Lalor and D. Fitzgerald.

HAVANA Y. C.—Havana boasts of a yacht club and a number of yachts, and a regatta was lately sailed there. The club burgee is similar to the N. Y. Y. C. with the star omitted.

LONG ISLAND SKIFFS.—A correspondent asks for the address of a builder of the small sailing skiffs used about Long Island.

WENONAH—Mr. Stillman's cutter has been towed to Piepgrass's at City Island to lay up.

METEOR.—This steam yacht is now at Poillon's for alterations.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A. C. A. EXECUTIVE COMMITTEE MEETING.

To the Members of the American Canoe Association:

The Executive Committee of the American Canoe Association will meet on Saturday morning at 10 o'clock, Nov. 13, at the Gilsey House, New York city. All are invited.

DESERONTO, Ont., Oct. 16. F. S. RATHBUN, Commodore.

THE OAKLAND C. C.

Editor Forest and Stream:

Since the last report of the doings of the Oakland C. C., the canoemen have been jogging along at about the same old gait. They have taken a number of cruises about the bay, to Goat Island, Bay Island Farm, etc. The racing men in the Mystic, Flirt, Zoe Mou and Waif have kept up a lively scrimmage every week, each in turn coming in ahead and enjoying the happy consciousness of sailing the fastest craft, only to be disappointed later, when some other fellow got the best of it. Any capsizes? Well, yes—so to speak—several; the Shadow, which boasted of a clean record, and the Undine, one day returning from an all night trip, got too close together, interlocked their mizzen booms and turned bottom up. The Commodore one day all by his lonesclf, trying an extra spread of muslin, got the mainboom foul of the mizzen brail and had to be towed ashore in a limp condition.

One of the prettiest trips was on Admission day, Sept. 9, which in this State is a general holiday. The Pacific Y. C. held their annual regatta on that day and the canoe club made up a party to go out and see the race. The fleet consisted of the canoes Mystic (flagship), Zephyr, Zoe Mou, Flirt, Undine, Shadow, Waif, No Name and the Spray. The cutter Aloha, yawl Nautilus, Skiff Yum Yum and the yacht Stanley as escort, all gayly decorated with bunting. They made a fine appearance as they dropped down the creek about 10 A. M.

Little or no wind made slow work for the voyagers and not until they were well into the bay did they catch a decent breeze. It was nearly 2 o'clock before they reached Goat Island and got through lunch. Soon after, the yacht fleet, which started at 1 o'clock from the city, came booming along, and tacked right close to the island in fine view of the excursionists. They had to beat from Goat Island down the channel to a stakeboat and run back, and before this was accomplished the fleet of small craft got under way and sailed out into the bay to intercept them. Unfortunately a light fog settled over the bay and the landscape was greatly obscured, and the view of the race entirely marred. The leading yachts came looming out of the mist fairly shrouded with kites, balloon jibs, clubtopsails and staysails, water sails and what not, and passing were soon lost again in the gloom. The Lurline was first, Halcyon and Aggie following, the Annie, Nellie and others coming after. The canoe fleet returned to Oakland about 6 P. M.

The next events of note in the annals of the club were a series of contests between the Mystic and the Spray. The latter, after the return from Clear Lake, did not return to the club house, but went into dry dock and thoroughly overhauled, had joined the fleet at Goat Island on Admission day. She did the best sailing on that day in the light breeze, and the next day in a set race of three miles beat the Mystic some three minutes. The skipper of the Mystic realized that something had to be done and went to work on a new sail, better shape and more area. The next two races were taken by the Mystic by some six minutes. Then the Spray came out with a bonnet to her mainsail, adding some 20ft. and overtopping the Mystic's spread by perhaps 10 or 15ft. But the "sit" was not there, and Mystic won the next two races with some five or six minutes to spare. All this was very interesting, as the races for the gold championship badge were approaching (Oct. 17). Spray had won it in May in a contest for cruising outfit, and Mystic had been laying for it ever since. But before the championship races came a cloud over the fortunes of the O. C. C. In this wise:

The San Francisco Yacht Club have been in the habit of giving an annual mosquito regatta, putting up prizes for Whitehall boats, fishermen's boats, ship's boats, yawls, small yachts, etc., and it is looked forward to as one of the events of the season. Anxious to test the canoes with these larger craft the O. C. C. entered some eight or ten of their best boats for the regatta which was appointed for Oct. 9. The weather had been mild and gentle for many weeks and canoe breezes were the order of the day. Our canoemen were very confident of making a good record. The starting point was Mission Rock, off San Francisco, some 8 miles from Oakland, and the time of starting 1:45 P. M. So the boys had more than half the day to sail down the creek and across the bay. But to make assurance doubly sure, that they would be on time, a steam tug was engaged to tow them and also enable them to take some guests to see the race. A jolly good time was anticipated. On the day appointed everybody was on hand in good season, but the wind was on the rampage. Good judgment dictated that the attempt to cross the bay in such weather was foolhardy. But the club has never yet turned back on account of the weather and the canoes were equipped and strung out in a line behind the tug in the following order: Flirt, Mystic, Spray, Coney Island and Shadow, the li tle Waif being stowed on board. The skippers of the three last were towed their boats at first, but when two or three breakages of painters had occurred going down the creek, all except Shadow were taken on to the tug to lighten the strain, he being last on the line was kept there to steer and make himself generally useful.

There was quite a sea running in the creek, and the wind was blowing 30 or 35 miles an hour against a strong tide, and before the mouth of the creek was reached the canoes were pitching heavily. Outside the sea was immense, and before they had gone a quarter of a mile the painters parted again. Orders were then given to abandon the trip. As the tug turned with the wind and sea following, of course the craft in tow were jammed against her. The captain of the Mystic got into his boat and the Shadow's crew was already on board, and these two got along very well under driver and paddle, but the Flirt, Coney Island and Spray being towed were upset, rolled over and otherwise ill-treated, and the Spray finally had her stem pulled out, and being without air tights sunk altogether. By dint of hard work Flirt and Coney Island were gotten to the narrow-gauge railroad wharf (near by), bailed out, and in company with Mystic and Shadow sailed home in grand style under driver alone stepped in main mast hole. Much sympathy was felt for Mr. Engelbrecht, as the Spray was his own handiwork, and was one of the crack canoes of the fleet, a loss to the club as well as to her owner. The other boats were slightly injured, but nothing serious.

As for the regatta, it was started by a few of the entries, but the stake boats dragged their anchors and had to leave their posts for safety, and those that did manage to get over part of the course were nearly swamped and many capsized, so it was declared off for a week, being sailed on Oct. 17. It was a perfect day, and if the canoes had entered they would have made a good showing, but our engagement prevented.

The race for the gold badge presented to the O. C. C. by Mr. E. Mayrisch, of Alameda, was held on Oct. 17. It has to be contested for every three months. This was the first contest. There were five entries. Mystic, Zephyr, Zoe Mou, Flirt and Coney Island. Distance about one and a half miles down the wind to a stake, with a beat home. The distance entire may fall short of three miles perhaps seventy-five yards. The Mystic took the lead, followed by Zoe Mou, the other three in a bunch. In rounding the stake the Mystic missed stays, thereby losing a good lead of about 100yds., the Zoe Mou getting around first and the Flirt following a short distance after. The wind being a little southerly of west enabled the canoes to make the trip back in about three tacks. Mystic soon regained the lead and passed the winning line 49s. ahead of Flirt. The following is the summary:

	Start.	Finish.	Time.	
Mystic	2 30 35	3 03 01	42 26	
Flirt	2 30 35	3 03 50	43 15	.49
Zoe Mou	2 30 35	3 05 20	44 45	2.19
Coney Island	2 30 35	3 05 45	45 10	2.44
Zephyr	2 30 35	3 05 46	45 11	2.45

After this race the Zephyr and others had a scrub race. The Zephyr went over the course in 40m. 20s. and Mystic in 41m. 5s., the improvement in Zephyr being on account of a centerboard added to her keel.

The next event, on Nov. 2, is to be a contest between the second and third class canoes—say Falcon, Meteor, Coney Island, Shadow, Water Lily, Belle and others. A handsome cup has been presented as a trophy for these classes only; a race to be held every month until some one canoe wins five races, when her skipper is to be the owner of it.

The Oakland C. C. has had a fine season and is in a flourishing condition. It has nearly doubled its membership, and its fleet is out of debt except that secured on its club house, and the income of the club exceeds its expenditures. Unlike the fraternity in the East, the canoists here are not going into winter quarters. The season here is not over, but just goes right on. In fact, from now until spring, barring occasional rain, will be our prettiest weather for canoeing. If some of the enterprising ones in the East would pack their boats on the overland route and take a trip out to this coast, they would find fine cruising for a few months and a warm welcome from the Oakland canoeists. The latchstring hangs out. MYSTIC.

THE A. C. A. AND THE CLUBS.

Editor Forest and Stream:

I have read Mr. Fraser's article on the above and think that until something better is proposed it has the field by a large majority.

It seems to me that the only difficulty would be the getting of the clubs who have no A. C. A. members among them into the union. The other clubs will see at once the advantage of every member of their club being an A. C. A. man, and I think we can take it for granted that they will go in for it heartily.

But how are we to get those clubs which have no A. C. A. members among them, to point out the advantages of that Association, to join in with us and make the A. C. A. count in thousands where we now have hundreds? I think one of the chief points to them will be the reduced fee. (I take it for granted that the fee will be reduced if the membership is run up to a thousand or above).

Suppose the fees were reduced to one dollar. For that small sum they could belong to a large and powerful organization, could have the privilege of attending a division meet or the A. C. A. meet, or both, each year with all the special rates, etc , that that implies.

I think Mr. Fraser's idea to have the club secretaries collect the fee is a good one, because unless a member attends the division or A. C. A. meet, and hears Dr. Neidé's cheerful "Have I got your dollar?" he is apt to forget that he has not paid his annual fees and let it slip past for that year. WILL G. MCKENDRICK.

TORONTO, Canada.

PADDLE AND CURRENT.

SECOND PAPER.

FRIDAY, July 3, we left the city of Binghamton for the headwaters of the Delaware. We had inquired anxiously how far up it would be safe for us to start; and, as the result of the information gained, bought our tickets for Hancock. A run of fifty miles found us in front of a bare, unpainted station, surrounded by a few still more forlorn houses, the sun just setting and the river half a mile away. We were not sufficiently prepossessed with the place to desire to stay there all night. Being provided with a good camping outfit, after a few preliminary purchases, we looked around for the best method of reaching the water. Our canoe had attracted the usual number of loiterers. Taking hold of it and turning to these with "A cigar for every man that lends a hand," we had the whole colony running at our side with our effects pell mell down the hill.

The road first touched the river at a rapid, a fitting introduction to the Delaware. Hurriedly launching in an eddy at the foot of this rapid, we, for the first time, took a survey of our surroundings. An air of primitive wilderness hung over all, the hills and the woods seemed to be working together to choke off the stream, which struggled along past both as if defying opposition. The river was a small matter; mountains and forests monopolizing the landscape.

Paddling rapidly forward, passing without difficulty two or three rifts, we felt assured that our acquaintance with the Delaware would be a long one. The last blood-red rays of the sun were lingering on the hills high above us, a celestial beacon fire to warn of the approach of night. The woods, thick and dense, hung dark like thunder clouds over the water. At last, long after twilight, we scaled a height to where, some fifty feet above the river, there seemed to be an opening in the forest. After much wading over rough stones and through mire, and laborious carrying up the hill, we were at last ensconced with the swift-running, noisy river at our feet and the valley, vocal with the sounds of summer, spread before us

A native returning home by a path in our rear from the dissipations of the town, coming suddenly out of the gloom, very naturally, in this seemingly uninhabited and uninhabitable region, surprised us. He had been a ratisman on the river, and gave us many practical directions. After a pleasant chat, with the remark that he had to go four miles through the woods, he left us as silently as he came.

Lazily reclining beside the cheerful fire, a harsh vibration, strangely out of keeping with the peaceful sounds of this almost utter solitude, strikes the ear; a nervous, rattling noise, growing louder and louder till sharply waking the sleepy echoes from the quiet hills a locomotive, with a headlight glaring like the evil eye of some monster, burst into view. Rushing shrieking along, seeming as if flying in the air half way up the hillside so distinctly outlined is it against the inky darkness of the mountain, the locomotive sending up showers of sparks, the furnace now and then emitting a lurid gleam, the brilliantly lighted passenger train flashes, with a shock like that of a sword thrust, through the stillness of the night. We felt as if haunted. We had left the city, we had left our employment; and by so doing had hoped to escape for a time all thoughts of the cares and annoyances of the hum drum work day life. Here, however, was a feverish eager monster, filled with people more restless than itself, invading the spot which, of all others, seemed to be the most free from suggestions of business worry.

In the morning we found that the marsh that had bothered us to cross was caused by springs of ice cold water. All that forenoon the river was peacefully disposed; there were many rapids, some of them involving wading, but nothing that was dangerous. The scenery was charmingly wild. The river filled the valley completely; and the hills, always thickly wooded, here hardly deserving the name of mountains, rose from the water at a not abrupt angle. A house occasionally, at long intervals, showed its top above the trees, the forest, as if chary of human foothold, closing tightly around.

Where a tributary came in affording a few tillable acres, a farm house would appear. But the great business along the Upper Delaware is lumbering. Few people can be met on this part of the river who have not for many years in the spring freshets navigated rafts of logs down to Trenton and Philadelphia. This fact enables the canoeist to keep well posted regarding the bad rapids. Lumber mills are in places more common than farm houses, and many of the available streams flowing into the Delaware are pre-empted by mills.

In the afternoon the rapids grow more formidable. They occurred at regular distances. The river, winding greatly, the hills always keeping close to the stream and winding with it, would flow sluggishly, broaden out into a pool, and then just around a point would go flying off down hill at a reckless pace. Frequently in coming to an unusually straight stretch, glancing along the water, we could see a hill down which it almost made one dizzy to look, at the same time when at a distance the descent being steep and beginning so suddenly that the surface at the commencement of the incline was hidden from view, no billows, no rough water were to be observed. The river now assumed on a large scale the characteristics of a trout stream. Instead of a broad bed paved with small stones and containing numerous shallows, the flow was compressed between narrow banks, huge rocks appeared around which the water eddied and gurgled, and in the rapids the deep current, studded with boulders, rushed with resistless force. This change, though requiring more skill and being dangerous, relieved us of vexatious wading and kindred annoyances attendant on shallow water. A quick eye and hand were necessary to carry us through. Hurrying along at a race-horse speed, fragments of stone would block our path. No time was left for decision; thought and action had to coincide. A mistake in most cases meant a shattered boat, in some cases crushed bodies or drowning. This fact, although the exhilaration was delightful, kept a great strain upon the nerves. We were constantly on the lookout for our fate. In each smooth expanse we were thinking of the next rapid. Long before we saw the rough water we heard its noise. Not only would we hear it at a distance, but so accustomed were our ears to the sound of running water that we could tell from the roar, boom or surge whether it was caused by a steep rush, a fall or a sunken rock.

Late in the afternoon I came near having an interview with Davy Jones. At the foot of a rapid requiring all our attention was a ferry cable stretched from bank to bank. Just where we must pass the cable lay low on the water. It was a hard thing to locate the position of this snare, it appearing further off than it was. Morris lifted it up and got under, but I, besides miscalculating the distance, also failed to realize the speed at which we were going. The result was that I was caught under the chin and jerked over backward. Fortunately, by the merest accident, I fell in the boat, otherwise we would have been swamped.

It had rained hard that day. The ground was so thoroughly saturated that the idea of camping was not pleasing. Hiding the boat among the willows and shouldering our outfit, we started across the fields for a house about a quarter of a mile away. This dwelling was a curiosity, being strongly constructed of stone and located in the middle of a garden that was elevated some twenty feet above the road and surrounded by a stone terrace. Altogether it looked as if built for war, reminding one of a castle or an Indian stockade. We scaled the ramparts, approached the door, and were saluted by a mastiff. On our attempting to knock the brute expressed such a strong inclination for fresh meat that we reached for our revolvers. After much pounding and waiting a woman's face appeared over the railing of the piazza above and eyed us very suspiciously. Upon making known our wants, we were requested to wait till her husband returned. We were much amused at being mistaken for tramps or lightning-rod men. Subsequently, by way of atonement, we received profuse apologies and good quarters. We chatted with them a long while, and next morning the farmer and one of his boys carried our duffle down to the river.

In running rapids there is no time for consideration, much less for consultation. Some one has to do the steering and take command. With us no words but those relating to the running of the boat were spoken. Because I owned the canoe, rather than for any other reason, I had the stern paddle and Morris the bow. Morris saw the necessity of acting on the instant, and, no matter how deep the water or what the circumstances, when I gave the word to jump he was overboard as soon as I. In fact, his zeal occasionally anticipated my directions, and, being forward and therefore able to see obstructions sooner than I could, he would sometimes leap before I thought it was necessary.

That morning the above fondness for aquatic life got him into trouble. In the midst of a growling, spiteful rift was a huge wave, caused by the impact of the water against a granite boulder. The current running high on this rock hid it from view from above; but the water dividing, and the descent being steep, exposed below a large mass of stone high above the surface. Expecting plain sailing, I headed our craft straight for this obstacle. Morris, spying the rock and supposing that I did not see it, with a cry of warning, holding the bow of the canoe as he fell, leaped into the deep, turbulent stream. The boat, swinging round in his grasp as on a pivot, struck the rock broadside, the concussion loosening it from his hold, and, while he was left helpless in the river, myself powerless to aid him, the canoe floated down stern first. He was carried off his feet by the rush; but, having the good sense to know that it was of no use to struggle, and realizing that he must be carried to shallow water, by submitting himself to the current he soon reached a shoal. Acting all this time as a spectator, the canoe floating backward unguided, a bump and a lurch which nearly caused another calamity brought me to my senses. Morris was soon aboard; but it was found that the paddle that he held had in the confusion been lost. As the current was strong, the river wide and filled with stones the color of the missing article and some time having elapsed, it was no easy matter to find the indispensable adjunct. However, after many movements and countermovements and a sharp lookout on both sides, even this was accomplished, and we proceeded with all damages repaired; the wetting in the warm sun being more of a joke than a serious mishap.

I should not wonder if traveling on Sunday was wrong, even though the vehicle be only a canoe and the travelers those who don't mean to make work out of the traveling. At any rate this was not one of our lucky days. The afternoon was an afternoon of shoals and wading, climaxed by a thunderstorm, so terrific that it made us, in spite of our stout rubber coats, want to get under cover. If the fates were opposed to our going on, they certainly offered us the best facilities in the way of shelter, finding us clean and commodious quarters in an old barn that stood close to the bank. Here we came across some wicked young boys who, instead of going to Sunday-school, had stolen away here out of observation to enjoy a quiet smoke. But leaving the right or wrong of such matters to the moralist our young acquaintances proved very good friends, liberaly supplying us with milk, etc., and standing around in admiring awe, while we cooked our supper over our miniature spirit stove. The farmer, an energetic, progressive man, came down to see us, trying to make himself agreeable. He had a hobby. That hobby was a glen on his premises.

"Are you gentlemen going to start early to-morrow morning?" he asked. Upon our answering in the affirmative he continued: "Well, I have a ravine on my land that I like to show to all city people who come along. Many persons go a great distance to see see it, and just as soon as you get through your supper I should enjoy acting as your guide."

We were unable to resist such a peremptory invitation, and soon found ourselves brushing aside the wet branches of the laurels and evergreens on our tramp up the bed of the creek that flowed through the ravine. The walls were of limestone formation, affording some fine examples of erosion. Here and there were great basins filled with water; again would be caves, the sides of which were perfectly smooth, while in the middle of these tunnels of its own making flowed the brook. Jumping across the stream, getting plentifully sprinkled with the spray of the waterfalls, climbing up steep places by means of shallow steps hewn in the rock, running along on narrow slippery ledges around deep pools, and plunging in regardless fashion through a saturated underbrush, the tough old farmer led us without a pause, talking continually.

He explained that capitalists had made him an offer for his glen with the purpose of building a hotel. Then he would branch off into a discussion of the geological formation. "You are college men. What kind of stone is that? A great many crystals were taken out there. What caused this rock to be worn away so?" Finally, though reluctantly, he turned about. We were well soaked, and built a big fire to dry our clothes before turning in. Around this our loquacious friends gathered, and several hours were passed in talking about the dangers of the river, the rafting, and listening to stories of famous hunts in the vicinity.

The boys were so loth to have us depart and cast such longing looks at our canoe, that I invited one of them to go with us down the rapid that lay between their home and the village of Cochecton. With over a hundred pounds of baggage and we three, making above four hundred more, our fifty-pound craft was weighted to within an inch or so of the water, creating some misgivings as to the result in the waves of the rift. We, however, got through safely, and found for the next three miles little rough water. We had heard very graphic descriptions of a bad spot a few miles below Cochecton called "Foul Rift," or "Cochecton Falls," and were assured that, compared with the perils of this river's famous rapid those through which we had passed were as nothing. Notwithstanding our being told that lumber rafts ran every spring and that we might possibly get through, the dubious way in which such an attempt was spoken of and the recital of numerous fatalities, made us, we must confess, a trifle nervous. Around a bend, the outlet of a lake-like expansion, the water flowing through a narrow gorge, we caught sight of this canoe annihilator. Surely the "half had not been told us." The river was low and boulders of immense size and all shapes lay scattered in utmost confusion on the immediate shores, which were part of the river's bed at high water; while in between, the water, lashed into billows and foam, sped among innumerable projecting granite fragments and leaped in fury in several falls upon the stones as if to grind them to powder.

Our experience here was such as makes me hesitate to put it on paper. We had come with stout hearts, fully intending to shoot the rapid. Even now, while looking at it, we did not make up our minds to relinquish our purpose. Three or four times did we traverse the stony maze that lined the banks of this half mile terrorizer. Many minutes were spent in marking out in our minds just what course we must take. At last all was ready. A start was made, one fall was jumped, then the current caught the canoe, whirled it around and dashed it sideways against a rock. With a desperate effort we managed to get into an eddy. We landed for consultation.

"Well, Ralph," said my friend, "I am willing to help you portage the canoe." That was just the beginning, and we couldn't do anything at all. I don't think we would ever get out of there alive. Even if we did the canoe would be smashed. I tell you the river is too low to make the attempt."

I had thought this way also, but did not have the courage to say so. Now that Morris expressed himself I rejoined, "I guess you are right. I am not quite ready to end this trip, especially in that way." Once more afloat we looked at our watch and found that three or four hours had been spent in paying our respects to the only rapid that ever got the better of us.

"Foul Rift" did not repeat itself that day. In the afternoon we came to Narrowsburg. About this place the current ceases, and the banks, previously of earth, here are of limestone, rising perpendicularly from the water. The village, quite a summer resort, is on a bluff thus formed. At the bottom of this bluff, in a cove, is a small beach, the village landing place, and here the river attains a considerable width. It was while eating our dinner at this spot that we witnessed an amusing spectacle. A rowboat containing an old man and a boy suddenly shot out from the opposite shore and headed for us. Evidently their mission was an ardent one, for the boy was rowing desperately; and, as at every stroke a quantity of water would fly into the air.

Soon we understood the object of the noble youth's violent efforts—he was trying to save his grandfather and himself from untimely shipwreck. The boat was leaking like a basket, and the columns of water, instead of being caused by bad rowing, were the result of the passenger's assiduous bailing. As they neared

the shore, we could see the water in the boat was getting alarmingly near the level of the water on the outside. The bow striking with a shock, the water rushed back on the old man sitting in the stern. The increased weight filled the craft, which hesitating for a minute, the rear occupant remaining the while immovable, gently settled to the bottom, immersing our aged friend to the armpits. The expression on his face was so agonizingly imploring and the entire affair so farcical that we rolled on the ground in laughter.

After leaving Narrowsburg we came to a part of the river of which, to save harrowing memories, I would say as little as possible. The flow was swift; and the bed, though not much broader than before, for what reason, whether evaporation and absorption, were greater than the supply furnished by tributaries, would be hard to say, contained less water than any previous place. The rocks were large and numerous, causing continual striking and sticking of the boat and consequent jumping out and in; but as a slight compensation the stones were all padded with a thick growth of water weeds, thereby saving the canoe. After the vexations of several miles of this kind of thing, after constant wading, pulling, and shoving, after cracking our paddle and our shins as well, we came to a place so attractive that it required no persuasion to make us decide to stop for the night. The spot was a beach of white and smooth sand, such as is seldom found away from salt water. Above this was a growth of shrub willows, overtopped by a fringe of trees, guarded in the rear by a meadow; on the opposite side a steep hill, densely wooded, crowded dark against the restless river. As a consequence of the lumber business, it is seldom difficult to find wood on the banks of the Delaware; and our camping ground was specially favored.

We determined to have a conflagration. Several hours were spent in collecting logs, stumps, planks and limbs, many more being occupied in watching and enjoying the effect. We are accustomed to impressions made upon us by objects seen in the daytime; these things beheld by moonlight appear entirely different. If, however, the light is that of a big fire, the sense of sight seems to betray us, the distinct ocular registrations of a short time ago are merged and confused, inanimate nature now assumes the attributes of life, trees nod and sway, stones and fences play hide and seek in the shadows or grow large and small by turns. Such a blaze as we had and in such a place obliterated the day world and the night world; all effects were changed; moon and stars were swept out of existence. As we reckon time by comparing the intervals between like occurences of the same thing, and as we had never seen the like of this before, the element of time also seemed removed; in fact by this wild glare, transposing and distorting the land and the water, we had drawn a weird—a new and magical—world about us. Gazing in trance-like fascination on this scene, sound aided sight in adding to the spell. We had called up the visible spirit world, and the inhabitants were now talking. The fire grew less, the logs popped, they popped on this side of the river and then they noisily proclaimed themselves from the opposite bank; they seemed to crackle and burst from all directions. A whip-poor-will lit not far away; he sang to us from his perch, and at the same time his notes emanated from the woods across the stream. We lent our voices to the sound, producing the same multiplex effect—we had unwittingly located in a nest of echoes.

The water growing deeper, leaving behind the troubles of the previous afternoon, we continued with little difficulty. The descents gradually became heavy and boisterous. It began to rain. Within three miles of Lackawaxen we arrived at a rapid of the same pattern and general appearance as "Foul Rift." The rush, containing three falls, two of them about 5ft. high, and the rocks were even more appalling; but the boat channel was straighter and more distinctly defined.

In our bare feet, that we might not wet our shoes, we deferentially walked over the rocks all along this rapid, carefully noting the dangerous places. As a boatman cannot see what lies below until too late to change his course, going over a fall in the right place is entirely a work of remembering information gained by previous inspection. We might have backed out as before, but rain preventing a portage, we had to face the music. Getting up a big head of steam, we shot over the verge of the first two falls like an arrow. Some distance beyond the third and worst, in the middle of the stream, was a partly submerged rock, and, though carrying out our preconcerted design by paddling with all our might on the same side, as we dashed over the last of the series in spite of our efforts we were caught irresistibly in the grasp of the current, forcing us against the obstruction. Our momentum being so great and the boulder being slanting, though badly shaken up we kept an unaltered course; but we appreciated more fully than before that a current swift enough to float iron is not a thing with which to trifle.

This was for many miles our last exciting experience with the Delaware. The hills grew steeper and the valley narrower. Now succeeded unusually long stretches of quiet water, indicating the proximity of the Lackawaxen Dam. This dam is built to supply water for the Delaware and Hudson Canal, which strikes the river here and follows it some thirty miles to Port Jervis. It is, owing to the lumber interests, the only artificial obstruction we encountered, and is so constructed that rafts of logs, at high water, can pass over without much danger. But as the river was low, flowing over the top in few places, we skirted the dam to ascertain where it would be best to portage. It had been raining most of the day, and now, when least desired, we were favored with a deluge.

Our investigations were cut short by the amount of water collected in the canoe; to save it from filling we were obliged to land and invert the boat. After the storm, to avoid all detentions and annoyances of the river, which at this point is very shallow, we slipped down into the feeder, finding ourselves in a few minutes in the canal.

TORONTO C. C. RACES.—The last race of the season of the Toronto C. C. was held on Oct. 30. There were six starters for the sailing cup, but the wind was very light and the race was abandoned as they could not finish before the limit. Boreas was leading from the start. Neither of the two challenge cups have been won by any of the members so far, although they were given at the close of the 1884 season. The result to-day is as follows:

SAILING CHALLENGE CUP.	Canoe.	1885.	1886.	Total wins.
Will G. McKendrick	Mac	0	4	4
Hugh Neilson	Boreas	3	0	3
Robt. Tyson	Isabel	2	1	3
John L. Kerr		1	0	1
COMBINED PADDLING AND SAILING CUP.				
Will G. McKendrick	Mac	0	4	4
Hugh Neilson	Boreas	3	0	3
Colin Fraser	Kate	1	0	1

D. B. Jacques now holds the Mason paddling cup for Class 4, decked canoes, F. M. Johnson the Class 1 paddling cup, and W. A. Leys the novices' sailing medal. Taken altogether the 1886 season has been the best racing year the club has had, and as it is too cold now to go out without an overcoat, the boys gather around the club stove smoking some open-hearted member's good tobacco, and talk over the prospect for next season, and wonder who will bring the first Pecowsic into the club.—WILL G. MCKENDRICK, Sec'y T. C. C.

"We propose having a game supper at our church next week," exclaimed a spinster at the opera house entertainment last night; "now, what kind of game would you recommend?" "Well, if you want to draw all the boys, suppose you try poker," calmly replied Joseph Pickle.—*Elmira Gazette.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. A. PEARSON.—We will publish the lines of dory shortly.

R. B. W., Shrewsbury, N. J.—Both dogs mentioned have been good field dogs, and we have never heard that their progeny were gunshy.

F. W. F., Salterville, N. J.—Residents of your State are not required to take out a license to shoot; the law applies only to non-residents.

HIPPIAS, Boston.—Forty feet of ⅝in. diameter and the smallest size Chester anchor. Mermaid was published in the FOREST AND STREAM of March 4, 11, 18, 1886.

J. W. S., Hartford, Conn.—1. Do you consider a full blood Irish setter too headstrong for a beginner to take when six weeks old and try and make a dog of him? 2. Do they make good grouse dogs? Ans. (1 and 2) Yes.

N. A. H., Williamsport, Pa.—What is the highest score recorded made on a Massachusetts target at 100yds., off-hand, open sights, (bullseye 4 in.), or 200yds. target reduced to 100yds. practice? Ans. The 200yds. record, which has been most carefully kept, shows for the 10 shots off-hand, with any rifle, under Creedmoor rules, a score of 117 in the possible 120 by W. H. Taft, of Brattleboro, Vt., in 1885, and for the Massachusetts decimal target, out of a possible 100, ties at 94 by E. F. Richardson, of Boston, and Otto Jaeger, of Wheeling, each in 1885.

INFORMATION WANTED.

A friend and myself are talking of taking a trip next season to the French Broad. Can you tell us where we can get information about the stream and country and best place to go? Game is not so much of an object as to find a good location to camp for a few weeks and have a change of air and scenery, ideas and diet.—MAR.

BRIDGEPORT, Oct. 30.—On the morning of Dec. 18, 1857, P. T. Barnum's beautiful residence, Iranistan, was burned. It was the only building of its peculiar style of Italian architecture in America, and cost $150,000. Around it on every side were laid out elaborate grounds and a large artificial pond was kept stocked with gold and silver fish. The grounds passed into the hands of the late Elias Howe, Jr., whose death prevented the erection of another splendid mansion on the site of the burned villa. This property is now divided by streets, and Col. C. H. Russell is a recent purchaser of the section upon which the pond above mentioned has remained intact. This week Col. Russell has caused the pond to be filled with earth, and as its limits were gradually lessened large numbers of fish were observed endeavoring to escape from their confinement. Scoop nets were procured, and hundreds of gold and silver fish were taken out. These had survived for nearly thirty years undisturbed, and among the finny beauties were several varieties which evidently were a cross between the gold and silver species. A reporter was told by Mr. Barnum to-day that the pond used to be one of the favorite resorts of his children. The fish were so tame that they would come to the water's edge at the ringing of a bell and partake of food from the hands of the family. If a stranger approached the fish would dart out to deep water. —*New York Sun.*

The St. Lawrence Gang.

This cut shows No. 1-0 (or Black Bass size) with living Minnow attached.

MANUFACTURED IN ALL SIZES FROM No. 5-0 TO No. 4, SUITABLE FOR

Muskallonge, Pickerel, Black Bass, Lake Trout, Etc., Etc.

All have patent treble hook with baiting needle, adjustable lip hook and treble swivel, and best silk metal wound gimp.

This is the most ingenious invention and radical improvement in trolling tackle yet made. Its manifest superiority to all gangs now in use is evident to every expert angler. A few of its peculiar excellencies are:—It is the only gang on which a bait can live. It is the only gang which can be adjusted to any sized minnow instantly and perfectly. It is not only the simplest but also the strongest gang made. It does not scare away the big and wary fish by a long array of treble hooks. The treble swivel insures perfect revolution of bait and reduces to the lowest possible point the liability of kinking the line.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

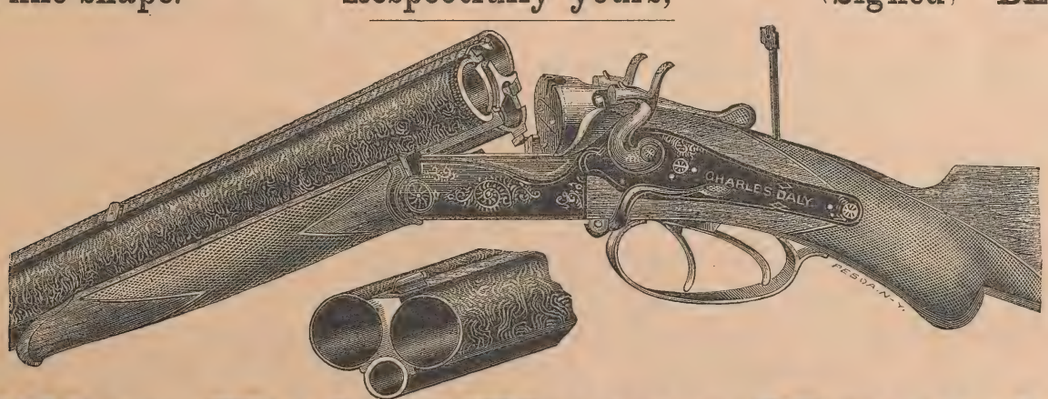
" 55—10, 12 and 16 Gauges, Damascus Barrels, Double Bolt, Fine Engraving,	90.00



A DALY WAVE FROM THE NORTHWEST.

Minneapolis, Minn., Oct. 20, 1886.

MESSRS. SCHOVERLING, DALY & GALES:

Gentlemen---The six Diamond Hammerless Guns are here. They are the finest lot of guns that ever came into the Northwest. All are pleased with them. The 32in. gun for the writer is simply elegant.

Judge Babcock of our city has just brought in to be cleaned up a Daly gun that he has shot for ten years, and in all that time he has not paid out one cent for repairs. It is still in fine shape. Respectfully yours, {Signed} BEST & CO.

The Daly Three Barrel.

This Gun has met with an unprecedented sale for an arm of this kind—far beyond our expectations.

They are made with fine Damascus Shot Barrels, Best Steel Rifle Barrels. Matted Rib, Locks and entire work of the very best quality.

Pushing the Top Lever to the left, the rifle barrel is fired by the right-hand lock. This mechanism is very simple, but effective and durable, and does not admit of any mistake being made.

A Folding Peep Sight throws down flush with the tang of the frame; a hinge back sight is placed on the barrel, which is flush for shotgun use and can be turned up for rifle use.

Price, with Sights Complete, $85.00.

SCHOVERLING, DALY & GALES, 84 & 86 Chambers Street, New York.

For Sale.

ANSWERS TO CORRESPONDENTS.

TIME HAS BEEN.

YES, the time has been, but it was years ago. Then the West was truly the wild country of which we used to read; then the man who had traveled in the Rocky Mountains was looked on in the East with a certain amount of awe. If not a hero, he was at least regarded as a daring fellow, who had taken his life in his hand and had exposed himself to many perils. His stories of the Far West were listened to with open mouths, and many were the questions asked him about the Indians, the buffalo and the bears. If he was not a modest, or at least a quiet man, the temptation to indulge in a little romance was often too much for him. He usually lied a trifle about what he had seen and done, though indeed that was scarcely necessary. A simple recital of facts would have been startling enough to the good people of the East.

Most of those who journeyed to the mountains years ago, did it because they were obliged to, but there were a few who made annual pilgrimages to the main range from pure love of the wild free life, which had in it then often a spice of danger and always something of adventure. Nowadays it is quite different. Now it is fashionable to go West, and every one has a cow ranch. Wherever one goes he sees cattle. The cowboy is ubiquitous. If by chance there is a square mile of prairie without a cowboy, in his place will be found a sheep herder or a homesteader. It is as prosaic as to travel through Illinois. The early denizens of the mountains are no longer to be seen. They have passed away, have given place to products of civilization. Where the Indian once made his surround of the buffalo which he dried for his winter's food, the white man now gathers his beef to send to the packing houses in Chicago.

In some few localities the white skulls of the buffalo still dot the plains, but those monuments of an extinct race are fast mouldering to decay. Soon a buffalo skull will be as rare as a buffalo. In place of these relics of a happier time are other whitened skulls—those of winter-killed cattle.

The extinction of the buffalo meant starvation to the Indian. Forced on to his reservation he is there plundered or kept on quarter rations till he dies of hunger, and the Indian question is thus being rapidly settled. The Indian gone from the greater portion of the West, settlement went on at a rate which, twenty years ago, would have been deemed inconceivable. People fairly poured into the country. The cattlemen came first, but hard on their heels followed the homesteaders—the farmers. As the cattlemen drove before them the Indians, so now the agriculturists are driving out the stockmen.

The great bulk of the buffalo disappeared a dozen years ago, though it was not until 1883 that their extermination could be pronounced to be complete. The number now existing in the United States is known pretty accurately by the careful inquiries instituted by the FOREST AND STREAM, and it is probably not more than about 600 or 700. In Wyoming Territory—including the National Park—there are perhaps 250; in Montana, near the heads of the Mussellshell, fifty-two head were seen the last summer; in Nebraska, on the head of the Dismal River, there were this summer about thirty; in the mountains of Colorado there is one band of thirty and one of twenty, while in the sandhills of Kansas and to the south in the Pan Handle of Texas, there are reported to be between 300 and 400. Many of these will be killed this autumn.

A few years ago we knew that the buffalo were practically gone, but the elk were still abundant. They are far better able to take care of themselves than the buffalo, and we thought that they would survive for a few years longer. Vain hope. From the regions where, three years ago, they were most abundant, they are gone. The ranchmen needed meat, and it is cheaper to kill elk than to buy beef. So when the weather grows cold, the hunting parties start out, and repairing to the range of the elk, they load up the wagons with fat cows and heifers and start for home again. We have known of 150 two-horse wagon loads of meat being hauled out of one small mountain region in less than two months. But this will never be repeated. The elk are gone from this region, never to return.

Far more effective than the hunters in driving away the elk are the cattle. These have spread themselves everywhere over the country. They dot the plains and the hillsides. They feed in the little mountain valleys and in the parks high up in the timber. They go everywhere that the elk go, and they drive them from their favorite feeding grounds. Elk and blacktail deer, we have found, are very much averse to the presence of cattle, while, on the other hand, whitetail deer do not seem to mind them much, and antelope not at all.

The days of good elk hunting are about over. Of course, for some years to come it will be possible for hunters to go to the mountains and kill a few of these noble animals, but we do not know now where one can now go with any certainty of finding them abundant. We have lain in camp when, night after night, it has been impossible to sleep owing to the noise made by the elk screaming and splashing in the water by which we had pitched our tent. We never expect to be disturbed in that way again.

The deer have followed the elk, the sheep have retreated to the highest pinnacles of the mountains or have sought other distant homes. Nowadays one has to depend for food on jack rabbits and sage hens. In many places he is lucky if he gets these. The prairies are without life.

Yes, the time has been when one could go in to the mountains of the West and live on the country. Then the plains were dark with buffalo, the graceful antelope moved lightly about among the ponderous and shaggy beasts whose pasturage it shared. In the broken buttes and bad lands, and among the rough ravines and hog backs of the foothills the black-tailed deer fed morning and evening, as did their cousins the whitetails among the willowy thickets of the streams. High up in the table lands of the mountains among the green timbers lived the elk—at gaze the most beautiful of large game. Here in summer fed the great droves of cows and calves, and to these in the early autumn the superb stags, descending with hardened horns from the mountain tops, came to choose their mates. Clambering about among the rocks above, but often descending to the prairie to feed, were bands of sheep, inquisitive as the antelope and then scarcely more difficult to kill.

Day after day, week after week and month after month we have traveled through the mountains, never out of sight of game, but killing no more of it than was required for our needs. The animals were tame, for then they had not learned the bitter lesson that has since been so effectually taught. Then the skin hunter was unknown, and, except in some few parts of the buffalo range, the tourist, the Eastern sportsman, had not made his appearance.

It is all over now and scarcely worth mourning about; but there are some of us who devoutly thank God that our day came before the game was all destroyed. We at least can say the "time has been."

THE MAINE GAME WARDEN MURDER.—There have been no important developments in the Maine tragedy. The account published in the FOREST AND STREAM last week was correct in all important particulars. Great excitement prevails in the vicinity and armed men have been scouring the country in a vain search for the assassins. Probabilities of their capture are meager. The fugitives are perfectly familiar with the wilderness into which they have fled, and it is thought that they have made their way to Canada. Our Boston correspondent confirms the view expressed in these columns last week that the tragedy would do much to clear away any sentimental sympathy with Maine poachers. Such incidents as the Wesley barn-burning and the Fletcher Brook murder expose the true character of the lawless ruffians who defy the laws and the officers. The ignominy attaching to such evil-doers ought to be shared in some way by the city sportsmen of other States who have hired these murderers and others of their ilk as accomplices in breaking Maine game laws. We may hope for less bragging on the part of such sportsmen now that their hired tools in the Maine woods are disclosing their true character.
